Himalayan Remedies

Wonderful Discovery in the Medical World!!

For some Obstinate and "Incurable" Diseases

Secured from the hidden stores of Great Lamas and Yogis of Tibet, Burma and Himalayan Hills, by Mr. P. C. Mukerjee B.C.E. M.S.C.E. F.T.S. Vidyabhusan, late Resident Engineer Calcutta Corporation during his tours and travels in the obscure regions of these mysterious lands while Engineer to P. W. D. of Burma and Personal Assistant to the Chief Engineer of Kashmir State.

The fruits of many years' hard researches in the Himalayas and 25 years' successful experiments by the founder and 12 eminent Physicians of Calcutta and elsewhere are now placed before the public for the relief of suffering humanity in general.

Since 1918 the founder has been practising in Calcutta as a SPECIALIST IN LEPROSY, LEUCODERMA and DIABETES and has cured a good many serious cases successfully.

THE HIMALAYAN REMEDIES GUARANTEE CURE OF

I Leprosy, Leucoderma, Gangrenes and all mortal types of Sores, Skin-diseases, and of ulcers within or outside also sinus and fistula in ano etc.

II Obstruction of urine and all urinary troubles due to Gravels, stone, &c. (a) Renal colic (b) Gall-stone. No operation or catheter-passing is necessary.

III (a) Diabetes of all stages, (b) Pulmonary Phthisis up to the stage when the patient has not been bed-ridden and reduced to skeleton but has vitality enough to digest our medicines.

Cure is effected by regular and scientific treatment with these unique medicines under the founder, assisted by an able Medical Board who help the founder so far as Diagnosis of any critical case is concerned.

For an experiment we request the sufferer to try any of the following cheap but wonderful medicines—for serious Malaria Special Preparation, painful Asthma and dreadful Dysentery of all stages, Rs. 1-8 each, Scorpion Bite &c. S. Extreme Dyspepsia and hopeless Nervous Debility, Rs. 2-8 each, Gastric Colic, obstinate Eczema, all eye complaints except cataract as well as long-pending Rheumatism of all stages, Rs. 2 each.

Medicines are Free from any Injurious Substance

All confidential Letters are to be addressed to Mr. A. Banerjee (Homeo)
Secretary to the Medical Board

UNSOLICITED OPINIONS—A FEW OUT OF A LARGE NUMBER

LEPROSY CURED. Dr. A. P. Bagchi, M.B., B.C.M., Calcutta, writes 5-7-18. "You have successfully cured a female relative of mine of her Leprosy. Her case was of 14 years' standing and was tried by most of the well-known Physicians and Kayirages of Calcutta as well as of other places of India but with no effect. Prior to your treatment she used to suffer from severe attacks of fever. Her sensation of skin was paralyzed in many places and she had sore and swellings all over the body and finally lost three toes. But under your marvellous treatment for the last 9 months she has been completely cured of all her ailments."

CURE OF EXTREME DYSPEPSIA. Mr. Nilambar Mukerji, M.A., B.L., C.F., the late renowned Prime Minister of Kashmir State and Vice-Chairman Calcutta Corporation, writes 11-6-15. "I was suffering from a long and confirmed Dyspepsia, torpidity of the liver and extreme nervous debility. I did not expect to live long. But now under your excellent treatment, I find that normal tone has been restored

to the alimentary canal and the peristaltic action so revived evacuates the bowels easily and twice every day and I feel stronger duly with the expectancy of a further lease of life."

Major-General A. W. Hughes writes from Darjeeling 15-10-15. "I am an old man of 72, your medicine reminds me of my young age of 32."

Dr. S. K. Lahiri, M.D., writes 15-8-07. "After sufficient trial I have found your (1) Himadrikalpa (Nervous Debility), (2) Himadri Sudha and (3) "Zerula" colic to be excellent medicines and undoubtedly far above the known specifics for diseases in which your Remedies are applicable. I am sure they will do immense good to the public."

Mr. R. Mrkumare, late Chief Justice of the High Court Kashmir State, writes 9-4-15. "The case of KALYAZAR which occurred in my house and was declared as hopeless by all doctors, has been completely cured by your Fever-and Himalayan Remedies."

Apply with history of your ailments to—

Manager.

WHAT IS MAGNETIC ATTRACTION?

What is it, in man or woman, that seems to draw and fascinate—a hypnotic power that no one can resist? You have it Everyone has it BUT ONLY ONE PERSON IN A THOUSAND REALLY USES THIS AMAZING POWER TO GET WHAT HE OR SHE WANTS OUT OF LIFE.

HOW YOU CAN LEARN THE SECRET OF MAGNETIC CONTROL

You have the magnetic attraction you need, but you are not using it! You can be popular in social life You can be successful in business You can get whatever you want out of life You can be precisely the man or woman you want to be—if you will only be fair to yourself and give your natural magnetism a chance to show you its powers.

How, you ask? Let the Latent Light Culture awaken the spark of your magnetic conscience

The Facts are Free -- May we send Them?

You will enjoy our interesting free book called "Pride of India" It explains the remarkable System of the Latent Light Culture and what it will mean to you right from the start Why, you cannot possibly study the first elementary principles of this amazing System without feeling conscious of a new power surging through you, a new confidence in yourself, a new poise and self assurance! Send for the free book to-day There's no obligation A pleasure and surprise awaits you

Rigvedic Culture

By DR ABINAS CHANDRA DAS, M.A., PH.D.
Author of 'Rigvedic India' and Lecturer in Ancient Indian History and Culture,
CALCUTTA UNIVERSITY

Demy 8vo About 600 pages Well bound in Cloth, gilt With Illustrations and Maps
Price Rs 10/- net

This is the author's second book on the Research of Indian History and Culture. Fascinating reading from beginning to end with a wealth of facts and evidences regarding the *actual life* as lived by the Rigvedic Aryans several millenniums ago in their original cradle in the Punjab before the very dawn of modern civilisation. A veritable Romance of Ancient Indian History written in a chaste and fascinating style which no true lovers of ancient Aryan culture can do without. Exceedingly valuable to students, scholars, ethnologists, lawyers, politicians, statesmen, social and religious reformers, educationists and the general reader.

You will be lost in wonder to read a faithful account of their homes, food, drink, dress, sports, amusements, manners, customs, rites, yajnas, beliefs, marriage-laws, high morals, status of women, arts, industries, trade, agriculture, love of cattle and horses, civil and criminal laws, medicine and surgery, political institutions, Sabha, Samitis, Election of kings and leaders, wars and mode of warfare, the Rishi or Sagepriests, the Vedic Gods, philosophical speculations, cosmology, the different clans and classes, gradual evolution of the caste system and love of the beautiful which culminated in Rigvedic Poetry.

Every School, College, Public Private and Bar-library should have a copy of it
Only a limited number of copies printed. Send your order immediately to avoid disappointment

Glimpses of Bengal Life

By RAI BALADUR DINESCHANDRA SEN, B.A., D.Litt.
DEMY 8vo, pp 321 PUBLISHED 1925—Rs. 4.

This work embodies the lectures delivered by the author in 1915 as Ramtanu Lahiri Research Fellow of the Calcutta University. The work throws light on many points connected with the social, political and religious history of Bengal. The last chapter contains stray notes on some Bengali ballads, the Vinachation as the song of Gorakhsnath on Chandidas, Chaitanya's desertion of Nadia and humour in old Bengali Poetry.

THE BEST BOOKS ABOUT INDIA

A NATION IN MAKING being the Memoirs of Sir Surendranath Banerjee, 2nd edition, **Rs 6**

A CLASSIC FROM THE MOMENT OF ITS BIRTH
The Statesman

This book has already run through a large Edition at **Rs 10-8** and we have made every effort to reduce the cost of the 2nd Edition that has been clamoured for since last July. We have succeeded in reducing the price to **Rs. 6** but are convinced that the book in its present form in inferior only in certain unavoidable respects to its predecessor.

WITH THE INDIANS IN FRANCE By General Sir James Willecks K.C.B. **Rs 10**

The book brings before the public, the dramatic part played by Indian Troops in France.

THE LIFE OF JAMSETJI NUSSEERWANJI TATA
By F. R. Harris, **15s**

This is the first biography of Indian's Steel and Cotton king, the founder of the great firm of Tata & Sons, whose service to India was as great as his love for her was profound.

THE EARL OF RONALDSHAY'S TRILOGY

THE HEART OF ARYAVARTA A Study of the psychology of Indian unrest **14s**

INDIA A BIRD'S EYE VIEW Mainly a book of external impressions **18s**

LANDS OF THE THUNDERBOLT (Sikkim, Chumbi and Bhutan) **16s**

A study of the concentration of the Indian mind. Lord Ronaldshay was for some years Governor of Bengal and in these three works has given the public the fruit of a first-class mind that has enjoyed unique experience.

The Well-renowned Talisman, **Paramananda Brahmachary's**

Nabagraha Kabacha

Do you wish to propitiate the nine planets which regulate and influence human fate? Use, then, Brahmachary's Nabagraha Kabacha. This Talisman has extraordinary power to undo the evil influences of all the planets and to bring you all success, peace and happiness in life. It is purely and sacredly made in the Shastric form. Thousands of unsolicited letters testify that this Talisman is wonderfully and verily efficacious for —

Success in Business, Trade, Commerce, Agriculture, Examination and Litigation, Cure of all sorts of diseases, Aversion for worldly troubles, Premature death, Dangers at every step, Pecuniary distress, Quarrel with friends and relatives, Mental disquietude, Loss of wife and children, Increase of the number of enemies, Service, Promotion, Increment of pay, Suitable marriage, Conjugal love, Honours from Government, Longevity of life in a few words, Health, Wealth and Prosperity.

It acts marvellously on the body of men, women and children, either Hindu, Mussalman, Christian, Parsi or of any other faith. Price Rs 3 AND 4 Postage Extra.

A FEW TESTIMONIALS.

1. Raja Sreenath Roy Bahadur, Bhagyakul, Dacca,—I have used your Talisman, its effects are undoubtedly wonderful.

2. Prof A B Bhattacharya, M.A., Rajshahi Government College,—I had no faith in any kabacha but Brahmachary's Kabacha's miraculous effects have astonished me.

3. Mr P C De, Well-known Detective Novelist, Calcutta,—One of my relatives, suffering from chronic diseases, has achieved great benefit by wearing your Talisman.

4. Mr R. C Guha, Dacca,—Just after using your Talisman I have secured a good service. Its prompt effect really reminds me of Aladdin's Wonderful Lamp.

5. Mr Rajcharan Mistri, Khulna,—Babu Harinohan Roy, a neighbour of mine, by using your Talisman comes out successful in every Litigation. He instructs me to wear your Kabacha. Please send me one.

6. Mrs Kusumkumari, Dacca,—Wearing your Nabagraha Kabacha I have gained a new life. I am now out of diseases, mental disquietude and pecuniary difficulties.

7. Mr. M. P. Pradhan, Craddock Town, Nagpur,—The Nabagraha Kabachas I ordered, were put on by myself, my brother and my daughter. I got my increment, my brother also got increment and my daughter came out successful in Matric., quite unexpectedly.

Paramananda Kutr, 8, Gulu Ostagar Lane, Beadon Square, Calcutta.

HOWRAH KUSTHA-KUTIR.

Treatment for Leprosy and Leucoderma etc.

A place where lepers are treated and which is well known to physicians and educated and respectable men throughout Bengal Bihar Orissa, Central Provinces, United Provinces, Madras, Bombay, Burma, Siam, Ceylon, &c.

Patients suffering from Leprosy, Leucoderma, Batrakta, all sorts of skin diseases, and having the following symptoms are wonderfully treated and cured here —

Red, Black, White Brown and Copper coloured patches, circular spots, rough dry and elevated spots, spot either plain or uneven in the middle and having circular border, spots the side of which are like ring-worms but the middle is plain, insensibility of spots and other parts of the body even if they are pricked with a needle, roughness of the skin of the body, a terrible sensation throughout the whole body, if the elbow happens to strike against anything, Hyperaesthesia and numbness of the body, lameness, cutmarks in the heel, rough or shining appearance of the skin, swellings of the nose, ears, fingers and other parts of the body, swelling of the body with patches like blobs which when they burst out secrete, fetid watery discharges, pimples in every pore of the skin, Anaesthetic patch, scaly patches which when scratched send out dust-like substances or scales.

Feeling of suffocation during sleep, specially during sleep at night, coming out of catarrhal discharges and blood-clots from the nose, burning sensation throughout the body, inflammation of the muscular spinal nerve of the elbow-joints, inflammation and thickening of the main nerve trunk of the shoulder and neck, pain in the joints of the body, submanillary regions, thighs, hypogastric and right and left iliac region and back-bone, ulcers in the feet and coming out of maggots and pieces of bones from the said ulcer called Madura, small diffuse thickenings and nodules in parts or in almost all over the body, ulcerated general nodular thickenings of the whole body secreting pus and watery discharges, contraction and necrosed condition of the fingers and toes, ultimately dhalanges being lost. Wonderful effects in 15 days' treatment. Treatment of Leprosy with Family Treatment Free.

A BUST OF
SIR
Surendranath Banerjee
 made from his sittings some
 time back.

by
V. V. Wagh. Sculptor
 6 New Queen's Road, Girgaum, Bombay
SIR SURENDRANATH BANERJEE

CERTIFIES —

"I know Mr. Wagh and regard him as an eminent Sculptor. I have seen some of the busts executed by him, and they, in my opinion will stand comparison with similar work done by any European Sculptor"

Mr. Wagh has recently executed some work for the Raja of Kasimunda who certifies — "Mr. V. V. Wagh sculptor has made a life-size marble statuette of my revered father. I am glad to certify that Mr. Wagh has executed his work admirably and I think it can compare favourably with the best works turned out in England." Mr. Wagh has made from sittings and photographs busts and statues of the Viceroy, Governors, Princes, Chiefs, Rajas and of Lok Tilak, Mahatma Gandhi, Deshbandhu Das, Pandits Malaviya and Nehru, Drs. Tagore, Beasant and Dadabhai Nowroji, Lala Lajpat Rai, Bhupendra Nath Basu and others.

First class statuary in marble and bronze promptly executed to order. Excellence in likeness and expression a speciality.

WONDERFUL REMEDIES OF EVIL INFLUENCE OF PLANETS

If you be not benefited by the Kavacha, money will be refunded. We send a letter of guarantee with each Kavacha

Sani Kavacha It will save you from adversity and misfortunes and while lengthening your life, will increase your wealth, fame, peace of mind and success in undertakings. Price Rs 3-6

Shyama Kavacha It is many in one. While making you free from debts it will give you plenty of wealth with a happy band of joyous children and at the same time make you proof against all attacks by enemies. Moreover, as the goddess Shyama is the spiritual-guide of Saturn, it is sure to make its wearer free from the wrath of Saturn and avert its evil influence. Price Rs 9-10

Dhanada Kavacha Its wearer earns immense wealth with little struggling. Whenever a wearer thinks of something he gets the result without delay. The goddess Lakshmi always resides at his house and gives him son, wealth, long life and fame. In conclusion it will give even a beggar the wealth of a king. Price Rs 7-10

Shatrubashi Bagalamukhi Kavacha—It will help you to overcome your enemies and to take revenge on them. Moreover the wearer gets his desired object and is released from the court when he is prosecuted as an accused or is a plaintiff through some accident. Price Rs 9-2

Mr. P. Singh, Vakil High Court, Calcutta—I am well astonished seeing wonderful effects of your Shyama Dhanada, and Bagalamukhi Kavachas within a week. 20-4-24

Babu J. K. Roy, Zeminder, Honorary Magistrate, Chittagong—I was surprised at the efficacy of your Shyama, Nabagraha, Nrisingha and Sani Kavachas. They made me quite well. 1-4-25

Mr. Banka Satyanarayan, B.A. Deputy Tahasildar, Kothapeta, Godavari, Madras—I have been perceiving the effect of your Sani, Nabagraha and Bagalamukhi Kavachas which I brought from you. 30-10-24

Mr. A. H. Cumming, Judge High Court, Calcutta—On examining my forehead, the exact time of birth of me and my son was correctly stated. He made some wonderful predictions about me which were proved to the last letter. 27-7-12

Mr. S. C. Sircar, M.A. 70 Shyam Bazar Street, Calcutta—I have got wonderful effects by using your Nabagraha and Shyama Kavachas. 13-12-23.

Our Kavachas have been circulated through all the lands from Hongkong on the Pacific ocean to Baghdad situated almost in the westernmost country of Asia; and crossing the bound of Asia they have been running to the different provinces of the continents of Africa, Australia, Europe and America. We have always been receiving numerous unsolicited testimonials regarding the efficacy of our Kavachas as well as our astrological calculations, from those quarters, which are published here for want of space. A copy of them may be sent, if asked for with one anna stamp. For some of them vide the May issue of the "MODERN REVIEW," 1925.

The biggest Astrological Society in India with magnificent library, containing Astrological and Astronomical works. For Horoscope, Thikui, and foretelling of all kinds, please drop a line to-day with one anna stamp.

Surjya Kavacha—Its wearer is sure to shake off the most obstinate diseases such as fistula, leprosy, Pthisis, Asthma, Rheumatism, Diabetes, etc. By dint of its virtues its wearers will enjoy long life, and get full vigour in mind. Price Rs 5-3

Mahamrityunjay Kavacha—It will ward off all serious disasters and accidents that might otherwise end in premature death. Price Rs. 8-2

Nrisingha Kavacha—It will cure Leucorrhoea, Barrenness, Hysteria and other diseases in women and enable them to bear healthy and long-lived children. It is sure to save you from the influence of bad spirits. Price Rs 7-5

Mahakala Kavacha—By wearing this evil women who are hopelessly barren will get children and those whose children never live will be mothers of children who will live long. One wearing this Kavacha comes out winner in disputes and lawsuits. And even a fool becomes learned as an effect of this Kavacha. Price Rs 11-9

Nabagraha Kavacha—Its wearer is sure never to lose any lawsuit and will easily secure good jobs and promotions. He will not die heirless. It effects easy delivery in case of women. Price. Rs 4-4

Mr R.C. Das, Retired Dy. Magistrate Chittagong—I am really charmed by the effect of your Bagalamukhi and Dhanada talismans, 2-4-24

Mr Chabaladas Jessaram, Agent, Eduljee, Vishaw Press, Marwarpati—I have got immense benefit by your Dhanada and Shatrubashi Bagalamukhi talisman. 11-2-25

Mr S N Ghose—Merchant Burdwan—I am quite astonished at the marvellous effect of Basilakan Kavacha you sent me. 2-2-22.

Babu H L Banerjee, Jaypur, Jessore—I have used your Nrisingha and Akshaya Kavachas and found that they have marvellous powers to change the destiny of men.

Mr. Dwarka Nath Chakravorty—Judge, Calcutta High Court—Pt B K Jyotirbhushan is an expert Astrologer. I am sure he will satisfy anybody.

Mr K L. Dutt—Retired Accountant General Madras and Registrar, Calcutta University—Jyotirbhushan possesses extraordinary power in Astrology and Palmistry, 20-1-18

THE AMAZING DISCOVERY OF THE AGE!!!

A Revolution in the Scientific World! Equally appreciated by the Indians and the Europeans!

Mr B PATRA'S UNIQUE PUBLICATIONS!

THE MYSTERIES OF NATURE —(1) To get promotion in service (2) Receiving favours from superior officers and others (3) How to be fortunate (4) The science of dream. (5) To know death beforehand (6) To turn disobedient persons obliging (7) How to read character in faces (8) Thought-Reading (9) How to be successful in all undertakings (10) Fulfilment of one's due desires in life etc.

THE HIDDEN TREASURE —How to choose a wife. How to get perfect happiness from conjugal life and many other hidden secrets not mentioned here. It gives unspeakable joy to the reader etc.

The above books deal with many secret sciences which are still unknown to the world. Those who intend to read the books should apply soon with the guarantee form thus—"I do give you my word of honour to keep the secrets private and not to misuse the powers." The price is fixed at Rs 4 each. V P. charges extra. Those who will order for two books at a time will get them at Rs 8 including all charges. Limited number in stock. Apply soon —

Durjodhan Herbal Home, Post Box No. 11416 Calcutta (India M.R.).

READ WHAT THEY SAY

THE PRACTICAL MEDICINES, DELHI —The Mysteries of Nature is the best book of its kind. This is a Novel Book for one and all of any age, caste or creed and in any walk of life. It unravels the many and diverse MYSTERIES OF NATURE and helps one to get all-round happiness in every respect, for instance, to get promotion in service and how to receive the favour of superior, how to win other's affection and to turn disobedient persons into obliging ones and many other valuable suggestions.

Mr A K LUKANSY, Palmgroves, Bingerville Ivory Coast writes —

THE HIDDEN TREASURE —In my opinion, if there was time, when the marriage topic called for vigilant surveillance, it is in these days -- the question therefore arises, what is the root-cause of so many failures, disappointments, separations and divorcements as the after-math of some matrimonial alliances? Undoubtedly, the answer lies in a deep mine of immutable laws of Nature which, dare say Prof B Patra has successfully excavated.

Altogether, it is an unique and excellent publication that cannot fail in attaining its objective. THE HIDDEN TREASURE should find a corner in the wise man's library.

JUST OUT !

JUST OUT !!

The First in the World

"The Universe"—Written with the aid of the Vedas, the Bible, the Puranas, the Koran, the Abesta, on the basis of geology, astronomy. Every College, H. E. School, Public and Private Library should possess a copy of this book. A. B. Patrika—"It contains in a nut-shell the history of the earth's creation, continuation and destruction. None has ever handled the subject in the manner Binode Babu's method of era calculation and researches on power, atom, ether, motion, etc are very charming and coincide exactly with scientific opinion and Hindu Shastras. The geological proofs go to establish that the composition of the Vedas dates further back than 14th century B. C., also show scientifically the exact dates of Manusamhita, the Ramayana and the Mahabharata. We request every body to go through this excellent book. Once taken up the book can not be left unfinished." 460 pages, price Rs 5-4. Binode Bihari Roy Vedaratna, Research House, Rajshahi (Bengal)

WORKS OF PROF. JADUNATH SARKAR, M. A.

AURANGZIB

50 years' eventful history, and a life's task in research

Complete in 5 vols. sold separately, Rs. 16.

Vols. I & II together (Second edition)

Reign of Shah Jahan and War of Succession, Rs. 5

Vol. III. Northern India, 1658-1681, 2nd ed Rs 3-8

Vol IV Southern India, 1646-1689, Rs. 3-8,

Vol V (1689-1707) Rs 1

Based mainly on original contemporary Persian sources, viz. the Mughal State Papers, daily bulletins of the Mughal Court, the letters of Aurangzib and his contemporaries (more than 5,000), Marathi *bakhars* and letters and the Assamese *buranjs*, besides contemporary Factory records of the English, French and Portuguese.

H BEVERIDGE - "Jadunath Sarkar may be called *Plinius in India* as the user of Persian authorities for the history of India. He might also be styled the Bengalee Gibbon."

VINCENT A SMITH - "You are doing first-class work. I have the highest opinion of your learning, impartiality and critical ability."

W. FOSTER, C. I. E. "It is easily the best authority on the period with which it deals."

Studies in Mughal India

320 Pages Rs 2.

Contains 22 Historical Essays on India
"in the 17th century and Mughal
civilization in all branches"

ASIATIC QUARTERLY REVIEW - "A series of essays of the most entertaining description"

INDIAN ANTIQUARY - "All the essays are brightly written and several contain information not hitherto available in English."

Mughal Administration

Second edition, size more than doubled.
Rs. 3.

A study of the administrative system of the Mughal Empire, the Departments, the functions of the chief officials, the provincial administration, its influence on the peasants, the legacies of the Mughal Empire, the causes of its downfall, - Emperor - aristocracy - State factories, farmans

SHIVAJI

Second edition, revised & enlarged. Rs. 4.

PIONEER. - "Probably the only really first-class piece of work in English on Maratha history published during the present century."

H BEVERIDGE. - "Jadunath Sarkar.....All his works are good, but perhaps the best of them is *Shivaji*. It is full of research and gives a striking picture of the birth of the Marhatta nation." Based on an exhaustive use of all the available original materials - Persian, Marathi, Hindi, Dutch and English - most of which were unknown to Grant Duff. Shivaji's character and achievements, and the Maratha institutions and system of Government are discussed in two long chapters 45 pages."

Anecdotes of Aurangzib

English translation, notes and a long life of Aurangzib
2nd. Ed Rs. 1-8.

The work is exceedingly interesting and valuable, as it throws much new light on Aurangzib and exhibits his pithy sayings, and his principles of government.

Ahkam-i-Alamgiri

Persian Text of Anecdotes, 2nd ed Rs 1.

Chaitanya

2nd ed., Greatly enlarged. Rs. 2.

Original life of the greatest Vaishnav saint of Bengal, with an old portrait

C F. ANDREWS - "The book is of surpassing value. The picture drawn of the saint is one of extraordinary beauty."

Economics of British India

11th edition, (1917), 384 Pages. Rs. 3.

The handiest and most accurate description of India's economic condition and problems "An indispensable *rade mecum*" (MODERN REVIEW)

Later Mughals, 1707-1739

By William Irvine, I.C.S.

edited and continued by Prof. SARKAR
2 thick vols., Rs. 8 each, sold separately.

Prof. P. E. ROBERTS - "A contribution of first-rate importance, certainly will always remain one of the chief authorities for the period. A piece of work done with amazing thoroughness."

K. R. Qanungo's

SHER SHAH, Rs. 4.

The authoritative history of the great Pathan,

JAT HISTORY

SARIBADYARISITA—Rs. 3 per seer (ideal blood-purifier tonic of the day)

H E Lord Eglton, the Governor of Bengal says : "I was very interested to see this remarkable factory which owes its success to the energy and enthusiasm of its proprietor, Babu Mathura Mohan Chakravarty. The preparation of indigenous drugs on so large a scale is a very great achievement. The factory appeared to me to be exceedingly well managed and well equipped, and I hope that it may continue to prosper." 11-8-2

H E Lord Ronaldshay, ex Governor of Bengal says : "I visited the Sakti Oushadhalaya (Dacca) on July the 15th, and was shown everything by the proprietor Babu Mathura Mohan Chakravarty, B. A. I was very much interested in all that I saw, and was astonished to find a factory at which the production of medicines was carried out on as great a scale. Babu Mathura Mohan Chakravarty seems to have brought the production of medicines in accordance with the prescriptions of the ancient Shastras to a high pitch of efficiency." 15-7-20

H E Sir Henry Wheeler, the Governor of Bihar and Orissa says : "I had no idea that the manufacture of indigenous drugs was carried on upon so large a scale. The whole thing bears marks of enterprise and success." 5-7-20

Beshabandhu, S J C. R. Das says : "I desire to place on record my high appreciation of the work of this factory. The business is carried on in an orderly and organized manner. Superbition leaves nothing to be desired. I congratulate the Proprietor on the success which this business has already attained." 24-10-22

SERVANTS IN BRITAIN

Illustrated with Photographs Specially Taken for the Purpose by the Author

By SE Nihal Singh

I

THE British make admirable servants. That has been my experience, as it has been the experience of many of my American friends who, like myself, have had to spend years in Britain in pursuit of journalism or other avocations.

I have had in my employ, during the sixteen or fifteen years which I have spent in London, servants who came from one or another of the English counties. I have also been served by Scotswomen, Welshwomen and Irishwomen whom economic necessity took to the metropolis.

I cannot of course, say that I found all these persons uniformly efficient or honest. Some proved to be slackers, or untrustworthy or both, and one or two downright malicious.

On the third or fourth day of my first visit to London as I was returning from a luncheon given to me by W. T. Stead at the Belton Restaurant, near the office of the *Review of Reviews* in Bank Buildings, Finsbury, I saw smoke pouring out of a window of the small hotel at which I was putting up. I rushed in and told the manager who lost no time in telephoning for the fire department. Fortunately, I was able to reach my room in time to save my luggage. It happened upon enquiry that the hotel proprietor had given notice to one of the servants to leave his employ, and she had tried to get even with him by pouring kerosene on a bed, touching a match to it, and setting the place on fire.

Then there was the old lady whom I shall

call Sarah, whom I found just opening the door to leave laden with two heavy bundles,

An English Maid in her Evening Dress—
one carried in each hand. "Where are you going and why? and what are you taking?"

I asked her, surprised at the manner of her departure and remembering that she had brought practically nothing with her when she came in the first place.

Not expecting me to return when I did and foiled in her design to get away during my absence, Sarah was struck dumb. She could not pluck up the courage to prevent me from examining the bundles she was taking away with her. I found them filled with loot of every description, gathered up from my belongings which she had decided to make her own. It seemed that she had made the round of the house and appropriated anything of a light nature that appealed to her fancy. I made her replace them and leave at once, keeping a sharp eye on her until she was out of the house.

She was followed, a little later, by a woman who gave the impression of being intelligent, though unaccustomed to domestic service and quite untrained, but willing. She soon developed a tendency to sit in a comfortable chair and read trashy novelettes which certain British publishers delight in broadcasting, rather than perform the duties for which she was paid. She was loath to go, and I at one time feared that the only way I would be able to get rid of her would be eventually to put her boxes out on the sidewalk and lock the door. But finding me determined, she departed without asking me to give her a "character."

An Irish girl followed her in my service. She was as strong as a man and willing to work hard. I overlooked her shortcomings because she did not object to the shoals of guests that were always coming to see me. If there was to be a larger crowd than usual, she demanded a quart bottle of stout to keep up her strength and spirits. Given that, she did not mind how many persons she had to cook for and to serve.

But she was entirely untrustworthy as to the hours she kept. She was habitually late in returning on her half-day out. On one occasion, she took it into her head to improve the time which hung on her hands during my absence by visiting her friends. I had to discharge her.

The war brought tribulations to those persons who relied upon others to have their domestic work done. All the good servants took to munition-making or became tram conductors, or joined the Women's Army Service Corps, since by so doing they could make more money, be their own mistresses

when not actually working and yet shine as patriots. It thus came to pass that if it was possible to secure a servant, there was bound to be something wrong with her. She was suffering with shell shock and had been discharged from the Army, or she was worthless as a worker or her character was unreliable. I had at least two experiences with that sort of servant.

One of them, who promised well at the beginning, soon began to lie in bed in the morning and pretend to be ill and unable to work. When I dismissed her at the end of the first week, she packed up an assortment of my household effects and would have taken them away with her, had I not been able to circumvent her.

My next experience was with a woman getting on towards middle-age who also had been in the Army Service Corps. She was untrained, unreliable, unclean in her habits, and altogether unfit as a domestic. One day I came home to find a policeman talking with her at the front door. It then transpired that she was harbouring in a shed back of my house, a soldier who had deserted from the Army, and for whom the police were on the look-out. She had been feeding him with food taken from my larder, giving him my clothes to wear, and treating him as a guest of the house. Needless to say, I lost no time in bundling her out of the house.

These unpleasant experiences are however, on the whole few and far between compared with the pleasant experiences I have had during my many years in London. As a rule, the British women who have worked for me as servants, knew their job and were diligent and faithful to my interests. Even during the war, the instances I have mentioned excepted, of course, I had fairly good luck with them.

II

I have great admiration for the sense of pride which the British serving maid evinces in her work. She does not object to discharging duties which, in India, we assign to orders of humanity whom, in consequence of such occupation, we despise and call by such hard names as "untouchables," "unapproachables," and the like. Every household duty, whatever its nature may be, is performed by the British servant as a matter of course and performed, as a rule cheerfully—certainly without any fuss. No and again, there may be a little grumbling

at the duty nature of some task—the British are a nation of grumblers—but there seldom is any attempt at evasion—the British, as a nation having indulged in grumbling, go on and swallow any pill that is stuck in their mouth.

The dignity of labour constitutes a tradition in Britain which we Indians would do well to copy. To my regret, however, I find that few of our own people who visit the British Isles—even those who have reached the verge of discretion—seem to be impressed by that admirable trait in the British character. I have known more than one of them to turn up their noses when they first saw members of the Imperial race engaged in emptying slops in the bedroom, or doing some other work which we in India regard as unspeakably dirty. I do not, however, remember a single instance in which such a sight has led the visitor to make a remark which would indicate that he had learned from that humble worker that all toil which is honest is honourable.

III

What a fine perception of the value of time most of the Britons in my employ as servants have shown!

Whenever it is possible, I do not like to have a servant sleeping on the premises, but prefer to have one come in from her home at an appointed time, stop in all day, and go away at night after the work is finished.

Such an arrangement has certain drawbacks. If you happen to be ill in the night, for instance, and require hot water or a cup of tea, or special attention of any kind, or if it is necessary to send for a doctor, you must either get along without help in such a case or struggle out of bed, irrespective of your physical condition and need, and perform the necessary service for yourself. If the servant "lived in," you would wake her, either by calling her or by ringing the electric bell hanging by a cord near the head of your bed, communicating directly with her room.

One has to pay a little more to the servant who does not "live in". This, however, is only fair, since the woman who comes in by the day has to pay for her lodgings and a certain amount of her own food, as, for example, on the days when she has her "afternoon off". She also has to pay for her laundry and other little items which would automatically come from her

employer, if she occupied a room in his house and had all her living expenses—"everything found" as it is called—included in her wage.

The advantages of such an arrangement, however, outweigh any such disadvantages. By having a person who comes to you for work just as you go out for yours, you escape any taint of servility. It gives to me, at least, a cleaner sort of feeling.

A Welsh Serving-Girl Attired in her "Sunday Best"

With one or two exceptions, I have found that servants usually come in the morning at the appointed time. Now and again, there was perhaps a delay of five or ten minutes; but it was generally due to the tram or bus—at least that was the excuse usually offered on such occasions. One or two servants were, indeed, so punctual that I would not have hesitated to set my watch by their arrival.

The maid came in good time to have breakfast ready by half past seven in summer

and eight in winter an early hour for England, especially in the winter. She generally would even have the brass on the front door polished and the steps scrubbed and whitened before breakfast or would perform such tasks in the intervals of serving the meal.

British serving domestics take a great pride in keeping the brass on the front door shining brightly and the steps immaculately white. It is in their eyes, more or less, the hall-mark of respectability and it is their first concern in the day's work. If a caller leaves a foot-mark on the steps, or if a gust of rain tarnishes the brass ever so slightly, a careful maid is out at once with cloth or polisher to set the matter right. She would take it as a personal reflection on herself if anyone were to pass a critical remark on such a subject.

Maid Busy Scrubbing the Floor

The servant who came in by the day usually stayed until she had cooked my served dinner in the evening, washed the dishes, and put everything tidy. She went away at eight or a little later, as I generally dined early.

Some of my acquaintances prefer to have a late dinner, in which case they let the servant prepare it and go away without washing up, leaving that task over for the morning. The American newspaper man who vacated the flat I occupied when I first went to London and whose English servant I inherited, used to have a cold supper very late at night after returning from the office. The maid would prepare everything for him and his wife, and leave it on the side-board; and they would eat it whenever it suited them, leaving the table to be cleared and the

dishes washed by her when she came in the morning.

Barring the exceptional cases already mentioned, my British servants have had a fine sense of orderliness. They knew where each article of furniture must stand, and if they found it disturbed, promptly replaced it.

The ideas of arranging the furniture in a room which some of these domestics entertained did not find favour in my eyes. They produced effects which appeared to me to be too formal and stiff. But they had been trained in such a hard school that I found them lacking in the ability to change the practices to which they had become accustomed. Once they discovered that I had a will of my own, however, there was no difficulty in having the furniture arranged according to my taste (or, to them, lack of taste). It was usually enough to speak once. Seldom was there any need for reprimand.

IV

How the British servants manage to achieve their high standard of mechanical perfection continues to amaze me to this day. The hedge which divides my house from that of my next door neighbour is kept meticulously trimmed to a certain height. Not a single sprig of privet or laurel is permitted to grow a fraction of an inch longer than the others, with the result that the hedge always presents the appearance of a long, green cushion. Not a weed is permitted to grow in the walk running in front of the flower-bed, the full length of the garden on either side framing the patch of lawn in the centre. The step is as white as step-powder can make it.

The furniture in the hall, the hall-tree, the umbrella-stand, the chair or monk's bench, which serves as a seat and also as a receptacle for overshoes and brushes as well as a table stand in the place which the housemaid has been taught is the proper place for them.

To attempt to change the arrangement would be to run the risk of straining the relations between mistress and maid. It is the same with all the works in and about the house. It is always done at a certain time and in a certain way—and in no other.

Many British servants scorn labour-saving devices without which an American servant would refuse to do housework. They prefer to get on their knees and scrub the floor with a brush rather than do the work with

SERVANTS IN BRITAIN

Nurse-maids employed by the Pich to take care of their children

handed brush and mop. They would crawl about with a short brush and in sweeping the floor than use a long-handled broom or a vacuum cleaner. They are indeed suspicious of innovations and stick to appliances and methods that their ancestors have used. In my own experience, however, there has been a considerable change in this respect. Sweepers have become common, and even motor-driven sweeping machines are beginning to come into use.

A

here we would employ half a dozen or a dozen persons to do the work of an Indian one. Englishwoman is compelled willing to do it. She keeps the clean from cellar to garret. She cooks the meals and washes the dishes, makes the cakes and prepares the pastries and other meats. She makes jam-jarckles for use during the winter months.

She washes and irons the linen, except the shirts and collars and the larger pieces such as table-cloths and sheets. She scrubs and polishes. If she is a well-trained servant of the old school, she even darns the stockings and mends torn or worn garments and house-linen.

Every so often she "spring cleans"—that is to say, she removes all the furniture from the various rooms, one or more at a time, takes up the carpet and beats it, scrubs the floor, washes the paint, brushes the dust from the ceiling and walls and thoroughly cleans everything in it. These spasms of "spring cleaning" usually occur just before Easter and Christmas, perhaps even oftener.

Since a good many persons do me the honour of calling upon me, and I usually live in a fairly large house, unless my visit to London happens to be very short in duration, I find it necessary to give the "general" servant the benefit of the services of a charwoman who comes in and does the rough work two or three days a week, leaving

not only the routine "tidying up" to do in addition to the cooking and serving of meals. Every employer does not do this, however, and more often than not the "general" servant in a middle-class family has to do practically all the work herself, unless the mistress or some other member of the family undertakes to help with the dusting, or bed-making, or light work of that kind.

By lunch time, or a little later, the servant has changed from her striped cotton or other dress which she wears while doing the rough work into a black dress with stiff white collar and cuffs and a white cap—the latter the traditional symbol of servitude in Britain. Strange to say, instead of chafing at being compelled to wear such a badge indicative of her calling, the well-trained servant who "knows her place" and is content to keep in it feels that it would be indecent for her to answer the door-bell without wearing her cap, and takes great pride in keeping it clean and wearing it at a becoming angle.

This tradition of doing things in the right way expresses itself in unexpected ways. I remember, for instance, I wished to take a photograph of a charwoman cleaning the windows. She had a cloth in her hand at the time, and I thought it would be all right for her to use it. She indignantly refused to do so, however, and made me wait while she went for the proper wash-leather. If would be the height of impropriety, she declared, to be caught cleaning windows with anything but a wash-leather cloth.

VI

I must pay a special tribute to one of our domestic employees who proved to be competent even beyond expectation. I shall speak of her as "Partridge" because that was the name by which we fondly called her, since she was little, and brown, and timid, like that fluttering bird.

"Partridge" did not come of the serving class, but her people had been hard-hit by illness which incapacitated the bread-winner for work, and she had gone to a school of domestic science and secured a diploma, so as to fit herself to do household work of a superior character. She was, in fact, more of a working housekeeper than a housemaid.

She took all the work and worry of house-keeping from us. She planned, and cooked and served all the meals, bought all the supplies, rendering an account of what she had spent, and did all the work of the house

in a really scientific manner. She was treated as a member of the family and with us and sat with us when not working, and often went out with us for walks and places of amusement. I am sure, indeed, that a Maharaja-to-be who used to visit us those days will never forget the little cake she specially baked for him, and of which he was very fond.

A girl like "Partridge," alas! was bound to attract a man desirous of finding a capable wife. She had a "young man" who called to see her sometime every day. He was an ex-soldier who had started a garrage. I came to recognise the toot of his motor-horn as he drew up his motor lorry outside the gate as well as she did. After she had been with us a few months the two were married, and we had to find another servant, who, needless to say, was nowhere near so efficient. "Partridge" had been. Never before or since, indeed, did we find her equal.

VII

Twice a week I have special cause to praise the efficiency and faithfulness with which the British woman who happens to be in my employ as a servant at the time serves me. Those occasions are when, in conformity with the general practice, and, indeed, with the law of the land, she goes out for her "half-day off." She is always in a hurry to get the lunch over betimes on those days that she can wash the dishes and get away as early as possible. Before going, however, she arranges the cups and saucers and cakes for tea on a tray so that it is only necessary to boil water and pour it over the tea leaves, left measured out, and sets the table for dinner, usually seeing to it that there is a large bowl of salad ready to eat.

I am not used to cold meals, and do not like them, so it means that on the servant's half day out I either indulge in my hobby for cooking *a la Indian* or eat a meal at a restaurant.

VIII

The British, as a rule, like to serve Britishers. Nearly every one employed by me has told me that. To test whether such a remark was made merely as a compliment or whether it was really meant, I have taken the trouble to make enquiries and have learned that many British women who have served Americans and other foreigners do not, if they can help it, serve in a British

More than one British housewife told me that she would not engage a servant who brought a good reference from an American or other foreigner, because they did not know how to treat their domestic help, "spoil" them.

The British are infected with a form of self-consciousness peculiar to themselves. Servants must be kept at a distance—"kept in their place," to use the proper expression. Familiarity is allowed. Some insist upon "sir-ed" and "madam-ed." The servant always stands in a respectful attitude when talking or being spoken to, must not sit except in the kitchen or in the special quarters allotted to her, and may not have a "young man" call upon her, or, if that privilege is given her, he is allowed to call only at stated times.

Some old-fashioned housewives did not permit the servant to sit down to lunch, but compelled her to eat it standing. In some cases the domestic was not given the same food that is set before the family, but was provided with inferior fare.

I have often wondered what must have been the feelings of a girl who was given only tit-bits to prepare for her employer's dining table, and at the same time was made to cook cheap scraps for herself. It would seem that there must have been a strong temptation to pilfer some of the better food and eat it on the sly.

That system had really come down from feudal times. In great mansions and spacious houses hordes of servants were kept. They had their proper "offices," and were graded from the butler and house-keeper down to "boots" and the scullery maid or boy. A sense of servility and class-consciousness was bred among them. They even set up a sort of caste system among themselves, in which each servant was graded according to the sort of work she or he did—a system which continues to this day.

The comparatively poor middle-class people, imitating the rich, condemned their servants to live under harsh conditions. Themselves dwelling in poky little houses, they had no chance to give proper accommodation to their domestics.

A middle-class family was indeed, able to employ only one servant, who was made to spend such leisure as she had in the kitchen. A deep and wide social gulf separated her from the family, and she was not allowed to have any friends of her own come to visit her.

The only human society she had was a gossip with the butcher, or baker, or green-grocer who came to deliver supplies, or the dustman who came to collect the garbage.

In the winter, when, even at mid-day, it may be pitch-dark with a black fog in London and other places in Britain, and night generally falls soon after four or five o'clock, this type of servant suffered more than she did in the summer, when the days are long and pleasant. The "kitchener," as the kitchen stove is generally called, consumes much coal.

Clearing the front-door step

and, therefore, the housewife inclined to be thrifty has a fire lit in it as little as possible, preferring to use the gas stove, which burns fuel only while the kettle is boiling or the meal is being cooked. Much of the time, therefore, the servant suffered with the cold since she had to work, eat, and even sit in a fireless room.

When I first went to London in 1910 and learned about the treatment with which so many British servants put up, I was amazed at their patience but I soon found the reason

The feeling of caste was imbedded in employers and employee. The supply of domestics was moreover far in excess of the demand. Any one anywhere in Britain could easily secure a servant either to live in or to come in by the way or half-day. An advertisement in a newspaper or an enquiry at a local registry or a shop brought a dozen or more applicants. One could have one's choice and be as hard about 'references' and 'characters' as one pleased.

Almost simultaneously with the outbreak of the war came a great scarcity of servants. As the war progressed the situation became much worse. It became impossible, indeed, to secure domestic help of any kind at any price. This had the effect of bringing up the scale of wages. The same servant who previous to August, 1914, could be hired for from £20 to £26 a year demanded from £40 to £52 and even more and got it.

What was still more important, the wartime scarcity of servants compelled the housewives to give privileges to their employ-

ees which they never would have dreamed of giving them before.

Today the housemaid is usually a pleasanter living quarters and more and more food—and has time to herself every day which is sacred to her, during which she is not required to render any service to her mistress, even if she elects to remain in instead of going out. Many housewives permit their maids to go out every afternoon for an hour or so, or every evening after dinner is over and the day's work is finished. They allow them, moreover, to remain later, in some cases even giving them a key so that they may let themselves in without disturbing others in the house. All these concessions have been made in sheer self-defence, because the employers know that if they are harsh with their servants they will not be able to get anyone to do the work for them; but the fact remains that the lot of the domestic helper in Britain is far happier than it was before the war.

ADULT EDUCATION IN CZECHO-SLOVAKIA

By AGNES SMEDLEY

WHEN any people or country is subjected by a stronger Power, it must be taken for granted that one of the first things the conquerors will do will be to either destroy, discourage or rigidly control education in the oppressed country. For knowledge and subjection cannot walk hand in hand. Thus it was with the Czechs and Slavs under the old Austro-Hungarian Dynasty, and only the establishment of the Czecho-slovakian Republic in 1918 opened the way for the full and free development of those peoples.

The Czecho-slovak nation was held in political servitude for over three hundred years. Wedged in between the old Russian, German and Austrian Empires all supported by international alliances of the so-called "civilised nations", its dreams of freedom were at best phantastic. A number of attempts had been made to keep alive the culture and feeling of nationality, but these

were defeated time and again. The leaders of such movements were generally scholars whose knowledge made it possible for them to realise the past glory of their people and to hope for a rejuvenation—instead of considering themselves "above" politics. They lived and they died or were killed without realising their dreams. But the modern dreamers lived to see the establishment of the Republic after the World War. It is undoubtedly true that had Czecho-slovakia been a part of the British, French or American Empires, the world would not have known of its existence—at best it would have been referred to as a "discontented rabble." For the great Powers liberated only those countries subjected by the Central Powers.

Despite this fact, despite political charges that this small Republic is merely an Entente weapon in the back of Germany, despite all the charges some undoubtedly true of the

population in Czecho-slovakia regard-
 oppression and discrimination, and laying
 our own political convictions in so far
 as Czecho-slovakia's intimate connection with
 the Powers is concerned, still we can
 learn the freedom of this nation. For it
 is in so far as the idea of national
 freedom can go, and freedom is sacred
 we can learn from Czecho-slovakia —
 many things we can learn if we will
 learn that although crushed —
 160 years — for centuries until
 all national consciousness was
 crushed, until the Czech population
 reduced to the ranks of serants
 of the ruling house and the
 class, crushed until some might
 think that they were not "ripe for self-
 government" and should first learn the
 of government from more advanced
 peoples, still, they were given their
 freedom at one blow, with the full
 right of building any form of
 government they desired. The down-
 trodden, suppressed and ignorant Czecho-
 slovak! It is something for Indians
 to think about!

But we can learn still more, we
 learn how this new Republic of a
 over thirteen million population
 within eight years, covered the
 country with a network of cultural
 educational institutions, from
 kindergartens to every kind of special
 industrial schools, academies and
 universities. The most significant advance
 have made in education, and the
 of most interest to us, lies in the
 of adult education and of the
 cation of illiteracy. For, under
 old regime, large numbers of the
 lived in an ignorance as dense
 as the Indian peasantry.

In the Czech part of the Republic,
 i.e. Bohemia, Moravia, and Silesia, —
 are few illiterates compared
 Slovakia in the south, with
 50 p c of its population illiterate,
 Sub-Carpathian Russia to the
 extreme east, with 50 p c of illiterates. This
 because the Czechs are the most aggressive
 of these two branches of the Slav race and
 because they entered the German schools and
 studied in the German language in the three
 provinces named above. Then it was the Czechs
 who tried to organise athletic and sport
 organisations, through their churches and through
 fraternal societies to educate their people and

keep the feeling of nationality alive. But in
 the south and east, the minds of the people
 were dead.

The first law for the education of the
 adult population was passed within six months
 after the Republic was founded, this law
 (Feb. 7, 1919) provided for free courses
 to be established throughout the State at the
 expense of both the Central Government and
 the local communities. Within a few months,

Prof. Tomas G. Masaryk, President of the Czecho-
 Slovakian Republic, noted scholar and historian, formerly
 Professor at the University of Prague. He was one of
 the Czech Scholars who were not "above" politics, but
 who instead, at the beginning of the World War, became
 an exile that he might work for his country's freedom.

another law was passed making it obligatory
 upon all towns and villages to establish free
 libraries and to add a certain number of
 new books to its shelves each year. All
 school teachers were obliged to give four
 hours a week of their time, without payment,
 in carrying out this program.

The free courses mentioned above were
 given under Cultural Committees elected from

the different village and towns concerned, that were obliged to direct the work. This Committee was and is today compelled to organise yearly or half-yearly courses of instruction in which all possible subjects, from the teaching of reading and writing, to the study of foreign languages, are taught. Twenty-five people must enrol themselves as desiring to study a certain subject. They may choose their own subject also—before a course is started. They meet twice a week. The Ministry of Education and National Culture pays half the expenses, the community must pay the rest. Each student is asked to pay a very small fee. Officials say, otherwise they will not appreciate the training.

A View of the Old Historic Czech and German University in Prague, Founded in 1348 by Charles IV.

Altogether there are today over 7,000 of these cultural Committees in operation, 5,286 among the Czechs and Slovaks, and 1,783 among the German population of the State. In Slovakia, and Sub-Carpathian Russia, the courses are chiefly for the eradication of illiteracy and general education, although there, as elsewhere, adults who have had to stop school for one reason or another have the opportunity of continuing their education. Courses are given in various branches of technical knowledge, machinery, drawing, plumbing, carpentry, dancing, agriculture, horticulture, lace-making, sewing, music, and French, English, German and Russian. According to statistics received by the Ministry of

Education and National Culture in Prague there are 29,146 courses of a general educational character in session, 3,396 of a professional character, 1,785 for definite professional training, and over 25,000 other enterprises, such as theatrical performance, exhibitions, popular academies, excursion-puppet-shows, etc.,—all conducted under the auspices of the Cultural Committees.

The teachers of these courses are the regular local school teachers each of which must, as I said, give four hours of their time each week also educated people or people of the town or village with a special knowledge of a special subject (e.g. lace making, carpentry, etc.) or, now and then, university lecturers sent

out by the Universities or technical academies in various cities. In the Ministry of Education and National Culture, I had the opportunity of talking with a Professor who had taught special subjects for one winter in some of these schools in the province and his enthusiasm was unbounded. He said his young student studies eagerly and earnestly as do the grown-up men and women in these little "people's universities."

* * * Intimately connected with the work of these classes stands the free public libraries that have been established by law throughout the country since the revolution. These

libraries do not exist merely on the law book in Prague. Since 1919, over ten thousand public libraries have been established, and in addition to these, the Ministry of Education and National Culture founded 28 special municipal Czech, and 152 travelling libraries. Two schools, for the training of librarians in towns with less than 10,000 population, have been founded, where courses in library management last for three weeks.

In addition thereto, during the past few years, three-hour lectures on the work and significance and management of free public libraries and two-hour courses on the necessity and importance of adult education have been given at all public

Jan Hillar, Director of Drama in the National Theatre in Prague

supplement for films and lantern slides. There are many other publications directly touching adult education as conducted through the Cultural Committees and the public libraries—such as the monthly, *The Dawn*, *The Review of Czecho-Slovak Librarians* and *The Book and the People*,—all in Czechish with the exception of the last-named one, which is published in German.

In addition to the above work the Ministry founded, in 1920, the "State Central Office for Lantern Slides" and the "Cultural Federation", for the promotion of adult education through slides and moving pictures. These two offices work in the closest relationship with the Ministries of Education and National Culture, the Ministry of Agriculture and the Ministry of Defense. They produce, select, and loan sets of slides and moving pictures to the Cultural Committees throughout the State. They have bought hundreds of educational films from Germany, France, and other countries, they have produced films and slides of their own, not only of an educational nature, but about fairy stories, romances, etc.

Oskar Nedbal, Director of the National Opera in Bratislava

There are countless other cultural and educational institutions conducted and supported by the Ministry of Education and National Culture of the new Republic, but they cannot be treated here. They include a long list of special schools for industrial and agricultural training, the Czech and German University in Prague (the oldest university in Europe) the University at Brun, etc., etc. There are technical academies and a technical university, there are academies of art; and there are academies for the study of music, for the Czechs are famous throughout the world as a musical

people. And it must be taken for granted, as a fundamental principle, that these institutions are not only for men, both men and women study in them,—and together.

But of still greater interest are the theatres in the promotion of art and culture, as well as of adult education—not so much for the illiterates, but it is admitted, as the theatres exist only in the towns and cities. But for other adults the theatres are the greatest factor in education and culture. In all villages where there are no theatres the Cultural Committee nevertheless arrange amateur theatrical performances, in order that the thought of the outside world may become a part of the life of the poorest man and woman. As in all European countries outside of England, the theatre is regarded as a place of culture and of education. Accordingly, there is not one town of importance in all Central Europe and the Scandinavian countries which does not support one or more of the chief theatres of the city. In Czecho-Slovakia this is also true. The National Theatre and Opera, and the Deutsches Theatre in Prague, the National Theatre and Opera in Brun, the National Theatre and the National Opera in Bratislava—all are highly

The Stavovske, now the second National Theatre in Prague, supported by the State. The old Gothic window in the crevice to the left is a part of the Czech and German University.

orted by funds from the Ministry of National and National Culture of the Central Government. The small towns and villages all support their own theatres. Here great dramas, ancient and modern, are shown. The Ministry of Education and National Culture exercises no control over dramas or operas to be given in the towns; it subsidizes. As an official in the Ministry said: "Our theatrical managers and actors are trained people, specialists in their professions; we would as little think of interfering in their work as we would expect to interfere in ours here at the Ministry. True, of course, that we do not support popular theatres or varieties or vaudevilles; we give financial aid only to fine, serious drama such as is presented in our National theatres."

I had the opportunity to see one of the theatres of a town in operation. It was a theatre that had been built, and is supported wholly by the town itself, a town of some 10,000 population. It was a beautiful structure in which was centred the chief cultural life of the town. The centre of the building was the large municipal auditorium, seating 3,000 people as beautifully and artistically built and decorated as any theatre in one of the great European capitals. In the same building, the smaller theatre, an auditorium seating some 300 people. In another section of the theatre for moving picture—and, by the way, I saw my first European sympathetic to India. In the basement of this huge theatre was a restaurant where an orchestra played, and one whole wing on the side was a terraced restaurant and bar. There a very good orchestra played every afternoon. The terraces were crowded with people drinking tea and coffee, and those who did not care to sit there for one reason or another provided in the adjoining garden. This garden, by the way, was maintained by the theatre. In the evenings it played in the theatre, on Sunday mornings, it gave concerts in the public garden. It was a part of the theatre itself.

These theatres, of course, charge entrance the same as elsewhere, but the prices are not exorbitant. In the town mentioned

above, I saw a number of dramas presented—once Hauptmann's "Rosa Bernd", Ibsen's "Hedda Gabler", and again a series of one-act ultra-modern plays that were daring, to say the least. The acting in these theatres is not cheap or amateurish; a group of artists, serious, professional people, come from Berlin or Vienna to play. If the entrance fees from the theatre do not cover the expenses and salaries, the town makes up the deficit. If the income is more than the expenses, the town is the gainer. In any case, here in the theatre was centered the best and most interesting things from the great world outside. From all, classical or modern, the people could learn, and through the years come to distinguish art from trash, creative thought from junk.

India, it is true, had its own destiny to work out; it has a distinctive tendency of thought and culture, that must be revived and enriched. But India has tremendous things to learn from Europe also. One of these things is not only the way to political independence, as we see in the case of Czechoslovakia. But one is educational methods adapted to Indian conditions and Indian psychology. The methods of adult education in Czechoslovakia can be of help here. But of all things which India can learn the most from Europe, stands the theatre as a place of culture and learning. In this respect, nothing can be learned from England, which is notorious throughout the cultured world for its cheap, trashy, inartistic theatres. There Indian students learn little that they cannot see in India; it is actually painful to see Indian students come from England to the Continent and ask for the theatres, the places they want to see are not the National Theatres where the great thought of the world is to be met face to face, but the cheap reviews, the varieties, the vaudevilles, the cabarets. They know nothing else—that is "the theatre" for them. But that is not "the theatre" on the Continent, where men and women devote a lifetime to the serious study of acting and of the drama, and where the serious men and women artists are the associates and equals of scholars and thinkers in every other branch of life. There India has a world to learn—and a world to gain.

income in India is taken to be Rs 107 or Rs. 100 or Rs 75

It is apparent that a lower proportion of the national income is absorbed by taxation in India than in any other country mentioned in the table. But it is well known that the tax-bearing capacity of a large income is more than in proportion to the size of the income. Take two persons whose incomes are Rs 2000 and 10000 respectively. If both were taxed at the same rate, say 2 per cent of the income, the one would be paying Rs 40 to the State and the other Rs 200, but the former would be more heavily taxed. Hence the universal adoption of the principle of progression in the taxation of income, which means that the rate of the tax rises as income increases. The extent to which this principle is made use of in England, the country where a real attempt has been made to adjust tax burdens to tax-bearing capacity, is shown by the following table.

Married couple entitled to allowance for 3 children

EARNED INCOME

Income Tax per £	s d	Percentage of Increase in rate of of income taken the tax on £ 100 as unit
200	Nil	-
300	Nil	-
400	- 1	1.66
600	1-11/2	5.62
800	2-2 1/2	11.04
1000	2-10	11.16
2000	4-1 1/2	20.62
3000	7-1	26.66
4000	6-1	30.11
5000	6-8	33.33
6000	7-2	35.83
8000	7-11	39.58
10000	8-7	42.91
25000	10-1	50.11
50000	11-0	55.00
100000	11-6	57.50

Two points should be noted. Firstly, in the earlier stages, if income is two or five times as great as the minimum taxable income, the rate of the tax is more than two or five times as high as in the case of the minimum taxable income. For example, the tax on £400 is 1.66 per cent of the income, on £800, 11.04 per cent (6.6 times the rate on £400), and on £2,000, 20.62 per cent (12.4 times the rate on £400). But in the later stages the rate of progression becomes slower.

* The table is taken from Dr. Holz's book, p 51, referred to in the article later, but an ultimate source of these figures is memoranda submitted to the Brussel's Conference.

The reason for this is plain. Suppose 10 per cent is taken from an income of £2500, then 100 per cent could not very well be taken from an income of £25,000. In the table given above, the tax on an income of £4000 which is ten times £400, is 30.41 per cent of the income as compared with 1.66 per cent on an income of £400, or 18.3 times as great, but that on an income of £8000 is only 23.8 times heavier. At a certain stage, then, the progression becomes slower and finally it gives place to simple proportion. For example, in Germany the Imperial income tax is levied at the rate of 55 per cent of the income on incomes of 5,000,000 M, rising to 60 per cent on incomes of 750,000 M or more.*

Bearing these facts in mind, we enquire whether the burden of taxation in India is light or heavy as compared with other countries.

Now suppose for a moment that India, Germany, France, England and the United States did not possess Governments of their own, but were governed by a central authority, say the League of Nations. How would tax-burdens be apportioned by this central authority?

Let us assume that it is decided to tax England at the rate of 19.6 per cent of the national income per capita, the actual proportion of taxation to income per capita in England in 1920. What will be a fair rate for India?

The rate could not be much higher than 1.07 per cent of income in India. How do we arrive at this figure?

Income per capita in England is 11 times that in India. According to the principle of progression on which the table given above is constructed, England is able to bear 18.3 times the rate of taxation in India. If the rate for England is 19.6 per cent, the rate for India would be $19.6/18.3$, or 1.07 per cent.

German income is five times as compared with that of India, and on the same principle, the rate of taxation in Germany would be 12.4 times the rate for India, or $1.07 \times 12.4 = 13.26$.

French income is about 9 times that of India, and France would be taxed at a rate 16 times higher than the Indian rate, or $1.07 \times 16 = 17.12$.

American income is about $17\frac{1}{2}$ times that of India, and the tax in the United

* Conrad—Finanzwissenschaft, p 52

would be 21.6 times the Indian rate,
 $07 \times 21.6 = 23.11$

The actual proportion of taxation to income may now be compared with what the proportion would be, if taxation were adjusted to the tax-bearing capacity in the five countries.

Actual rate	What the rate ought to be
per cent	per cent
India 4.6	1.07
Germany 12.2	13.26
France 13.0	17.12
England 19.6	19.6
United States 7.08	23.11

It is evident from the figures given above that India is more heavily taxed than any other country; that the United States is the most lightly taxed country; and that Germany bears slightly, and France substantially more taxation.

With other aspects of the question I shall deal more briefly.

It has been contended, and rightly, that it is improper to speak of the "burden" of taxation, if taxes are properly spent. For example, taxes imposed for furthering national education, for the development of national industries or promoting national welfare in other ways, impose no burdens. It is only when taxes are mis-spent, when a disproportionate amount of the total revenue is spent on the Army as in India, that one can regard taxation as a burden. Further, in the case

of India, we have to remember that part of the sums raised by taxation in India is spent outside the country (included in the Home Charges), and secondly, as a German writer points out:

"It is not a matter of indifference whether national income is used to strengthen the economic position of foreigners, or to help them to live more comfortably (free passages and increased pay for the services recruited in England) or whether it is consumed by the sons of the soil, even when they do not return for it service of equal value—so that national income is at least consumed by the nation itself, though not in a 'reproductive' manner."

In this respect the burden of taxation is real and it must be heavier in a subject than in a self-governing country.

In conclusion, I may say that this article would be regarded by official apologists as an example of "political excursions masquerading under the name of economics", but I would be glad if any would undertake to show that, considering the facts given above India is the most lightly taxed country in the world.

* "Es kann ja nicht gleichgültig sein, ob die nationalen Werte dazu dienen, Landfremden zur wirtschaftlichen Stärkung oder zum Wohleben zu verhelfen, oder ob sie von eigenen Landeskindern verzehrt werden, selbst wenn diese nun keine gleichwertige Gegenleistung dafür aufbringen, so dass dieses Nationaleinkommen zum meisten von der Nation selbst konsumiert wird, obschon nicht 'reproduktiv'." *Sind internationale Vergleiche steuerlicher Belastungen möglich?* by Dr. rer. pol. Waldemar Holz Leipzig, 1924, p. 67.

THE PRESERVATION OF THE NATIVE STATES. 17

By MAJOR B. D. BASU, I. M. S. (Retired)

So far, no writer has taken the trouble to analyse the motives which influenced the British authorities to give up the policy of annexing the Native States governed by "feudal" princes. It was more often by fraud than by show of force that those States were brought under the jurisdiction of the British Government. It was the policy of the East India Company to dye red the whole map of India and not to leave a single ruling prince in any part of this country. But the mischievous nature

of this policy was being exposed by several thoughtful and far-seeing statesmen in England a few years before the outbreak of the mutiny. They wrote and said that the policy was not ethically just or politically expedient or financially sound. These publications of the India Reform Society—the speeches in parliament, the agitation in England by the agents of some of the deposed princes, had, to a certain extent, the effect of making the natives of England revise their opinion

regarding the annexation of the Native States.

Mr. John Sullivan pleaded very powerfully the cause of Indian princes and exposed the injustice done to them by the absorption of their territories. In his well-known pamphlet, 'Are we bound by our Treaties?' being "A plea for the princes of India, published in 1853", he said that

"When a question of this kind (i.e. appropriating the territory of an Indian prince), or any question relating to India, is proposed for our consideration it behoves us to examine it under a fivefold aspect

"Firstly, is it just?
"Secondly, will it improve the character of the people? Or will it deteriorate that character?
"Thirdly, will it conciliate their affections? Or will it alienate them?
"Fourthly, will it consolidate our power, or will it weaken it?
"Fifthly, will it enrich or will it impoverish us?"

The consideration of the question under the first four headings did not trouble the Christians of England so much as did the last one. They used to look upon the annexation of a Native State as a distinct gain to England. Wrote Mr. Sullivan in another part of the above-named pamphlet

"Not content with proclaiming our intention to exclude them (the natives of India) from every high office in our own territory, till they are 'Christianised and civilised' not content with confiscating the Jagheers and Enams which have been granted to natives by former Governments, we have now marked whole sovereignties for our prey, and thus that we may open fresh fields of employment for our own countrymen. Five native states have fallen within the last ten years. If we put on one side of the account what the natives have gained by the few offices that have been lately opened to them, with what they have lost by the extermination of these States we shall find the net loss to be immense and what the native loses, the Englishman gains. Upon the extermination of a Native State, the Englishman takes the place of the sovereign, under the name of Commissioner three or four of his associates displace as many dozen of the native official aristocracy while some hundreds of our troops take the place of the many thousands that every native chief supports. The little court disappears, trade languishes, the capital decays, the people are impoverished, the Englishman flourishes, and acts like a sponge, drawing up riches from the banks of the Ganges, and squeezing them down upon the banks of the Thames."

Mr. John Sullivan's plea for the native princes does not seem to have any effect on the hard-hearted Christians of England. What did it matter to them whether the policy of annexation of Native States was just or improved the character of the people or caused loss to the revenue of India as long as it

extended the market for their goods and provided careers for their "boys"? Philanthropy or altruism did not influence them as did the consideration of pounds, shillings and pence. It was necessary therefore to show them that, if the policy pursued in India towards the "heathen" princes was not given up, it would ultimately touch their pockets.

So in the *India Reform Tract*, No II published in 1853, it was stated.

"that whilst we have not trebled our revenues, we have increased our debt more than sixfold, and we are at this moment adding to that debt in order to make good deficiencies of income."

"We seem, therefore, to have been imitating the example of the man 'greedy of acres' in this country who borrows money at five per cent in order to purchase an estate which will barely yield him three. We have been urged on in this 'earth hunger' first, by a notion that extension of territory is the necessary consequence of a successful war; secondly, that territory must needs be as profitable in our hands as in the hands of its native owners. . . it was the opinion both of Clive and Hastings—certainly very competent judges—that the extension of our territory beyond the Bengal provinces would be a burden instead of a benefit. Looking at the question merely with reference to finance, the soundness of their opinion cannot be questioned. The more territory, the more debt, and why? Because we, foreigners, cannot make territory as profitable as its native owners."

"We have shown that the more territory we get the heavier are our embarrassments. In the year 1792, the year in which we first began to extend our dominion, we had a surplus revenue of nearly a million, the debt in that year was not equal to the annual revenue nor the interest to one-sixteenth of the revenue. After having enormously increased our territory, we have an annual deficit of upwards of a million sterling, . . ."

"It may be, at no distant period, the unpleasant duty of the Chancellor of the Exchequer to renew those applications for loans in aid of the finances of India, which were not unfrequently made in the early part of the century,—such a prospect, however disagreeable, is before us."

The India Reform Society, of which Mr. John Dickinson, *Junior*, was the Secretary and the life and soul, did not remain content with the publication of the above-named tract only, but soon after published two more tracts (which have been reprinted by the present writer)—namely Nos IV & IX entitled "The Native States of India," and "The State and Government of India under its Native Rulers" respectively, in which attempts were made to show that the Native States governed were not worse than any province of India then under the administration of the Christians. But the publications of the India Reform Society in 1853 did not seem to have any immediate effect on the minds of the Christian authorities in England or in India. For, we find two

ant Native States—Nagpore and Oude, unceremoniously annexed in 1854 and respectively.

was after the annexation of the Mussal-State of Oude that Sir Erskine Perry made his powerful speech in the House of Commons on April 18th, 1856, in which referring to the deficit in Indian finance, he said that the true causes of the deficit were annexations.

First of all, remarkably enough, it will be seen that nearly every annexation during the few years, operates as a dead loss to the States, even on its civil charges alone...

But it is to take a very inadequate view of the value of annexations if we do not consider the cost of military occupation and defence of whatever may be...

ask, if any immediate advantage to be gained in revenue or police can compensate for the destruction of our moral influence and the sinking of the faith in British morality which violation of principle is sure to create in the mind."

He concluded his powerful speech by saying...

the difficulty to retrace our steps, a consciousness of my own insignificance and inability to arouse the Assembly, would have probably kept me silent, were had been no future before me. But the nation has not yet half formed its work...

Now, the Indian Press, backed up by still more powerful organs of Indian opinion in this country, are hounding on the Indian authorities to take the Nizam's territory. Next will present the fertile territory of Malwa with its inexhaustible black soil, so rich in cotton and opium. That still more fertile, and with the best waterators in India adjoins it, and is even more fertile Rajputana, and the rest of the sixty States will follow as a matter of course.

I trust that even on financial considerations the House will pause a while before it lends its sanction and approval to these annexation doctrines. On the still higher grounds of right and justice the obligation, which rests upon this nation as a Christian Power, to prove by our example the conduct in the East, the superiority of that religion we profess, and of that morality of which we always boasting, I do earnestly hope that the observations I have made, but especially the opinions of the illustrious men I have quoted, induce the House to interpose by its authority, its inquiries, by its protection of those interests committed by Providence to our control, and check the headstrong propensity in our Indian rulers to territorial aggrandizement, which, if not founded in right and justice, must tarnish the British name and ultimately imperil the permanence of our Government in the East."

In the concluding words, "and ultimately will the permanence of our Government in

These opinions will be found in the India Tracts Nos. IV & IX reprinted by the writer.

the East" seemed to possess the ring of prophecy in them, for the Indian Mutiny broke out within a year of their utterance. It was the Mutiny which made the British Christians consider the expediency or otherwise of absorbing the Native States.

The agents of some of the deposed or ill-treated princes were spending money in England in hiring advocates to secure justice to their masters. But not in a single instance did they meet with success. Those 'heathen' or Moslem agents irrespective of their sex or position in life received scant courtesy, rather in several instances positive rudeness at the hands of the Christian authorities there. One has to turn to the story of Satara for the ill-treatment of Ranga Bapoji, the agent of the deposed Raja of Satara, and to Appendix B of the Panini Office reprint of "Dacoitee in Excelsis" for the treatment meted out to the Queen—mother of the King of Oude in England. It cannot be denied, however, that the agitation in England, of the agents of the Indian princes called the attention of the natives of that country to the affairs of India. Even the outbreak of the Indian Mutiny did not prevent the annexationists from advocating their policy. Thus, one anonymous Christian author, who was evidently ashamed to give only his name in a pamphlet named "Indian Policy" published from London in 1858, wrote —

"The great object in annexing subsidiary princes is the transfer to the Indian Treasury of the land revenue, which they dissipate in the worst manner. Moreover, the armies of native Princes would be abolished.... A fresh objection to the advantages to the Government of total annexation is that the subsidiary princes have stood by us in the revolt, and that it is our policy to maintain them—a miserable exposure of ignorance in those who uphold it. No large subsidiary prince in India could stand an hour without our support: it is our army which keeps them on their thrones, and assures them the payment of their splendid incomes.. I prefer the support of the four or five millions sterling still reclaimable in land revenue.

"So much for the advantages to the British Government, now for the advantages to the people"... With five millions sterling more per annum, we might abolish the salt-tax (a horrible cruelty, so bad that if we cannot keep India without it, it is almost a proof we ought to leave), we might engage to a respectable extent in public works, we might really commence the education of India... What right have we to throw away land revenue in one place, while we oppress the people with a salt-tax in another? What right have we, by virtue of what we call a treaty, to enable by our arms a sovereign to keep his throne who oppresses his people, who takes their surplus produce and squanders it, whom they would instantly dethrone but for us? Who had the power to make any

such treaty? Had we any power to give a people for ever into the hands of a sovereign who neglects all his duties to them? Had such a sovereign (sometimes a stranger, entirely of our selection) any power to create the sacred right of Kings in himself by such a treaty?.... Talk not of treaties, they were illegal in their nature: let us not, at all events, if 'we have made a wicked oath, so much the more wickedly perform the same.'

"Moreover, I say, the revenues of princes, whether territorial or not, are in trust for the people: when that trust is not fulfilled, the revenue passes to the succeeding Government.....

"I consider the policy and justice (in the real sense of the word) of annexation so clear, that I should be prepared to sacrifice personal interests considerably to carry it out. It will be objected here by some—but what authority have we English to depose any native prince? I might reply with the counter question—what authority have we to support any native prince? Or, to state my reply more fairly, I refuse to argue the question of authority altogether. Our Government now carefully abstains from treaties which covenant that we are never to take possession, to prevent such in future.

"Total annexation, however, being our duty, it must be gone through with, and I would suggest the following milder method of carrying it out as worthy of consideration. I would not dethrone any prince now living, but annex the dominions of each when he died. The treaty difficulty might, perhaps, be hushed up as follows—when our supremacy is fully re-established, it might be explained by the Governor-General to the native princes, that the British system in India would undergo considerable change necessarily, but offer to them their kingdoms for life, on condition that they nominate the Queen of England their successor. I apprehend that, if judiciously timed, the native princes would comply with this modest request."

Modest request indeed! Such were the arguments and proposals of those Christians of England who were clamouring for the total annexation of territories in the possession of the "heathen" princes of India.

The annexationists used to justify the annexation of the Punjab on the ground that it helped the English in suppressing the Mutiny. It was convenient for them to ignore the fact that it could not join the Mutiny for some of the reasons stated in the 'Rise of the Christian Power in India,' Vol. V.

It was very forcibly held by the British Army. Wrote the *Indian News* of 27th July, 1858, that

"It justifies self-esteem to aver that our admirable administration of the Punjab saved India. On this verdict we entertain very serious doubts.

"..... we drained not only Bengal proper, but the North-Western Provinces of about four-fifths of the European troops that formerly were stationed in them: that we might transfer them to the Punjab. When the British frontier rested on the Sutlej, it did not extend much beyond 70 miles, but when our rule of the Punjab in the name of Duleep Singh

failed, we found a solution of the difficulty in the gratification of our grasping propensities. So we took to ourselves the inheritance of our ward and made the Punjab British: then in lieu of 70, our frontier extended over 280 miles. The inhabitants of the new acquisition were disarmed, and our old provinces were almost denuded of European troops: all being required to keep the Punjab in order, as well as to swell its revenue returns by the army expenditure. The bayonet held our new possession.....because all or nearly all the European army was required to hold the Punjab in the bayonet form in which we were ruling. Yet we are told the Punjab saved India, our reading being that the Punjab nearly cost us India.....

"None can question that India was nearly drained of European troops that the disarmed Punjab might be kept in subjection: nor can any deny that our generals were crippled—unable to dash at Delhi before the mutineers swarmed to that capital, because of the army located in the Punjab. It is equally clear that had the all-used Dost Mahomed desired it, he would have found a swarm of Afghans ready to aid in recovering Peshawar. It is, to our understanding, an error to say that the Punjab saved India, it was instrumental in nearly losing us that country. It was the cause why the Mutiny was not crushed at once, why it gained strength.... We have now in place of the Bengal Army 82,000 Punjabs in our service. No option was left perhaps but to entertain them. They are good soldiers,while their enlistment at the opening of the mutiny was removing from their homes to a distance men perhaps not to be trusted at such a time in their villages."

It did not appear expedient to the British politicians and statesmen to yield to the agitation of the Christian annexationists. They saw that annexations not only meant financial ruin to India, but created discontent and disaffection in the disbanded soldiery of the annexed Native States which might again produce another Mutiny. Sir Thomas Munro had already sounded a note of warning as to the danger to India from the unemployment of the aristocracy and disbanded sepoys of the annexed States. He wrote—

"The native army would be joined by all the numerous and active class of men formerly belonging to revenue and police departments, who are now unemployed and by many now in office who look for higher situations, and by means of these men, they would render themselves masters of the open country, and of its revenue:....

The out-break of the Indian Mutiny showed that Sir Thomas Munro was not a false prophet. The Christian statesmen and politicians of England could not ignore the warning of the Governor of Madras.

Then again, the native Sepoy was looked upon as a mere mercenary. It was necessary to make the Native States recruiting grounds for the men of the Native Regiments. These men, being foreigners would not make common

with the subjects of the British Indian
ment. There was no danger of the
ak of another Mutiny in the future.
us, it will be seen that it was not from

any motive of philanthropy, altruism or justice that the policy of the annexation of 'Native States was given up, and 'the doctrine of "Lapse" was knocked on the head.

THE BEARING OF RECENT DISCOVERIES ON THE ANCIENT HISTORY OF INDIA

BY DR. A. BANERJI-SHAstri, M A., PH D. (*Oxon.*)

3 Rigveda represents the *storm and drang* of Indian History. An all-round fight with yet unfamiliar elements, rivals and down-trodden Dasyus. One creates the first—the thunder of Maruts, blinding lightning and the drowning down of Parjanya, the darkness of Ratu, inclemencies of Vata and the malevolent ties of the Rudra. But

Who are the Asuras? Rigveda I. 35
35 10 describe *Asura* as "intelligent".

on Sambara—"transference of the more
nt recollection of a dreaded enemy to
reatest of all enemies, the demon of the
s" (Roth, *Lat. und Hist. der Veda*, p.
The other leaders of the Asuras and
pressors of the Aryans were Rauhina
II. 12, 12), Puni Rg. I. 33. 3; 180, 7; V.
etc They are, however, addressed by
name term *jana* (Rv. II. 12. 2) as applica-
o the Aryans themselves *Pancha janah*
II 12 2). What became of these Asuras
drop their historical character by the
mana period?

(a) again, are the Dasas ? When
 fighting the Asuras for water—

evidently terrestrial but symbolised as celestial (Rigveda II. 12. 3)—the Dasyus or Dasas are contemptuously described as coloured savages to be dispossessed and exterminated (Rv. II 12. 4)—cf. Grassmann and Muir *Sk. Texts*, II, pp. 368 ff. They are to be clearly distinguished from the Asuras who are never treated as savages or of a different 'colour'. The Rigveda knows Dasyus not only as non-Aryans but also non-Asuras.

(ii) (b) The Asuras disappear from the Indian horizon by about the Brahmanic period. This disappearance synchronises with a perceptible re-adjustment of the position of the Dasyus. (1) The *Aitareya Brahmana* (VII 11) speaks about their connection with Vishvamitra, "The foe of mankind," perhaps a reminiscence of the Aryan's conception of the Asura—as a enemy of himself, hence of the good world. (2) *Manu* describes them as partly Kshatriyas degenerated into Vrishalas.

(3) The *Vayu*, *Matsya*, *Brahmanda Puranas* give a not non-Aryan descent for the Dasyu races of the south (4) The *Harmansa* connects them with a not non-Aryan source in Tarvasu, son of Yayati. (5) The *Mahabharata* I 3478 broadly hints at their mixed origin.

(iii) As a curious commentary on the above two ii (a) and ii (e), a curious *melange* of (1) Philological and Archaeological remains in the South of India amongst the Dravidians of to-day.

(1) "The Dravidian languages (Tamil, Telugu, Malayalam, Kanarese) are fundamentally different from Sanskrit, the language of the Aryans"—R Swaminatha Iyer—*Origin of Dravidian Languages* III Oriental Conference, Madras, 1924, quoted in *Dravidian India* by T R. S. Iyengar, 1925, p. 69)

(2) The Dravidian languages have an independent and indigenous origin (Wilson's *Catalogue of the Mackenzie Collection*, p. 19; *Lazarus, Siddhanta-Dipika*, Vol v p 31.)

(3) There is an element in the southern languages which is not Aryan (Rapson, *Cambridge History of India* Vol I) and yet found in the Rigveda and earliest Sanskrit (A Pillai, *Dravidic Studies No III*, p 56). For instance, the so-called cerebrals. They can be traced in the Sumerian (perhaps connected with the Asuras)—Langdon, *Sumerian Grammar and Christomathy*. They are not prominent in other Dasyu or non-Aryan languages in India. But they form an important feature of Dravidian languages (*Asura and Dasyu*)

(II) Archaeologically the Dravidian country presents the same inscrutable combination as above. Specially noteworthy are—

(1) Panduram Dewal—Newbolt. *Ancient Sepulchres of Panduram Dewal in S India*, J R A S Vol XIII

(2) Megalithic sepulchres near Nallampatti

(3) Burial grounds at Adichanallur—Rea, *Cat. Prehist. Antiquities from Adichanallur and Perumbar*.

(4) Flora and Fauna, distinct and different from Aryan on the one side and Non-Aryan on the other. (Another tradition mixture between non-Aryan Dasa and Asura.)

The second stage of Philology sought to solve the above doubts and difficulties in the cases of Egypt and Greece. Philology was founded on a realization of the fundamental unity amidst apparent diversity of different languages classifiable under a steadily lessening number of families or groups. Its second stage is an outcome of extending that realization to different sciences wrongly supposed to be self-sufficient and independent. Of the greatest value to Philology in this respect has been Archaeology.

Egypt, long ago, re-adjusted her viewpoint by establishing a pre-dynastic period.

(i) Petrie's typological sequence dating applied to chronological degeneration of pottery and (ii) a comprehension of the Egyptian calendar (4241 B.C.) settled its lowest limit to before 4000 B.C. Further researches have subdivided the predynastic period into Early predynastic, Middle predynastic and Late predynastic, leading on to the 1st dynasty. For the present discussion, it is necessary to note

(i) that about 4241 B.C. the Nile valley

people were sufficiently civilized to observe the risings of stars and fix the solar year.

(ii) that civilization, according to archaeological finds at Narmer and Gebel el-Arak, has an eastern origin somewhere in Asia Minor (Mesopotamia, Elam etc.)—*The Cambridge Ancient History*, Vol I, pp. 255-6.

Greece followed suit. The tale of early Greece was hardly discernible through its extant fragments. But every glimpse was a problem and a promise. And the Prometheus strain beckoned on. Even Earth had to violate her secrets and Schliemann, Halbherr and Evans recovered pre-historic Greece. Aegean sources Mycenae, Tiryns, Knossos, Phaistos, Cyclades and Crete have shed their unintelligibility. Minoan (Early, Middle and Late), Mycenaean (Early, Middle and Late), Cretan etc. are now well-defined strata of this Prehistoric Greece. The work of reconstruction continues. Data accumulated page after page of a fascinating Past is stored and read. The inspiring story is available to every part of the world, in books and journals. Only two points need to be stressed for the present purpose.

(i) Crete was the breeding place of the Aegean culture. It passed on to the mainland of Greece by easy stages through the Cycladic isles. Homeric Greeks were alien to, and in course of time absorbed, this non-indigenous culture. But this culture, within every text-book within the last twenty years is now admitted to be the Heroic Age of Greece before Homer. In other words, Pre-Homeric Greece.

(ii) Cretan culture is supposed to be of eastern origin, from somewhere in Asia Minor. Though entirely "Aegeized" "Minoized" it probably came "from Anatolia at an even earlier period".—Hall, *Aegean Archaeology*, 1914, p. 258.

India, however, lagged behind. She either ignores doubts and misgivings or invents explanations and passes them off as traditions. (See the mutually contradictory meanings offered for the same word in the same context by the Vedic commentators). Yet there was a time when an Indian was alive to healthy doubts and could confess them. Kautsky (7th. cen. B.C.) was among the first to express his inability to understand the Vedic allusions—"as obscure and unintelligible". His successors from Yaska to Sayana set about to find out and record tradition and manufacture it in case of need. The modern Pandit has gone one better. Almost completely

off from that tradition intellectually observing it only in its mechanical. He seeks to extinguish for ever the flame of curiosity. Unable to deny irrationalism in his systems of thought, he has developed a philosophy of being and allowing for the irrational in existence and calls it a revelation. In these two, long-lost tradition and revelation, he has twisted the glories of the past into pseudo-epic records of the past into pseudo-epic rhapsodies, obscure and puerile. The word "religion" made everything so simple! Divine personages furnished for filling all the gaps of discontinuity. They left no insoluble problems or pressing questions.

The questions were there all the time, many blots on the fair face of Geography and History. A happy accident brought them to the fore. Mahenjo-daro will remain a land-mark in the history of the excavations at Harappa (1920-21). Mahenjo-daro (1922) have shed the light on a Long-Forgotten Civilization" (a—Sir John Marshall—*The Illustrated News*, Sep. 1924). The archaeological have been copiously described in papers including this Review. For present discussions, it is necessary to ask they solve any of the doubts mentioned in "In other words—

Is the Mahenjo-daro culture Pre-Vedic or Co-Vedic, for it is certainly not Vedic?

Is it Asura as found in the Rigveda? Certainly not Aryan and only partially Indian, the typical Dasa elements being

What connection does it bear to the Indian of to-day?

Is it of indigenous origin or intrusive from outside? If so, from where?

The answer at this stage would be probable. The large number of engraved seals (about 350 in number giving about 100 characters) is still an open question. In his *The Indo-Sumerian Seals* (1925, pp. 48-98), has offered his observations, but they await verification. Pottery and vases, pictographs, burial customs etc. (*The Statesman*, Nov. 23, 1924). That—(i) The Mahenjo-daro culture is Pre-Vedic Aryan.

The burial customs (crouching position) provide an unbroken chain from Arcot District in Madras through Sind

and Baluchistan to Mesopotamia and Gehareh in Babylon. They agree with the same customs attributed to the Asuras in the Vedas.

(iii) Sayce and Gadd have found affinities between Mahenjo-daro relics and Sumerian objects between 3000-2800 B.C.

(iv) R. D. Banerji fancies resemblance with Crete.

From the above tested in the light of doubts already pointed out issue several important hints.

(i) The Mahenjo-daro culture is probably the Asura culture as recorded in the Vedas. It was anterior to the Vedic. It spread over the Punjab, Sind and southern India. In course of time the Vedic Aryans penetrated into the Punjab by another route. The important water-ways were occupied by the Asuras. In the long-drawn struggle, the Asuras were worsted. They gradually intermarried and got mixed up with the Dasas. This race-mixture bred the modern Dravidians. Hence the disappearance of the Asuras from the arena of Indian civilization.

(ii) The Mahenjo-daro culture is eastern in origin, affiliated to Asia-Minor.

The third stage is already in sight. It opens with an important issue—the story of conflict between an older Asia Minor civilization and a later Indo-European growth. The facts to be determined are—

(i) If Asia Minor was the cradle of this Eastern culture—how did it reach India—by land or sea?

(ii) Its course westward Egypt, Crete; but did it stop there?

(iii) The Indo-European culture—is it from Central Asia? By what intrinsic superiority could it overcome the older culture and in course of time spread over India and the whole of modern Europe through Greece and Rome?

(i) Marshall considers Mahenjo-daro culture as intrusive—"successive migrations from outside." Linguistic and archaeological remains in Baluchistan and Rajputana perhaps indicate the route. But of the advance or retreat?

(ii) From Crete to Scotland survive strange and stray waifs of languages, with clearly-marked oriental characteristics—Etruscan in Italy, (Michaelis, *A Century of Archaeological Discoveries*, 1908, p.57) Basque on the Bay of Biscay (Millet, *Les Langues Dans L'Europe Nouvelle*, Paris, 1918,) and that provoking Newton stone inscription in Scotland. The last-named is a mystery. Waddell's reading, making it Eastern and Phoenician

(Waddell—*Phoenician Origin of the Britons, Scots and Anglo-Saxons*, 1924, pp.21-25) has been ridiculed by Temple in the *Ind Ant.*, 1925, July and Aug. Eastern, however, does not and cannot mean complete agreement. They were once living languages in varied environment and life is change. Charles V of Spain who had waged war for forty years to unify the world had not realized this even when tired, and, in his monastery, he tried to keep some dozens of watches in agreement. Yet, one day, Charles accidentally dropped them all and made the profound remark, "Absolute agreement is decidedly impossible except in immobility." He had found it out at last, and that is not bad for an emperor. It would not be bad either for an archaeologist or philologist.

(iii) Even imagination wavers before this problem—its complexities and far-reaching consequences. Every available record has to be read and re-read. History is the everlasting embodiment of that brooding human spirit whose task never dies. To-day it stands at the mouth of the gloomy cavern of the past, even of Human Past, with bent back and

shaded eyes, seeking intently to penetrate the gloom beyond, with the fear of that threatening darkness, with the desire of that redeeming miracle it yet perchance may hold

1 In the *Rig Veda*, the Asuras are described *रिरेचानुलो वसुतः सुनीतः* (*Rig Veda*, the Asura. 10) i.e., of a golden complexion and well-led.

2. cf. Hillebrandt, *Vedische Mythologie*, 114, 136. cf. also *वेचनी वसुतः* (*Rig Veda* 10) their battle-cry wrongly interpreted *वेचन वसुतः*, 'Ye enemies!' It is the same as Assyrian "*Halleluya*", cry of victory. The language is later described as *Mlechchha*,—ZDMG LXVIII. 719; JBBRAS, XXV. 78.

3 Wilson, *Rigveda*, Vol. III, p. xiv.

4. Vedic *Asura* has the same three senses: the *Asura* of the cuneiform Inscription Banerjee, K. M., *Arian Witness*, pp. 49 ff.

5 Satpatha *Brahmana* XIII, 81.5. mentions *Asuras* as *Prachyars* (i.e. of Magadha).—cf. (a) *Jurasandh ki Barthak* and the *Bira Nimrud* Nimrud in Assyria (Bihar Pre-Maurya Fergusson). ON SHAKESPEARE

By ROMAIN ROLLAND

[Translated from an Unpublished Manuscript]

[We present this paper to complete the trilogy of Romain Rolland on Shakespeare. In Shakespeare Rolland has discovered, and through that master playwright he pronounces the supreme philosophy that *Art is Sublime Play*. But it is not an irresponsible play, as the doctrine is made to mean in its distorted version. Art is that divine play which, through its eternal dance—rhythms of joy, liberates the human soul from the trammels of Reality. This has its strikingly friendly echo in the philosophy of art suggested or sung through that masterpiece of dramatic symbolism—*Phalgunt*, the Cycle of Spring, of our Rabindranath. The improvisations on the Vedantic *maya* and the Vaishnava *lila* of Indian philosophy seem to strike a sympathetic chord to this symphonic orchestration of Shakespeare by Rolland, the master harmoniser of the Occident in this age of discord. We salute Maitre Rolland by presenting this paper to his Indian admirers and conveying to him our gratitude and good wishes on the celebration of the 60th anniversary of his birth this month.

KALIDAS NAG.]

III.

THE LIBERATING GENIUS

THE aspect of the great plays of Shakespeare is tragic; the thoughts underlying them are terrible. And still the general impression of the work is luminous. Where then is the hidden sun?

The first reply to the question, the reply that suggests itself to the mind most easily is that a work like that of Shakespeare is so vast that it embraces all that exists—joy as well as sorrow—and that the one corrects the other. The work of Shakespeare is like nature itself: each one of us can draw out of it what we are in need of. And inasmuch as the secret instinct of men invariably drives them towards joy, it is the dream of joy which is best retained by men. Memory

is only an accomplice of the heart in game, draws a veil over the sorrowful is.

but we are not going to take our stand on an explanation. For, in the immense as whereon Shakespeare projected the fables of Life, the values are not the same in all cases: the comedies, for example, however poetic they may be, are not balanced against the grand tragedies. And even Falstaff himself, in spite of the radiance of Pantagruelic gaiety (corded, however, by the lugubrious end), cannot hold his own against a *King Lear* or *Hamlet*. In fact, the interest of the problem is in this, that it is not the character or the play that is the most gay but the most sombre that shines the strongest light.

And it is here that we enter the very heart of the question that, transcending Shakespeare, touches the very soul of Art: *The function of spirit through art*. Art is like a mountain. In a certain degree of altitude, great work, whatever may be the subject-matter, brings joy to the soul. One can even say that, in the interior of that zone, one tastes a superior kind of delectation in things tragic. The third act of *Orpheus*, the last few scenes of *Leontes* have, in the act of relaxation of the heart, no other advantage but that of gradually bringing us down from the giddy heights of passion to a mundane quietude which reassures the public to resume their everyday life. But the conventional optimism of the scenes seems tame and insipid after the strong joy of suffering which suffuses the preceding scenes. At the end of the terrific *opus*, with the termination of the implacable march of Fate set against the struggling hero, we breathe more freely, and our heart seems to be filled with the solemnity of a night. Malwida von Meysenburg relates in her memoirs how, during one of her bitterest days of her life of exile in London, with her soul prostrate through grief and tending towards suicide, she witnessed the performance of *Othello*, and the spectacle of such an unfortunate hero drew a new courage to live. Whence comes this good?

It comes from the fact that Art is not a mere play. It is not disinterested either. (What play is quite disinterested?) Art is the supreme play of spirit, liberating itself from the cruel laws of the world and becoming by itself the creator of life and of the laws which govern the universe

modelled by the spirit in the image of Reality. From the plains of Simois, where the warriors confront one another, the human spirit wafts itself up to the god Zeus, who is observing and feeling their passions serenely from a distance and without the poisoned sting of passions. But compared with Zeus, the human spirit is more deeply moved; for it knows that it is sheltered only for a moment and it enjoys more ardently that recess accorded in the interval of life's agonies; it must plunge into that agony very soon and it knows that the condition of existence in that world is death. Only for an instant is the human soul invulnerable; and, looking down upon the arena with eyes half shut, it contemplates, as it were in a dream, the trials and struggles of brother spirits with a passionate emotion which secretly recalls their struggles to his own, and with a smile of relief which reminds it of the fact that the soul is only dreaming. The more tragic is that dream, the more anxiously does the human soul scrutinise, on the features of its poetic "double", the shudders of sufferings and the force of resistance which its brother spirit brings to the struggle. In fact, it is a sentiment like that of the Romans who rushed to the gladiatorial circus, propelled by the same sort of desire unavowed. But for grossly realistic natures, denuded of imagination, with callous insensibility like that of the Romans, there must be actual shedding of blood and the horror of real agony. The tragic art creates its spectacle quite entire, out of the substance of dreams and not out of living flesh; it is woven out of man's combats, his joys and sorrows; it is always the bloody game, but he knows that it is only a game and that here all is dream.

The strength and efficacy of Tragedy would be greater in proportion to the *illusion* being more intense and the *dream feeling* more profound, comparable to the essence of a few drops of which suffuse the lovely body with perfume. These two conditions of success are rarely fulfilled in drama. Shelley's drama of the soul—of disembodied spirit—evaporates into a rainbow-coloured dream. And a masterpiece of Ibsen like the *Little Eyolf* appears like a block of stone on the head of a swimmer who sinks by a weight heavier than any burden that is suffocating us. In the case of higher types of genius, in a Sophocles and a Shakespeare, the equilibrium of the two forces—that of the Real and of the Dream, is superbly maintained, and that is the great secret—the hidden sun, in their creations.

However, that equilibrium is not produced by the same elements in the case of all master artists. The sober harmony and the perfect healthiness of a Sophocles do not resemble, in any way, the overwhelming polyphony and the demons of riotous souls in the dramas of Shakespeare, more than the Gregorian chant resembles the death of Ysolde in Wagner Opera. But, if the quantities employed in the game are changed, the proportion remains the same: a more enormous weight of passion-charged reality is opposed and balanced against a more violent mastery of the soul and a more fascinating capacity of dream.

Let us proceed to examine briefly the two poles of the balance.

The reality which Shakespeare presents before us is, in almost all his masterpieces, always a *paroxysm*. It does not simply supply the facts of the play which, in essence, represents a *crisis of the soul*. All such crises are not of equal value. Each crisis brings into play the supreme powers of an individual soul, towards the direction of a given passion. The worth of each crisis, therefore, is in proportion to the worth of that soul and wafts us to the height to which the wings of that soul may bring her. But the divine frenzy in the genius of Shakespeare reveals itself in the *selection* of those souls. Each soul has been selected, with the eye of an eagle, so as to be like a camp of election-light, where passions are born and suddenly surge up to the plenitude and the total exhaustion of its torrential strength. From the very first words of Lear, egotism and pride roar like wild beasts. From the first awakening of ambition, the savage imagination of Macbeth bounced to the encounter of crime; the assault of the inner tempest is so thundering that his hairs stand on end and his heart knocks at his ribs. He stumbles from the reality that envelops him and he sees nothing but what is in the future.

"Present fears are less than horrible imaginings. My thought, whose murder yet is but fantastical, shakes so my single state of man that function is smothered in surmise and nothing is but what is not" (I. 3).

The tender Juliet, from the moment that she loves, is love all round. Nothing else exists any more. When one announces to her the death of Tybalt and the banishment of Romeo, she cries out:

Romeo is banished? To speak that word is father, mother, Tybalt, Romeo, Juliet, all slain, all

dead. 'Romeo is banished!' there is no end, no limit, measure, bound in that word's death; (Act III. 2).

Troilus, lovelorn, expecting Cressida, is afraid lest when he would see his beloved the joy would prove too strong and would mean death and annihilation of his being.

"Death, I fear me, surrounding destruction, of some joy too fine, subtle, potent, turned too sharp to sweetness for the capacity of my ruder powers (Act III. 2).

So the love for her children is as limit less as the hatred in Margaret of Anjou against York (Third Part of Henry VI, I. 4) and against Richard III (I. 3, IV. 4).

"I am hungry for revenge, and now I cloy me with beholding it.....At hand, a hand ensues his piteous and unpitied end: Earth gapes, hell burns, fiends roar, saints pray to have him suddenly conveyed from hence. Cancel his bond of life, dear God! I pray that I may live to say, the dog is dead" (IV. 4).

The group of jealous souls: Posthumus of *Cymbeline*, Leontes of *The Winter's Tale*, Claudio of *Much Ado About Nothing* and Othello, the Moor of Venice, are tigers growling with hunger for gnawing and choking the prey under their claws.

"First to be hanged and then to confess... I would have him nine years a-killing" (IV. 1).

Leontes would dash out the brains of his child on the pavement. These unchained passions, sometimes unify or hurl themselves against one another, forming a symphonic combination that is formidable, so that one would consider them as sweeping tempests of elemental forces. Such an Aeschylean scene we find in Richard III attempting to drown the imprecations of the three vociferous women under the rattling of drums and sounding of trumpets. Such is also the scene of the tempest with the three madcaps in *King Lear* (III. 2, 4), or the epic and funereal tableau which opens *Henry VI* around the tombs of the hero in Westminster Abbey—the furious disputes of the great barons whose apostrophising are cut short by the arrival of the messenger in the fashion of antique dramas and the succession of news of defeats and mourning like the toll of death-bells. Nearly all the dramatic situations of the great plays are like a flood-gate which gives way under the rush of passions. They boil and foam in *Macbeth*, a *Lear* and a *Romeo*. From the moment that the torrent is let loose, we must follow its course.

But while the heart is carried away by the current, the very same moment the spirit plays above like a ray of light on the water or like a sea-gull which flies over the waves, touching them with its wings, balance

itself on the waves, yet far from them; and the spirit enjoys the game as a game knows that it is free.

The sentiment of *dream* penetrates the soul of Shakespeare. It is neither so profound nor so essential in any other dramatic work. By fits and starts he catches his tragic heroes in the midst of action and transforms them into somnambulists who find themselves, like Macbeth, suspended on the brink of the abyss.

Life's but a walking shadow, a poor player that struts and frets his hour upon the stage, and then is heard no more; it is a tale told by an idiot, full of sound and fury, signifying nothing" (V. 5)

Hotspur suddenly arrests himself in full career, and, falling, as it were, into the abyssal depths, measures the void:

But thought's the slave of life and life time's fool; and time, that takes survey of all the world, must have a stop." (Henry IV, Part I, V. 5)

Hamlet is not fully conscious, if he is not smiling with eyes open. The eyes of Ophelia awaken from the dream of life on the eve of her final departure from this world. She is detached from that dream of life, of splendour, which she adored so much. On the shore of death she contemplates in irony the conqueror Caesar Augustus, who is but a slave of fortune ministering to his caprices. She escapes the influence of the "fleeting moon" which presides over the fate of human dreams. She is no longer human.

I have nothing of woman in me; now from my foot, I am marble-constant."

(Act V. 2)

So in *King Lear* Edmund expires with, "is past and so am I"

When that sentiment of the *illusion* of life suddenly flashes upon Shakespeare's heroes once believed furiously in life, they seem to feel the very root of the tree vacillating which they had clung to with a desperate grasp. Then they appear like those blinded by magic glare, and surcharged with bitterness who do not see in all that exist, anything but a water farce.

Flies to wanton boys are we to the gods; they kill us for their sport" (*Lear*, IV. 1)

Gloucester.

At the soul of the poet, soaring above the world, smiles with an affectionate and curious interest at the charming spectacle which this world offers him:

the world's a stage
all the men and women merely players:

They have their exits and their entrances,
And one man in his time plays many parts,
His acts being seven ages." (*As You Like It*, II. 7)

The poet Shakespeare has compassion for human sufferings and at the same time he fondles and enjoys them; he "can suck melancholy out of a song as a weasel sucks eggs," just as it was the habit of the melancholic Jacques, another self of Shakespeare. And through the mouth of Jacques he gives the secret of that melancholy, which is another form of joy, sister sentiment to that which La Fontaine tasted—the joy of the Free Spirit, too free perhaps, vagabond and nomadic like the flock of migratory birds whose home-land is the immense void of the Sky.

"I have neither the scholar's melancholy, which is emulation, nor the musician's, which is fantastical; nor the courtier's, which is proud; nor the soldier's, which is ambitious; nor the lawyer's, which is politic; nor the lady's, which is nice; nor the lover's, which is all these; but it is a melancholy of mine own, compounded of many simples, extracted from many objects; and indeed the sundry contemplation of my travels, which, by often rumination, wraps me in almost humorous sadness."

To which Rosalind retorts jeeringly:

"A traveller! By my faith, you have great reason to be sad. I fear you have sold your own lands to see other men's; then, to have seen much and to have nothing, is to have rich eyes and poor hands."

"Yes", replies Jacques, "I have gained my experience."

Nothing can be had for nothing. It is at the expense of his own life, of his personal happiness, that the Poet buys the luminous rays of the spirit. As Prospero avows that it is the essence of his days, of his everyday souvenirs that his power is built; "Ye elves of hills, brooks, standing lakes and groves... weak masters though ye be—" yet Shakespeare-Prospero has, by your aid, "bedimm'd the noontide sun, called forth the mutinous winds," and resuscitated the past centuries, so that, at his command, "the graves have waked their sleepers" (*Tempest*, V. 1)* He lives Life at its best and he dominates, in his turn, Time which dominates life. He makes time one of his actors (*The Winter's Tale*, IV. 1). As a colleague of time, Shakespeare knows that he can, in spirit, "overthrow law and in one

* "It is remarkable that in his enumeration of the Spirits whose aid had been invoked, Prospero-Shakespeare mentions only the Spirits of the countryside familiar in life, the rural genii, the elves of Stratford—and by no means the spirits of the sea and the tempest, whom the subject matter of the scene seems to expect."

self-born hour...plant and o'erwhelm custom", that he can create and annihilate beings and peoples, that he can, if he pleases, make the Past Present and the Present viewed as a far-off Past revolving (so does Goethe). But when he weighs the things that are in his hands—the peoples and the centuries—Shakespeare feels that he holds nothing, that he himself is nothing but a dream like all the rest.

"These our actors -- were all spirits and
Are melted into air, into thin air,
And, like the baseless fabric of this vision,
The cloud-capp'd towers, the gorgeous palaces,
The solemn temples, the great globe itself,
Yea, all which it inherit, shall dissolve,
And, like this insubstantial pageant faded,
Leave not a rack behind. We are such stuff
As dreams are made on, and our little life
Is rounded with a sleep. (Tempest, IV. 1)

So speaks the master magician on the eve of the abdication of his power. The magic work which his art has constructed out of the joys and sorrows of life, appears, in the midst of the tempest, like an island of dream refuge, a consoling song—the Light! The grossest as well as the most delicate hopes come to cling therein, like a child on the bosom of the Mother:

"Be not afraid: the isle is full of noises,
Sounds and sweet airs, that give delight, and hurt no

Sometimes a thousand twanging instruments
Will hum about mine ears; and sometimes voices
That, if I then had wak'd after long sleep,
Will make me sleep again and then, in dreaming
The clouds methought would open and show rich
Ready to drop upon me, that, when I wak'd,
I cried to dream again" (Tempest, III. 2)
Translated from the original French by Kalidas

A UNIVERSAL LANGUAGE FOR INDIA

By MADHU SUDHAN S. GOKHALE

Union College, Schenectady, N. Y.

THE insidience with which the problem of a universal language for India claims its place is lost amid the clamour for various other necessary reforms for advancing towards the goal of Indian nationalism. The problem is unsolved owing to various reasons, the first one being the lack of realization of its importance in comparison with other political problems of the day. The second one is the impossibility of suggesting a solution that would suit the tastes of speakers of so many different languages and dialects of India.

For a reason which need not be discussed there is always a resisting force offered by people in general to any new idea. It is not the intention of the writer to offer any thing new but merely to state the nature of the problem with a view to point the way to a most practicable solution.

It has been a general belief that a Universal widely prevalent language happens to be so, if not entirely by accident, yet irrespective of its characteristics. On the face of it this may seem to be the correct view and one may optimistically wait for one of the

present languages of India to take the place of a universal language. Hindustani, for instance, has been claimed by some as the future universal language for India, which will develop to be so in course of time, and if Hindustani (or Hindi) ever does become universal language, it would settle the present question.

Does a universal language ever become so in course of events irrespective of its characteristics or is it necessary to create one which will be best fitted with due consideration to its characteristics? If a language becomes universal owing to its characteristics has Hindi got the necessary credentials to that line to raise itself to that status? If the universal language has to be created by studious efforts, does Hindi deserve to be promoted as being one, justly fitted to occupy that position? It is however idle to speculate whether Hindi will ever actually reach that status but it is more important to know whether it is inherently qualified for that purpose.

The reference to the Hindi language in the above paragraph is not made with any

ular point in view but just to make
 ay to show the importance of the
 ion by a concrete example. The name
 y other language may easily be substi-
 as far as the reasoning goes. However
 ame of Hindi was used because of its
 nal acknowledgment as a future univer-
 nguage for India by the general Indian
 c.

he languid progress which the question has
 ever since the awakening of India along
 nes of development of nationalistic ideals
 proof that the universal language as such
 to be created by studious efforts.
 er is this proof the only proof The only
 that the United States has a common
 age in spite of her cosmopolitan popula-
 is her studious efforts to establish one
 linguistic conditions in Canada, which is
 any other respects not unlike the United
 are curiously far different from those
 United States. The colloquial and the
 language in Canada is French, the
 language being English, while on the
 hand, the language of the United
 is English. The prominence of the
 sh language in the United States clearly
 the efficiency of the method of making
 guage universal by studious efforts as
 at the method of relying on the
 cteristics of the language

is an undeniable fact that the French
 age has a decided advantage over
 h as regards simplicity. The only
 why French occupies a prominent
 as being universal in Canada in spite of
 ficial English is the ease with which
 European immigrants in Canada can
 r French

studious and systematic efforts are
 by the Government of a country to
 sh a common language, any language
 made to fill that position for some
 least, irrespective of its merit or
 . On the contrary, where government's
 are lacking or even half-heartedly
 out, the only language that can
 universal is the one that possesses
 ry qualifications. Therefore, in view
 fact that the Government of India has
 rest in establishing a universal langu-
 r India other than English, we are
 to the conclusion that the problem of
 iversal language for India cannot be
 by leaving it to spontaneous develop-
 unless there be some language which
 rently qualified for it.

In the above discussion, it is easy to

realise the necessity of studious efforts to
 adopt a suitable language. The problem can-
 not be solved by leaving it to the process of
 spontaneous evolution. We have seen that
 Hindi is already believed by some to be the
 language best suited for the purpose. Let us
 see how far this belief is justified by facts.

The language to occupy the position of
 the universal language, must have certain
 characteristics. First, let us see what the
 necessary characteristics are, secondly, whether
 the Hindi language possesses these charac-
 teristics and thirdly, whether any other
 language in India possesses them to a higher
 extent. If the Hindi language does possess
 them, it is high time to start some studious
 efforts for its promotion as a universal
 language. But if it does not, let us recog-
 nise the fact and redirect our efforts in a
 more promising direction. One thing, however,
 is obvious. The Hindi language seems to be
 more widely understood in different parts of
 India than any other language. However let
 us first see what other qualities are necessary.
 A language to be able to command the posi-
 tion of a universal language, should possess
 the following characteristics :

I. The universal language should be
 easy to learn. At present in India there is
 no common language as such and whichever
 language we choose as our future universal
 language, will have to be studied by those
 whose mother-tongue is some other Indian
 dialect. Hence it is necessary that it should
 be easy to learn. The British rulers are
 trying to make English the universal language
 for India. It is a fact that we do not want any
 of the Western languages to be our national
 tongue, for the simple reason that none of
 them are simpler to learn than any of our
 languages. On the other hand, if we are at
 all going to have a European language, let
 us at least not have the hardest one! The
 prominence that the English language has
 gained in Indian politics is due to its poli-
 tical status, not to its simplicity, or any other
 inherent merit.

II. To facilitate the introduction of any
 of the present languages of India as our
 future national language, it should have a
 generous stock of literature available for
 immediate use. There is no use trying to
 create literature in that language after
 deciding on the language. The stock should
 be ready and copious.

III. The language should also be
 homogeneous. By nonhomogeneousness is meant
 the uniformity of character throughout that

part of India in which it is spoken. It should be indistinguishable from its namesake in the neighbouring district

IV. There should also be a large percentage of speakers in that language to start with as it will promote the growth rapidly, once adopted. Now that we have analysed the important characteristics that a language should possess to ascertain her position as a universal language, let us see whether any of the languages in India possess them, and which one to a higher extent than the others. The English language, to begin with, has enough literature and is homogeneous in structure, but as regards simplicity or percentage of speakers in India it will rank far behind any Indian language. The only reason the English language presents an aspect of universality is due to its political status, not unlike Latin in the days of the Roman Empire. Now let us turn to Hindi or Hindustani, one of our own languages and see if it meets the above-mentioned requirements.

Hindi is a simple language but by far not the simplest. A man from Maharashtra will not be able to learn Hindi any quicker than he would Gujarati, or Bengali. Hindi grammar is full in every particular and none too easy to master in a short time for a man who is quite foreign to Hindi.

If we look whether Hindi has a generous stock of good modern literature to start with, it will compare very poorly with any of its sister dialects in North, Central and Western India. The fact is self-evident when we see that the choice is limited to very few books. Tulsidas' Ramayana is one of the few classical books which could be pointed out for studying in universities. Even then, Tulsidas' Hindi is old and archaic and would be of as much use to-day as Chaucer's English in any modern English-speaking country. The Hindi language of to-day may form a suitable means of conversation in the absence of other languages; but then this Hindi is neither classical nor literary. If India has to have a universal language, she certainly does not want the one that has been developed by its use by illiterate people.

Let us look at Hindi from the view-point of homogeneity. Without going into any deep investigation, every one is aware of the fact that Hindi is not homogeneous. The Hindi of Nagpur and Indore is different from the Hindi of Allahabad and still more so, if we go farther north. Nor is this difference a trivial or superficial one but according to the testimony of a Maratha gentleman, though a

prize-winner in Hindi oration at Bilaspur, was unable to understand a lecture delivered in Allahabad-Hindi.

As regards the last qualification, about percentage of speakers, Hindi may appear being spoken and understood by a large percentage in India. The spread of the Hindi language in India has been not unlike spread of Parsee communities. There is hardly a city of moderate size in India in which a single Parsee family could not be found. From this no one will infer that Parsees form a majority of population in India. Another reason for Hindi's apparent growth is again partly due to the influence of rulers. The majority of Sahibs and Maharajahs manage to make themselves understood to their servants—a majority of khansamas and chauffeurs being Mohammedans—Urdue Hindi. Hindi being the only language they come in contact with, whatever part of India they set foot on, and not having a better knowledge of any other language than Hindi, they naturally make themselves understood in Hindi, with the rest of their servants and other Indians. The above details will clearly show the reason for the aspect of universality which Hindi presents.

Now that we have considered all points for and against Hindi, let us see if there is any other language better qualified to be a future universal language. At this point one might be tempted to suggest Marathi, as were it not for a few drawbacks as regards simplicity, it could be easily recommended. But if Marathi were to be chosen as a universal language, any other dialect of Western India is just as good, neglecting the issue of simplicity, which occupies a prominent place in the discussion. After due consideration of these facts the language that would next strike any body's mind would be Bengali, or the language of the people of Bengal. It is superior to all others mentioned above as regards its characteristics, and we can safely admit the easy-working quality of the Bengali language. Let us, however, see how this language stands in comparison with other languages as regards the characteristics which are necessary for its introduction as a universal language.

The Bengali language is the simplest for an outsider to learn. It is doubtless true that if a Kanarese or some other South Indian were to learn any of the Central or Eastern Indian dialects, he will pick up Bengali a lot quicker due to its simplicity of grammar. The Bengalees have eliminated the conceit

gender altogether or to a very large extent. Many common words are employed to denote two different things. For instance the words "to eat" and "to drink" are both used by one and the same word meaning "eat". In the Bengali dialect even a letter is "eaten." These are only a few examples of its simplicity, but which could easily be verified by an actual experiment.

regards the amount of modern Bengali which is ready for immediate use, it can be compared with any of its sister languages, even with Marathi, which runs a close next to it in respect. Most of the best literature is modern, and there is no trouble of interpreting old and archaic forms which might be encountered in the old Marathi of Dnyanesh or old Guzerati of Samal-bhatta.

Bengali language is homogeneous and much so when compared with sister languages. The Kathiawari Guzerati is different from the Kutchi Guzerati and still more different from the Surat Guzerati, the latter being very similar to a form used by the Parsees.

The Marathi at Satara and Poona is distinctly different from that at Nagpur and Kolhapur, even though the difference may be small. Lack of homogeneity is not only bothersome to those people who are not in that language, but homogeneity is an essential feature for those who are. Hindi especially compares very poorly with Bengali in this respect. The percentage of speakers in the Bengali language is statistically more if not obviously more than for Hindi's apparent growth was noted above. Unlike the Hindustani-speaking people, most of the Bengali-speaking people are concentrated in their own province. To compare the area in which Bengali is spoken, it will show the reality of this point.

Those who are so far convinced as to the utility of the Bengali language being our universal language, may ask how a "great effort" can be made for its establishment in that position. Here comes a point

where the Bengalees will have to start with their share of the "efforts." Whatever may be the other accommodating features of the Bengali language, it has one serious disqualification; that is its alphabet. Just how and when it originated is of no consequence, but it is an evolution of the Nagari alphabet. If the Bengali language has to be made a universal language, its alphabet will have to be the commonest, that is the Devanagari alphabet. A Guzerati or Hindustani, a Marathi and even a Bengalee himself can read it. This will be the first and the only important step, and the Indian public will manage the rest. If the Bengalees would only realise how many people in different parts of India start to read the Bengali literature and have to give up due to the frills and fanciness of the alphabet, and have to satisfy themselves with English translations! Even the Germans have for certain purposes dropped their artistic alphabet for a simpler Roman alphabet. Many a Maharastrian, and a Guzerati has had to satisfy himself with reading Bankim Chandra and Tagore in the twisted and none-too-sincere version in his mother-tongue only owing to the impossibility of deciphering a rather artistic Bengali print.

If the above plan for changing the alphabet is adopted, it would not be surprising to find Bengali articles appearing in Marathi and Guzerati journals for the benefit of those learning the Bengali language.

In dealing with this subject the writer's knowledge was limited to the above-mentioned languages only. If any one after reading this exposition has in view some other language more simple and homogeneous, etc., he will do well to bring it to the notice of the Indian public, as the question never demanded better attention than it does now.

My thanks are especially due to Mr. Hari Pada Mukerjee, of Faridpur (now at Union University in America), for making it possible for me to write accurately as regards the characteristics of the Bengali language.

GERMANY, RUSSIA, INDIA AND THE LOCARNO TREATIES

By Dr TARAKNATH DAS, M.A., PH.D.

THE security pacts and arbitration treaties initiated at Locarno,* has been hailed as a great step towards European peace Mr Chamberlain, the Foreign Minister of Great Britain, at the annual Lord Mayor's banquet at the Guildhall has declared a significant warning against blocking the Locarno Treaties by the German nationalists. He said,

"No statesman dare take the responsibility of dashing from our lips the cup of hope raised at Locarno, and no nation dare face the load of obliquity which will rest on any nation which would deny to the world its greatest need and its deepest and profoundest hopes."

The London *Times* in a recent editorial, characterises the German nationalist opposition as unstatesmanlike and it is based upon a false conception of the meaning of the Locarno Treaties. It editorially says,

"The Locarno Treaty implies for Germany not as the Nationalists affirm, limitation, but liberation. It does not restrict Germany's liberty of action; it gives her a freedom and an equality in international affairs such as she has not enjoyed for many years."

However the German nationalists are opposed to the Locarno Treaties, to such an extent that they have forced the Nationalist members of the Luthor Cabinet to resign. If all other parties vote for ratification of the treaty, it will be passed by the Reichstag. But the Social Democrats have already decided not to vote for the Locarno Treaties unless the nationalists decide to vote for them. The Social Democrats feel that if they vote in favor of the Locarno pacts, when the nationalists refused to share the responsibility, the Social Democrats will later on be seriously attacked by the Nationalists "as traitors" and this will have an adverse result in home politics. Therefore if the nationalist opposition continues unabated and the Social Democrats do not change their present position the ratification

of the treaties may be blocked by Reichstag*.

It is not easy to enumerate all the substantial objections of the German Nationalists against the Locarno Treaties. (Space will not permit it.) But two of them have international significance, and they are (1) Germany's War Guilt Question, and her entry into the League of Nations and (2) the possible effects of the Locarno Treaties on existing and future Russo-German relations.

German Nationalists (in fact every German irrespective of party affiliations,) regard, it is a falsehood that Germany was so responsible for the World War. They want that the Allied Powers should make a declaration absolving Germany from this charge. They advocate that Germany must not enter the League of Nations until this is done, unless she is allowed to make reservations on the articles 16 and 17, of the League Nations which concern military and economic sanctions against any Power which may at war with any member of the League.

German Nationalists, following the teachings of Bismark, are pledged to oppose a policy which may lead to misunderstanding and conflict with Russia. German Nationalists regard that the Locarno Conference has been a great success for British diplomacy, which is now following an anti-Russian policy. The view, of the German Nationalists has been substantially strengthened by the attitude of the Soviet Commissar of Foreign Affairs, Tchitcherin who regards that, among other things, the Locarno Conference was planned by British statesmen to isolate Russia in World Politics, and practically to destroy the value of existing Rappallo Agreement. Tchitcherin came to Berlin via Warsaw to strengthen Russo-German friendship and to oppose all plans which might be regarded as steps towards detaching Germany from Russia.

The Rt. Hon. Mr. Ramsay MacDonald visited the Capitals of the Central European countries, especially Berlin, to counteract

* The Locarno Treaties will be signed in London in December, 1925, when King George will entertain the representatives of foreign Powers with a Great State banquet. The success of the Locarno Conference is universally regarded as a great diplomatic victory for Mr. Chamberlain, who on his return from Locarno to London was greatly honored by the King as was the case with Lord Balfour after his return from the Washington Conference.

* It is not improbable that Nationalist opposition will change its present attitude towards the Locarno treaties, as they did about the "Dawson Plan", at the last moment.

herin's activities against the Locarno Treaty, regards the fear of the Soviet states to be unfounded. In an interview in which he has been reported to say

speaking of Soviet Russia, Mr. McDonald said, "that country ought to come into European civilization, but if it is not coming in, the rest of us would have to do their best without it. Our policy was not realistic. It was dominated by a delusion of British enmity. Whenever we met together in any part of the world, Russia immediately imagined behind the British plans to strengthen the anti-Soviet movement. The reason for this attitude was that the Government at the bottom was in many ways the most typical bourgeois government in and in other respects it was still Tsarist in outlook. Its great fault was that it had not yet realized that there is a great movement in Europe. Soviet Russia, clinging to its old fancies, was one of the greatest obstacles to any of this movement."*

However, it seems to us that the *New York Times* (Paris edition) of October 21, 1925 fully substantiates the contention of the British nationalists and the Soviet Commissar for Foreign Affairs when it says,

"The Locarno treaties are ratified, the Bolsheviks are making a common cause with Germany, the domination of Asia and against European civilization, is an empty mockery."

Less an authority than Lord Grey of Arundel, in an address before the League of Nations Union at Manchester on November 11, has made it clear that one of the main objects of the Locarno treaties will be isolation of Russia.

"The Locarno treaties," Lord Grey continued, "entailed something much more than the Rhine frontier, which was merged in the much more important obligation to uphold the principle of arbitration in all disputes. One thing which would lead to certain to cause another war was the state of things growing up in Europe which existed before 1915, when Europe was divided into great diplomatic groups opposite each other armed to the teeth. Before Locarno, there was the greatest danger that that things might grow up in Europe again. We had been making separate treaties with Czechoslovakia and Poland, from which Germany was excluded. The result of that policy has been that Germany would become the center of another group of alliances to itself. In fact, they were on the way to separate diplomatic groups in Europe. We had made France and Germany into one group, and made it certain they would not have two other groups in Europe in future, in which Germany was in one and Germany in the other. Russia was the only great power in Europe outside the Locarno system. He trusted the effect of Locarno on Russia was that Russia would realize that she was not that her isolation was her own fault."

Times (London) October 28th, 1925.

Regarding Germany's entry to the League of Nations, Lord Grey uttered a caution against exuberance, as it was possible *this might be construed in Germany as if we thought that Britain or France was going to get some special advantage out of Germany's entry*.

The prime motive behind the Locarno Treaties, so far as British diplomacy is concerned, is to detach Germany from Russia. This is absolutely clear from the following extract of the substance of the speech of Hon. Ormsby-Gore, M. P., the Under-Secretary for the Colonies, one of the spokesmen of the British Cabinet, delivered at Manchester. —

"Referring to the Locarno Conference, the speaker said that today, for the first time for all too long, there was again a sense of security on either side of the Franco-Belgian frontier. Even more important was the drawing together of all the Powers of Western Europe in defence of Western civilization, which has been so rudely disturbed by the war. Things were not so secure as some were apt to think, and the solidarity of Christian civilization was necessary to stem the most sinister force that had arisen, not only in our lifetime, but previously in European history. *The question was: Is Germany to regard her future as being bound up with the fate of the great Western Powers, or was she going to work with Russia, for the destruction of Western civilization?*" The Foreign Commissar was brought from Moscow to try to prevent that. *The significance of Locarno was tremendous.* It meant that as far as the present Government of Germany was concerned, it was detached from Russia and was throwing its lot with the Western powers. Locarno had also achieved the reinforcement and strengthening of the League of Nations to a degree which most of them did not believe possible *so soon*."†

It seems to many that the policy of isolation of Russia may not help saving the so-called Western civilization. In this connection, it is very interesting to note what Mr. James H. Hudson has expressed in the *Manchester Guardian*.

"Mr. Ormsby Gore's statement in the Free Trade Hall on Saturday, (Oct. 24) regarding what he described as 'the issue at Locarno' is the more significant in that, the Under-Secretary for the Colonies is usually classified among the more careful members of his Majesty's Government. 'Locarno,' says Mr. Ormsby-Gore, means the detachment of Germany from Russia. *This seems rather striking confirmation of the oft expressed suspicion that the British Foreign Office has been less concerned at Locarno with the peace of the world than with such reshuffling of the weights in the balance of power that in the next war we shall have on our side our late enemy Germany against our late ally Russia.*"

* *The Times* (London) November 12, 1925. The italics are mine.

† *The Times* (London) October 26th, 1925. Italics are mine.

"The strangely changing kaleidoscope of allies and enemies which two hundred years of diplomatic effort have managed to secure for this country should specially have warned us against regarding the creation of a new friend as a cause for offence to others. But apparently Mr. Ormsby-Gore is quite untroubled by such reflections, and he at least cannot complain if Russia sees in British diplomacy what he himself sees. Do Mr. Ormsby-Gore and the Government for which he apparently speaks really believe that Russia will sit quietly twiddling her fingers while our Foreign Office pursues the policy of detaching from her those who upon every economic and moral ground should be her friends? The Russian menace was a dark shadow across our path for half a century. It seems from Mr. Ormsby-Gore that having disposed of 'German Menace' in Europe by making Germany our friend, we must at least make sure there is another menace to take Germany's place. Russia, with the access to the millions in China and India, can play the game."

"What madness! If the Under-Secretary for the Colonies is right, the peace carrillons which they rang when Mr. Chamberlain returned from Locarno were quite too previous. *The Pact, instead of a milestone on the road to peace, is a finger-post pointing to war and the destruction of civilization.*"

As the prime motive of British diplomacy to promote the Locarno treaties is to isolate Russia, (as isolation of Germany was the guiding principle of British Statesmen* when they brought about the Triple Entente in existence) it seems inevitable that there will be a future conflict between Britain and Russia. In that case, all members of the League of Nations will be called upon to aid Britain against Russia, unless Russia joins the League. Prof. A. Berriedale Keith points out that although Article 9 of the Locarno Treaty provides,

"The present treaty shall impose no obligation upon any of the British Dominions, or upon India, unless the Government of such Dominions or of India, signifies its acceptance thereof." However, India, in case of a war between Russia and Great Britain, will be subject to attack by Russia and her allies. "In virtue of their membership of the League of Nations, the Dominions and India might be called upon by the League to afford Great Britain aid if she were engaged in a war under the sanction of the League... in spite of distinct personality of the Dominions and India in the League of Nations, a declaration of war by the

King automatically places the Dominions and India in a state of war, liable to enemy attack and justifies the enemy power in dealing with Dominion citizens as hostile."

Thus the question arises, will the Locarno Treaties enhance the security of India?

In case of an Anglo-Russian War, (to the Locarno Treaties seem to be diplomatic preparation for it), Britain will carry on land, sea, and commercial warfare against Russia; and through the sanction of the League of Nations will force Germany to wage war against Russia. Will that be to the advantage of Germany? Does Germany favor the policy of a war with Russia? The German Nationalists, who admire Bismark as the great statesman, and the creator of the German Empire, will possibly oppose all commitments of the Locarno Treaties, which will morally bind Germany to fight Russia. Russo-German amity to the followers of Bismark, is the cardinal principle for German Foreign Policy. Bismark created the German Empire by defeating France in 1871. This victory of Prussia, was possible largely because of the benevolent neutrality of Russia, which was really purchased, when Prussia refused to join Britain and France against Russia during the Crimean War.

It is universally admitted in Germany that it would be unwise in the long run, to follow a policy which will lead to Russo-German enmity. However, the Locarno Treaties may be ratified by Germany because the German statesmen dare not displease Great Britain and reject them. They fear that Germany will also incur the displeasure of America, if she rejects the Locarno Treaties. The German Statesmen are afraid of a situation which may lead to bringing about financial pressure on Germany by England and America. They also think that by signing the Locarno Treaties, they will be paving the way for a possible Anglo-American-German co-operation in World politics. It will be an Anglo-American-German alliance (written or unwritten), primarily directed against Russia, promote world peace?

REVIEWS AND NOTICES OF BOOKS

Books in the following languages will be noticed: Assamese, Bengali, English, Gujarati, Hindi, Malayalam, Marathi, Nepali, Oriya, Punjabi, Sindhi, Tamil, Telugu and Urdu. Newspapers, schools, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazine addresses, etc., will not be noticed. The receipt of books received for review will not be acknowledged nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer, etc., according to the language of the books. No criticism of book-reviews and notices will be published.—
[M. R.]

ENGLISH

DAYS IN LATIN AMERICA. By Webster F. 226 pp. Missionary Education Movement, the United States and Canada, New York 1900, paper \$75.

It is primarily with the object of pointing out the need for evangelical missions in South America that this well-written little book furnishes a mass of valuable general information on the continent to the south of us, which will serve not only to educate the stranger to Latin America, but will also refreshen the memory of the reader somewhat familiar with that territory. The first part of the book is devoted to a description of the physical and political relation of Latin America to the United States, racial backgrounds and other factors. The development of the major religions is traced from the time of the Spanish conquest to the present. In the remaining part the author treats of the educational and social situation, the Catholic influence from the times, and its virtues and weaknesses.

The missionary movement in Latin America has in many years attained considerable importance, and is decidedly of benefit to the United States. It maintains contacts between the American people and value both to ourselves and our neighbors. From the very beginning the Latin people have always felt their closest bonds to Europe. And it has always been to them that they have looked for cultural and moral guidance. For the first time they have now know us better, and realize that we, too, have something to offer. Any work which develops this bond and to bring us into a closer relationship deserves the attention and moral support of all of us.

H. M. BRATTER.

LETTERS, MURKINS AND ROMANCE OF A By Maurice Chudeckel. 311 pp. Boston. H. M. Bratter Publishing Company, Inc. \$1.50.

Our view of ourselves as others see us is a faculty which we possess. But occasionally we are surprised to hear from the lips of strangers to our impressions favorable and unfavorable and gives to the newcomer. Favorable impressions are always welcome; unpleasant ones are always to be discounted, if not entirely to be disregarded, without thinking, we are apt to credit the whole or in part to the imagination of the person who relates them. Most of us never change our view of the life about us which is given us

in grammar school days. We are permanently prejudiced in our own favor.

Regardless of whether we accept criticisms in the spirit in which they are given, or whether we entirely deny their truth, unknown to us they each time leave their mark and thus accomplish a good purpose.

Mr. Chudeckel's is a unique story, written in the form of a series of letters from a Russian immigrant in this country to his friend and comrade at home. As explained in the introduction, these letters form a true story. Written originally in English, as is the custom with many Russians of the better class, they have been changed only in the names of places and of persons. The interest of the story grows constantly from the first scene on board ship bound for America, until the last dramatic pages, entirely unforeshadowed in the earlier part of the book.

In this volume the author has ably and convincingly revealed to us some of the anomalies of our democracy,—equal rights for men, liberty and tolerance, and racial prejudice, religious intolerance and the whipping post. What is pointed out deserves our most serious attention, and we owe a debt of gratitude to the author, as to every stranger who brings to our attention evils of which we may or may not be aware.

H. M. BRATTER.

THE SECRET OF THE VEDANTA, PART I: THE IDENTITY OF JIVA AND BRAHMA (SOUL AND GOD) TRANSLATED INTO ENGLISH: By K. R. Araya, B. A. from the Tamil book of Sri Paramahma Sacchidananda. Pp. 498. Price Rs. 2-8.

The author deals in this book with miscellaneous subjects—from the "State of the Universe before Emanation" and "The Essence of the Upanishads" to "Tooth-powder".

MAHESCHANDRA GHOSH.

THE ENGLISH SPEAKING NATIONS: By G. W. Morris M.A., and L. S. Wood, M.A. published by the Oxford University Press. Price 3/6 net.

The central theme of the book, according to the authors, is "not the military achievements of our ancestors (of the British), but the development of the Commonwealth ideal and the gift to the world of the sense of imperial trusteeship—an imperial conception, based upon nationality and self-government." They also claim it to be "the supreme achievement of Britain that she has given a new meaning to the word 'Empire'." It is out of place here to discuss the validity of this assertion, the Book is very well got up and profusely illustrated.

A NATIONAL SYSTEM OF TAXATION. By A. Ramaiya M.A. Published by P.S. Mahalinga Iyer, 1110 North New Street, Madras.

The author does not claim any expert knowledge of economics, but shows a better grasp of his subject-matter than many economists. The greatest happiness of the members of the State should be the guiding principle of all State activities. The subject of taxation is not exempt from this. The author has worked out his ideas along this line.

THE GLEN IS MINE AND THE LIFTING.—TWO PLAYS OF THE HENRIQUES. By John Brandt. Constable and Company, London 6s.

Of the two plays in the book "The Glen is Mine" is a comedy in three acts and the other one "The Lifting" is a simple play in three acts.

The comedy is interesting reading and it should be doubly so in real acting. The characters are all lively. "The Lifting" though a 'simple play' is none the less interesting. The plot is a simple one, but very tense and finely woven. On the whole, this book of two plays should have a warm reception from play-goers, players and the general reader of literature. Brandon is not a new name in the field of present-day English literature, and the present volume will add to his already established fame as a novelist and dramatist.

The paper and printing of the volume is all that can be desired and special note should be taken of the paper binding—it is a departure from the old tradition of bookbinding—the paper cover is beautiful and somewhat oriental in tone.

HUMPHREY CLINKER—A NOVEL. By Tobias Smollett. This book is No 210 of the famous Oxford World Classics Series (2s.).

Humphrey Clinker is considered to be the best novel of Smollett. According to Hazlitt, this book is "the most pleasant gossiping novel that was ever written." We hold the same opinion about the book and the Oxford University Press deserves our most grateful thanks for bringing out such cheap and at the same time beautiful editions of famous masterpieces of English Literature.

WOMEN OF BENGAL—A STUDY OF THE HINDU PARNASINS OF CALCUTTA. By Margaret M. Uquhart. The Women of India Series. The Association Press, 5, Russel Street, Calcutta Rs. 1-12. (1925)

The authoress has tried her best to present a true picture of the Woman of Bengal in her natural setting, the Bengali home. It is a pity that Englishmen and the Englishwomen have a very quaint idea about things Indian—specially about Parnashin India. Mrs. Uquhart is in Bengal for the last 22 years and has mixed with Indian Women, not in the missionary spirit of preaching the holy gospel to them, but as a student and friend. She has not tried in the least to compare Indian women with European women and thus lower the former in the estimation of the public outside India. She has written of the shortcomings of the Bengali Woman, but that with a friendly spirit. The greatness of heart and lovable nature of the Bengali Woman have impressed the authoress much.

The book is illustrated with several very beautiful pictures. But one thing we must mention here. The illustration "Behind the Parda"—A Village Type" by H. Mazumdar (p. 96) is ill chosen

and the publishers would do well if they omit picture from the second edition of this beautiful book. "The Village Type" is not a village type, but an imaginary vulgar production of the artist. This is the only discordant note in the whole thing and it is misrepresenting the thing in a most distasteful manner.

However, the book is worth reading both Indians and Europeans, and we congratulate both publishers and the authoress on the success of their labour and hope to see the second edition in no time.

GLIMPSES OF AMERICA: By Dr. Sudhendra Prasad, Ph.D. Lecturer in Political Science at the University of Iowa U. S. A. Published by Messrs. M. C. Sarkar and Sons, 90-2A Harrison Road, Calcutta. Price Rs. 3 (Pp. 240. 1925.)

Dr. Bose in his newly published book "Glimpses of America" gives snap-shots of different aspects of American life and institutions and interprets their significance for Young India. Some chapters of this book originally appeared in *The Modern Review*, *Welfare* and other Indian periodicals. Edwin D. Starbuck of the State University of Iowa in his introduction to this book surveys the career of the author in the U.S.A., and presents splendid tributes to Dr. Bose. It is also worth of note that, in spite of the humiliating decision of the U. S. A. Supreme Court which has annulled his citizenship, Dr. Bose has written the sketch in a fine spirit. We confidently expect that it will well got-up, extremely useful and illustrated to will receive a wide circulation.

1926 DIARIES. Published by Messrs. M. C. Sarkar and Sons, Calcutta.

Ghosh's Kohinoor and other diaries published by Messrs. M. C. Sarkar and Sons have maintained their position as popular diaries. They are issued in various sizes to suit the requirements of customers of different classes.

INDIAN CURRENCY: By A. K. Sarkar, M. A. Company, 4/4A College Square, Calcutta. 1s. only.

A few questions of the present Currency Commission have been answered successfully in this little book. The author has done well to explain some difficult terms, used in the book, in the Preface. This will help the general reader considerably. The author has also discussed the possible systems for India—the Silver Standard, Gold Exchange Standard and the Gold Standard. Like many other economists, the author is of opinion that the Gold Standard will be the solution for the Indian monetary difficulty. Study of Indian Currency ought to go through this monograph.

HINDI.

THE HISTORY OF RAJPUTANA (FASCICULUS). Hindi: By R. B. Pandit Gaurishankar. Printed at the Vaidik Press, Ajmer. Pages Price Rs. 6.

The author of this bulky volume is a well-known Hindi scholar and antiquarian whose work '*Pragati Lipimala*' as well as his several researches

have already earned for him a high reputation among scholars. His new undertaking, *History of Rajputana*, the first volume of which under notice will considerably enhance his reputation. Col. Tod's *Rajasthan* was hitherto the only work to which students desiring to know the history of the war-like race of Rajputs could turn with advantage and pleasure. The work, though not so fully and sympathetically written, had one great merit, viz. that it was written by a foreigner who was not inadequately acquainted with the social customs, language, literature, and history of the people whose history he took upon himself to write. Despite this drawback, his pen produced a creditable work, the accuracy and excellence of which have remained unimpaired to this day. Now, time has surely come for its revision in the light of the store of information made available by researches in the past, and further it became necessary that the information collected and properly arranged be made available to the general public not acquainted with the English. R. B. Pundit Gourishankar was well fitted for the work and the Hindi-knowers will be glad to know that the work so far done sufficiently justifies the expectations of him.

It is regrettable, however, that though the author has taken every care to mention the facts of Rajput history and of the events which are borne out by truthful investigations, his knowledge of Maharatta history is very deficient. He has not taken sufficient care to ascertain the truth regarding the history of the Mahrattas. From the distortion or mis-spelling of names of well-known personages in Mahratta history, such as Sambhuji (son of Shivajee the Great), Chhatrapati Shivajee's brother) and Dadojee (Shivajee's tutor) whose names are correctly given as Shambha, Vyanka, and Kondeo, there are several false statements regarding Mahratta history which are utterly intolerable. For instance, in 1687, the author has made an astounding statement that on the death of Shahu Maharaja his son, the Prime Minister Balaji, usurped the title of Maharajadhiraj and in 1807 (*sic*) made Poona his capital. Now, as a matter of fact Balajee was never the King of Satara, had never the title Maharajadhiraj. Their title was Chhatrapati Maharaja. Balaji never held that title, nor was there the least possibility of his ever successfully doing so in the face of several war-like and loyal Mahratta chiefs who were powerful. Poona was never the capital of the Mahratta Empire in the time of the Peshwa's residence in Poona until 1807, but in 1736, and it was first taken over by Balajee but by his father Bajee Rao I. without express permission of his master. What the author has stated is mere fiction or distortion. Such mistakes happily are not numerous, but are just sufficient to shake the reader's confidence in the reliability of the contents of the work. It is to be hoped that in successive volumes the author will exercise greater care in ascertaining facts.

V. G. APTE.

GERMAN

BRUCHTE INDIENS IN DREIER GEOGRAPHISCHEN
ABHANDLUNGEN DES KOLONIATIN-

STITUTES XIX HAMBURG, REIHE E. Bd. 3: Dr. Th. H. Engelbrecht. Hamburg, 1914, Text 271 pp.; Atlas 23 Maps.

This most interesting book, containing more than 23 maps and 55 tables is based upon generally accessible statistical material. The author boldly endeavours to give a scientific description of agricultural India, really going to the bottom of facts. He deals with that vast part of the world, bearing the name of India, which name represents at the same time an immense number of languages and religions, mountains and plains, deserts lacking in water and population, big towns roaring with trade and business, territories which have been thickly populated and richly settled for a thousand years and primeval forests hardly ever touched by man's foot.

A farmer is the author of this book, written with the most careful accuracy and patience, but at the same time boldly planned, a man well-known for economic and scientific work during long years. He has already published a series of remarkable books, among which the "Landbauzonen der aussertropischen Lander" (The Agricultural Zones of the Nontropical Countries) is considered as a first rate standard-work.

Only such a well-proved specialist could succeed in giving a description of India without having ever himself seen those immense regions. His own scientific perception was so profound in every direction, that we might expect him to sift the immense statistical material thoroughly, giving most important views. In a measure unknown as yet, he has been always accustomed to use and utilize meteorological facts and points of view as well as those of botanical geography for illustrating his agricultural material.

Indians who are scientifically and economically interested and educated will find in those precious statements many economic facts, they had hardly ever had an idea of. They will find points of view from which they can get a survey that might never have been acquired before. In contrast to other scientific works before all English books, the author values a series of plants only used in native agriculture, for instance, the different sorts of millet, Indian beans, from the catjang to the ronnet and from the native vegetables and spices to the dyewood and to the distribution of tobacco and poppy stimulatives that are of great importance also for India.

Thus, in contrast to the general rule of statistical statements, the accent is not laid upon the more important commercial plants, but just upon the relations of the different plants used in agriculture to each other, to economic life and also to the population. That it was done with German solidity seems to have been thoroughly misunderstood by English science. In England, the book was quite recently criticized and unfortunately the effect of the World War has created a certain irritability, regrettable, but in some way comprehensible. That is the only reason to explain the peevish and and, considering the value of Engelbrecht's work, quite unjustifiable way in which the book was criticized by a first-rate English authority, the "Journal of the Royal Geographical Society".

The meteorological data, for instance, quoted by the English critic, have been all misunderstood, and, what is worse, they seem to be accentuated only to suggest to Englishmen that this solid and

fundamental work is in every way not worth considering, the principal economic facts (say the interests of English commerce!) having been, as the critic says, hardly dealt with.

But just for that reason the work must be recommended to scientifically educated Indians. There can be no doubt that it is of great importance for India and its indigenous population. For the author wrote it to the main end of thoroughly investigating the nutritional situation of India and its agricultural base by means of modern agricultural science.

BERLIN W 50, SCHAPIERSTR. 33

PROF. ED. HAHN

GUJARATI

DWARKA DARSHAN. By *Hathubhai Anthabhai Patel, B. A.* Printed at the *Ajga Sudhakar Press, Baroda*. Pp. 136. Thick card bound. Price Re 1-0-0. (1925); with pictures.

This book is more than a guide to Dwarka, as it treats of the celebrated place of pilgrimage from various points of view, and puts in a plea for improvement in the administration of the different charities where he finds room for the same.

SABALINI. By the late *Damodardas Khushaldas Botadkar*, printed at the *Lohana Steam Printing Press, Baroda*. Paper cover. Pp. 110+123+11. Price, Re 1-0-0 (1925).

Kavi Botadkar took his place amongst the well-known modern poets of Gujarat by his *Rastarangini*, which by now has run into a third edition. The collection of poems appearing under the above heading represents his work prior to the wave under the influence of which he produced poems in the *Rastarangini*, and as such represents a different feature of his work, the poems are all of a high order, all the same. The great value, however of this book, consists in the long introduction of nearly 110 closely-printed pages, on Botadkar's poetry, contributed by a brother poet, *Narsinhrao B. Divatia*. His whole work is submitted to an intelligent analysis, and its beauties brought out in a way in which only a master-hand can do it. It will for all time remain a finger-post for greeting the reader in ways he should go in appreciating this poet, who knew much Sanskrit and little English and still could come up to the standard of a scholar educated on modern lines.

THE CARE OF THE TRUTH. By *Kaikhurus Dorabji Jila, of Navsari*. We have already noticed the first edition of the book. This is its second edition.

SHRAUBHAGYABATINTU SANSARCHITRA: the biography of the late Mrs. Manekbai Kabanji Dharamsi, gives in detail how she educated herself and made herself useful to her sisters both in Bombay and in Kathiawad. At one time, she took an active part in social life of this city and is still remembered here for the courage with which she did so.

SWARGA JAYANTI OR ADARSA NI KATHA. By *Chatala Chandra Nagar Dwivedi*, printed at the *Aditya Printing Press, Ahmedabad*. Cloth bound Pp. 251. Price Re. 1-8-0. (1925).

Under the garb of a novel, the writer discusses Vedant and Yoga. It has always been found that

such a hybrid satisfies neither the cannon of philosophy nor of fiction, and the reader is simply bewildered to find out as to where he is. The bewilderment is, however, lessened in some cases where passages, comparatively simple and understandable, relieve the technical aspect of the subject. The writer says that the present work is but a fragment and more is coming. We wish him to live up to his expectations.

The Jaina Niti Pravesha, and Kumarika Patro, (Letters to a Girl) are two little brochures published by Mr. Mavji Damji Shah. The first teaches morals, and the second are pieces of advice given to a girl in the shape of letters.

NARSINH SAR: By *Harishankar Trivedi*, printed at the *Saraswati Printing Press, Bhabnagar*. Paper cover. Pp. 111. Price Re. 0-6-0 (1925).

An anthology of the poems of Kavi Narsinh Mehta, is a good idea, and this compilation is thoroughly representative one.

INTERESTING STORIES. By *Gokuldas Dwanikar, Ranchura*, published by the *Sharda Office, Rajkot*. Thick card board, with pictures. Pp. 200. Price Re 1-8-0. (1925), with an introduction, by *K. Munshi Esq., Advocate*.

The stories are interesting and bring out certain welcome traits of the old and indigenous tribes inhabiting Kathiawad, such as the Mers and the Ahirs where men are brave, honest, and truthful and women equally brave, honest, truthful and beautiful in addition. The literature of stories, however, round these tribes is entirely oral and requires to be preserved in print.

Defeated Gujarat. By *Thakkur Narayan Vasari*, printed at the *Gujarati News Printing Press, Bombay*. Paper cover. Pp. 319. Price Rs. 1-0-0 (1925).

A fascinating chapter in the early history of Gujarat, the 8th century, is narrated in this novel. *Supal, Vanraj, Anahil, Champaksinh* were some of the heroes who undertook to free Gujarat from the foreign yoke of *Bhuvad Solanki* and the book deals with their adventures and struggles. The writer has gone to other historical sources for his subject, and tried to present it in a popular form; the great obstacle, however, in his way, is his stilted, artificial language, which scares away those classes of readers whose sympathy he wishes to enlist.

We have received the following books from "Society" for Encouragement of Cheap Literature.

1. *Vir Durgadas*. 2nd edition.
2. *Mohan Samrat Akbar*.
3. *Sri Shivaji Chhatrapati*.
4. *Swami Ram Tirtha, Part IV*.
5. *Pritamdas ni Vani*.
6. *Short Stories, (Samajik)*.
7. *Swarga nun Viman*.
8. *Swarga ni Kunchi*.
9. *Swarga no Khajano*.

They are reprints, except 4, 5, 6. *Pritamdas ni Vani* deserves special mention, as he is a well-known and popular Gujarati poet of the old time. A collection of his verses was badly wanted and the society has supplied the want. The introduction is intelligently written.

Bodhak (बोद्धक). By *Chhaganlal Thakurdas*, printed at the *Surat City Press, Surat*. Paper cover. Pp. 16. Unpriced. (1925).

useful and sound pieces of advice to the less and advanced people of both sexes are in this little book on such varied subjects, as, care of teeth, ears, throat and nose, observing certain principles, etc.

K. M. J.

TELUGU

INTRODUCTION TO THE HISTORY OF TELUGU
Vol. I. By Bhogaraju Narayanamurti.

This is a collection of a series of literary essays published in the Bharati monthly magazine. With the laudable notion of writing a detailed comprehensive history of Telugu poetry. In this introductory volume, he has given his views on the evolution of poetry and the qualities which make it a pleasing poetry ought to possess. He has followed the old-fashioned method of dividing the history of poetry according to the patrons, the Chalukyan princes, the Chola princes, the Vijayanagar emperors and the Marathas, he has attempted to construct a division of the history into the different ages—the age of Nannaya (1022-1250) the age of Takkanna (1250-1350), the age of Yerranna (1350-1440), the age of Potana (1440-1520) the age of Peddanna (1520-1600), the age of Veerasalingam (1600-1880) to the present age. This scheme, no doubt, enables him to give a clear notion of the poetic talents, the character and organised social life of the Telugus. Often the previous writers have presented a distorted view of the various writers. They have sometimes included base metal in their treasury of gold. We hope, however, this volume should be more discriminating in his

B. RAMACHANDRA RAO.

GERMAN-ENGLISH-FRENCH.

MEN UND MENSCHENWERKE (MEN OF TO-DAY AND THEIR WORKS): A New Encyclopædia in German, English and French. Editor—Arpad Szenes. Vienna 1925. Vol. II, pp. 472.

This new encyclopædia, of which the second volume is before us, is well got-up. The binding is of linen with leather back and leather corners. The paper, printing and illustrations are excellent. The size of the page is about 12½ inches by 9½ inches. The work is tri-lingual and will consist of ten volumes. It claims to be the first attempt to present a true picture of present-day culture in all its branches and ramifications. "All the great figures in the intellectual and cultural world of to-day are delineated in word and picture, an imposing monument indeed. The detailed biographies, which are compiled by scholars and experts of high standing, the beautiful photographs and the original research articles of the prominent men and women of the day give a complete and comprehensive picture of modern intellectual and economic life, of the channels along which our culture flows, and of all the wonderful achievements in science and art."

It has been highly spoken of by a whole host of famous men and newspapers, including Edison, Galsworthy, Maxim Gorky, Sven Hedin, Sir Oliver Lodge, Nansen, Poincaré, Romain Rolland, etc.

The present volume contains a good life-sketch of Sir J. C. Bose, and an article by him on Plant and Animal Life.

ENGLISH.

Raja Rammohun Roy, His Life, Writings and Speeches, with a biographical sketch. Cloth. Pp. 340. Rupees Thre only. G. A. Natesan and Co., Madras.

This is a very useful publication which all who do not possess previous editions of the English works of the great Indian religious, social, political, educational, and administrative reformer, and scholar and author, would do well to procure.

The publishers are, however, wrong in claiming that it is the first one-volume edition of Rammohun Roy's English works. The Panini Office of Allahabad published such an edition years ago, which contained all his English works, which Natesan's edition does not. The Panini Office edition contained more than a thousand pages of small print.

INDIAN INFLUENCE ON THE ART OF INDO-CHINA.

Translated from the French.

By JADUNATH SARKAR

George Groslier, Director of the French Indo-China, has published a book (*Recherches sur les Cambodgiens*), giving a minute study of the life and character of the Cambodian People with a very large number of illustrations, many of which are drawn from ancient and mediaeval sculptures. The most recent extant belongs to the 7th

Century A.D., and from it he draws the following conclusion:—]

THE religion, too, is far from being spontaneous and primitive. We discover a *soma-sutra* on the north face of the tower B [at Hanchai] consisting of *makaras*, a person

lying on the many-headed serpent carved on the lintel of the cellule. The characters and text of the inscription [dated the first half of 7th century A. D.] settle for us the cult and its Indian origin.

We cannot, then claim, in spite of the ancient date of Hanchei—than which none in Cambodia is older,—that the little group contains the origin of Khmer architecture. In spite of the extreme simplicity of its plans, it does not belong to the stage of commencement, but marks a step which is the first accessible to us, and at which the sculptor and iconographer had [already] made themselves expert in their art, just as the architect had done in his. And in that the carpenter predominates.

Since it is in India that we ought to search for the past [development] of the sculptor,—and it may be, of the architect too,—let us take an account, with the aid of exact facts, in what measure Cambodia is indebted to monumental India. No instant can be chosen in preference to this, no epoch is more propitious for that research, than the beginning of the 7th century, and no Cambodian group is more qualified than Hanchei to contain both the traces of the still-living nativism of the indigenous race and the foreign influences at their beginning. Foreign formulae can, in effect, be so much the more visible in actual occurrence as the power of the Indian cults develop and prosper, as the country is on the high road to civilisation, and as the wealth and might of the reigning kings are attested by the texts.

The alphabet of Southern India [used in the earliest Cambodian inscriptions] and the termination in *-varman* of the names of the kings from the 4th century in Cambodia invite us to traverse the Dravidian country at the epoch of these Pallava monarchs who designated themselves *varman*. It is, in deed curious to find on the coast of Coromandel a [Mahendra-varman I [reigning] from 600 to 25, when at the same moment in Cambodia Chendravarma Chitrasena, himself the son of a Viravarman, was reigning (about 610).

In the Pallava country and in the period high terminated in the 7th century [there is] all one architecture, and all the monuments of the ancient city of Mavalipuram—"Seven Pagodas" to the north of Pondicherry, and those of the capital Kanchi offer themselves to us for comparison. But in order to act with all the certainty desirable, we have also searched for their ancestors, be-

cause these edifices are not themselves precisely original. They have benefited ancient influences, and at least the caves are themselves modelled on the caves of north-western India from the 1st century of Christ.

Undoubtedly, I could even use the stupas of brick to imagine the origin from Sanchi of the use of these in stone at Hanchei B. But that use the Khmers as well have borrowed from the country or they may have evolved automatically in the country where clay abounds, from pots in primitive *terra cotta*.

The *rathas* of Mavalipuram, namely Dharma-artha, Arjuna-ratha &c., give the square plan, the cube and the pyramidal decreasing grades [found] at Hanchei. On the other hand, the *rathas* are made of a single block of granite. Hanchei is probably built [of separate stones], and four centuries have not more subdued the influence of A than that of B. The primordial element of that conception in Cambodia, namely the cubic cellule, and its mode of assembling the stones, is unknown at Mavalipuram. Also if it has no suggestion of a pyramidal form on a square base, the Khmer may very well mark in the origin a deliberate independence and not take from the foreigner (i.e., Indian) anything except the pyramid.

Now, from Hanchei that independence in what concerns the other architectural elements comes to grow very sensibly. The Cambodian built a gate of which the lintel and jambs are unknown in the Seven Pagodas. He comes to add the novelty of a high front there, as one sees it on tower B. He omits the peristyle in colonnade, the riches, the pillars,—all the porch (in short) which is verily the essential characteristic of Pallava architecture before the 7th century.

In decoration, the sculptor, however, cannot have the same independence and he marks with the help of his chisel a striking resemblance between the Hanchei edifices and those of Mavalipuram. The god [Vishnu] reclining on the serpent in the cellule, whose head rests on one of his hands, while the Naga expands his hoods, is found not only in the cave of Durga in the Seven Pagodas, but also at Ellora in the cave of the Avatars. This very cellule is adorned with projecting mouldings or fillets, two and two, high and low, and the pilasters filled into grooves (which correspond to the cover-joints, in carpentry) seem to pass under the

is profile [of a cornice moulding] which it terminates are adorned with carved decoration in a slight low relief. The whole seems literally to be from the Pallava *rathas*.

Come down to tower A [at Hanchei]. On the bare part of the wall, behold the cornice par excellence; one band, one new band, and one projecting dripstone.

Is there in the Pallava country at present? *Mandapam* and *Ardha-mandapam* flat covertures made of large flagstones. Any flat coverture in Cambodia. But in going towards the North [of India], always on the coast, east of the Deccan, so propitious to the Far East, [namely] in Orissa, to the tower, corbelled, rough hewn [in sandstone] which is in use. We must not forget that we have arrived at the 7th century, precisely at the same epoch in which the alphabets of North India appear in Cambodia, with, it seems, a revival of Indian Buddhism. We should not forget that in the *nagari* country at Puttadam we have seen temples inspired by Dravidian art. That is to say, at the moment when Cambodia received directly or indirectly from India a new blood issuing from the North, then we may without much surprise find arriving to the rescue of the Khmer architecture the conveyor of blocks from Orissa, who has lent him [the secret of] the construction of the tower by horizontal platforms of unworked blocks assembled at random. But this new initiator possesses an individual art. If he receives inspiration from the Dravidian, he also asserts his own freedom. We see his theories accepted in Cambodia [due] consideration for the times and needs? The Khmer does not allow him a prosperous career [lit, luck], any more than a Dravidian colleague. He accepts from the process, but refuses the elevations of the temple without stages (however characteristic) which is crowned by a dome, as well as the series isolated by a corridor running round them. In contrast with the Pallava temple of Kanchi, namely the Vaikunthapuram, the Cambodian never built with posed sanctuaries, never with interior pillars; never with monumental lions, rising from the walls or supporting pillars, never oblique stairs in the earth level of the sub-basement, never with round or polygonal pillars or attenuated shafts. What

is extraordinary is that the Khmer seems to act in opposition to his Brahmanic initiators every time that he can do it.

In the 7th century, Cambodia is known as already a civilised country and not one covered with nothing but huts. Palaces, and it may be temples, of brick or wood were numerous; the Chinese [writers] have been unanimous in saying so to us. Now, all the archaeologists of India are also unanimous in recognising that the Indian edifice of the 3rd century B. C. [as seen] in the rocks where it is sculptured, imitates the pre-existing or contemporary edifices of light materials. Mavalipuram copies that perishable construction [in] the interspaces between the monoliths or translates it in the adjusted blocks of the Shore Temple. Every stage of the *rathas* bears it in reduced forms. It is the *Pancharam*.

Thus, since it is impossible as yet to know to what exact epoch the arrival of the first Indian in Cambodia goes back,—we ought to inquire if that Hindu, before inspiring the use of the rough stone (*grus*), would not have himself constructed pavilions of wood or of bricks, (which have now disappeared) and which were in the style of his own country; popular houses, temples, or palaces.

Since it is the Coromandel coast which reveals to us the origin of the decoration of Hanchei and that without contest and with an inexhaustible prolixity, let us try to imagine if at least the Pallavas were for a long time in the country of Naga-raja Khmer, —it being made perfectly clear that the solution allowable in the actual state of Indian history would have only a relative and entirely moral value.

The Pallavas did not construct at home in rough stone before the end of the 6th century. It is in that epoch that this people attain to their climax, which indicates an ascension earlier, a period of prosperity which dates from the 4th century,—a period of wealth, of happiness, and national labour, little favourable to mass emigration. What followed it in the 6th century? Wars. A century earlier the situation was practically ruined, and the Kadambas had vanquished this happy people. At the opening of the 6th century, Kanchi the capital is destroyed, burnt down by Pulikesi, the Chalukya prince. From 625 to 645 Narasimha-varman I, tried to re-establish the glory of the Pallavas, but in vain. It is precisely, during the 6th [? or 7th] century—so disastrous to the sculptors of the *rathas* [at Mavalipuram]

puram], when Kanchi has been burnt down by the Chalukya arms, that the moment should have come to emigrate and to try fortune elsewhere, whilst the enemy was advancing over the [home] land. All construction comes to a dead stop, marking the end of the Pallava monumental art. The sea is there, the Golden Chersonese is the East, the *Sarana Bhumi* sung by the old Indian bards.

Now, we know in a sure way that it was in that century [the 7th] and the commencement of the next, that Hancher appears with the Dravidian decoration and that the first Khmer *Varman* Kings of the inscriptions reign.

About 640, Dharmapala of Kanchi, the enemy of Hinayanism, in effect quitted the Dravidian country to go to Indo-China or Sumatra. Between the 4th and 8th century approximately, the Khmer has acquired all the elements of his architecture plans, elevation, processes. The country being rich in rough stones of all kinds, and Brahmanism being on the increase,—that same Brahmanism which had in India made general the use of undressed blocks of stone,—here are the new determining conditions from which the great monumental art of Cambodia comes to flow. The epoch of assimilation and of discoveries is closed, that of realisation begins [in the 9th century].

One fact is certain the second half of the 9th century and the 10th century are the age in which epigraphy places the climax of Shivaism in Cambodia and in which we meet with the tower with four faces.

GROSLIER'S CONCLUSIONS.

These reserches show, otherwise than by mere supposition, a Cambodia artistic and flourishing, a mass of artisans, clever and fervently faithful to the service of an aristocracy that was half-Indian and half-native whose sole preoccupation (as proved by the facts) are to build temples and embankments, to live in luxury, to use elegant and always decorated utensils, to accumulate riches and religious merit.

Such a gorgeous programme could not possibly be realised without war with foreigners, whether for acquisition or for defence. The bas-reliefs and certain inscriptions certify that it was very much so... Now, a state of war and this artistic state—which only peace and abundance of handi-

work can establish,—could not go hand in hand. Either we are in the presence of an extraordinary historical exception, or we ought to recognise in Cambodia a civilisation more ancient than it is customary to think it, above all among peoples who were conservative par excellence and relatively slow in evolution. The second hypothesis, which an argument of another kind also supports seems to me more natural than the former.

In the course of my progress, I recognise that I have run against certain ideas hitherto accepted. It has seemed to me that the influence of Southern India [or Cambodia] was no more than local and accidental compared with that of Northern India; that this [North Indian influence] from before our era and up to the appearance of the Thai barrier, must have regularly touched Cambodia, and that finally the land way from the Ganges to the Mekong must have been more frequented than the sea-route from S. India.

On the other hand, I have been led to give absolutely up the opinion generally held that without Brahmanism the Khmer would have been non-existent. I believe, however, that the Chinese influence on Cambodia equalled, if it was not superior to and unquestionably more ancient than the Indian influence.

Also there is a less exclusive opinion that we have accepted, namely that the Indian has only modified a pre-existing national art,—an art of which the individuality and independence reveal themselves from the first to the last day; that the number of immigrant Brahmans in Cambodia had always been very limited, though their authority might have been felt without mixture during some centuries, and that their genius had found, for being served worthily, a people admirably prepared, and so to say predestined. Thus, in that fecundation of a ground where Indian thought has germinated so easily we ought to give to China an active and time-honoured role which the Indianist writers are too much in the habit of neglecting.

After having reduced the Brahmanic influence to more reasonable proportions, it is our duty to render to Buddhism greater merit and a priority which the grouping of certain facts permit us to envisage on a more solid ground. Almost the entire architecture appears to be of Buddhistic origin. The rough stone monument only refers to Shiva,

with its towers on the four faces. But, on the other hand, the plan of the palace and its formes, earlier than those of the temple,—

the principal characteristics which the latter borrowed from the former,—appear to me national

MR. AJIT GHOSE'S COLLECTION OF OLD INDIAN PAINTINGS.

By RAMES BASU, M. A.

THE publication of Havell's "Indian Sculpture and Painting" was a memorable event in the history of Oriental Art, for this pioneer work revolutionised the prevailing ideas regarding old Indian art and led to the ultimate recognition of that art by art-critics and to a small extent by art-collectors. The enthusiasm of Mr Havell, not less than the beautiful reproductions which were such a

order. When the parcel arrived he was agreeably surprised to see written in a foreign hand on the backs of some of the pictures such inscriptions as 'Achbur', 'Hamong' &c., and on looking at the pictures he found that seven of the unidentified Indian drawings were in reality fine old Mughal portraits of the Badshahs, while the other two were Rajput paintings of Radha and Krishna. From

Journey to Mathura (Early Rajput Painting, Early 17th Cent)

feature of his book, made a great impression on Mr. A. Ghose, whose collection of rare old Indian paintings we propose to describe briefly. He was then already a constant buyer of books, and, while turning over a catalogue of a London bookseller, he lighted on an item described as "Nine old Indian drawings", for which he at once sent an

this lucky chance began that collection which, being continually added to from year to year for twenty-five years, is now recognised by eminent authorities as one of the largest and most valuable collections of rare old Indian paintings, while as regards its representative character ; it is unrivalled.

Mr. Ghose's enthusiasm is boundless and

he has explored all sorts of likely and unlikely places throughout the country in the fascinating search for old paintings and manuscripts and has met with many adventures. Often he has been disappointed on a first visit to a locality where he had expected something, but his instinct has led him to return again and perhaps a third and a fourth time to the self-same spot and he has found that his

Portrait of Riza Ablasi drawn by his pupil Muin Musavir. (Persian painting)

perseverance has finally been rewarded. His guiding principle has been to secure those specimens only which have a distinctive value for the study and enjoyment of old Indian art and such objects always make an instantaneous impression on his mind. He has to his credit the discovery of the more numerous and the more rare paintings from seemingly exhausted ind-spots. Thus a very well-known authority once remarked to him that, when he visited

a certain hill district a dozen years back, he came away with the impression that he had made a clean haul of everything that was to be had there, but Mr Ghose made extraordinarily remarkable finds in the very same locality years after. Amongst his discoveries of great importance are some old fresco paintings in the finest Kangra style which had been unnoticed so far.

In the work of collecting, Mr. Ajit Ghose has received the enthusiastic support of his elder brother, Mr. A. Ghose, F.C.S., F.G.S., V.I.M.O., who is himself one of the foremost collectors of old Indian art and has specialised more particularly in the art of old Kangra and of ancient Tibet.

The Ghose Collection is too extensive to be at all adequately dealt with in the all too brief space of a single article, and so we propose to give only a short account of it in a quite non-technical way.

The examples of Jaina art comprise very early manuscripts of the "Kalpasutra" and "Kalakacharya Kathanakam" and other works, besides fine old painted Jain book covers. One of the fifteenth century manuscripts, a dated "Kalpasutra", is one of the earliest known illustrated manuscripts on paper. A miniature from this rare work is reproduced.

The specimens of Mughal art, especially of historical portraiture, which were lent by Mr. Ghose to the Historical Section of the Calcutta Exhibition of 1923, aroused considerable interest. Visitors to the annual conferences of the Indian Historical Record-Commission have also had opportunities of admiring some of the unique examples in the collection which have been loaned by special request. They are of far greater artistic and historical importance than the ordinary variety of exhibition pictures. A number of paintings in the Ghose Collection have come from the Imperial collections of the Mughal Emperors and bear the seals of the Badshahs, such as Aurangzebe, Shah Alum and Faruksiyar. Of unique interest is a picture of Riziah Sultana by Ram, Court painter of Akbar, which belonged to Zebunnissa Begum, sweet poetess and daughter of Aurangzebe, and her seal is the mute witness of her ownership. In this section there are signed examples of the work of Ram, Chatarman or Chitarman, Balchand, Mohan and Nanha among others.

The Rajput paintings include some of the finest works of each school. Primitive Rajput painting is represented by the earliest known Ragini pictures. The Pahari Schools

represented by numerous examples, including remarkable specimens of the Siege of Lanka series. Kangra paintings are known to most by reproductions of Kangra examples and few had the opportunity of admiring the strength and variety of colouring and the fervent draughtsmanship of early Kangra art, fine examples of which are in this Collection. It is well known that the Rajput and Pahari artists were employed by the ruling princes, and very often they were employed to illustrate some popular romance by a series of detached paintings. These are therefore, of special importance. Mr. Ghose has been fortunate enough to have secured several such paintings, which are not to be found in any other collection except that of Dr. Naraswamy, the foremost authority on Rajput art. Among the series in the collection he has mentioned the Siege of Lanka series, primitive paintings of Ragini, Nala and Damayanti, and Gita-Govinda. Carefully going through the Rajput section of the collection, we do feel with Mr. Ghose that the old classification of Indian Schools of painting requires revision. The various styles of painting belong to distinct schools and merit separate recognition, but have hitherto been grouped together under the generic name of Pahari. One such school which produced many fine works in quite a distinctive style and is of great importance in the history of the Pahari Schools may be called the Chamba School from the centre where it originated. Mr. Ghose is the possessor of many extraordinary primitives of this school which strongly suggest its origin from fresco painting. He has also a remarkable series of paintings of the Gita-Govinda with the figures on the back; these paintings are the

Prince Daniel and his wife, Jana Begum. Contemporary Mughal Painting.

products of the school in its maturity. Another school—that of Chamba—produced a distinct style of portraiture, examples of which are in the collection.

Mention has already been made of the illustrated Jaina manuscripts in the collection. Among illuminated Hindu manuscripts are the romance of Hir and Ranja with many miniatures of the Rajput school and a very old manuscript of lyrics on the loves of Radha and Krishna with illustrations of the Pahari School; but most important of all is a unique

Old Bengal "Pot" Drawings, Kalighat

illustrated *Nayika* manuscript with numerous illustrations of unusual beauty apparently by an early Kangra artist.

Of great interest is the splendid collection of fine drawings numbering several hundreds. Drawing as an art was much in vogue in mediæval India and Indian master artists may fairly be said to have attained perfection of workmanship in the line. With what boldness and simplicity is the line drawn! Drawings of the Mughal, Rajput, Kangra, Sikh and old Bengal schools are in the Collection. The traditional skill of the Hindu artist in the manipulation of the line is nowhere better seen than in old Rajput drawings, which are hardly inferior to the best Mughal work, while they have a feeling about them which is lacking in Mughal art. The value of the line is best brought out in portraiture and we shall see how the old painters of Bengal, who are now forgotten, excelled in figure drawing.

We may add a note here as to the general method of duplicating pictures used by both

Mughal and Rajput. Tracing paper was used and the lines of the drawing were marked out by dots produced on the paper by needle pricks. It was then lightly brushed over with powdered charcoal and the outline copy completed. Examples of these original drawings which have been pricked are in the Collection and drawings in every stage of completion are to be found. Often the master left indications, for his pupil engaged in copying, as to the use of the pigments to be employed by little touches of colour.

Examples of Kangra drawings are perhaps even rarer than Kangra paintings but the Collection possesses a large number. One drawing depicting the seasons deserves special mention, not only on account of the individuality of the drawing, but because it is the portrait of one of the Kangra chiefs, Raja

dhandas appears as the central figure in the drawings.

The old Bengal "pot" (পট) drawings up to the middle of the last century are so remarkable for the vigour and boldness of line and the calligraphic quality and the excellence of figure drawing that they will come as a revelation to all art-lovers. These old drawings, some of which can compare with the best examples of the other recognised schools, are unfortunately long gone out of fashion. The higher circles of Bengalee life accustomed to decorate their homes with inferior foreign pictures. It is the neglect of the 'culture' that has brought about the ruin of the old Bengal. People now can hardly be made to believe that the "pots" of Kalighat could ever have had a glorious past. Once Mr. [name] while speaking eulogistically about the drawings, was abruptly interrupted by one of our venerable public men, who indignantly exclaimed: "What! you mean art by the rubbish of Kalighat?" Yet the specimens of this school will come a

Siege of Lanka—Old Pahari painting. (Beginning of the 17th cent)

A miniature from a copy of the Kalpasutra—Early Jain painting—15th cent.

much people and their name is legion that there ever was any merit "pots". From the middle of the 17th century, the demand for the products of the school has come on a small and scale only from the masses. So

decade after decade, the school has degenerated. The later drawings of stereotyped pictures of gods and goddesses of social scenes lack the flexibility and firmness which characterise the work of the earlier artists. The Collection affords ample opportunity for

Painted wood-cover of a manuscript (Bengal)

comparing these two types of the Kalighat school. We may in passing remark with regret that those who have brought about the remarkable art revival in the Bengal of to-day do not appear to have sufficiently utilised, or, more properly, have not even recognised, the best products of this lost school. Were they ashamed to own these rustic artists as their foregoers in the art history of the country?

Mr Ghose by his indefatigable exertions has made a unique collection of the extremely rare early Bengali painted manuscript covers of the fifteenth, sixteenth and seventeenth centuries—a collection which is unique in point of the excellence of these art documents, and their large number and their variety. These painted manuscript covers are unknown by reason of their rarity even to professed students of Indian art and are unrepresented in Museum collections. Mr Ghose is engaged in a work on these "pots", so admirable for their beauty of colouring and "impeccable" drawing.

Paintings on playing cards were much liked by the aristocratic people of India and so they are now found scattered over many provinces. Very noteworthy are the rare playing cards on ivory in the Collection with exceedingly fine miniatures of animals in the early Mughal or Indo-Persian style of Mansur and probably by that master Rectangular playing cards such as these are very rare. The specimens in the collection of the Dasavatar playing cards of Vishnupur are very old.

Thus far, we have dealt only with the Indian section of the Collection. Mr. Ghose's artistic interest is not limited to India. He has a wide outlook on art history and is a

keen student of the art of all nations. One who has seen the collection will not need to be told that he is a lover of Chinese and Japanese art or that he has been attracted to Persian painting to which early Mughal art is so closely related. Besides many choice examples of Safavid painting, including signed specimens of Riza Abbasi and of his pupil Muin Musavir, the Collection possesses several fine manuscripts with miniature—one of the most notable of which is a fifteenth century, probably unpublished, manuscript with miniatures of the highest excellence of the Bihzad school.

We cannot be too thankful to Mr. Ghose for collecting and preserving these beautiful relics of a long-forgotten glorious past and all art-lovers should feel indebted to him considering that no other art collector contains such a large number of select and representative specimens of all the various schools, whether Jain or Mughal, Rajput or Kangra, Pahari or Sikh, Bengalee, Orissan or South Indian, with their various sub-divisions. Indeed, this extensive Collection is not only a rich feast for pure artistic enjoyment, its representative character affords abundant materials for the study of practically the whole range of the history of old Indian painting, and the care and judgment and deep knowledge with which only select specimens have been included make it a collection to stimulate artistic taste and artistic creation.*

*At the special request of Mr. Percy Brown, the Principal, Government School of Art, Calcutta, a loan exhibition consisting of representative specimens from this Collection is being held along with the Fine Art Exhibition,

TO ROMAIN ROLLAND

An Appreciation

By RABINDRANATH TAGORE

FILE in America, I had occasions to talk about the rapid and enormous growth of organisations which attain their tible efficiency by eliminating the personal and concentrating the mechanical one in a lump of system. I spoke of the spread lousness and the deadening of the moral of responsibility in consequence of the ne representing man in most of his ies. Cruetly and injustice of an appalling have to-day been made easily possible, se, they can be done through an organ- elemental force which ruthlessly takes ect path towards the fulfilment of its se, trampling down all other considera- We have seen how church can be blood- ; while the religion it represents is ie; how it is possible to cheat on a ale scale in the name of business, while spectability of the sharers of profit is untouched; how gross falsehoods are ately used for poisoning their victims overnments whose members have gentle- manners and traditions. When in to such gigantic institutions men t terrible wrongs, they feel something religious exultation which smothers conscience. It is the modern form of worship with its numerous rituals of sacrifice in the shadow of which all religions have faded into unreality. e of my hearers who was in sympathy y thoughts asked me how it could be

possible to fight these organisations without setting up others in their place. My answer was that my reliance was on those individuals who had made human ideals living in their personality. They may look small and weak by the side of the power they resist, as does a plant by the side of a huge frowning boulder. But the plant has the magic power of life. It gradually creates its own soil with its own constant emanations, and its defeat and death are a prelude to a victorious resur- rection. I believe that when anti-human forces spread their dominion, individuals with firm faith in humanity are born, who become acutely conscious of the menace to man and fearlessly fulfil their destiny through insult and isolation. We came to know such a man in England in the person of E. D. Morel who is dead now, but who can never die. When we see them, we know that the living spark of human spirit is not yet extinct and that there is hope. Human civilizations have their genesis in individuals, and they also have their pro- tectors in them. One of the few proofs that the present day is not utterly barren of them is the life and work of Romain Rolland. And that the present day needs him most is proved by the scourging he has received from it, which is a true recognition of his great- ness by his fellow beings.

EARTH AND WATER

By SISTER NIVEDITA

th and water are the mystic offerings
ch the home king offers allegiance to
ver-lord.

th and water, therefore, are the symbols
which the Mother would fain be
ped.

Earth and water of India, dust of our
fathers, home of all our beloved, land of
our children!

Water of seven sacred rivers, ocean
girdle of our Bharata, flood of the rice-
fields, and gift of mountain-snows!

Earth of India' altar of our gods,
Footway of our saints,
Foundation of our homes,
Dust of our heroes.

You, the Indian waters,
Vahana of the lotus,
Fountain of joy and coolness
Symbol of all purity,
Consecration of the temple
And extinguisher of the last dread fire!

India whose sky is temple-dome,
Whose mountains are her pillars,

Whose forests make offerings,
And the South wind fans,
In these we worship.

The blessing of the grass : Be strong,
be strong

The blessing of the palms : Put on thy crown
Be patient and endure
Lift high thy thought
Dream lofty dreams

The cry of the rivers and the land : Return
Return

Oh ye whose hope is in your land,
and your land's hope in you
And all the Nation answers: We are one!

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous misrepresentations, etc., in the original contributions, and editorials published in this Review or other papers criticising it. As various opinions may reasonably be held on the same subject, this is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally, no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—*Editor, The Modern Review.*]

The Prefixing of "Sir" to Rabindranath Tagore's Name by Mahatma Gandhi

Regarding the editorial comments made in the December issue of your *Modern Review* on the prefixing of "Sir" to Rabindranath Tagore's name by Mahatma Gandhi, I have to say a word. We know very well that Dr. Tagore wrote a letter to Lord Chelmsford renouncing his Knighthood as a protest against the Punjab affairs; but it is also a fact that in all his books published by the Macmillan Company, "Sir" is put before his name invariably in every volume—not only in the reprints of those which were published before he is said to have renounced his title but also in those which have very recently been published. May I therefore ask: why should the Mahatma be blamed if Rabindranath himself uses or allows his publishers to use "Sir" before his name in his own English books? Indeed, when Dr. Tagore had just returned from Italy, it was actually given out by a writer in the *Illustrated Weekly Times* of India that Rabindranath took no objection to being styled and addressed as "Sir" Rabindranath.

SUBODH CHANDRA BOSE
RESEARCH SCHOLAR,

University School of Economics and Sociology,
Bombay. 8, 12. 25.

Editor's Note

It is not "a fact that in all his [Tagore's] books published by the Macmillan Company, 'Sir' is put before his name invariably in every volume—only in the reprints of those which were published before he is said to have renounced his title—also in those which have very recently been published."

We have not at present got all of Tagore's English works before us; but from those which we have, we will mention the following whose pages simply bear the name of Rabindranath Tagore without the title "Sir":—

The Wreck, 1921.

The Fugitive, 1921.

Thought Relics, 1921.

Creative Unity, 1922.

Mashi and Other Stories (Indian Edition), 1923.

Gora, 1924.

Red Oleanders, 1925.

The writer says that he knows very well that Rabindranath Tagore wrote a letter to Lord Chelmsford renouncing his Knighthood, but uses in the same sentence the words, "before he said to have renounced his title."

The Bombay University ought to teach "research scholar" to verify his "facts," before publicly using them and to learn the meanings of the words he uses.

If a writer in a Bombay paper really wants to know what the "research scholar" says he did, it is not much matter. Only recently Rabindranath

within our hearing that he did not wish his name to bear any prefix whatever, whether it be 'Mr.', 'Srijit', or 'Babu'; he wished to be known as simple Rabindranath Tagore.

Fatal Stars and Royal names

In the note on p. 691 of the *Modern Review* 1924, suggesting the possibility of being the star of nativity of Pushyamitra Shunga dynasty, I cite below two instances from Tamil literature, which show that the use of specifying particular individuals birth-nakshatras was in vogue in the d.

1. Sangam poet Mulam-killar (*Purananuru*) called after 'Mulam' which was apparently star.

2. the *Jivakachintamani*, King Sachchandan named by the title of 'Bharaninai-pirandan' in reference to the star 'Bharani' in which he

advanced, this practice was common and names were often simple star-appellations. In royal inscriptions of the State, we come to names as Avaniyana, [Pillayar-Tiruvadi Avani], Kottai-Tirunal, Queen Rohini, etc. In H. the present Yunnaraja called to as the Chitrai-Tirunal or the Prince of the day of the auspicious Chitra asterism.

A. S. RAMANATHA AYYAR.

Prof. Sylvain Levi on the East and the West

I was surprised to read, on page 446 of the *Review* for the month of October 1925, an article regarding Professor Sylvain Levi. The article that you quote from "Living Age" gives a translation of the original one, in "Cahiers du" which I specially referred to, for the

the last December number we have given a translation of Prof. Levi's whole article by Prof. Benoit, we omit those portions of our correspondent's letter which contain translations of passages of Prof. Levi's article. [Ed. M. R.] "passage" which is due to Mr. Levi and is included in the article seems to have been attributed to *Clarke*. (See *Modern Review*, 1st column, October issue) The *Clarke*, I certainly know it, to have very advanced scientific tendencies, must have borrowed this from Mr. Levi without making a reference to the author. You quote this passage of Mr. Levi and remark that "*Clarke*—divides differently from Prof. Sylvain Levi!

I pardon me to have written to you at length. I have taken pains to try to submit what I had to say. I am persuaded that you will appreciate my attempt to see that a fair view of the type as yours, will do justice

The passage referred to will be found translated in the December *Modern Review*, last paragraph, 706 and first of p. 707. Ed. M. R.

to Mr. Levi which, he certainly deserves and I think, is entitled to.

No two people think alike, nor need they do it. Mr. Levi has his *personal* views which we may dispute. Yet we cannot ignore that he has devoted all his life and all his energies to the study of our ancient civilization. He is one of those people who have created in Europe an audience for the plea of the East, and I think that we might be, very confidently, more sure of his loyalty to India than of many others.

GANPAT TENDULKAR

The Paharpur Excavations

We have been criticised in some quarters for saying in our last November number that the Paharpur archaeological excavations, conducted under the joint auspices of the Calcutta University and the Varendra Research Society, ended in a fiasco. We have neither the inclination nor the space to print in detail the accounts of the expenses incurred for these excavations, which, so far as we are aware, yielded no results. We will only state in brief that Kumar Sarat Kumar Ray of Dighapatia made a grant of Rs. 2,000 for actual excavation and of Rs. 500 for the travelling expenses of the Calcutta University and Varendra Research Society parties. But the Calcutta University party spent Rs. 935-6 and the Varendra Research Society party Rs. 160-14-6, total Rs. 1096-4-6 in travelling expenses alone. Rupees 200 were advanced to four gentlemen who do not appear to have rendered any account of the sums given them. Expenses in connection with excavation amounted to Rs. 482-1-3 and petty expenses to Rs. 71-9-6. There was an unspent balance of Rs. 650-0-9.

Computing the travelling, halting and mileage charges of the parties on a liberal scale, they should have totalled only Rs. 668-11-0; but they actually came up to Rs. 1096-4-6. In addition, the parties spent Rs. 67-11-0 on furniture, Rs. 72-9-0 on personal comforts, Rs. 214-4-0 for conveyance of tents and records, and Rs. 124-9-6 for miscellaneous items. But the actual excavation expenses incurred amounted only to Rs. 59-8-0! No wonder Kumar Sarat Kumar Roy, the donor, wanted his money back. It is said Mr. Oaten, Director of Public Instruction, Bengal and Prof. R. P. Chanda acted as arbitrators and gave it as their award that Rs. 1470 should be returned to the Kumar. It was not, however, recovered from the excavation parties responsible for wasteful expenditure, but was paid to the Kumar from the overflowing coffers of the Calcutta University. That is what we can say from the information at present at our disposal.

Tube- Wells

The writer of the article (published in the February 1925 number of the *MODERN REVIEW*) has given preference to the process by sinking an outer casing, which is followed by some of the firms sinking tube wells at the present time, in which the annular hole between the tubes of the well and the outer

casing, left in the impervious and semipervious strata of earth when the outer casing is removed, requires to be closed up perfectly. The writer has also mentioned it, but he has not evidently anticipated the magnitude of such a work; neither has he mentioned the process. He should use either clay or cement or similar other material from above, but effective closure of the hole in this way is next to impossibility, as it cannot be filled up thoroughly throughout its whole length by such a process; and if any chink is left anywhere, surface percolation will contaminate the water of the deep stratum. There is no means to know, at least, that the hole has been closed properly. If, however, clay or cement used for the purpose is greater in quantity than is actually necessary, some of it may find its way up to the strainer and close it partly, thus reducing its effective area; nay, part of any quantity used, may very well do this harm; and there is no means of knowing or removing it when once there. Both these defects—surface percolation through open chunks and reduction of the effective area of the strainer may occur in many cases simultaneously.

In a soil, moreover, which can be conveniently divided into five strata, namely (1) clay mixed with sand (2) fine sand with clay (3) coarse sand (4) pure clay (impervious), (5) clean coarse sand, the hole will be closed throughout the strata nos. (2) and (3) as soon as the outer casing is removed and the portion of the annular hole in the 1st stratum only can thus be closed, leaving it in the 4th stratum as it is, while the 2nd and 3rd strata are pervious. Water from the surface layers may, hence, easily find its way to contaminate the water of the 5th layer, which is highly objectionable and takes away the chief argument in favour of a tube-well as supplying safe potable water from a deep stratum; and it is no better than a well sunk down to the 3rd stratum. This division of subsoil is rather a representative one of alluvial Bengal, instead of a chance one, and this process of well-sinking is necessarily far from being satisfactory.

This process has been recommended by the writer mainly for the sake of safety of the strainer which may get damaged if fitted with the tube of the well and sunk. The method as used by some other firms of sinking the tube first without strainer up to the required water-bearing stratum and sinking it again after taking it out and fitting it with the strainer, has been found a cheap and successful one. In this process, a short length of tube is added to the lower end and is closed up with cement concrete from above to stop sand-blowing from below. Two wooden beams with a central hole in each, just bigger than the outer drainer of the tube, are also anchored in the earth at different depths, the central holes being one just below the other. The tube in sinking passes through these holes and its path during second sinking remains the same as in the first

and in sandy layers where the friction on the tube is the greatest, muddy water is forced in by the water-jet and thus a smoother path for the strainer is ensured owing to clay being deposited from the water in the sand. It is after all not at all difficult to find out if the strainer has been damaged from sand-grains coming out with water, even after a few days' use of the well; and in that case, the strainer may be replaced.

For a $1\frac{1}{2}$ inch tube, well, moreover, an outer casing of about 3" diameter will have to be sunk; it is certainly much more costly than sinking a $1\frac{1}{2}$ inch tube. Sinking by water-jet process, again, requires water to be forced in through an inner tube which in this case is a $1\frac{1}{2}$ inch one and that in the other 1" only; and necessarily, much larger quantity of water requires to be forced in with the help of a power pump in the former for sinking operation, while a hand pump is quite sufficient for the latter, and provision of so much water is scarcely possible in many places in dry months, specially in the arid area near about the big rivers.

P. C. Bhattacharjee, B. A. B. E.

Mr. Bose's Reply

Mr. P. C. Bhattacharyya seems to assume that the annular space around the tube-well has to be sealed up after the complete withdrawal of the outer casing. As a matter of fact, the sealing is done simultaneously with the withdrawal. The casing is drawn up a few feet, a measured quantity of slurry or sealing composition is poured in through the annulus, the casing is again drawn a little, slurry is again poured in, and so on in successive stages. The details of the process would be tedious reading, but if Mr. Bhattacharyya be interested, I shall be glad to give him further particulars and reference of numerous instances where the process has been perfectly successful.

Mr. Bhattacharyya recommends a cheap process in which a plain pipe is first sunk, then withdrawn, fitted with a strainer and re-inserted into the hole.

The system succeeds only for small depths and when the strata bored through are firm enough to prevent collapse of the unlined bore. But in the majority of instances, the bore gets more or less choked in spite of mud plaster, and during re-insertion of the pipe, considerable resistance has to be overcome. Mr. Bhattacharyya says, if the strainer gets damaged, it may be replaced. Quite so; but at considerable cost, for it involves practically re-boring.

I agree that the system of using an outer casing is expensive. But it gives far more positive results than other systems.

RAJESHKAR Bose

APURVA

(To a Boy of Santiniketan who died young.)

W. W. PEARSON

by cometh Death, life's final garnering,
 those unformed, to boyhood's unripe
 years?
 those still young who scarcely yet
 have felt
 a kiss of friendship on their thirsty
 lips?
 those for whom the coming days
 seem rich
 th promise and with fragrant hopes ?
 To those who,
 te fresh-opened flowers, fill the morn-
 ing air
 th perfume laden with the fertile gifts
 autumn fruitage and of summer suns,
 ir eyes alight with radiant worlds
 unseen,
 ir hearts aglow for love and quick
 adventure?

Death comes serene to take them to the realms
Of aspiration and unrealised dreams.
No loss is theirs except of outward things.
Life, with its tasks and strenuous endeavour,
Would soon have quenched the joyful hopes of youth
And would for them have been a journeying
Away from all that boyhood holds most dear,
Welcome to them is Death. He greets with smiles
His youthful comrades and soothes away the pain
Of longings felt, in this life unfulfilled.

INDIAN PERIODICALS

'As An Englishman Sees India.'

r. J. T. Gwynn, I. C. S. (*Retd.*), who, I suppose, is the same person who some time ago interviewed all sorts and conditions of men all over India as a special correspondent of the *Manchester Guardian* in order to get their brains or pump out their secrets, contributed to the November *Indian Review* an article under the above caption. The article says, "it is based on superficial knowledge," but the tone is throughout that of an Oracle and Destiny combined. Yet a frank Westerner's appreciation of things is "it has its interest."

The first question he discusses is: "Do we give India Swaraj?" The answer would not, if we would. We could give her the independence that China now enjoys. It is not what Indians mean by Swaraj, I

hope. The truth is that Mr. Gandhi and his Non-Co-operation very nearly frightened us into believing that we could no longer rule India. But we never imagined that India was yet able to rule herself. We even doubt whether India will ever be able to give herself a decent stable government. But to let our policy be shaped by that doubt would be to confess ourselves desperate of the future of the human race. We must act on the assumption that it will be possible with time and patience to bring a strong native government into power in India. Will it be a democracy? Certainly not. The orthodox faith in democracy has gone the way of the orthodox religious creeds. On the Continent, men ridicule it openly. In England they do not do that, not at least if they wish to be elected members of Parliament, but their practice pays no regard to democratic theory. We believe in the inequality of men. Equality of opportunity? That is an unattainable ideal. And it is far more important that some men should have splendid opportunities than that all men should have equal opportunities. All men cannot go to Oxford. Would you then break up the University and bury one professor in each provincial town? No. We are all

authoritarians now. Let us get the best men if possible, give them all possible advantages and get them into power. And whoever is in power, whether he is best or second best, let him have faith in himself and use his power according to his own lights and see that he is obeyed. Don't let him ask for guidance from his enemies or compromise with them as the old-fashioned Liberals expected our Governors to do. No need to make enemies of those whose ends are the same as ours merely because we differ about means. But you must learn to recognize a real enemy when you meet one. We have learnt something from Lenin and Mussolini much as we dislike those gentlemen.

Since, in the opinion of Mr Gwynn, Englishmen are not democrats, it follows, he says, that they are not much impressed by those who say that India is not ripe for democracy. Nevertheless that is the usual excuse trotted out by Englishmen for opposing India's right to Swaraj. Let us, however, hear the writer :—

We ask : Can you see any elements in India capable of giving India a stable native Government ? We should like to find such elements, for we fear that the dislike of alien rule is a strong ineradicable and highly dangerous instinct and an Indian mercenary army is a gun that may go off at either end. We should like to see India quietly transubstantiated into a self-governing and self-defending Dominion. But, till we see how that miracle can be wrought without imminent risk of a disruptive explosion, we shall expect our agents in India to continue to govern India with India's co-operation, if possible, but if not, then as best they can.

Where shall we look for elements capable of giving India a stable native government ? It is fashionable to point to the Native Princes and others talk of the bureaucracy. But in all countries strong and enterprising men gravitate naturally towards the seat of power wherever that is placed. We have given the reins into the hands of the Western educated class. We believe that for that reason the strongest and most energetic (not necessarily the most prudent or the most virtuous) will be found in the ranks of that class and that they will learn to get themselves elected at the polls and to dominate the legislatures. Whether they will have enough character to hang together and support each other and make a government and keep the bureaucracy in its place or whether they will fritter away their strength in communal and personal squabbles, that is the crucial question.

That last sentence ought to serve as a fresh reminder to our leaders of all creeds and castes to cultivate real fraternity and patriotism and unite.

The next question tackled by the retired heaven-born scribe is : "Are we impressed by what the highbrows tell us of the potentialities of a distinctive Indian culture ?" He replies :—

Of course, there is something in it, but we suspect exaggeration. We used to hear so much about the Gaelic culture, but now that the Free

State is in being and the sons of the soil have all the jobs to quarrel over—well, the Gaelic cult has failed to materialize and nobody cares longer about its disembodied spirit. Tagore easily understand. He is in harmony with West thought. In fact, he is a little too much in fashion. We suspect that he could not stand himself, that he is not quite in the first class.

Poor Tagore ! If he had not been v largely read in the Far East as well as in West and Far West, he would have been dubbed an obscurity and a failure. But as we read, he is too much in the fashion ! Gwynn says, "Tagore is in harmony with West thought." But Prof. Sylvain Levi says in *Out from the East* : "Tagore who denounces to countrymen, to China and Japan, the faults and crimes of Europe, does wrong to Asia to Europe, and his own ideal." What are we to believe ? The truth is Tagore appreciates what is good in the West and also denounces its faults and crimes, as well-balanced minds must. And, therefore of course, "he is not quite in the first class." How could anybody dare to be in the first class who is a subject of Mr. Gwynn and countrymen ?

Another fault of Tagore is that the writer suspects that "he could not stand by himself." Perhaps what some Europeans friends and acquaintances of Tagore have been in the habit of saying and writing of him has given rise to the myth that Rabindranath is like the *nirguna purusha* of the Sankhya and requires an active *alter ego*, to think, feel, imagine and act for him. I even if that myth were a fact, who is the *alter ego* who thought, felt, imagined and wrote all his Bengali works, of which almost all his English works are translations. Perhaps some European did it ;—many Europeans have that kind of supremely selfless and self-effacing nature. They do the best things anonymously and leave the name and fame to be enjoyed by the Indians. I am an example, did not some Europeans conceive and design and build the Taj at Agra leaving the credit to go to India. It has, however, to be explained why if Tagore cannot stand by himself, he writes and says and does things without a thought of what people may think of him, thus often making himself unpopular with parties. That is not the behaviour of a man who depend on others. Tagore has always been true to his song, addressed to himself "Ekla chalo re," "Walk thou alone."

But let us now hear what Mr. Gwynn thinks of Mahatma Gandhi.

As to Gandhi, we don't take him seriously as a thinker any more than we take him seriously as a statesman. His personality is of course quite another thing, unique and all but wholly admirable. He has the "will like a dividing spear" and with it, unselfishness and a complete mastery over all the baser instincts, envy, hatred, malice and all uncharitableness. We have a weakness, too, for the puritan ascetic in him. But much of his humanitarianism and asceticism seems to us misdirected energy. We feel that his view of man is out of date. He seems to look on man as the saint did, as a special creation of God's, a being little lower than the angels and in no way related to the beasts of the field. We think that the statesman and the moralist must always bear in mind the fact that men are only beasts, some further and some less, far evolved and that they must therefore be careful not to expect too much of everybody and not to lay down rules of conduct for universal application. Perhaps there is a radical distinction between good and evil, but the rules of conduct certainly alter with the environment and probably with the individual. A pity that Mr. Gandhi did not take up gardening instead of cotton spinning. The gardener's unending war with birds, caterpillars, insects, fungi and weeds would have enriched his meditations on the doctrine of non-violence as they have taught others the necessities of the practical statesman. But the most significant fact about Mr. Gandhi is the influence he acquired in India. That reveals both the strength and the weakness of the Indian people. Their strength is their readiness to recognize and be attracted by benevolence. Their weakness is their sentimentality, by which I mean a certain moral weakness which make them afraid to accept the criticism of their intellect when an appeal is made to their emotions.

We do not at all agree that either as a thinker or as a statesman Mahatma Gandhi is not a person to reckon with. We have sometimes been in sharp disagreement with him. But nevertheless we think that much of what he has said and done is quite sound, in spite of the apparent failure of the non-co-operation movement.

As to his idealistic views and hopes of man, if he has been wrong, so have been Buddha and Christ and many other teachers of mankind. There cannot be any "pacts" and compromises with human weakness in ethical and spiritual idealism.

Agricultural Co operative Societies

Mr. A. K. Yegnanarayana Iyer, Deputy Director of Agriculture in Mysore, writes in the *Journal of the Mysore Agricultural and Cooperative Union* :

"Agricultural Co-operative Societies" are formed for the following purposes:—

1. For the supply of seeds, manure, implements and other articles required by the farmer such as concentrated feeds for stock.

2. For the sale of the produce grown by the members, whether it is grain, fruit, milk, eggs or poultry or live-stock.
3. For the co-operative ownership, and use of large-scale appliances which may be too big for individual ownership, such as power guns, power-driven sugarcane mills, irrigation pumps, threshing machines, rice hullers, fodder cutters, spray pumps, etc.
4. For the purpose of serving special forms of farming, such as dairying, sericulture, etc.
5. Colonization and co-operative farming.
6. Insurance against loss of stock or crops by sickness, storm or pests.

Indian Mercantile Marine

Prof N J Shah, Ph. D. says in the October number of *The Mysore Economic Journal* ---

The root-cause of the whole trouble is the British shipping monopoly in India. The best remedy would be the development of an Indian Mercantile Marine. Whatever may have been the historical causes of the present backwardness of the Indian Shipping Industry, the condition which at present militates against the development of shipping enterprise by the people of this country is the strong position established in the Indian trade by certain British shipping companies which enables them to stamp out Indian competition by questionable means such as, deadly rate wars, the Deferred Rebates System which secures perpetual loyalty of shippers and the discrimination against the "disloyal" shippers who are penalized in various ways. The Deferred Rebates System is thus obviously harmful to our economic interests and should therefore be abolished by law. Its legal prohibition would undoubtedly remove an important obstacle from the path of Indian shipping. Various other countries have also legislated definitely against the shipping monopoly and its weapons, Deferred Rebates System and rate wars.

GROUND FOR DEVELOPMENT

There are also other important grounds on which the development of an Indian Mercantile Marine is desirable.

(a) It would lessen India's dependence upon foreign shipping companies which reduces her trade to utter helplessness in times of war, as for example, the shortage of shipping facilities during the war.

(b) Profit of freight rates variously estimated between 35 and 50 crores of rupees would be saved from going to foreigners.

(c) Shipping and ship building would open new avenues of employment to Indians who at present experience a great difficulty in obtaining suitable and profitable employment.

(d) Instead of the unfavourable policy of the present foreign shipping companies, an Indian Mercantile Marine can, by a suitable policy, encourage the special interest of Indian trade and industries.

(e) It will serve as a nucleus of a future Indian Navy and as a second line of defence.

With the favourable conditions such as geographical situation, extensive coast, natural harbours

sea-faring population, large traffic and suitable rivers, the Indian Mercantile Marine can be created and developed without insuperable difficulties, only if the artificial condition which act against it are removed and shipping enterprise and ship-building skill are encouraged by proper means. Next to the abolition of artificial obstacle, what is mainly wanted is the policy that will stimulate enterprise and inspire confidence in the investing public.

With the double objects of securing the largest possible share of ocean commerce to national merchant fleet and of making the ocean traffic subservient to the interests of the production and commerce of the country, the State measures for the encouragement of shipping in other countries have taken one or more of the following main forms:—

- (1) The navigation laws;
- (2) construction and navigation bounties,
- (3) postal subsidy,
- (4) admiralty subsidy,
- (5) reservation of coastal traffic for national ships,
- (6) cheap loans,
- (7) preferential railway-rates.

It is important to note that almost all the countries except Great Britain have reserved their coasting traffic to national vessels. In Great Britain, however, where there is no legal reservation 99% of her coastal trade is carried by British ships. The history of all the maritime countries in the world, from which Great Britain is not excluded, proves that State aid in one form or another has played a very important part in the development of a mercantile marine.

"If I were a Municipal Commissioner"

Mr. Dharm Pal Achte says in the November *D. A. V. College Union Magazine* what he would do if he were a Municipal Commissioner.

I would first of all get a plan of my ward prepared in order to make myself familiar with each and every street of it.

I would frame a list of all the hindrances and drawbacks in the ways of the growth of a healthy life of the people.

I would see that my voters do not lack in light, proper drainage, pure water.

Before any thing else, I would see that the street and houses of my ward are all neat and clean, well-lighted and ventilated, healthy and beautiful to look at. I would persuade the intending builders to keep large and open spaces around their houses to adopt some elegant style of architecture, to make room for broad and straight streets and if possible to have a public park in each of the blocks of my ward where women and children should go to recreate themselves. This would scare away half the number of doctors and other medical leeches and in its stead there would flourish joys of a healthy, wealthy and—if you will—a happy life.

I would have a committee in every block of my ward and call each of its representatives to tell me his grievances, which I, in my return, would try to have removed.

I would fix one day in a week simply to go

into some streets of my ward so that the people might feel that I am one of them.

I would make myself accessible to the poor and helpless people, so that I might know of their grievances.

I would insist on well-to-do persons to come out with a helping hand towards their unfortunate fellow citizens. For this purpose, I would use my best knowledge and energies to organize measures of relief and social amelioration for the poor and backward people. For instance, if a man finds beyond his means to get good water for his use to send his children to schools, to arrange for medical aid for himself and his children, to get a good book for his intellectual amusement or even if he is so indigent as to be unable to provide for his household the primary necessities of his life, I would see that due measures whether individual or co-operative charity are undertaken to provide him with these. I would leave no stone unturned in moving the municipality to come forward and help me in my efforts.

Having thus succeeded in bringing good food and lodging to all the people of my ward, I would set myself to provide for a common Library or reading room, for a common and free hospital for a common and free school, each for girls and boys, for a common museum, a common garden and above all a common co-operative society concerning itself with a social, economic, judicial, and executive good of the people living in my ward.

Wanted More Brotherliness

We read in the December *Young Citizen*

As we are to those whom we love dearly, we must we learn gradually to become to the whole world; and by thus living, those nearest and dearest to us, whether individuals or Nation, grow nearer and more dear. Let us also seek out Those beyond us on Life's Pathway and render them practical reverence. Let us recognise our equality and render them a loving comradeship. Let us seek out those still behind us, and render them our strong wisdom and compassion, as Those in front of us do like wise unto us.

The need of the world to-day is an individual effort on the part of everyone to be more brotherly. Our philosophers and dreamers and statesmen too often seek after forms, and strive for a peace builded upon the rotten foundation of everyone giving only what he is obliged, through grasping at every personal advantage. The world is at peace more because grasplings have for the time been balanced, than because each seeks to express a heartfelt generosity.

You and I know, my brothers, that whatever may be sought to be done by societies and leagues and movements, and in National or international assemblies, all ultimately rests on individual effort—the leaven that moves the whole.

Never mind what others are doing or are not doing. Let us do our duty and leave the issue to God. I say to you, therefore, make for the new year **LIVING-KINDNESS** your personal watchword at all costs and in all circumstances.

Mystic Experience

The Light of the East asks :—

What do mystic experiences prove? Do they and are they alone to prove, that the Supreme they represent it to be? We have exposed at length the two answers commonly given nowadays to this important question. Some answer that direct experience of divinity is the only test of its existence and characteristics. Others deny the proving value of experiences. The main reason of the first experience alone places us in contact with reality; reasoning and faith are deceptive, intuition gives us the truth. The reason of the others is nothing is more deceptive, than intuition. Each is coloured by the prejudices of the seer, intuition is confused with apperception (the given its interpretation) and finally perception is illusory: madness consists in trusting the visions of a diseased brain. Every reader will have noticed that these two positions are extreme. According to the first, experiences alone are proofs. According to the second, intuitions are no proofs at all. Aristotle long ago that goodness is generally to be found in the golden mean. Truth is often to be found in the same position. God is neither all really is, as the Advaita proclaims, nor nothing at all, as proclaim the Madhyamikas or Sarvakas. Religious experiences are neither a valid criterion nor no criterion at all.

Religion and Science

the opinion of *Prabuddha Bharata*

A time has come when religion should shake hands with science in a spirit of fellowship. The spirit of enmity and quarrel that has created to-day yawning gulf separating the one from the other must give way to one of mutual confidence, they should unite as friends and help each other towards the realisation of a common end, which is Truth. So far as we understand, the conflict is due to a misconception that is to disappear with a better knowledge and understanding of each other's function and position. Though there may be a difference as to methods, both science and religion, it may be said, aim at one thing, viz. Truth. The goal of religion places before us is, truly speaking, different from the final conclusion arrived at by science. They are but different views of the same thing from different perspectives. The recent triumphs of science establishing the unity of life, consciousness and the existence of one universal Principle permeating the whole universe have proved what we say. When the Vedic revelation declared with a voice of thunder that the Absolute is one, and it is Absolute Existence, Knowledge and Bliss, they simply foreshadowed by intuitive vision the final synthesis of science that has been made. Hence, what we want to emphasise is that no religion which is based upon a narrow basis and is progressive and liberal has any reason to be afraid of science. It is only the narrow and hide-bound religion of the church that considers itself to be at stake

and raises a false note of alarm at the progress of science.

Duties of the Jaina Community

According to the November *Jaina Gazette*, the following are among the duties of the Jaina community :

1. Members should be selected and sent out into the different provinces, towns and villages to study the causes of the decrease in the Jain population and to send their reports to the office of the *Gazette* which will publish them for the information of the whole Jain public. After studying the conditions in different places, the Association should hold a session in which the matter may be discussed and remedies suggested and approved to check the decrease. The Association should also see that such remedies are applied in practice.
2. Representatives from the Association should approach our rich sheths and sowcars and request them to provide funds for
 - (a) the endowment of scholarships,
 - (b) the establishment of boarding-houses wherever necessary,
 - (c) for the founding of Udasin Ashramas
 - (d) for the collection and preservation of manuscripts in libraries in important centres in India,
 - (e) for the publication of the Sacred Books of the Jainas with translation and commentaries in English and in other important languages,
 - (f) for establishing a central Jaina museum and archaeological institute, and (g) for forming a fund in aid of poor Jain widows.
3. The Association should find out ways and means for the promotion of education among the Jainas and should see that in the next return of census the percentage of the illiterates is very much reduced.
4. The Association should also put a stop to some of the social evils, e.g. child marriage, old men marrying young girls, and to encourage inter-marriages between the different castes of the Jainas.

V. S. Srinivasa Sastri.

Mr. T. S. Gangadharan writes in the November *Scholar* ;—

Among outstanding personalities, who by the influence of their noble example and great work, shape and mould the character and destinies of the younger generation, the Rt. Hon. V. S. Srinivasa Sastri easily takes a prominent place. A statesman of world-wide reputation, a sincere patriot, an ideal educationist, a true social reformer, a great orator and a trustworthy guide of the younger generation, Mr. Sastri is worthy of admiration. Writing about Mr. Gandhi, in an American Magazine, Mr. Sastri quoted a beautiful Sanskrit saying—"Do not tell me of holy waters; they may cleanse us, if they do, after a long period. A saintly man purifies at sight." The same is true of Mr. Sastri; for, to know him is to revere him and honour him.

Mr. Sastri is the guide, friend and philosopher of the young men. The magnetism of his personality

will have a wholesome effect upon all those who come in contact with him. A tall well-built athletic figure, dignified in deportment, majestic in carriage, with a face beaming with culture and radiant with nobility, Mr. Sastri's personality is indeed a tremendous force, often very hard to gauge and extremely difficult to withstand. The majesty of his form makes him awe-inspiring, but his kindly face gives him an air of a *paterfamilias*, to whom the welfare of the children is a matter of abiding anxiety. Indeed, to many of his countrymen, Mr. Sastri is an intellectual giant, a personification of eastern wisdom and western culture. A great scholar both in English and in Sanskrit, Mr. Sastri is no mere Orientalist, nor a pure Occidentalist, but a harmonious blending of the two.

About Women

The following paragraphs are taken from the November *Stri-dharma* :

CHILD LABOUR ON INDIAN PLANTATIONS

We strongly protest against the demand of the Indian planters that "lofts" on plantations shall be excluded from the definition of "factory". If this was granted, planters would have the right to employ children without any restriction of hours of the children's work. It is a cruel demand and the Labour Commissioner should see that the rights of small children are not interfered with by Western planters sitting at a Planters' Conference thinking only of coin and not of helpless, immature humanity. How can Indians ask for better conditions for their labourers abroad in the Malay States, in Fiji, etc., if they allow the factory laws relating to the proper care of their own children to be disregarded right here in their own motherland?

WHERE ARE THEY THAT ACCUSE THEM?

Four unfortunate and very young women were hauled up in a Bengal Court the other day, charged with soliciting, neither the names nor the addresses of the men had been taken by the police, and their whereabouts were unknown. The Magistrate, without calling any evidence, fined each girl Rs. 8. Injustice of this sort is being done every day, and not only in India. Never until there are equal laws for men and women will conditions in the streets of great cities be decent. Soliciting in the streets is, and must be made so legally, an offence for both men and women; the accuser should always be in Court to uphold his or her charge, police evidence is not sufficient in such cases. What is wrong conduct in a woman is also wrong conduct in a man, and we demand an equal moral standard as the ideal for all children of Mother India.

MARRIED WOMEN IN PUBLIC SERVICE

There is a movement in many countries to exclude married women from service in Government posts such as teaching, nursing, clerkships, etc. This we consider wrong in principle, firstly because it will allow only those girls to marry who can find husbands who have large enough incomes to cover all expenses without any help

from the wife's earnings. It is not fair if money factor should unnecessarily limit the emotional life of thousands of fine young women. Secondly, in India, where almost every woman is married, it would be impossible to get ex-teachers, doctors, nurses, etc., unless married women are retained. Thirdly, it is the married women who have the greatest amount of experience and stability. Fourthly, it is wrong to prevent married women giving their best education whether they are paid or not, married women need a larger sphere of influence in their home circle, and born teachers who are mothers are an asset to hundreds of children. Against this, there is the fact that many women are not in good enough health during their period of pregnancy to do justice to their public. It seems that each individual case should be treated on its own merits being left to the discretion of the chief officer in charge, or better to a Committee of management for such. The ideal would be that each mother should be paid by the State for the care of her children, that men's wages should be altogether re-molded in view of such a revolutionary change in the financial value of motherhood.

The Balanced Mind

In the October *Hindustan Review*, the Hon'ble V. S. Srinivasa Sastri thus pleads the balanced mind :—

Do our universities—let me put the question though I do not expect an answer—with ever-increasing specialisation of studies provide of set purpose the type of mind necessary for discovering the golden mean, the safe middle course between opposing tendencies? Is there use, even in these tranquil places dedicated to thought and wisdom, for the man who hesitates, who weighs arguments with care, who resists the force of passion? A recent Governor of one of our provinces, who had been a radical in European politics turned out to be unprogressive here, once explained the phenomenon to me. He sought advice from every quarter on a disputed issue, read all the papers dealing with it. The merits and wrongs seemed to him so equally balanced that the case for change was never wholly in or out. So he said, he let the old arrangement continue, it had answered so far. He was a typical conservative, a perfect Hamlet of politics. But such deliberation is not indecision. It will lead to action quite as often as to inaction. And the action which it leads will be safe and suited to all attendant circumstances. I freely admit that a conscientious politician is not popular. His counsel of patience and moderation is irritating to excited and enthusiastic natures. Yudhishtira, called many ugly names by Bhima and Draupadi. But he did not allow himself to be hurried. "Unagitated like the sea, immovable like the mountain," he waited till the time arrived and then struck and struck home. The cross-bencher is a beloved of his tribe, but the crossbench mind is an ever-present and an ever-growing nuisance. Believe me, it is no disease, no infirmity. On the other hand, it is the crown and summit of liberal education. It would be an evil day when it became

act, and the high function of universities is to
er it with tender and unremitting care.

The Indian Issue in South Africa

The National Christian Council observes:—

We have to remember in connection with this
the situation that for the large bulk of the
an community the Union of South Africa is
land of their birth and they will be strangers
ent to India. It is clear therefore that what-
may be the solution of this problem, it does
in the direction of repatriation. Repatriat-
a large number of Indians from the country
their adoption to a country which to most of
is at present only a name will be manifestly
est, even if it were practical. Only mutual
will and real appreciation of the difficulties
ing on both sides can bring about any satis-
ry settlement of this difficult question.

Infant Welfare

Jerbanoo Mistri writes in the October
al Service Quarterly:—

he object of infant welfare work being to re-
the high infant mortality in India, it stands to
on that it can only be achieved by a wide-
ad and continuous propaganda throughout the
so that the training imparted to mothers will
e them to bring up their children in the
way without any outside help. The object
never be accomplished by merely maintaining
depots and dispensaries. If necessity compels
workers to take the medical needs of a place
consideration, only the minor ailments may
reated, but the main object, that is, education,
d never for a single moment be lost sight of.
e amount of money spent and the labour
rtaken are to be rewarded with tangible results.

To Indian Young Men and Women

r Kirtiker exhorts young men and
en thus in the December *Volunteer*:—

ung men and women of India, wake up. You
e pillars of the nation. It is you who constitute
ation. The bondage of your country is your
ondage. Do not slurk your duty or be done
or all or pass into oblivion as your previous
tions have done. Each one of you is a leader
self or herself and can choose your action
sphere of national welfare and strive to
d to achieve the same. Don't you fool your-
to the belief and blind faith that you have
ow necessarily somebody's lead always!
a every person is built differently physically.
or she is gifted differently mentally too.
would occur to a poor little budding girl
ot strike a tried veteran leader, because our
on is such. So, rely on your initiative, if you
ad act up individually, if not in concerted

Our activities need not be confined to the
intelligentsia alone. The real centre of our work
is among the masses. They have been suffering
the real pinch of starvation as the result of the
alien exploitation of our country. Bring home to
them in a few words the situation. Acquaint them
with their country, the cause of their poverty,
their starvation and our slavery and "you are
made" as the phrase goes. If one or two of you
can at all succeed in sowing this requisite seed
now, at the harvest time you will see wonderful
results. You are the vanguard of our dear, oppressed
and shackled motherland and you are capable
of delivering her from her present predicament.

The Purpose of Buddhism

Louise Grieve explains the purpose of
Buddhism in the following words in the
December *Mahabodhi*:—

The religion of Buddhism undertakes to teach
us the cause of suffering; it teaches that there
is a rational cause for suffering and a rational cure
for it; that is the reason we believe it is
the right doctrine. It does not give us a theory of
original sin to account for all our misfortunes, but
shows us that we have made ourselves what we
are and that we ourselves can make our future
lives what we will. We know that present
suffering is caused by past transgression of basic
laws, the clinging to self, which is caused by
ignorance. With knowledge comes relief from
personal suffering but real peace cannot come till
we have done all that is in our power for the
relief of others.

The Four Noble Truths, 'Sorrow,' 'Sorrow's
cause' and 'Sorrow's ceasing' and the Way to
Sorrow's ceasing (Eight-fold Path) are subject to a
twofold division. The first two, sorrow and
sorrow's cause belong to the realm of samsara,
ignorance, conformation, desire. The second,
sorrow's ceasing and the Eightfold Path belong to
the realm of truth, Knowledge, the realisation of
the not-self and freedom from desire.

The ultimate goal of every Buddhist is Buddha-
hood. We cannot all hope to come to earth and
manifest here as Buddhas, leading countless
thousands to enlightenment, for it is in the nature
of things that a Buddha comes only at immense
intervals of time. But each hopes to attain en-
lightenment and to give as much of the truth to
humanity as the time and the degree of civilization
can assimilate. We all hope for freedom from
limitation, perfection, enlightenment, Buddha-hood.

So, the purpose of Buddhism is release from
suffering. The cause of suffering is the will to
manifest as a separate individual 'self.' The cure
for suffering is the freedom from the illusion of
'self.'

The Co-operative Sale of Jute.

The Bengal Co-operative Journal
observes:—

It is gratifying to note that serious efforts
are being made by the Bengal Co-operative Depart-

ment to organise the Co-operative sale of jute, which is a monopoly product of Bengal. Any one, who knows the working of the leading jute firms, knows how there is a veritable troop of middlemen intervening between the cultivator and the mill, and how the larger portion of the profits goes into the pockets of various middlemen like *beparis*, *farias*, and purchasers. It often happens that the cultivator, after his jute is ready, disposes of it at any price that he can get, for he cannot wait for good prices. Besides, the cultivators, who are generally illiterate, are not in touch with the Calcutta market and has to accept any prices that are offered.

A Co-operative Jute-grower's Association has already been started and registered at Chandpore.

Landholders' Income and Income-Tax

The Chittagong Bar Magazine writes:—

The Bengal Zemindars have at last been discovered to be enjoying privileges and exemptions to which they are not entitled. Their income from permanently settled estates hitherto expressly excluded from the purview of the Income-Tax Act is being represented as unjust and unwarranted by the terms of Reg. I of 1793. It is now being argued that the revenue or jama that is realised from the holders of permanently settled estates is not tax, but State's share of the produce of the soil. The net assets after this payment constitute Zemindar's income which is assessable under the Income-Tax Act precisely like other incomes.

The Bengal Zemindars can take care of themselves, if they be wide-awake. What we who are not Zemindars are concerned with is that the apportionment of revenue between the Central and Provincial Governments has been so made that though Bengal pays most of the income-tax, it goes to the Central Government. Any more revenue from that tax without the Bengal Government getting all or a large portion of it, would be a further act of injustice to Bengal.

Commercial Travelling.

The Editor writes in the December *Students' Own Magazine*:—

The Commercial Traveller is a man who goes about different markets to find buyers for a given commodity or manufacture. Successful salesmanship consists in creating a demand where there was none before. This requires great energy and zeal and a great amount of pushing backed up by a capitalist who can for some time patiently wait for the results. The Commercial Traveller who is nothing but a salesman who ought to be always on his legs has to come across various kinds of people, the model of gentleness and politeness on the one hand, and stern, rigid and dry people

on the other. The salesman has not therefore to lie down on a bed of roses. To safeguard the interests of his firm, he must be ready to sacrifice his comfort. At the same time, he ought to be honest in charging his travelling expenses. Of course, a little more of these does not matter much to the firm for which the Commercial Traveller is working, if he can show a big outturn of work. If the traveller can go on foot or have a tram, he ought not to have a tonga, but when saving of time means securing of more business, he should not hesitate to incur a little more expenditure.

Young Indian boys often make bad travellers, because, in the first place, they lack the necessary go. At school or college, the great thing nearest their heart is to have a chair or stool in the office; it matters little if by breathing bad air and by constantly sitting for hours together, they shatter their health.

Commercial travelling is a great aid to the widening of one's general knowledge. One learns a lot of things while travelling in train and talking with the buyers. To use the words of Bacon, he becomes a ready man. Boys who may be willing to work and be prepared to bear even a little bit of rough treatment ought not to hesitate in taking to this line, for in a couple of months it can not only turn out to be paying but also provide the costly experience without which a business cannot be safely run. To those who mean to start a new business, our serious advice is: "Please do not gamble with your money. Gain business experience through commercial travelling. You will have then laid a firm foundation for the business you mean to start."

Where Students are paid to go to School

We read in the December *Oriental Watchman*:—

Detroit automobile manufacturers have started something new by paying boys to go to school. They take the boys at twelve years of age and give them the ordinary school education with the addition of special training in making automobile parts which pass the most rigid inspection. By the time they are eighteen years old, they are ready to take a responsible position at the mother factory. The boys are paid nineteen cents per hour, about ten annas, for a forty-eight hour week, or about thirty rupees per week, besides special allowances for vacation time and a special saving fund. Surely a good example that might be followed in other lines.

The Buddha's Sermons

The Blessing writes:—

During His uninterrupted ministry of forty-five years, the Blessed One had occasion to address all sorts and conditions of people from the humble outcaste to the boastful Brahmin and arrogant Kshatriya. And the Buddha adapted each discourse to the needs of the people immediately concerned and the occasion. Each sermon is a special prescription, intended to meet the requirements of a particular disease.

us, who today read these "prescriptions" of great Physician, it sometimes seems that contrary remedies are advised and sometimes, certain inconstancy of behaviour characterized Master.

Why does the Buddha at times exalt the household, calling it "a high blessing"—and again stigmatize it as "a den of strife"? Why, to the same question, does the Master sometimes give an answer, sometimes remain silent, sometimes even administer a rebuke?

The solution to these puzzles is clear only to one who sees the whole picture of the Buddha's teaching. To one who studies that Dhamma ethetically, earnestly and deeply, never forgetting that the Suttas are but prescriptions for the maladies, there comes the understanding which up the immense picture, putting each fragment in its proper place, presents a panoramic view of harmonious adjustment to the patient toil.

Indian Loan Words in Arabic.

Professor Muhammad Shahidullah observes in the September number of *Peace* :—

The occurrence of a foreign word in a language has a peculiar significance of its own. It has its own story. Like a tale-bearer it gives a world of information to the student of philology. Max Muller has made a list of Indian words for ape, peacock, algum and found in the Old Testament. What a vista of the past has the word *Babru* for Babylon found in Buddhist Jatakas opened out! What a history of Greek words in Sanskrit like *hora*, *kendra* etc., I shall give below a number of Indian words, Sanskrit, found in Arabic. These words show that the Arabs even before the birth of the Prophet of Islam had commercial relationship with India. This evidence of philology is corroborated by other sources, e.g. Periplus of the Erythraean Sea written in the 1st cen. A. C.), and other Greek, and Arabic works. I am here, however, only dealing with philology.

He then gives a long list of Indian words found in Arabic.

The New Turkey.

G. Sherwood Eddy has contributed a very interesting article on the New Turkey in the December *Young Men of India* from which we make the following extracts :—

In place of the Sultan was the President of the new Turkey, 'Theodore Roosevelt,' Mustapha Kemal, a far greater soldier than Roosevelt and a more executive personality. In place of the Caliph of pan-Islam was the secular leader of a new nationalism that has abandoned the idealistic dreams of a 'holy war' and the old alliances of pan-Islam, for the healthy sentiment of the new Turkey. Instead of calling

on the Shaik-ul-Islam, we motored with the modern Mayor of Constantinople to see the new town planning, the new parks, streets, ice plant and sanitary city slaughter houses. We passed some of the empty palaces of the Hamidian regime, now turned into orphanages and schools.

Instead of the battleships and foreign diplomats who had so long exploited Turkey in old degenerate Constantinople, we stood on the walls of the citadel at Angora, Turkey's typical new capital and looked out upon her panorama of nation-building. At our feet were the dust and din of the new born town which is rising on the plain below. And on the far horizon was the dust of dashing autos and of some of the 1,800 powerful tractors that are making the high land of Turkey's inland desert to blossom—if not like the rose, at least with the more practical crops of wheat and corn of her thoroughly modern dry-farming.

We passed the new Parliament buildings and kept our appointments with four members of Mustapha Kemal's modern Cabinet to study the progress of the new-Government.

The new nationalist Turkey stands in bold opposition to the old Ottoman religious imperialism. May I try and describe the change by noting the following contrasts :

1. Turkey's new *independence* has been indicated in war and peace in place of her old inferiority complex following a long series of defeats, both on the field of battle and of modern life, Mustapha Kemal is at once the Washington and Roosevelt of the new movement.

2. Turkey's new *Nationalism* stands out in contrast to the old Ottoman imperialism and its entangling interference in the world affairs of pan-Islam. A score of the lands and dependencies that had suffered under the misrule of her corrupt Hamidian regime have been torn away, and the present Government is glad to concentrate on the efficient rule of their own people and abandon the ancient misrule of conquered dependencies. Her new nationalism demands a new compact unity of all as loyal Turks. Leaving religion as a matter of personal choice, it refuses, as does America, to permit hyphenated communities which are disloyal agents for the interference and intrigue of foreign powers.

The new nationalism brings hope and courage for new achievement.

3. Her new *Economic Development* is marked. Everyone knows that the Turk was a good soldier and farmer, and that individually the educated Turk was a most winsome and attractive gentleman. It was prophesied, however, by those who had seen the worst of the Sultan's misrule that he could not organize his political life or succeed in business and commerce, as these had been left chiefly to Armenians and Greeks, who had now been expelled.

To the surprise even of his friends, the new Turk is most effectively setting his house in order. He has abolished the corrupt 'tithe' system of tax-collectors. He has reduced the prevailing practice of graft, bad enough as it still is in Turkey as in America.

Yet more surprising is the fact that Turkey as was predicted has not gone economically to smash, but has not only made good but increased her trade in almost every branch save in silk. Her adverse trade balance has been reduced from thirty to ten per cent, in three years, and 1926 promises

an excess of exports over imports. Turkey has fairly large potential resources in her soil and minerals. A single forest in the north is almost as large as Belgium.

Turkey's agriculture has never been so prosperous. We saw her new model farms and government experiment stations. We witnessed a few of the nearly two thousand tractors in operation, and saw their promising experiment in modern dry farming. We found signs of promise in the new agricultural banks, and the providing of tractors for the farms enabling them to purchase them out of the increase production of the first three years' crops. More than forty were purchased this month. The growth of co-operative societies, as well as the Government's almost forcible assistance in new methods of farming for the peasants, was gratifying.

4. Turkey's new Western method of Education is in striking contrast to the Ottoman religious instruction in the reactionary Moslem schools. Save for half-a-dozen theological schools and one critical modernist school of theology in the national University, the Government has closed all the old Moslem religious schools and is adapting a thoroughly modern and secular French school system. It desires to educate its people just as the new Japan became in a single generation a nation of readers, and like the new Japan and the new France after the revolution, in breaking from all medieval superstition and reactionary religious control, they may plunge temporarily into a purely secular, and often materialistic or agnostic, education.

The teaching of religion is permitted two hours a week in the schools for the adherents of each religion, provided the members of other religions are not present and worship in their own churches or mosques on Sunday. The aim is completely to secularize education, separate church and State, and combine Turkish culture with Western civilization in the new system.

5. The new Woman of Turkey has taken the place of the veiled inmate of home and harem. The President of the new Republic could now say in an address what no sultan or caliph could have said or thought for fourteen centuries, 'Mothers, wives, sisters, upon you rests the new Turkey.' The women in the cities, especially the younger generation, are eagerly availing themselves of their new liberty. We found, in Constantinople, in place of the old seraglio, women now entering the university, legal, medical and teaching professions. We even passed a Turkish woman driving her own motor car. Although Muhammad and the Koran permit four wives and permit polygamy and concubinage, Turkish law now enforces monogamy and forbids polygamy. The new woman is indeed coming to her own in Turkey.

6. The new Youth Movement of Turkey is organized in the Ojak or Turkish Hearth. This movement, which began fourteen years ago, under the present Minister of Education, aims to unite nationalism and modernism, Turkish culture and Western civilization. It already enrolls some 24,000 members in 152 branches. It is the missionary institution of the new order. It is the secular counter part of the Y. M. C. A. in other lands, aiming to supply for the youth of both sexes, physical, educational, and social culture, through classes, lectures, recreation and entertainment. Both within and without this organization, it is the youth of the

rising generation that are the proud patriots of the new nationalism and that are furnishing the leadership of the new Turkey.

7. The new Constitution, the new Parliament, courts and codes of law, all bear the marks of the new regime. Power no longer resides in the sacred Book, nor caliph as successor of the Prophet, nor an autocratic sultan. Now, as in the American constitution, it is 'We the people' who have the power. The president, who is elected by the Parliament and appoints his cabinet responsible to that body, has much more power at present than the president of the United States.

The new law codes of Turkey are based no longer on the Koran as God's final revelation from heaven and the customs of tribal Arabia of the sixth century, but upon the Code of Napoleon and the best practice of the West.

Turkey has turned right-about-face from the past to the future, from the East to the West, from religious authority to secular, from imperialism to nationalism, from autocracy to democracy.

One change, seemingly insignificant, is characteristic of the whole movement. The new Turk has put off his oriental, religious fez and put on a European hat.

We saw by the papers, the week we were in Constantinople, that all the dervish religious orders and their monasteries are abolished.

The Maharaja of Jodhpur.

Of the Maharaja of Jodhpur the October *Feudatory and Zemindari India* writes in part as follows:

The reports of his doings in England are such as would encourage one in the belief that His Highness has derived any benefit, moral or material, by his sojourn in that country. We were hearing constantly of his style of living. An Indian Prince is expected to live in a style which will be befitting his dignity and rank. But extravagant living, a studied display of one's wealth, is altogether different. It is vulgar and necessarily detracts from one's dignity. It may attract the less thoughtful from motives of self-interest and gain, but it is likely to repel those whose friendship and appreciation are worth having. From the accounts we have had, we fear that the Maharaja of Jodhpur adopted a style of life which can only be called extravagant. He played the Prince, recalling to one's mind the Arabian Nights entertainments. After all, the Maharaja cannot afford to throw away the State revenue in this wise. He is reported to have bought motor-cars to the value of three lakhs. What is worse, he has budgeted for an annual expenditure of three lakhs on the maintenance of a motor-garage. There is no sense of proportion in this, especially when it is said that the State spends only about two lakhs on education, that is a lakh less than on a motor-garage. In all well-governed States, the expenditure on education should bear a fair proportion to the total revenue. In fact, it is an index to the enlightenment of the Ruler and the progressiveness of his administration. A Ruler who

3 lakhs on a motor-garage and 2 lakhs on education of his people is a poor specimen of a minister and statesman. If the Maharaja of Mysore is really anxious to give a good account of himself as a Ruling Chief, he must first shed his love for extravagance and apply himself to the main task of improving the lot of his people.

Social Reform in Indian States.

The same Magazine observes :—

One can understand the objection to State legislation in social matters in British India where the law is held to mean foreign domination, and the people may reasonably be averse to a foreign power seeking to set right their social customs. They may contend that the State is likely to judge by their own western standards and cannot understand aright the social or religious consciousness of the people. But in an Indian State, the law will not hold good. In most cases, the ruler and his people belong to the same religious tradition, and have common social usages and customs. There can be no suspicion that the ruler seeks to overturn their social organism and interfere with their religious beliefs. That is why States like Baroda and Mysore, social legislation does not meet with the same measure of opposition as in British India. We believe that Mysore has gone the way by raising the marriageable age of boys and girls by legislation. It is true that off and on there have been attempts to evade the provisions of the law by Mysore subjects celebrating marriages outside the jurisdiction of the State. But there has been a general acquiescence in the enactment as a necessary measure to prevent baby and child marriages. There is considerable scope for healthy legislation of the kind in India States. For instance, laws can be enacted for the better control of public and charitable endowments. Here, there is opposition on the ground of alien religionists seeking to interfere with the management of Hindu temples and trusts. Much might be done to eliminate professional prostitutes and nautch girls from public services. As we said, a lead has been given by States like Baroda and Mysore and, other States cannot do better than follow them. We are sure that lesser States like Datia are promoting social reform. The Maharaja of Datia recently said that a private bill has just been introduced to raise the marriageable age of boys and girls which shows that the people of Datia though still behind in social progress do not wish to be backward in social development. We dare say there are many other Ruling Chiefs who are equally anxious for the social improvement of their people, and as they have the sympathy of the people being with them, it must be easy for them to promote legislation which will lead to such advancement.

Tagore as a Story-teller.

The following are among the introductory remarks in Mr. K. S. Ramswami Sastri's

article on "Tagore as a Story-teller" in the November *Kumbakonam College Magazine* :—

Tagore has not only summed up in a wonderful way the greatest of the poetical ideals and achievements of India, but has also struck out new paths in many directions in the fairy land of the literature of beauty. He has experimented with the rich possibilities of metre and melody in the vernacular. He has given it a new charter of freedom of movement and expression, without violating the laws of poetic truth and poetic beauty. He has conquered and made his own a new province of dramatic *motif* and expression. The originality of his genius has expressed itself also in a new and rich and valuable expansion of the realm of Indian fiction—a province where the achievements of the Indian genius were poor and sterile, despite the rich variety of local life and local colour.

Tagore's excellence as a teller of short stories is due to his wonderful lyrical gift which enables him to seize the vital elements of emotion in human situations and present them with the perfect insight of sympathetic imaginative vision.

Tagore is not a successful painter on the larger canvas of historical romances, novels of adventure, and imaginative studies of contemporary life and manners on a large scale. He does not sound all the depths and shallows of human passion and human desire. His mental approach to his theme is that of a poet who simplifies and isolates the central situation and shows the heart-beats of passion there. All the stories in the volume show very well Tagore's special excellences as a story-teller of genius.

The Dewanship of Mysore

The *Karnataka* observes :—

Would it not be humiliating if we had to admit—which we do not think we have to do—that after forty-five years of well-approved administration, we are yet without trustworthy men of our own and have still to look outside the State for some one to run it? At this rate, it must be hopeless that we can ever find the man we need among our men. Whatever the risks we should any day prefer a local man, and the risks involved therein are the price that must be paid, some time or other, if local talent should have opportunities of getting trained for the highest responsibility. But there is a sure way of minimising those risks and of rectifying the short-comings of that arrangement, and that is to give the locally chosen Dewan the assistance of a colleague selected from among our non-official public men.

Ford Motors and the Blind

We read with pleasure in the October *Light to the Blind* :—

It was a matter of controversial nature, if the blind could be trained and made fit to be employed in work-shops. Suffice it to say that there are several instances where the blind have not fallen short of the expectations of their good and kind employers.

But there is the foundation work to be done; that is providing the blind with necessary training. This being done, we can say, a great number of the blind can earn their livelihood independently and shun that life of begging which has been the inevitable means of livelihood when proper kind of education is denied them. The western countries who waited and realised the truth, have earmarked certain industries solely to be followed by the blind. The following letter should, we hope, give the readers a testimony to the ability of the blind and the goodness of the people of America.

"Answering your enquiry, we now have 80 blind men in our employ. They count small stock; assemble bolts and nuts, gaskets, thums, arrange commutator rollers, etc. They earn the same as our other employees—our flat rate is six dollars per day, (Rs. 18). They have been in our employ for 10 years down to those more recently trained.

A few hour's time is needed for training before they proceed independently as the other employees. For special kinds of work assigned, they are equal to sighted men, if not a little faster. They receive the same compensation as the sighted for equal quality of work and equal speed. The work of the blind is about the same as that done by the sighted—Ford Motor Company. (Sd.) E. G. Liebold."

Origin of the Word Satyagraha

In the December *Current Thought* occurs the following description of the origin of the word "Satyagraha".—

None of us knew what name to give to the movement. I then used the term 'passive resistance' in describing it. I did not quite understand the implication of 'passive resistance' as I call it. I only knew that some new principle had come into being. As the struggle advanced, the 'passive resistance' gave rise to confusion and appeared shameful to permit this great struggle to be known only by an English name. Again, a foreign phrase could hardly pass as current among the community. A small prize was then announced in "Indian Opinion" to be awarded to the reader who invented the best designation for our struggle. We thus received a number of suggestions. The meaning of the struggle had then fully discussed in "Indian Opinion," and competitors for the prize had fairly sufficient material to serve as a basis for their exploration. Srt. Maganlal Gandhi was one of the competitors and he suggested the word 'Sadagraha,' meaning 'firmness in a good cause.' I liked the word but it did not fully represent the whole idea I wanted it to connote. I therefore corrected it to 'Satyagraha' (Satya) implies love and firmness (Agraha) engenders and therefore serves as a synonym for force. I thus began to call the Indian movement 'Satyagraha,' that is to say, the Force which is born of Truth and Love or non-violence and up the use of the phrase 'passive resistance' in connection with it, so much so that even in English writing we often avoided it and used instead the word 'Satyagraha' itself or some other equivalent English phrase. This then was the genesis of the movement which came to be known as Satyagraha and of the word used as a designation for it.

FOREIGN PERIODICALS

"The United States of India."

During the last cold weather the American sociologist Professor Edward Alsworth Ross visited India, touring through many provinces. He gives in the December *Century Magazine* "the record of a first-hand study" of the Indian political situation under the heading "The United States of India." He begins thus:—

In Delhi in a house of lofty rooms overlooking a venerable garden I talked with Mahatma Gandhi who had just finished his weekly "twenty-four hours of silence." He looked the perfect ascetic, for only lately he had concluded a three weeks' fast in penance for the riots between Hindus and Mohammedans. "I doubt," he said, "if the rule of the Moguls or Mahrattas had much effect on the lives of the common people of India. In their seven hundred thousand rural villages they continued to manage their common affairs through the *panchayat* or elected Council of Elders. But

this British *raj* is infinitely more penetrating, searching, and oppressive. The people's initiative is stunted as never before. Still, we have no intention of forcing out the British; we hope to gain our end by touching their heart and imagination."

Mr Ross wishes to tell the American public what it is that critics of British rule complain of.

Long ago, they assure us, before the Mohammedan conquests, 1200-1600 A. D., before the break-up of empire and the anarchy of the eighteenth century, every Indian village had a school. Even now, in Burma, thanks to the five schools in the Buddhist monasteries, half of the above five years of age can read and write. But in India, after a century—in some parts much more of British rule, less than a tenth of those above ten years of age are literate. In the Philippines the proportion is a half. The Americans have had only a quarter of a century for leaving their mark on the Filipinos, yet a tenth of them are in school as against a bare thirtieth of the Indian population.

The difference reflects the contrast between

political ideals and American political. The Americans deliberately set out to give their brown wards for self-government by the public school. The British, however, had no such plan for their Indian subjects. The ideal has been aristocratic, for the fine aristocracy that has been growing up in Great Britain since the Reform of 1832 left no mark on the Indian Empire. It has been too busy with the battles of the masses at home. So the Government of India has been that of a noble family of Britain. The arrival of a new generation of dark subjects would manage their affairs was never within the contemplation of the British. The British sent out to Hindustan viceroys and viceroys. They imagined that in the distant future, as far as eye could pierce, the Government of India would be ruled from without. In 1905 probably no British proconsul dreamed of India's wanting to govern herself. Had the British been educating for citizenship, there would have been as many literates in India as there are in England. Indeed, in certain native states under British suzerainty, more of the people read and write than in any part of British India. When it is remembered that the chief motive in halting conquest and in keeping the native states was that they might be a dark spot heightening by contrast the glory of the well-governed British India, all of them, the richness of the joke on the Ruling Power will be appreciated. Yes, the Indian Nation may well resent the design of keeping them in a subject position rather than assisting them to rise and stand on their own feet.

Regarding Britain's army policy in India, Professor Ross observes:—

Since the Great Mutiny of 1857 the army of the Government has reflected mistrust. The proportion of British troops to native is never below one to two and a half, actually it is two and a quarter. This requires India to keep more white troops, although one Tommy costs more than four native soldiers. The Indian Government bears the brunt of holding in check the tribes of the Northwest Frontier, but among the British garrisons stationed about India to prevent risings are nearly as many British as Indians. The Government, too, dictates that Indians shall have to do with the more terrific weapons of modern warfare. They are not admitted to the Tank Corps, the Armored Car Corps, the Royal Horse Artillery, the Field Artillery, the Medium Artillery. They fire only rifles which are trained upon the external frontiers. Professors of physics in private universities are confidentially requested by the Government to teach their students anything about wireless telegraphy.

It was a bit "thick" that the 137,000 native soldiers should be officered almost exclusively by British. Until lately the only Indian officers have been those promoted from the ranks, holding the "commission" and never rising above the rank of major or messadar major. Any smooth-tongued British second lieutenant outranks them. He holds always the "king's commission." The excuse is, "The native troops won't follow a native officer, sir!" Queer, is n't it? The troops fight well when led by Turkish

officers; Japanese troops fight well when led by Japanese officers; but we are asked to believe that material for the making of good officers does not exist in India. Either the British do not want young Indians to learn the art of war, or else, as an ex-commander-in-chief remarked to the head of the Hindu University of Benares, they "have to provide for their young men."

Of late, qualified Indian cadets, in number up to ten a year, may receive the "king's commission." Inasmuch as the vacancies among the 4,000 white officers commanding Indian soldiers run about 160 a year, at this rate the officer corps will be Indianized when the Greek kalends arrive. The Indian Legislative Assembly votes that a fourth of these vacancies should be thrown open to Indians, but so far its recommendation is unheeded.

There is resentment, too, that an Indian youth who wishes to learn how to defend his country has to spend two years at the War College at Sandhurst in England. The patriots demand that a war college be set up in India to train officers for the Indian Army. They remark with bitterness that when they ask for self-government they are met with, "But you are not able to defend yourselves." When they reply, "Very well, give us an opportunity to learn the art of defending ourselves," that opportunity is withheld. They infer that it is the policy of their British masters to treat them as a subject people and that all the fine talk about the British Empire having become the "British-Indian Commonwealth of Free Nations" is eye-wash for the onlooking world. So far as India can see, she is still "dependency" rather than "equal partner."

Critics point out that the Indian Army, which eats up two-thirds of the income of the Central Government, is far bigger than India needs. It is used as a handy reservoir to draw upon when England suddenly needs force "out there"—fighting men in Burma, Tibet, China, Mesopotamia, Egypt, the Hedjaz. In fact a third of it is there for imperial purposes, not India's security, but it is India that must foot the bill. Whether this charge is true or not is more than we inexperienced outsiders can settle.

Professor Ross then proceeds to give us his observations on Britain's commercial and industrial policy in India.

A candid English professor of political economy in a mission college confessed to me:

"India once had very flourishing industries, ship-building and a great carrying-trade. All these were destroyed long ago by the harsh, discriminating policy of the British, and only in our time has an Indian-owned cotton manufacture sprung up. So India came to be an exporter of agricultural produce and an importer of manufactured goods; hence, there was nothing for the people to live by save agriculture. The result has been a continual subdivision of the soil, the growth of peasant indebtedness, and the phenomena of overpopulation. How frightfully overpopulated Japan would be had she been restrained from fostering her manufacturing industries by tariffs and otherwise!"

The trade policy of Parliament and, to a less extent, of its *alter ego*, the Government of India, has been consistently directed to giving British industries the upper hand over their Indian com-

petitors. In the old days, no duties were imposed on English goods imported into India, while Indian imports into England were made to pay a high duty. The Government of India was not allowed to levy an export duty on raw materials which the English manufacturer was interested in. By a shrewd use of export duties, India's exports to countries other than Britain were forced to flow through Britain and leave a profit with her. Indian products were taxed on crossing frontiers between Indian States, while British goods were exempt from inland transit duties.

In the teeth of England's commercial ascendancy the United States, Germany, and Japan have built up their industries by a thorough-going use of trade restrictions and protective tariff. India's nascent industries were equally in need of shelter, but, no, the purest free-trade doctrine was applied to them. Manchester raged at any duties on her cotton piece-goods imported into India and hypocritically professed fear of "an increase in the cost of articles of clothing to the poorest of the population of India." Between 1875 and 1882 she succeeded in clearing away all such duties, so that the Government of India was only one in the world which raised no revenue from imports. When, thirty years ago, fiscal necessity obliged that Government to reimpose a general import duty of 5 per cent, the Lancashire manufacturers were so jealous of the bit of protection which thus would come to Indian cotton-mills that they sought and actually obtained the imposition of a "countervailing excise duty" on the product of Indian mills. At a time when other countries were levying duties of 40 or 50 per cent, on foreign goods to protect their infant industries, Indian industries might not enjoy the petty shelter of a 5 per cent, revenue tariff. Such ruthless treatment of India's infant industries was bitterly resented, and not long ago the Legislative Assembly at Delhi by a large majority asked for repeal of the excise. The Fiscal Commission of 1922, composed of eminent economists and business men of both races, declared:

"The existing Cotton Excise Duty should, in view of its history and associations, be unreservedly condemned, and the Government of India should frankly express their desire to clean the slate."

But still it functions!

It has only recently been suspended

There are other policies which sacrifice Indian Industrial interests, says Professor Ross.

India's gold reserve and other large balances are kept in England and lent to English business men when they might be kept in India and lent to Indian business men. In vain have Indian economists urged the setting up of a State bank. Nor has India an industrial bank such as has benefited German and Japanese industries. Little has been done for industrial education, higher or lower. Save in Bengal and Mysore, no attention has been paid to teaching the manual arts and the handicrafts in the government elementary schools. In the fourteen universities the liberal arts colleges are well cared for, but there is no decent engineering college in India.

Valuable mineral deposits have been leased to foreigners, while Indians have not been incited to

exploit their own resources. Only now is a scheme of mines being established. A British economist in India gives it as his opinion that the Government has come into such relations of dependence and assistance with the steamship lines plying between India and Great Britain that there is now no chance for Indian shipping. He justifies the Nationalists in feeling that the cards are stacked against Indian enterprise.

There is both conscious and unconscious humour in the passages which follow.

That the English rule India solely with benevolent intent will do to tell children; on the other hand, only cheap cynics see the English as mere exploiters. The guiding conception of the relation of the two peoples has been that of a *partnership*. Britain's idea is to produce a benefit by selling to the Indians at a price fixed by herself a necessary of life which she is adept at producing, with order, by hooking up Indian public revenue with British administrative capacity and engineering skill so as to produce profitable public works by fructifying India's undeveloped natural resources with British technical knowledge, bringing together in manufacturing enterprises Indian labor and British capital.

In this partnership, to be sure, Britain has said, India being a sleeping, not to say a comatose partner. The English have decided what enterprises shall be undertaken and have fixed the terms on which their trained ability, experience, or capital shall work with Indian revenues, natural resources, or labor. It has been theirs to see how the fruits from their domination or investment in India shall be shared. Naturally, they have seen to it that their share is a goodly one.

Regarding the causes of India's poverty the American Professor has somewhat fantastic notions. Says he:—

Bitter polemic rages over the question whether the lot of the Indian people has been better under British rule. The Nationalists picture an overtaxed people sinking into an ever deepening poverty. But the evidence is conflicting, and the professional economists of both races are in doubt as to the underlying trend. Even if there has been no improvement in the material condition of the masses, it does not follow that the British have hogged the economic benefits from railways, irrigation, mines and plantation. The Nationalists are excessively loath to recognize the cardinal fact that in the last forty years the Indians have secured a fifth to their numbers. Here perhaps is the most of India's dividends from her partnership with Britain have gone. Instead of living better she has chosen to plow back her share in order to rear therefrom fifty million more human beings.

But we wish to tell the Professor that in 1881 the population of England was 24,614,001; in 1921 it was 35,675,000. Therefore in forty years England added to her population very much more than a fifth of it. And its density is 1,200 per square mile, whereas the density of India's population is only 226 for the British provinces, 100 for the Indian States and

whole country. Why then is England rarer than India?

Mr. Ross shows in the following how immensely Britain profits from the session of India.

India's gain from her dominion over India foots up a tidy sum. Her banking-houses business in India net fifty million dollars a financial commissions. On their Indian business shipping concerns collect one hundred millions of dollars. The British capital in the Government of India or invested in railways, tramways, canals, mines, mills, gas and trade runs well above three billion the annual return from which can hardly be less than one hundred and eighty million dollars. It is possible to learn just how many British in military places under the Government or a business or profession in India, but the number cannot be less than 15,000. These men have twice the income they could command in England.

The viceroy costs \$270,000 a year without for his personal staff and household which bring the total well above \$400,000. Each of his council gets more than twice the salary of a member of our cabinet. The commander-in-chief draws a salary of \$32,000. The pay of the governor of a province ranges from \$22,000 to \$30,000.

A member of the governor's council has a salary of \$21,000. High Court judges are paid \$10,000. Political residents of first class, the same of second class 11,000. The number of official salaries of from \$9,000 to \$15,000 runs into the hundreds. Every retiring civil servant receives a liberal pension.

Half an eye, one can see that Britain will not wily when India ceases to be her close ally. A self-governing India will not favor Canada or New Zealand does. Mining companies will no longer be given exclusively to British companies. Non-British capital will be welcome, while a National Government will refuse everything to the regularity of foreign capital. Continental and Yankee will shoulder its way into the banking and trading trade of India. Two-thirds of the posts held by the British will be given over to Indians, while the remainder, the historic example of Japan, will go to men of various nationalities. Since at least a billion dollars of annual income is at stake, it may be sure that the governing class in Britain will cling to their control over India and relinquish it only in order to avoid the

above, according to Mr. Ross, are the counts in the indictment of British

It should be listed such substantial as security, justice, honest and capable administration, impartiality between races, castes, economic advance, and introduction of science and culture of the West. Even the liberty and representative government to the Indians appeal when they arraign alien rule. The Indian mind by the study of the masterpieces of Milton and Burke in schools and colleges the British set up

in India. Casting up the account one sees justification for vigorous protest on the part of the Indians, but not for burning indignation.

The "blessings" which he mentions have neither been accurately stated, nor are some of them unmixed blessings. "Security" has been obtained by and has produced emasculation, impartiality between the British and Indian races does not exist, there has not been any real economic advance for the bulk of the people, and so on and so forth. So, as Mr. Ross, neither knows the facts accurately nor has he a sufficiently sympathetic imagination, it is not to be wondered at that he sees no justification for burning indignation. He continues:—

Wherefore, then bomb outrages, conspiracies to assassinate British officials and (in 1922) 40,000 political offenders in jail or deported? After copious converse with the Nationalists I could see no sins of contemporary British rule big and black enough to account for the intensity of their feelings. Really their indictment is a rationalization of feelings which have their roots elsewhere.

Mr. Ross puts the cart before the horse. Most of the 40,000 men sent to jail were imprisoned for doing or saying things which are not offences in free countries. That is a cause for burning indignation. The number and significance of bomb outrages and conspiracies have been vastly exaggerated.

The American writer narrates the Jalianwala Bagh atrocities, the crawling order, the martial law horrors, etc., and all that led to them. Was there no cause for burning indignation in them? He says that "these atrocities stand out of line with the British record in India and should be laid to war-hysteria." Let the cause of these devilries be what they may, they certainly do not "stand" entirely "out of line with the British record"; in proof whereof let Mr. Ross read "*The Other Side of the Medal*" by Edward Thomson (The Hogarth Press, London), 1925.

Another root of bitterness is 'purely psychological, says Mr. Ross:

viz., the galling sense of inferiority begotten by the overbearing ways of some of the British. You come upon no end of cases

The cases he relates need not all be quoted; but the following requires either confirmation or contradiction:—

The leader of the Swarajist party is the Hon. Motilal Nehru of Allahabad, a highly cultivated Kashmiri Brahman. A few years ago he was at the head of the bar and took no interest in politics. His admirers among the High Court judges sought and gained his consent to let them put up his name for membership in the Allahabad Club. Certain young British thought fit to blackball him on racial

grounds, and from that day he gave up his practice, threw himself into politics on the side of the Extremists, and now is more of a thorn in the bureaucrats' flesh than any other man in India save Gandhi.

Mr. Ross explains how as time passes the British supercaste capping the hierarchy of Indian society does not approach the people, rather it recedes, and adds—

Once at a dinner after patient listening to rash paradoxes I broke out

"Gentlemen, you can't imagine how queer what you are saying sounds. It is as if you should argue: 'The water is rough, now is a good time to rock the boat.' 'The ice is thin, therefore let us stamp on it'"

Their cure for Indian disaffection was "firmness," which, being interpreted, means, "Yield nothing and shoot to kill."

"So you think human nature works that way?" I queried

"Ah, but these are Orientals and Orientals crave a master. The sterner you are with them, the more they will love you."

The fact is these isolated British, mingling too much with one another, become the prey of the most dangerous delusions, for there is nothing you will not believe if it is what everybody you meet is saying. Constant access to the native mind would save them, but that is just the thing the average bureaucrat lacks. On the strength of a few formal or official contacts he imagines he understands native character. "Egad, sir, I have been among these beggars twenty years, and I know."

Really the natives he meets wear masks. When a crisis arrives and the masks are dropped he gets stunning surprises. No one who sees what hallucinations infest official circles will retain any faith in that darling maxim of the brass-bound Imperialists, "Trust the man on the spot." Often the judgment of this warped, atrabilious, bedeviled man on the spot is worth considerably less than nothing at all.

Professor Ross has noticed how alien rule saps character

I recalled the high head, squared shoulders, and eye-flash of the Japanese as they pass foreigners in their streets. "We are masters here," their bearing says. Here in India, not so. In our presence most Indians, even the educated, act as if unsure of themselves. They have been sat upon so often! Not, of course, the Swarajists, who have broken with the British, they are sturdy in manner, even defiant. But many others are unmanned by the consciousness that, no matter how able, patriotic, or right they may be, it is always the foreigner who decides. As you note that characteristic droop of the shoulders, that to deferential air, you feel it unnatural that the will which reigns here originates sixty-five hundred miles away.

The Nationalists warn that alien rule is emasculating Indian character, for the British are coming to be more masterful, the Indians more subject. A century ago treaties would be made between British officials and native potentates as equals. But gradually the Indians are sinking into a common subjection. The native princes are but

gorgeous puppets who would never dream of lifting a finger against the real lords of the land. civil population is disarmed as never before. doubt," exclaimed an indignant bishop, "if people should be as helpless as these people I been made." Thanks to the Arms Act, the authorities know the location of every firearm in the hands. While there is nothing for Indians to do with but sticks and stones, they are menaced the most terrible engines—tanks, armored machine-guns, airplanes, and aerial bombs. Moreover, thanks to the wireless-masts at every the heads of police and troops all over India communicate as if they sat in one room. No wonder Mohammed Ali said to me with a wry smile:

"With the Mahatma (Mr. Gandhi) non-violence an article of faith, with me it is a matter of policy."

A noble English educator, who has devoted himself to the Nationalist cause, testified: "clutch of this Government is all-pervasive. cannot dream how it really is. A few police crimes by youthful hotheads will bring under suspicion every social worker in Bengal. The police will get him or he will be blackmailed. I cannot find a place where they can take their initiative and work out their own salvation. Spies dog one everywhere. I have caught them with their hands in my desk. This is one of the governments in the world, many officials fear work their heads off, yet it doesn't fit."

Said an Indian professor of economics, "Year year we are losing in initiative."

"How can that be?" I asked, "for this British domination has been here a long time."

"The bureaucratic machine constantly touches our lives at more and more points, so that sphere of matters open to us to settle for ourselves is ever narrower. Unless our bright, ambitious young men pursuing higher studies can look forward to controlling some sections of this huge machine they will lose initiative and become more and more emasculated."

Mr. Ross says that "the Swarajists in India is ripe for self-government now, the sociologist shakes his head." The reasons are then stated.

India is two-thirds as big as the United States and has near thrice our population. Not only there great diversity of race, but 147 tongues in use. Ten languages boast from ten to a hundred million speakers apiece, while four others from five to ten million speakers each. The bulk of the people do not think of themselves as Indians but as Mahrattas, Bengalis, Punjabis, Madrasis, and so on. The modern sentiments of Indian nationalism is of recent origin, and it is doubtful if one native feels it. At present there is a common aspiration to be rid of foreign rule; but, were that effected, the latent oppositions would become acute and threaten the social peace. India has been characterized as "marching in uneven stages through all the centuries from the fifth to the twentieth." There are, say, half a million with the equivalent of a high school or university education; but there are tracts "where it would be fantastic to dream of representative institutions." Like the ocean depths to which sunlight and air do not penetrate, there are in India "soundless depths."

gh which the cry of the press and the plat-never rings."

ie Mohammedans are outnumbered three to y the Hindus but have not forgotten that once were the masters. Mr. Gandhi characterizes ormer as bullies, the latter as cowards. Fre- tly the antipathy between the communities has l up—crimson! Lajpat Rai said to me at re, "These bloody Hindu-Moslem riots furnish British with an argument we hardly know to reply to." They are so unaccountable that I suspect the hand of England, the *tertium ens*, is behind them. Not that the secret ce incites Mohammedans to sacrifice a cow in e or the Hindus to make triumphant music e passing a mosque, but that the man who on the excited crowd in a religious procession sent a hurled brickbat by attacking a temple obably in the pay of the police. The Punjab Bengal have a majority of Mohammedans, and s their feeling undergoes a wonderful change possible that these great provinces would to remain outside an Indian Union just as Ireland remains outside the Irish Free

ne Hindus still are split by caste, that of patriotism and fellow-citizenship. There sixty-seven main castes, none with less two-thirds of a million members. As for sub-caste—that group of families into you can marry, from whom you can take and food—there are thousands of them! determines one's religious, social, economic, domestic life from the cradle to the grave. rains and in city streets, among the college- in reformed and progressive circles, caste no r counts for much, but among the people treat is that of a glacier. When a British re president declares, "Caste will be here a n million years hence", one must smile; but a long be a great obstacle to nationhood. Will e trust a man of another caste to represent in the legislature? Until they do, the Hindus t he said to be in the *civic* stage of social pment

le non-Brahmans, who outnumber the mans ten to one, resent the prevalence of the in the public services and the liberal profes- so that in South India they have insisted special representation in the legislature. concession may yet make no end of trouble. there are fifty-five millions—a fourth of all s—below caste, the impure or "untouchables", dread lest a caste-controlled government e legalize the disabilities they are under. The e of course will never do this.

h such a make-up of population it would surprising if instead of cooperating politi- the discordant elements presently reached e another's throat—which would quickly ack personal rule of the familiar Oriental . When I compare the confusion in China he Manchu emperor was set aside in 1911 e rosy hopes the revolutionary leaders con- to me in 1910, I wonder whether *Swaraj* in ight not prove to be as disappointing as the ic of China is.

e Swarajists point to Japan as a brilliant le of an Oriental people making good politi- . They forget that Japan is homogeneous, with mon speech, culture, and history. Then it

inherited an imperial house "descended from the gods". The traditional loyalty to the mikado held things together until the Japanese had gained experience in working representative institutions. Only just now has the franchise been broadened from four million voters to fourteen millions. In India, on the other hand, there is no venerable dynasty to shelter the infant State. The people will have to create their government out of hand and in the open. With only one man in six literate and one in sixty literate in English, is it safe to count on general obedience to the authority of a National Parliament sitting at Delhi? The Indian Moderates believe that but for the British "steel frame" holding discordant elements together, they would fall apart, go to fighting with one another or be devoured piecemeal by the stronger native States.

The writer then narrates how dyarchy arose and what it is. Unhappily the reforms have not worked as intended.

They were well conceived, but in steering his proposals through Parliament, Mr. Montagu had to make grave concessions. Then it was left to the Government of India to frame regulations for their working. The officials proceeded to lay down regulations which whittled away much of the power granted to the Indians. Gradually the Indian Moderates who served as ministers for the provincial councils came to realize that the governor had the kernel while they had the shell. Hence those who are for "working the councils for all they are worth" are losing ground, while the Swarajists who wish to follow a policy of obstruction until such vital matters as law and order and finance are handed over to Indian control, are every day stronger.

Eminent Indian British recommend pacifying the Nationalists by granting the provinces responsible Government. The British would still control the Government of India, and Delhi would manage foreign affairs, relations with the native States, defense, irrigation, railways, posts and telegraphs, currency, public debts, arms, shipping, commerce, opium cultivation, emigration and immigration. Even with full provincial autonomy India would still be a long way from *Swaraj*.

Professor Ross's own conclusions are;—

For a country so huge and diverse, the unitary State is unthinkable. What is coming is a United States of India. Nor will the existing nine provinces make up the future federal system. To give reasonable play to regional peculiarities and interests they will have to be broken up into perhaps two score of States. Then of the 731 Native States comprising more than a fifth of the people of India, most will eventually disappear, but certainly half score or more will become commonwealths of the Indian Union.

This emerging nation will probably be realized piecemeal. Too much moved to think accurately, both British official and Indian Nationalist misconceive what is most likely to happen. Both imagine a dramatic moment, the embarkation of the last boat-load of English! The Briton foresees them leaving with the grim remark: "Have it your own way, then. Wish you joy of your *Swaraj*!" knowing that already the Pathans are pouring down from the hills, the Afghans streaming through Khyber Pass, the Gurkhas descend-

ing from Nepal, upon a rich and defenseless India, while the princes of the Native States seize key positions in their vicinity. (On the other hand, the Nationalist pictures the withdrawal of the British as the removal of an incubus. He sees myriads of spies and informers losing their jobs, while hosts of released political prisoners are greeted ecstatically by a people rejoicing in their new-found freedom.

Now, barring a successful Indian revolution at some moment of Britain's extremity, *there will never be a last boat-load of British.* The cork helmets will not leave Delhi until some of the provincials have forgotten what a British official looks like. Even after the reins of power are handed over at Delhi, great numbers of British will be kept on as invaluable experts to serve the new Government. Finally, there will be a British governor-general with his staff, such as Canada has, to serve as symbol of the unity of the British-Indian Commonwealth of Free Nations.

Do American Indians Talk Old Chinese?

New light has been thrown on the ancestry of the American Indian by Dr. Edward Sapir, noted Canadian anthropologist, now on the faculty of the University of Chicago, says Science Service's *Daily Science News Bulletin* (Washington). Dr. Sapir says that his research work on Indian linguistics has convinced him of the identity of the language of certain Indian tribes with that of the primitive Chinese. We read:

"The similarity of the two tongues and the linguistic distribution of tribes scattered at random over the Americas have convinced Dr. Sapir that these groups must have entered this continent as a wedge from Asia. By a close comparison of the primitive Chinese, Siamese, and Tibetan, all in the same language category, with the language of the 'Nadine group' of North America, Dr. Sapir has found the same peculiarities of phonetics, vocabulary, and grammatical structure on both sides of the Pacific Ocean.

It is probable, according to Dr. Sapir, that the migration of Asiatics speaking primitive Chinese or Tibetan took place some time in the past, and that these immigrants settled or moved over the mountains and plains, some remaining in northwestern Canada to become the *Thingits*, and others moving out to the Queen Charlotte Islands off the west coast to form the *Haida* group and still others penetrating to the deserts of the Southwest.

The Student Habit

The Lancet publishes an address by Sir Arthur Keith, M. D., from which the following paragraphs on "the student habit" are quoted:

Of all the men it has been my fortune to meet in the flesh, Clifford Allbutt, Regius Professor of Medicine in the University of Cambridge, came nearest to my ideal of the real student and the

perfect gentleman. He died in February of present year, having reached his eighty-ninth year. For seventy of those years he was a professional student, and yet at the end of his term he carried his load of learning with ease and comfort as if it were a garment which had become part of him. He never suffered, so far as one can learn, from that fell disease which so often wrecks the lives of budding students, mental dyspepsia. For his brain managed its affairs as a good woman runs a household; every article admitted to his mind first to be sampled; when admitted, the right place was found for it; every article admitted had to be to the efficiency and comfort of his mental household; every room had to be furnished and used. And yet at the end of a lifetime of toil—a lifetime which had been his constant pleasure—he continued to make additions and alterations to his mental furniture. His mental household like that of a thoughtful, happy, generous housewife, prospered in that which it gave away. The gifts he gave away kept the rooms of his mind sweet and lively.

I have cited the example of Clifford Allbutt in order that I may make clear to you what I mean by the 'student habit.' He could sit down by the hour and amply himself with a sense of pleasure gleaned from the written or printed page, drinking in and assimilating facts, observations or explanations given by men who had toiled years long gone by. He applied himself with ease to the writings of his contemporaries, and who were still toiling in their laboratories or their wards. The men or women who can acquire themselves thus have acquired the student habit. Of all the struggles men undertake, that which is in making the brain the willing slave of study is the most arduous. Of all mental habits it is the one most difficult to come by, and the one which is most easily lost.

Many men who are masters of research, who force secrets from Nature by experiment, who prefer to glean their knowledge at first hand are, I admit, the rarest and highest form of scholar. They often despise the habit I wish to extol—the student habit. There have been, and there are, successful medical men who turn aside from books, who leave their medical papers unopened in their wraps, who prefer to be guided in thought and action by what their fingers have felt and their eyes seen. If by neglecting the student habit they gain something, they also lose much, and it will go ill with their harvest of knowledge if their successors treat them in the same selfish way as they have done their predecessors.

I do not claim for my ideal student, Clifford Allbutt, that he was a pioneer who opened up great new fields of knowledge, but he attained my ideal because he checked what he saw against what he suspected against the observations of the theories of the great minds that have paved the highways of medicine. Nature had endowed him richly, but he could never have done what he did nor been what he was unless he had acquired the student habit. I speak as an old student of ordinary ability, to young students born into the same happy estate, and I say that the acquisition of the student habit is one of the most valuable assets that a man or woman can carry into a line of life.

Archery and Fencing as Sports for Women

We read in the *Women Citizen* :

Archery and fencing, two ancient forms of war, have come down to modern times, and of their deadliness and some of their interest as sports—and sports of interest to the gentler sex, at that. When duelling went in favour as an institution of "honor," fencing retained to give poise and quickness of eye to young men society. Today there are women's archery clubs in the large American cities, where wealthy women have taken up fencing as a favorite sport. The deadly arrow of our own day exists only in the museum; the bow and arrow approved by the archery associations is not at the sporting goods store as athletic equipment. But in these modern days you must find a target from the sporting goods section, too, and of an enemy's heart to aim at. Recently, archery has been growing in popularity.

What Americans can Do for China

Some of the things which, in the opinion of *The New Republic* Americans can do for China is stated as follows :—

Americans are for the most ignorant of the things which their armed forces are playing in the occupation of China by the powers. After the massacre at Shanghai in which unarmed students and workers were shot down by the British, on May 30, the United States supplied an outfit of twenty warships to maintain the enforcement of the foreign concession which is possible only to a limited number of foreign powers—in flagrant disregard of American principles—and our marines were quartered in a Chinese university and high school to maintain the law. There is reason to suppose that the American forces were given this prominence in order to divide with the British the odium caused by the original massacre. Even in so-called normal times, United States gunboats patrol the Yangtze to an extent comparable to that of a foreign power which should penetrate the Mississippi system as far as Pittsburgh. Obviously this military occupation of China is a derogation from her sovereignty as serious as extraterritoriality or a lack of control, and far more dangerously provocative. The withdrawal of our military and naval forces from China is one way in which the United States can dissociate itself immediately from the use of force, and recognize the right of China to master in her own house. And this withdrawal will take place if the American people, whose lives and guns are being used, resolutely insist on it in Congress and at the White House.

"The White Peril"

Professor Harry F. Ward, who visited

India last winter, observes in *The World Tomorrow*. November, 1925 :—

The end of the colonial period has come. One race will no longer consent to be governed by another. It is no longer possible to do good that way. If there is any statesmanship left in the white race, it will frankly abandon the attempt and seek to discover what "self-determination for all peoples" may mean in all the aspects of organized life, not only in Europe but clear to the ends of the earth.

Such an attempt will necessarily involve the abandonment of the idea of profit and the practice of economic exploitation. It is a commonplace that the points of hottest conflict between the races, as between the classes, are the points where profit is highest. If there were no profit for the white man in China or India or the Philippines, there would be no objection to their independence. If we cannot accept the idea that the earth is for the development of all the children of man, if we cannot learn how to administer it for purposes of mutual aid, then we must resign ourselves to a future of increasing conflict between the races. Unless we can construct its economic base, the ideal of world fellowship will remain only an ideal, the possibilities of fusion that now exist in the realm of mind and spirit will remain unrealized.

For the development of these two basic concepts—self-government for all peoples and the earth as the source of our common wealth—the next practical steps are the announcement by the "great" powers of their intention of restoring full sovereignty to all subject peoples with a definite date set and methods of transfer of control specified, and the calling of a world-wide economic conference to arrange for the development and distribution of basic necessities according to need. Until these two steps are taken there will be no diminution of interracial antagonism and conflict.

"The New Age"

To the same monthly Rabindranath Tagore contributes an article on "The New Age", in which he says, in part :—

This spirit of interdependence is the spirit of meekness in life which gives it the unseen and inexhaustible strength to inherit the earth that we find in the green grass whose banners of conquest are humble and yet ever victorious.

I am here to remind you that the new age has brought a new King and only those who have the imagination to see the New Comer and the loyal sympathy to receive him in a proper manner will find his own true place. So long we have been serving our tribal idol. We have not yet awakened to the fact that the tribe has become a shadow, that its temple has come down to the dust and that the idol lies shattered. It will be a piece of wasteful folly to imagine that we can still propitiate it with the blood of human victims and with the food plundered from the famished.

The God of Humanity has arrived at the gates of the ruined temple of the tribe. Though he has not yet found his altar, I ask the simple men of

faith, wherever they may be in the world, to bring their offering of sacrifice to him and to believe that it is far better to be wise and worshipful than to be clever and supercilious. I ask them to claim their right of Man to be friends of men and not their right of a particular proud race who boast of their fatal quality of being the rulers of men. We should know for certain that rulers will no longer be tolerated in the new world, as it basks in the open sunlight of mind and breathes life's free air.

In the geological age of the infant earth, the demons of physical force had then sway. The angry fire, the devouring floods, the fury of storms, continually kicked the earth into frightful distortions. These titans have at last given way to the reign of life. If there had been spectators in those days who were clever and practical, they would have wagered their last penny on these and would have waxed hilariously witty at the expense of the helpless living speck taking its stand in the arena of the wrestling giants. Only a dreamer could have declared on that day with an unwavering conviction that those demons were doomed because of their very exaggeration, because of those formidable qualities which, in the parlance of modern school-boy science, are termed Nordic.

I ask you once again, let us—the dreamers of the East and the West—keep our faith firm in life that creates and not in the Machine that constructs, in the power that hides its force and blossoms in beauty, and not in the power that bears its aims and chuckles at its capacity to make itself obnoxious. Let us know that the Machine is good when it helps not so when it exploits life, that science is great when it destroys evil, but not when the twain enter into unholy alliance.

Before I conclude I ask your leave to say that I believe in the individuals in the West, for on no account can I afford to lose my faith in man. They also dream, they love, they intensely feel pain and shame at the unholy rites of demon worship that tax the whole world for their supply of bleeding hearts. They cherish in their minds the creative faith which by its magic, secretly fashions the images of a perfect expectation in the midst of the boisterous dissipations of unbelief. In the life of these individuals will be wedded East and West, their lamps of sacrifice will burn through the stormy night along the great pilgrim tract of the future, when the names of the statesmen who tighten their noose round the necks of foreign races will be derided, and the triumphal tower of skulls in memory of the war-lords will have crumbled into dust.

Fascist Imperialism and Terrosism

The *London Review of Reviews* writes:—

One of Mussolini's personal organs, *L'Impero* (The Empire), of Rome, declares that the ideal which its name represents has now reached the stage of "assured realisation". The leading Nationalist organ, *Idea Nazionale*, writes, "Liberty is not an end in itself but a means to attain the fulness of a Destiny which becomes Imperial when a race possesses Imperial capacity. The Italian

It is clear that the

military war which Italy waged and won in the name of that Destiny, not in the name of humanitarian or international ideologies, must continue more intensely to amplify and, especially, to correct the results of the war." Mussolini himself has recently caused to be published in England and in America an article in which he glorifies the Fascist "counter-attack after the Matteotti affair," and adds:

"The violence of recent episodes makes it a living issue. *Violence is moral provided it is timely and surgical and chivalrous* (The italics are Mussolini's). But since the revolutionary party holds the power, violence must confine itself to creating and maintaining a sympathetic atmosphere towards the use of this governmental violence. Private and individual ungoverned violence is anti-Fascist."

The plight of patriotic Italians who cannot do will not bow to the will of the dominant factor is likely to be hard and may in some cases be tragic. If they stay in Italy they and their families are in constant danger, and they may at any moment be deprived of their livelihood. If they take refuge abroad their property is liable to confiscation and they may be deprived of Italian citizenship. Professor Salvemini, the eminent historian who is now in a place of safety, has decided to resign his chair at Florence University and has addressed to its Rector the following dignified letter:

"The Fascist Dictatorship has now totally suppressed in our country those conditions of freedom in the absence of which University teaching and history—as I understand it—loses all trace of dignity, because it classes necessarily to be an agency of free civil education and is reduced either to servile adulation of the dominating Party or to a mere exercise of erudition, foreign alike to the moral consciences of the teacher and of the taught."

"Therefore I am compelled to part from my young hearers and from my colleagues—with sorrow, but certain that I am discharging towards them a duty of straightforwardness even more than a duty of consistency and respect towards myself."

"I shall return to serve the country in education when we shall have regained a civil government."

Professor Salvemini contributes to the same journal (November-December) an article on "The Terror in Florence", detailing the cudgellings, the murders, lootings, burnings and wreckings committed in the central streets of Florence, and quoting the following words of Mussolini:—

"If necessary, we shall use the bludgeon also steel. A rising faith must needs be intolerant. Either my faith is true, or yours; either your mine. If I think that mine is true, I cannot secret murmurings, petty ambushes, skulking calumny, base slander. All these must be put down, overthrown, buried."

University Courses in Matrimony
In *Liberty* Eleanor Early has given

unt of the college for Women at Boston y, which has instituted a special course training for prospective brides, "a course ue in the history of Education."

ee student who has taken the complete course has satisfied the examiners of her proficiency, tiled on entering the bonds of matrimony e after her name the letters C. B., that is, ed Bride. When the course in matrimony initiated, the "Chair of Love and Marriage" offered to a lady who was believed to have a success of matrimony in her own case. rs. Macdonald, and was accepted by her. Macdonald is the university's official trainer

ides each department in college is contributing to tea. Every professor and instructor is pledged further it. For instance: The professor of ology illuminates the mental processes of male and emphasises the differences in the ology of men and women with a view to fishing a more sympathetic understanding en husbands and wives. The professor of ating has introduced a system of personal ousehold budgeting that guarantees immunity all the usual errors of domestic finance. rofessor of economics dwells particularly o problems of the average American home, e professor of sociology discusses the new n of the sexes, giving a place in the sun e wage earning wife. Marriage is made a nd study. Girl students analyse its cause ec. They know its liabilities as well as ets. And no man can sell them the proposi ecause the night is full of stars and the air of roses. They know the transitory elements ance too well for that."

MacDonald employs the epigram as a of instruction. Here are a few charac- examples of her *ex cathedra* utterances: ver marry a man just because you love

re in a cottage is a fallacy. Money talks." nance and roses fade. But rent and bills e always with us."

ood provider wears better than a dancing

Following is a typical test question from an tion paper set to students in the matri- class at Boston: "Mary Brown is a golf She hates country club crowds and cock- d cigarettes. Her husband is happier at o than at home. They love one another, r tastes are entirely different. Mary, a philosophic turn of mind, decides nish this paragraph in not more than two words"

Tea and "slave" labour

London *Inquirer* writes:—

hibition were extended to tea, most of us depressed. But, although tea-drinking rly advocated by some well-known men mulating and restorative action, no such on of its value is held now, apparently, t experts. Moreover, attention is drawn

(in *The Modern Review*, Calcutta) to the necessity for using what is practically "slave" labour in the countries where tea is chiefly grown. It is because wages being so high, the vast amount of care involved in the cultivation of the trees, the picking and curing of the leaves, would cost too much that the tea industry has not been developed in the United States, "although it has long been known that the tea tree thrives well over an area a hundred times greater than all the tea plantations in India and Ceylon."

The Great Encyclopaedia of China

We read in the *China Journal of Science and Arts*:—

After prolonged negotiations which seemed at one time destined to failure, it has been finally decided by the Peking Government that the Great Encyclopaedia, *Ssu K'u Ch'uan Shu*, is to be reprinted by the Commercial Press of Shanghai. Arrangements looking to this end were completed more than a year ago, and the 36,000 volumes were boxed and ready for shipment on a special train which was to convey them to Shanghai, when decided opposition to the scheme on the part of some scholars of the old school blocked it. Its opponents suggested that if the Commercial Press was to be allowed to reprint this great work the firm should send the necessary staff to Peking to undertake the work of photographing the volumes and thus avoid the possible risk of loss during transportation. The Commercial Press maintained that the added cost of carrying on this work in Peking beyond what would be the maximum expense in Shanghai would increase the price to prohibitive figures. At last the saner arguments of the Commercial Press have prevailed and the great work of reproducing this vast thesaurus is to be undertaken at the large printing establishment of the Commercial Press in Shanghai.

This Encyclopaedia has been stored in the beautiful Wen Yuan Ko, a two-storied building with green roof immediately in the rear of Wen Hua Tien, which has been used in recent years by the Government Museum for the exhibition of paintings and writings. Two years ago I had an opportunity of visiting the Wen Yuan Ko and examining this Encyclopaedia. The volumes are about eighteen inches in length and twelve inches wide. As a rule six volumes are included in one set and are protected by binding boards of Persian cedar (*nash*). The labels of each volume are of thin yellow silk and the inscriptions were written by calligraphists of the Nan Shu Fang of the Palace. The whole set of books is transcribed by hand in a standard style of writing and in this respect may be compared to the best manuscripts of the Middle Ages in Europe, when pious monks copied the writings of the early Church Fathers.

When this Encyclopaedia was completed in 1772 A. D., under the patronage of the Emperor Ch'ien Lung, seven sets were written. Of these one was stored in the Wen Yuan Ko in Peking, one in the Wen Ch'ao Ko, Mukden, one in the Wen Ch'in Ko, Jehol, and one in the Wen Yuan Ko, at the old Summer Palace (Yuan Ming Yuan).

It is proposed to reproduce thirty sets of the

The students include those of the preparatory and special courses—of the universities. The number of students in 1923 is unknown.

A Woman Winner of the Nobel Prize

Victor Vinde writes in *Les Nouvelles Littéraires* :—

[Sigrid Undset is one of the Nobel Prize winners for 1925. Her literary work divides itself into two distinct cycles—the *Contemporary Novels and Tales* (beginning with *Marthe* (Julie in 1907 and ending with *Clouds of Spring* in 1921), and the three volumes of *Kristin Lavransdatter*, which appeared between 1920 and 1922.]

Undset is the first writer to consecrate her whole life to the study of woman. No doubt there have been, and still are, highly talented writers who have devoted to woman pages of an affecting beauty of a real spiritual greatness, of a fine psychological insight; but for these writers women have been only an object of study. Nothing of the kind in Undset. She does not study an object with the curiosity of the bystander or of the amateur. She subjects herself to a kind of vivisection for the sake of responding to a secret agony which torments her, of discovering the cause of that invisible pain.

Madame Undset has in the strict sense no style. As a Norwegian critic has expressed it, she is contemptuous of style. She has, however, a manner quite her own in writing. She prefers to proceed by means of psychological monologues,—brusquely interrupted from time to time by descriptions, accumulating certain details of secondary importance and deliberately omitting important details for the reader to reconstruct himself.

The work of Sigrid Undset cannot easily be analyzed in a few lines. Here I have wanted only to emphasize the curious fact that in her work man gives the impression of cowardly and irresponsible being but it must not be forgotten that man is only a secondary personage in it. What Undset especially undertakes to clarify is the emotional life of woman, the awakening of emotion in the young girl, in the woman in love, in the wife, in the mother. Her marvelously developed maternal instinct has allowed her to reveal to us the psychology of children, and few writers have achieved such a note of truth in the study of childhood as Undset in *The six Handkerchiefs*, *Little Girls*, and *A Child*.

The masterpiece of Sigrid Undset is her great work on the Middle Ages, *Kristin Lavransdatter*. It is not an historical work, for the period in which the author sets it—the beginning of the fourteenth century—is in the history of Norway wholly devoid of events. Having studied for fifteen years the manners and the common life of men and women in modern society,—studies collected in her contemporary novels and short stories,—Undset considered herself sufficiently well documented to undertake the portrayal of manners in the Middle Ages, a method which has left her more liberty from every point of view, since her narrative is not encumbered with historical details, and which, at the same time, has allowed her to make religion play a more important role. Sigrid Undset, who has just been converted to Catholicism, has created in this book a magnificent idealistic work that will mark a date in the literature of the twentieth century.

I know nothing finer, more moving, more perfect, in the European literature of the moment than that curious figure of a woman. Kristin Lavransdatter

When Art is Great

John Dewey writes in the *Journal of the Barnes Foundation* :—

Art is great in proportion as it is universal, that is, in proportion as the uniformities of nature which it reveals and utilizes are extensive and profound—provided, however, that they are freshly applied in concrete objects or situations. The only objects, insights, perceptions which remain perennially unwithered and unstaled are those which sharpen our vision for new and unforeseen embodiments of the truth they convey. The "magic" of poetry—and pregnant experience has poetic quality—is precisely the revelation of meaning in the old effected by its presentation of the new. It radiates the light that never was on sea or land but that is henceforth an abiding illumination of objects.

Solar Eclipse in Sumatra

Popular Mechanics says :—

To watch the eclipse of the sun, January 14, a party of scientists from the naval observatory in Washington, D. C. has gone to Sumatra in the Dutch East Indies. The phenomenon will last only two minutes, but in that time the observers hope to make motion pictures and color plates which will show more about the sun's gases and other features. The expedition has devoted three months to erecting their look-out station and telescope tower. Other parties from England, Germany and France as well as one from Swarthmore college, will be at Sumatra. An Italian group will be stationed in Africa.

What Simultaneous Civil Service Examinations Mean

The Indus for November, 1925, writes :—

In addition to the first twenty already selected for the Indian Civil Service this year, the Civil Service Commissioners have announced that the next sixteen candidates have been also taken up. Seven of these are Indians. Messrs. M. K. Kirpalani, B. B. Sarkar, G. D. Khosla, R. Jagmohan, H. Hussain, K. G. Ambegaokar, V. K. R. Menon, and we heartily congratulate them on their success. The proportion, therefore, between Indian and British recruits this year is fifteen to twenty one—a fine attempt at the Indianisation of the Services indeed! While in India hardly more than five candidates are appointed from amongst the competitors for the Civil Service Examination at Allahabad, in England, the number selected is as much as seven times that and more.

What is the good of holding simultaneous examinations both in London and in Allahabad, if such flagrant unfairness is to be allowed? This disgusting mockery of "justice and fairness" must be stopped at least in the name of common sense. For even a "boob" can see through the game.

THE PHILOSOPHY OF OUR PEOPLE

[Presidential Address at the Indian Philosophical Congress]

By RABINDRANATH TAGORE

MY timidity makes it difficult for me properly to enjoy the honour you have done me to-day by offering a chair which I cannot legitimately claim as my own. It has often made me wonder, since I had my invitation, whether it would suit my dignity to occupy such a precarious position on an ephemeral eminence, deservedly incurring anger from some and ridicule from others. While debating in my mind as to whether I should avoid this risk with the help of the doctor's certificate, it occurred to me that possibly my ignorance of philosophy was the best recommendation for this place in a philosophers' meeting,—that you wanted for your president a man who was blankly neutral and who consciously owed no allegiance to any particular system of metaphysics, being impartially-innocent of them all. The most convenient thing about me is that the degree of my qualification is beyond the range of a comparative discussion,—it is so utterly negative. In my present situation, I may be compared to a candlestick that has none of the luminous qualities of a candle, and therefore suitable for its allotted function, which is to remain darkly inactive.

But, unfortunately, you do not allow me to remain silent even in the circumstance when silence was declared to be prudent by one of our ancient sages. The only thing which encourages me to overcome my diffidence, and give expression in a speech to my unsophisticated mind, is the fact that in India all the *vidyas*,—poesy as well as philosophy,—live in a joint family. They never have the jealous sense of individualism maintaining the punitive regulations against trespass that seem to be so rife in the West.

Plato as a philosopher decreed the banishment of poets from his ideal Republic. But, in India, philosophy ever sought alliance with poetry, because its mission was to occupy the people's life and not merely the learned seclusion of scholarship. Therefore, our tradition, though unsupported by historical evidence, has no hesitation in ascribing numerous verses to the great Sankarāchārya,

a metaphysician whom Plato would find it extremely difficult to exclude from his Utopia with the help of any inhospitable Immigration Law. Many of these poems may not have high poetical value, but no lover of literature ever blames the sage for infringement of propriety in condescending to manufacture verse.

According to our people, poetry naturally falls within the scope of a philosopher, when his reason is illumined into a vision. We have our great epic Mahābhārata, which is unique in world literature, not only because of the marvellous variety of human characters, great and small, discussed in its pages in all variety of psychological circumstances, but because of the ease with which it carries in its comprehensive capaciousness all kinds of speculation about ethics, politics and philosophy of life. Such an improvident generosity on the part of poesy, at the risk of exceeding its own proper limits of accommodation, has only been possible in India where a spirit of communism prevails in the different individual groups of literature. In fact, the Mahabharata is a universe in itself in which various spheres of mind's creation find ample space for their complex dance rhythm. It does not represent the idiosyncrasy of a particular poet but the normal mentality of the people who are willing to be led along the many-branched path of a whole world of thoughts, held together in a gigantic orb of narrative surrounded by innumerable satellites of episodes.

The numerous saints that India successively produced during the Mahomedan rule have all been singers whose verses are aflame with the fire of imagination. Their religious emotion had its spring in the depth of a philosophy that deals with fundamental questions,—with the ultimate meaning of existence. That may not be remarkable in itself; but when we find that these songs are not specially meant for some exclusive pundits' gathering, but that they are sung in villages and listened to by men and women who are illiterate, we realise how philosophy

has permeated the life of the people in India, how it has sunk deep into the sub-conscious mind of the country.

In my childhood, I once heard from a singer, who was a devout Hindu, the following song of Kabir.

পানীয়ে মীন পিয়াসীয়ে
মুখে গুনত গুনত লাগে হাঁসীয়ে
পূরণব্রহ্ম সকল ঘটবরতে,
ক্যা মথুরা ক্যা কাশীয়ে ।

When I hear of a fish in the water dying
of thirst, it makes me laugh.
If it be true that the infinite Brahma pervades
all space,
What is the meaning of the places of pilgrimage
like Mathura or Kashi?

This laughter of Kabir did not hurt in the least the pious susceptibilities of the Hindu singer; on the contrary, he was ready to join the poet with his own. For he, by the philosophical freedom of his mind, was fully aware that Mathura or Kashi, as sites of God, did not have an absolute value of truth, though they had their symbolical importance. Therefore, while he himself was eager to make a pilgrimage to those places, he had no doubt in his mind that, if it were in his power directly to realise Brahma as an all-pervading reality, there would have been no necessity for him to visit any particular place for the quickening of his spiritual consciousness. He acknowledged the psychological necessity for such shrines, where generations of devotees have chosen to gather for the purpose of worship, in the same way as he felt the special efficacy for our mind of the time-honoured sacred texts made living by the voice of ages.

It is a village poet of East Bengal who in his songs preaches the philosophical doctrine that the universe has its reality in its relation to the Person. He sings

সম আঁখি হইতে পয়লা আস্মান জমীন
শরীরে করিল পয়লা শক্ত আর নরম
আর পয়লা করিয়াছে ঠাণ্ডা আর গরম ।
নাঁকে পয়লা করিয়াছে খুববর বদ্ববর ।

The sky and the earth are born of mine own eyes.
The hardness and softness, the cold and the heat
are the products of mine own body.
The sweet smell and the bad are of my own nose.

This poet sings of the Eternal Person within him, coming out and appearing before

his eyes just as the Vedic Rishi speaks of the Person, who is in him, dwelling also in the heart of the Sun.

রূপ দেখিলাম রে নরনে আপনার রূপ দেখিলাম রে
আমার যাকত বাহির হইয়া দেখা দিল আমারে ।

I have seen the vision,
The vision of mine own revealing itself,
Coming out from within me.

The significant fact about these philosophic poems is that they are of rude construction, written in a popular dialect and disclaimed by the academic literature; they are sung to the people, as composed by one of them who is dead, but whose songs have not followed him. Yet these singers almost arrogantly disown their direct obligation to philosophy, and there is a story of one of our rural poets who, after some learned text of the Vaishnava philosophy of emotion was explained to him, composed a song containing the following lines:

ফুলের বনে কে ঢুকেছেরে সোনার অহরি
নিকবে বসয়ে কমল আ মরি মরি ।

Alas, a jeweller has come into the flower garden,—
He wants to appraise the truth of a lotus by
rubbing it against his touchstone.

The members of the *Baul* sect belong to that mass of the people in Bengal who are not educated in the prevalent sense of the word. I remember how troubled they were, when I asked some of them to write down for me a collection of their songs. When they *did* venture to attempt it, I found it almost impossible to decipher their writing—the spelling and lettering were so outrageously unconventional. Yet their spiritual practices are founded upon a mystic philosophy of the human body, abstrusely technical. These people roam about singing their songs, one of which I heard years ago from my roadside window, the first two lines remaining inscribed in my memory

খাঁচার মধ্যে অচিন্ পাখী কখনে আসে বার ।
ধরতে পারলে মনোবেড়ি দিতেম তারি পার ।

Nobody can tell whence the bird unknown
Comes into the cage and goes out.
I would feign put round its feet the fetter of my
mind,

Could I but capture it.

This village poet evidently agrees with our sage of the Upanishad who says that our mind comes back baffled in its attempt to

reach the Unknown Being; and yet this poet like the ancient sage does not give up his adventure of the infinite, thus implying that there is a way to its realisation. It reminds me of Shelley's poem in which he sings of the mystical spirit of Beauty—

The awful shadow of some unseen Power
Floats, though unseen, among us; visiting
This various world with as inconstant wing
As summer winds that creep from flower to flower,
Like moonbeams that behind some puny mountain shower,
It visits with inconstant glance
Each human heart and countenance.

That this Unknown is the profoundest reality, though difficult of comprehension, is equally admitted by the English poet as by the nameless village singer of Bengal in whose music vibrate the wing-beats of the unknown bird,—only Shelley's utterance is for the cultured few, while the *Baul* song is for the tillers of the soil, for the simple folk of our village households, who are never bored by its mystic transcendentalism.

All this is owing to the wonderful system of mass education which has prevailed for ages in India, and which to-day is in danger of becoming extinct. We have our academic seats of learning where students flock round their famous teachers from distant parts of the country. These places are like lakes, full of deep but still water, which have to be approached through difficult paths. But the constant evaporation from them, forming clouds, is carried by the wind from field to field, across hills and dales and through all the different divisions of the land. Operas based upon legendary poems, recitations and story-telling by trained men, the lyrical wealth of the popular literature distributed far and wide by the agency of mendicant singers,—these are the clouds that help to irrigate the minds of the people with the ideas which in their original form belonged to difficult doctrines of metaphysics. Profound speculations contained in the systems of Sāṅkhya, Vedānta and Yoga are transformed into the living harvest of the people's literature, brought to the door of those who can never have the leisure and training to pursue these thoughts to their fountain-head.

In order to enable a civilised community to carry on its complex functions, there must be a large number of men who have to take charge of its material needs, however onerous such task may be. Their vocation gives them no opportunity to cultivate their mind.

Yet they form the vast multitude, compelled to turn themselves into unthinking machines of production, so that a few may have the time to think great thoughts, create immortal forms of art and to lead humanity to spiritual altitudes.

India has never neglected these social martyrs, but has tried to bring light into the grimy obscurity of their lifelong toil, and has always acknowledged its duty to supply them with mental and spiritual food in assimilable form through the medium of a variety of ceremonies. This process is not carried on by any specially organised association of public service, but by a spontaneous social adjustment which acts like circulation of blood in our bodily system. Because of this, the work continues even when the original purpose ceases to exist.

Once when I was on a visit to a small Bengali village, mostly inhabited by Mahomedan cultivators, the villagers entertained me with an opera performance the literature of which belonged to an obsolete religious sect that had wide influence centuries ago. Though the religion itself is dead, its voice still continues preaching its philosophy to a people, who, in spite of their different culture, are not tired of listening. It discussed according to its own doctrine the different elements, material and transcendental, that constitute human personality, comprehending the body, the self and the soul. Then came a dialogue during the course of which was related the incident of a person who wanted to make a journey to *Brindaban*, the Garden of Bliss, but was prevented by a watchman who startled him with an accusation of theft. The thieving was proved when it was shown that inside his clothes he was secretly trying to smuggle into the garden the *self*, passing it on as his own and not admitting that it is for his master. The culprit was caught with the incriminating bundle in his possession which barred for him his passage to the supreme goal. Under a tattered canopy held on bamboo poles and lighted by a few smoking kerosene lamps, the village crowd, occasionally interrupted by howls of jackals in the neighbouring paddy fields, attended with untired interest, till the small hours of the morning, the performance of a drama, that discussed the ultimate meaning of all things in a seemingly incongruous setting of dance, music and humorous dialogue.

These illustrations will show how naturally, in India, poetry and philosophy have walked

hand in hand, only because the latter has claimed its right to guide men to the practical path of their life's fulfilment. What is that fulfilment? It is our freedom in truth, which has for its prayer :

Lead us from the unreal to Reality.

For *satyam* is *anandam*, the real is joy.

From my vocation as an artist in verse, I have come to my own idea about the joy of the real. For to give us the taste of reality through freedom of mind is the nature of all arts. When in relation to them we talk of aesthetics, we must know that it is not about beauty in its ordinary meaning, but in that deeper meaning which a poet has expressed in his utterance : "Truth is beauty, beauty truth." An artist may paint a picture of a decrepit person not pleasant to look at, and yet we call it perfect when we become intensely conscious of its reality. The mind of the jealous woman in Browning's poem, watching the preparation of poison and in imagination gloating over its possible effect upon her rival, is not beautiful ; but when it stands vividly real before our consciousness, through the unity of consistency in its idea and form, we have our enjoyment. The character of Karna, the great warrior of the *Mahabharata*, gives us a deeper delight through its occasional outbursts of meanness, than it would if it were a model picture of unadulterated magnanimity. The very contradictions which hurt the completeness of a moral ideal have helped us to feel the reality of the character, and this gives us joy, not because it is pleasant in itself, but because it is definite in its creation.

It is not wholly true that art has its value for us because in it we realise all that we fail to attain in our life ; but the fact is that the function of art is to bring us, with its creations, into immediate touch with reality. These need not resemble actual facts of our experience, and yet they do delight our heart because they are made true to us. In the world of art, our consciousness being freed from the tangle of self-interest, we gain an unobstructed vision of unity, the incarnation of the real, which is a joy for ever.

As in the world of art, so in God's world, our soul waits for its freedom from the ego to reach that disinterested joy which is the source and goal of creation. It cries for its *mukti* into the unity of truth from the mirage of appearances endlessly pursued by the thirsty self. The idea of *mukti*, based

upon metaphysics, has affected our life in India, touched the springs of our emotions and supplications for its soar heavenward on the wings of poesy. We constantly hear men of scanty learning and simple faith singing in their prayer to *Tara*, the Goddess Redeemer.

ভাৰা, কোন্ অপরূপে দীৰ্ঘ হেঁদে হেঁদে
সংসার-পায়দে
ধাকি বন্,

For what sin should I be compelled to remain
in this dungeon of the world of appearance ?

They are afraid of being alienated from the world of truth, afraid of their perpetual drifting amidst the froth and foam of things, of being tossed about by the tidal waves of pleasure and pain and never reaching the ultimate meaning of life. Of these men, one may be a carter driving his cart to market, another a fisherman plying his net. They may not be prompt with an intelligent answer, if questioned about the deeper import of the song they sing, but they have no doubt in their mind, that the abiding cause of all misery is not so much in the lack of life's furniture as in the obscurity of life's significance. It is a common topic with such to decry an undue emphasis upon আমি আমার, *me* and *mine*, which falsifies the perspective of truth. For, have they not often seen men, who are not above their own level in social position or intellectual acquirement, going out to seek Truth, leaving everything that they have behind them ?

They know that the object of these adventures is not betterment in worldly wealth and power,—it is *mukti*, freedom. They possibly know some poor fellow villager of their own craft, who remains in the world carrying on his daily vocation, and yet has the reputation of being emancipated in the heart of the Eternal. I myself have come across a fisherman singing with an inward absorption of mind, while fishing all day in the Ganges, who was pointed out to me by my boatmen, with awe, as a man of liberated spirit. He is out of reach of the conventional prices which are set upon men by society, and which classify them like toys arranged in the shop-windows according to the market standard of value.

When the figure of this fisherman comes to my mind, I cannot but think that their number is not small who with their lives sing the epic of the unfettered soul, but will never be known in history. These unsophisticated Indian peasants know that an Emperor is a decorated slave remaining chained to his Empire, that a millionaire is kept pilloried

by his fate in the golden cage of his wealth, while this fisherman is free in the realm of light. When, groping in the dark, we stumble against objects, we cling to them believing them to be our only hope. When light comes, we slacken our hold, finding them to be mere parts of the *All* to which we are related. The simple man of the village knows what freedom is—freedom from the isolation of self, from the isolation of things which imparts a fierce intensity to our sense of possession. He knows that this freedom is not in the mere negation of bondage, in the bareness of belongings, but in some positive realisation which gives pure joy to our being, and he sings

যেজন ডুবল সখী তাঁর কি আছে বাকি গো।

To him who sinks into the deep nothing remains unattained

He says

মনবে আমার মনের সাপে মিলিবি যদি আর,
তুই মনেতে একমন হ'য়ে আজব সহব চ'লে যাই।

Let my two minds meet and combine
And lead me to the City Wonderful

When the one mind of ours which wanders in search of things in the outer region of the varied, and the other which seeks the inward vision of unity, are no longer in conflict, they help us to realise the *ajah*, the *anirachaniya*, the ineffable. The poet saint Kabir has also the same message when he sings

By saying that Supreme Reality only dwells in the inner realm of spirit, we shame the outer world of matter, and also when we say that he is only in the outside, we do not speak the truth.

According to these singers, truth is in unity and therefore freedom is in its realisation. The texts of our daily worship and meditation are for training our mind to overcome the barrier of separateness from the rest of existence and to realise *advaitam*, the Supreme Unity which is *anantam*, infinitude. It is philosophical wisdom having its universal radiation in the popular mind in India that inspires our prayer, our daily spiritual practices. It has its constant urging for us to go beyond the world of appearances in which facts as facts are alien to us, like the mere sounds of a foreign music, it speaks to us of an emancipation in the inner truth of all things in which the endless *Many* reveals the *One*, as the multitude of notes, when we understand them, reveal to us the inner unity which is music.

But because this freedom is in truth itself and not in an appearance of it, no hurried path of success, forcibly cut out by the greed of result, can be a true path. And an obscure village poet, unknown to the world of recognised respectability, untrammelled by the standardised learning of the Education Department, sings

নিষ্ঠুর গরজী,

তুই কি মানসমুহুর ভাজ বি আগুনে ?

তুই কুটুকাবি, বাস ছুটাবি সব্ব বিহনে।

দেখ'না আমার পরমগুরু শাঁই,

সে যুগযুগান্তে ফুটায় মুকুল তাড়াহড়া নাই।

তোব লোভ প্রচণ্ড, তাই ভরসা দণ্ড

এর আছে কোন্ উপায় ?

কয় সে মদন, দিস্নে বেদন, শোন্ নিবেদন,

সেই শ্রীগুর মনে,

সহস্রধারা আপনহারা তাঁর বাণী শোনে,

রে গরজী।

O cruel man of urgent need, must you scorch with fire the mind which still is a bud ? You will burst it into bits, destroy its perfume in your impatience. Do you not see that my lord, the Supreme Teacher, takes ages to perfect the flower and never is in a fury of haste ? But because of your terrible greed, you only rely on force, and what hope is there for you, O man of urgent need ? 'Prithi' says Madan the poet,—"Hurt not the mind of my Teacher. Know that only he who follows the simple current and loses himself, can hear the voice, O man of urgent need

This poet knows that there is no external means of taking freedom by the throat. It is the inward process of losing ourselves that leads us to it. Bondage in all its forms has its stronghold in the inner self and not in the outside world ; it is in the dimming of our consciousness, in the narrowing of our perspective, in the wrong valuation of things.

The proof of this we find in the modern civilization whose motive force has become a ceaseless urgency of need. Its freedom is only the apparent freedom of inertia which does not know how and where to stop. There are some primitive people who have put an artificial value on human scalps and they develop an arithmetical fury which does not allow them to stop in the gathering of their trophies. They are driven by some cruel fate into an endless exaggeration which makes them ceaselessly run on an interminable path of addition. Such a freedom in their wild course of collection is the worst form of bondage. The cruel urgency of need

is all the more aggravated in their case because of the lack of truth in its object. Similarly, it should be realised that a mere addition to the rate of speed, to the paraphernalia of fat living and display of furniture, to the frightfulness of destructive armaments, only leads to an insensate orgy of a caricature of bigness. The links of bondage go on multiplying themselves, threatening to shackle the whole world with the chain forged by such unmeaning and unending urgency of need.

The idea of *mukti* in Christian theology is liberation from a punishment which we carry with our birth. In India it is from the dark enclosure of ignorance which causes the illusion of a self that seems final. But the enlightenment which frees us from this ignorance must not merely be negative. Freedom is not in an emptiness of its contents, it is in the harmony of communication through which we find no obstruction in realising our own being in the surrounding world. It is of this harmony, and not of a bare and barren isolation, that the Upanishad speaks, when it says that the truth no longer remains hidden in him who finds himself in the All.

Freedom in the material world has also the same meaning expressed in its own language. When nature's phenomena appeared to us as manifestations of an obscure and irrational caprice, we lived in an alien world never dreaming of our *swaraj* within its territory. With the discovery of the harmony of its working with that of our reason, we realise our unity with it, and, therefore, freedom. It is *avidya*, ignorance, which causes our disunion with our surroundings. It is *vidya*, the knowledge of the Brahma manifested in the material universe, that makes us realise *advaitam*, the spirit of unity in the world of matter.

Those who have been brought up in a misunderstanding of this world's process, not knowing that it is his by his right of intelligence, are trained as cowards by a hopeless faith in the ordinance of a destiny darkly dealing its blows, offering no room for appeal. They submit without struggle when human rights are denied them, being accustomed to imagine themselves born as outlaws in a world constantly thrusting upon them incomprehensible surprises of accidents.

Also in the social or political field, the lack of freedom is based upon the spirit of alienation, on the imperfect realisation of *advaitam*. There our bondage is in the

tortured link of union. One may imagine that an individual who succeeds in dissociating himself from his fellows attains real freedom, inasmuch as all ties of relationship imply obligation to others. But we know that, though it may sound paradoxical, it is true that in the human world only a perfect arrangement of interdependence gives rise to freedom. The most individualistic of human beings who own no responsibility, are the savages who fail to attain their fulness of manifestation. They live immersed in obscurity, like an ill-lighted fire that cannot liberate itself from its envelope of smoke. Only those may attain their freedom from the segregation of an eclipsed life, who have the power to cultivate mutual understanding and co-operation. The history of the growth of freedom is the history of the perfection of human relationship.

The strongest barrier against freedom in all departments of life is the selfishness of individuals or groups. Civilisation, whose object is to afford humanity its greatest possible opportunity of complete manifestation, perishes when some selfish passion, in place of a moral ideal, is allowed to exploit its resources unopposed, for its own purposes. For the greed of acquisition and the living principle of creation are antagonistic to each other. Life has brought with it the first triumph of freedom in the world of the inert, because it is an inner expression and not merely an external fact, because it must always exceed the limits of its substance, never allowing its materials to clog its spirit, and yet ever keeping to the limits of its truth. Its accumulation must not suppress its harmony of growth, the harmony that unites the *in* and the *out*, the end and the means, the *what is* and the *what is to come*.

Life does not store up but assimilates, its spirit and its substance, its work and itself, are intimately united. When the non-living elements of our surroundings are stupendously disproportionate, when they are mechanical systems and hoarded possessions, then the mutual discord between our life and our world ends in the defeat of the former. The gulf thus created by the receding stream of soul we try to replenish with a continuous shower of wealth which may have the power to fill but not the power to unite. Therefore, the gap is dangerously concealed under the glittering quick-sands of things which by their own accumulating weight cause a sudden subsidence, while we are in the depth of our sleep.

But the real tragedy does not lie in the destruction of our material security, it is in the obscuration of man himself in the human world. In his creative activities man makes his surroundings instinct with his own life and love. But in his utilitarian ambition he deforms and defiles it with the callous handling of his voracity. This world of man's manufacture with its discordant shrieks and mechanical movements, reacts upon his own nature, incessantly suggesting to him a scheme of universe which is an abstract system. In such a world there can be no question of *mukti*, because it is a solidly solitary fact, because the cage is all that we have, and no sky beyond it. In all appearance the world to us is a closed world, like a seed within its hard cover. But in the core of the seed there is the cry of Life for *mukti* even when the proof of its possibility is darkly silent. When some huge temptation tramples into stillness this living aspiration after *mukti*, then does civilisation die like a seed that has lost its urging for germination.

It is not altogether true that the ideal of *mukti* in India is based upon a philosophy of passivity. The *Ishopanishad* has strongly asserted that man must wish to live a hundred years and go on doing his work, for, according to it, the complete truth is in the harmony of the infinite and the finite, the passive ideal of perfection and the active process of its revelation, according to it, he who pursues the knowledge of the infinite as an absolute truth sinks even into a deeper darkness than he who pursues the cult of the finite as complete in itself. He who thinks that a mere aggregation of changing notes has the ultimate value of unchanging music, is no doubt foolish, but his foolishness is exceeded by that of one who thinks that true music is devoid of all notes. But where is the reconciliation? Through what means does the music which is transcendental turn the facts of the detached notes into a vehicle of its expression? It is through the rhythm, the very limit of its composition. We reach the infinite through crossing the path that is definite. It is this that is meant in the following verse of the *Isha*

বিদ্যাংকাবিদ্যাংকং যন্তুৰ্বেদোভয়ং সত্ৰ

অবিদ্যায়া যুক্তং তৌৰ্জী বিদ্যায়াঃ যুক্তমন্ত্রতে ।

He who knows the truth of the infinite and that of the finite both united together, crosses death by the help of *avidya*, and by the help of *vidya* reaches immortality.

The regulated life is the rhythm of the finite through whose very restrictions we pass to the immortal life. This *amritam*, the immortal life, is not a mere prolongation of physical existence, it is in the realisation of the perfect, it is in the well-proportioned beautiful definition of life which every moment surpasses its own limits and expresses the Eternal. In the very first verse of the *Isha*, the injunction is given to us *Ma-qriddhah, Thou shalt not covet*. But why should we not? Because greed, having no limit, smothers the rhythm of life—the rhythm which is expressive of the limitless.

The modern civilisation is largely composed of *atmahano-janah*, who are spiritual suicides. It has lost its will for limiting its desires, for restraining its perpetual self-exaggeration. Because it has lost its philosophy of life, it loses its art of living. Like poetsasters it mistakes skill for power and realism for reality. In the Middle Ages, when Europe believed in the kingdom of heaven, she struggled to modulate her life's forces to effect their harmonious relation to this ideal, which always sent its call to her activities in the midst of the boisterous conflict of her passions. There was in this endeavour an ever present scheme of creation, something which was positive, which had the authority to say, *Thou shalt not covet, thou must find thy true limits*. To-day there is only a furious rage for raising numberless brick-kilns in place of buildings. The great scheme of the master-builder has been smothered under the heaps of brick-dust. It proves the severance of *avidya* from her union with *vidya* giving rise to an unorthmic power, ignoring all creative plan, igniting a flame that has heat but no light.

Creation is in rhythm,—the rhythm which is the border on which *vidyananka avrdyananka*, the infinite and the finite, meet. We do not know how, from the indeterminate, the lotus flower finds its being. So long as it is merged in the vague, it is nothing to us, and yet it must have been everywhere. Somehow from the vast it has been captured in a perfect rhythmical limit, forming an eddy in our consciousness, arousing within us a recognition of delight at the touch of the infinite which finitude gives. It is the limiting process which is the work of a creator, who finds his freedom through his restraints, the truth of the boundless through the reality of the bounds. The insatiable idolatry of materials, that run along an ever-lengthening line of extravagance, is inexpressive; it belongs to

those regions which are *andhena lamasa-ritah*, enveloped in darkness, which ever carry the load of their inarticulate bulk. The true prayer of man is for the Real not for the big, for the Light which is not in incendiarism but in illumination, for Immortality which is not in duration of time, but in the eternity of the perfect.

Only because we have closed our path to the inner world of *mukti*, has the outer world become terrible in its exactions. It is a slavery to continue to live in a sphere where things are, yet where their meaning is obstructed. It has become possible for men to say that existence is evil, only because in our blindness we have missed something in which our existence has its truth. If a bird tries to soar in the sky with only one of its wings, it is offended with the wind for buffeting it down to the dust. All broken truths are evil. They hurt because they suggest something which they do not offer. Death does not hurt us, but disease does, because disease constantly reminds us of health and yet withholds it from us. And life in a half world is evil, because it feigns finality when it is obviously incomplete, giving us the cup, but not the draught of life. All tragedies consist in truth remaining a fragment, its cycle not being completed.

Let me close with a *Baul* song, over a

a century old, in which the poet sings of the eternal bond of union between the infinite and the finite soul, from which there can be no *mukti*, because it is an interrelation which makes truth complete, because love is ultimate, because absolute independence is the blankness of utter sterility. The idea in it is the same as as we have in the Upanishad, that truth is neither in pure *radya* nor in *andya*, but in their union.

হৃদয় কমল চলতেছে ফুটে কত যুগ ধরি ।
তাতে তুমিও বাধা, আমিও বাধা, উপায় কী
করি ।

ফুটে ফুটে কমল ফুটায় না হয় শেষ ।
এই কমলের যে-এক মধু রস যে তা'র বিশেষ ।
ছেড়ে যেতে লোভী ভয় পারে না যে তাই ।
তাই তুমিও বাধা, আমিও বাধা,
মুক্তি কোথাও নাই ।

It goes on blossoming for ages the soul-lotus in which I am bound as well as thou, without escape. There is no end to the opening of its petals, and the honey in it has such sweetness that thou like an enchanted bee canst never desert it, and therefore thou art bound and I am, and *mukti* is nowhere.

(By the courtesy of THE VISVA-BHARATI QUARTERLY, which also publishes it in its January number)

CAWNPORE

CAWNPORE is a city in the Allahabad Division of the United Provinces of Agra and Oudh, situated on the south bank of the Ganges, forty miles south-west of Lucknow. The river in front presents a large and motley assemblage of steam vessels and old-fashioned Indian river boats. It formed from early times a frontier outpost of the people of Oudh and Bengal against their northern neighbors.

"In the middle of the eighteenth century, the land lying between Jajman (4 miles to the east) and Bithoor (13 miles to the west of modern Cawnpore) is said to have been practically a waste. About the year A. D. 1750, Hindu Singh, Rajah of Sachendi, came on the eighth day of the moon, in the month of Bhadra, known among Hindus as Janmashtami or the anniversary of

Krishna's birth, to bathe in the Ganges, near the site of old Cawnpore. Pleased with the place, and assured that any city founded on so auspicious a day could not fail to become famous, he himself made the beginnings of a town, and before departure left instructions with his dependant, Raja Ghan Shyan Singh Chauhan, of Ramapur (a town 13 miles from Cawnpore, on the road to Hamirpur), to complete the buildings and supply the new town with inhabitants. From the circumstances of its foundation, the new town was known as Kanpur (*The City of Krishna*). A Gateway and *Ghat* built at this time still exist, as also traces of the original rampart."

Cawnpore, as a place of note, is of recent origin, being indebted for its growth, besides its commercial facilities, partly to military and political considerations. In 1777, being then an appendage of Oudh, it was assigned by

Cawnpore Birdseye View of a part of the City of Cawnpore

the nawab as the station of a subsidiary force; and in 1801 it became, in name as well as in fact, British property.

In histories of India and Guide-books to Cawnpore written by British authors, much space is given to what happened here during the sepoy rebellion, the entire blame being laid on the Indians. We have no desire to revive the memories of those days either in defence or in condemnation of either of the parties. We will only note that, according to Forrest's *Indian Mutiny*

Cawnpore. Bird's-eye View of Different Factories of Cawnpore

Cawnpore. Edward Memorial Hall (side view)

(1903), Nana Sahib wished to spare the women and children, and there is no evidence that personal indignities or dishonour were inflicted on the unhappy women. We have also to record that in the latest book written with reference to the Mutiny, *The Other Side of the Medal* (1925), by Edward Thompson, the author says:—

There is long overdue a new orientation in the histories of India. We must no longer stress the Black Hole of Calcutta, and ignore the seventy suffocated Moplah prisoners of our railway vans; we must no longer stress Cawnpore, and ignore Benares

and Allahabad and Delhi and Renaud's march on Cawnpore. If there was one phrase more than another in Romesh Dutt's dignified appeal to us, which should win our respectful sympathy, it was his request that the darker incidents of the mutiny (or such as we choose shall be told) should be expunged from books, "at least as recorded in school-books meant for boys." Why should Indian boys be compelled to read about the fiendish work at the well, when there is not a word said about Neill's fiendish work on the way to the well?—p. 126

At present Cawnpore is chiefly known as the junction of four railways, the East Indian, Oudh and Rohilkhand,

Cawnpore Gaganan Ghat with Temple of Mahadeo

Rajputana, and Indian Mid-land, and as a great centre of industries and commerce. The harness, shoes and other leather-work manufactured here are wellknown. Factories for manufacturing other articles are the Cotton Mills for the manufacture of tents, twill lining, towels, etc., woollen mills, jute mills, flour mills, chemical factory, brush factories, etc. The sale of oil seeds and food grains reaches a very high figure. In addition to these a great number of hides and skins are imported for

Cawnpore Agricultural College

Cawnpore. Temple in the middle of the Weston Road. On the right side of the temple is the masque for which firing took place when this Road was being made.

sale, a great proportion of which are used in the local factories and the rest exported. Besides these staple articles, various raw products, e.g., gum, bristles, etc., are imported from the district and sold for local and foreign consumption. In mercantile importance, Cawnpore ranks in India next to the five seaports, Calcutta, Bombay, Karachi, Madras and Rangoon. Next to these ports, Cawnpore is also the most important market in India for piece-goods.

In 1881 the population of

Cawnpore was 151,444, in 1911 it grew to 178,557. According to the census of 1921, the population was 213,041.

A very large proportion of the population of Cawnpore is composed of Hindus, such Mahomedans as there are being in a great measure descended from the followers of various notabilities who crossed the river to escape the wrath of different kings of Oudh.

Modern in its origin, this city cannot boast of the possession of any splendid buildings, as is the case with

Cawnpore Christ Church

Angle of Memorial Well

the neighboring stations of Agra and Lucknow, though it has of late years improved upon its former condition.

There are some noteworthy educational institutions in Cawnpore, such as Christ Church College for general education, the Agricultural College, the institution for technological research and training, etc

The kindly feeling of the residents has found expression in the establishment of a "Poor House" for distressed Indians, situated behind the Subadar Tank Cemetery, and still supported in the main by funds raised in previous years. There are some other charitable institutions.

GLEANINGS

The 1924 Eruption of the Hawaiian Volcano

Tremendous scientific and spectacular interest attaches to the explosions at Kilauea Volcano in Hawaii National Park, in May, 1924, for this series

of explosions is the first ever witnessed by white men at Kilauea.

In 1790 there was a similar series of eruptions, although evidently a more violent one. The account of the eruption of 1789, was gathered by the Rev I. Dibble, from the lips of those who were

Dust Column 1000 feet high

Dust Cloud about 7,000 feet high

part of the company and present at the scene and is as follows:

The ground began to shake and rock beneath their feet, and it became quite impossible to stand. Soon a dense cloud of darkness was seen to rise out of the crater, and almost at the same instant, the thunder began to roar in the heavens and the lightning to flash. It continued to ascend and spread around till the whole region was enveloped and the light of day was entirely excluded.

"The darkness was the more terrific, being visible by an awful glare from streams of red and blue light, variously combined through the action of the fires of the pit and the flashes of lightning above. Soon followed an immense volume of sand and cinders, which were thrown to a great height, and came down in a destructive shower for many miles around.

Halemaumau, the lava lake of Kilauea, the famous "Pit of Everlasting Fire," is located near the southwest end of the crater floor, and is the main vent in Kilauea. Prior to the eruptions of May, 1924, the lava lake had gradually subsided until the lava disappeared from sight on February 21st, leaving a pit 380 feet deep. This pit remained empty of lava from February 21st on, and was exceedingly quiet until April 29th, when large amounts of dust began to rise from it. The walls of the pit began to avalanche, causing slight earth tremors

in the vicinity of the crater, and the rock dust resulting from these avalanches rose as small dust clouds. This stage continued until the night of May 10th, when occurred the first explosion which threw out rocks. On Saturday night, May 10th, or early on Sunday morning, May 11th, a sudden explosion took place in Halemaumau. It lasted only a few minutes and the volcano again returned to a condition of steaming, avalanching, and forming of dust clouds. The avalanches and dust clouds, however, were much larger and more continuous than before and minor explosions continued at frequent intervals until Sunday morning, May 18th.

A New Link in Man's Ancestry

Just discovered at Taungs, South Africa, by professor Raymond A. Dart, this remarkable fossil skull appears to represent a creature intermediary between man and the apes, but with a brain of distinctly human type. Few discoveries in human evolution have aroused so much interest,

Fossil Skull Found in Africa

authority throughout the country, particularly in the far west, is still a young man, notwithstanding a notable record in establishing identities from

Infancy of Gigantic Flower
[After 22 days the bud is only 19 inches long]

he short-lived, 8-foot Flower of Sumatra

The illustrations, pp 89, 90, show the curious flower known as *amorphophallus titanum* was only about nineteen inches high after twenty days of life, but twelve days later it was four feet, four inches high and the bud had opened. Our illustration shows the full-grown flower forty days later. It was then eight feet high and is shown unfolding its bell-shaped spathe that opened three days later. The scent of this flower is described as "evil."

An American Criminologist's Feat

[The flower is now about 4 feet 1 inches high]

seeming trivialities. His office is in San Francisco, his home on one of the loftiest hills in Berkeley, across the bay.

"Is it any more difficult, Mr. Hemrich, to detect a forgery when the writing is done in a foreign language? And is it necessary that the examiner be an accomplished linguist?"

The Full-Blown *Amorphophallus Titanum*
[The flower is now forty days old and is 8 feet high. Three days later the flower collapsed.]

"No—to both questions. During the World War enemy agents busied themselves in an attempt to hatch a nasty brood of troubles for John Bull, and by making their headquarters in San Francisco, Uncle Sam was drawn into it. The idea was to stir up enough strife to warrant sending troops to India, thereby making that many less effectives available for use on the western front. This was known as the Hindu-Ghadr Revolution Plot.

"During the trial of these cases I served the United States and British governments jointly. Examinations were made and authorship established of documents and papers written in Bengali, Gurmukhi, Hindustani, Urdu, German, Spanish and English, and I lay no claim to being a linguist." He had produced some sheets of paper with lines of characters that resembled shorthand notes all jammed up tight.

"This is Bengali script. (p. 89.) Do you see how this W-like character is formed? And this one that looks like the letter V? See how it is joined to the next character in every case? These are some of the peculiarities of this man's writing which help-

ed to clear up a great many questions and to convict him.

"In work of this kind, while it is not essential that an examiner should be a linguist, it is necessary that the fundamental movements by which writing is executed be thoroughly understood

—

Ant Legions Fight Savage Battle in a Zoo

They staged a battle over in the London Zoo recently. The keepers turned a thousand or more animals loose, urged them to attack each other, and before the melee was over, several hundred had been killed and many others badly wounded. The London newspapers carried running accounts of the fight, excited spectators came to view it.

Why was such a thing allowed? Well, you see all the "animals" were ants. That made it pretty safe for the human onlookers. But if you think that the battle was any less ferocious or deadly than a combat between tribes of wild-cats or herds of elephants, you are mistaken. The ant, when properly aroused, can give any animal lessons in ruthlessness.

The most remarkable thing, however, was the way in which the opposing armies planned their campaigns and conducted their attacks. It was proof of that illuminating remark made by the great English naturalist, Sir John Lubbock, when he said "Of all animals, the ant is nearest to man in all his actions." The remarkable intelligence of the ant, which makes him one of the most versatile creatures alive, has long aroused wonder, and here is a demonstration that he can use his brains in the heat of battle as well as in the calmer days of peace.

It all started on a bright Monday morning, when one of the keepers at the Zoo placed a little wooden chip, not on an ant's shoulder but over the moat that separated two ant colonies—an old one that had been there for three years, and a new one just arrived. The chip served as a bridge, and for the first time made possible communication between the two nests.

A member of the old colony got curious. He swarmed across the bridge and penetrated into the new nest of ants. He never came back.

That meant war, the old ants decided. But they did not lose their heads and dash pell-mell across the bridge only to be swallowed up in a possible ambush. Instead, they chose 10 of their best warriors and sent them out as scouts. These daring ants crawled across the chip of wood, with the muddy water of the moat menacing them from below, and crept cautiously into the enemy's territory.

They found nothing. All the new ants were hidden away in their nest, unaware of the catastrophe impending. The wise scouts went back home.

An excited council of war must have followed, for in a few minutes there issued from the old nest an imposing array of warriors marching in ranks as orderly and well defined as the Macedonian phalanx. A few scattered ants running alongside threw the white sand up into little mounds that could serve as fortifications in case "earthworks" were needed for defense. Then the whole band, now greatly augmented, swarmed across the bridge.

A lone ant of the new colony was out taking the air when he saw the hostile band come pouring toward him. He was brave, but he also was wise. Therefore he hurried back to the nest to warn the others. In a few seconds all his comrades were streaming out to the attack.

The carnage that followed was terrific. It sounds almost unbelievable, but the fight lasted for four days and nights.

On one occasion an armistice was arranged, but it lasted only a few hours. Evidently the terms were broken by one side or the other, for the battle was resumed, and more wounded lay quivering on the white sand or floating helplessly in the water beneath the bridge, while dead bodies lay strewn around everywhere. With their big mandibles, the warriors slashed at one another in individual combat. They tossed the weaker ones into the moat or failing this, cut off their opponents' limbs and left them helpless.

By Thursday afternoon the invaders from the old colony had been driven back across their bridge and practically annihilated. Their fortifications were useless, for the rout was complete. The new ants took some of their captives for slaves, killed the rest, and then went back home. The workers cleared the dead from the field, and all was peace.

The intelligence and power of organization shown by the ant in time of war is no less marked in time of peace. This amazing little animal not only is an efficient warrior—he is also an architect, a mathematician, a perfect nursemaid, a professional strong man, a farmer, a doctor, and an undertaker of distinction. He displays teamwork and a force of will, equaled only by his fondness for gay life (including, alas! intoxication) and sports. Doctor Hermann Eidmann, famous entomologist, of Munich, Germany, assures us, too, that the ant can talk.

Consider, first his skill as an architect. In East Africa may be found "all, slim towers of earth built up by the white ant, or termite. Some of these towers are 20 feet high. Imagine a creature only a quarter of an inch long constructing a piece of architecture 20 feet in height! It is as if the ancient Egyptians had built 12 pyramids one on top of the other. And the Egyptians at least had primitive tools, while the ant works with nothing except the limbs that nature gave him.

In the mountains of Pennsylvania are found some of the largest "ant cities" in the world. Most of them are built underground, and the biggest one covers 30 acres. Think of 30 acres of ants! Think of the bewildering complexity of the subterranean passageways, and you will wonder how an ant ever finds his way back to his starting-place. Yet he does, by some mysterious sense of direction.

The ant is the most efficient builder in the world, for he carries all his "tools" and material with him. For instance, he can make a sort of millboard for his home by chewing up certain vegetable matter and causing it to stick together by means of a glue secreted in his glands.

Perhaps the most striking demonstration of the ant's intelligence is afforded by the manner in which he builds a shelter among the branches of a tree by "sewing" leaves together. The full grown ant can spin no "thread," but the larva can, for it has to make a cocoon. So the adults fetch up their larva, which have been spinning their silk cocoons. A number of worker ants pull the edge of two

leaves together. An adult holds a larva in its mouth, pokes the latter's head down on the leaves and the little larva begins to emit silk at a good rate. The ant holding it draws it back and forth across the two leaves, and since the silk sticks and hardens almost immediately, a large number of such contacts have the value of stitches, and the "sewing" process soon is finished.

The ant was the originator of the cooperative institution. He knows more about teamwork than any 10 football coaches combined.

Just for callous curiosity, take a spade some day, find an ant hill, and cut it clean in two. Then notice what happens. For a few minutes the little

animals will run around in desperation, but so as if some mysterious voice were commanding the 'they will stop their aimless scutterings and go down to work, each doing the task nearest at hand. One will pick up the pupae, which cannot stand the light of day, and carry them into the deep caverns, another will seize a grain of sand and start to repair the nearest breach, still another will carry away any debris that has fallen in the tunnels.

And the most peculiar thing about it all is that apparently no one ant directs the work. There is no leader, no boss. Yet they work like a machine.

THE SACRIFICE

By SETHA DEVI

1

THE day had been fearfully hot, but a gentle breeze now started shaking the leaves of the neighbouring cocoanut tree. The door of the big bedroom of the Chakravartis opened noisily and a girl of twenty-five or thereabouts came out. She looked on all sides and then called out, "Kanu, O Kanu!"

She got no reply. She came down to the yard and saw that the front door stood wide open. She stood in the doorway looking anxiously out. A young girl, dressed in a striped red sari and a pair of tinkling anklets, came and asked, "Aunt Sari, will you come with me to the tank?"

"How can I?" said Sari or Sarojini. "I don't know where that good-for-nothing brat of mine has run to. I wonder whether he could have fallen into a tank or pit!"

"How you talk!" said the young girl. "Why should he fall into a tank? I saw him just now playing in Chhidam's house with his grandchildren."

"The young scamp!" said Sarojini. "He is as wicked as he is ugly. He is born a Brahmin, but he cannot make friends with any but low-caste people. Ever since he came here, he got stuck at Chhidam's. I wonder what there is so attractive there. If my aunt hears about it, she will beat me with a broom. These people are Mahomedans; I wonder whether the child takes anything there!"

There is no strict observance of the purdah in village society, especially for the daughters

of the village. Sarojini did not even veil herself as she started out, saying, "Shaila, will you come out with me a little way?" Shaila objected a little, saying, "But aunt, mother told me to return very soon."

"Why, madam?" asked the older girl jestingly, "is your bridegroom coming to day?" Shaila blushed deeply, but made no other answer.

"Very well, go back," said Sarojini, "it is not very far off, I can go alone." She let go of Shaila's hand and went off alone.

Chhidam's house stood at a little distance. As she came near it, she saw her four-year-old son Kanu sitting in their yard and feeding a kid with grass and new leaves. Chhidam's grandson was collecting these materials and his granddaughter was busy trying to put her anklets on the legs of the kid. The poor creature had very little taste for this adornment, but its objections were not at all listened to.

Sarojini slapped the child's face vigorously and then dragged him off home. The boy roared lustily all the way. As soon as she reached the house, the first person she saw was her venerable old aunt, who was sitting in the sun, nodding and yawning. "Why are you beating the child?" she asked her niece.

"What else is to be done?" she replied; "he is a wicked young imp and will come to a bad end. I found him playing by the side of the big tank. He will get himself drowned one day."

"I did not go to the big tank," howled

Kanu, "I want the kid, O O, Oh." Sarojini slapped him even more soundly to shut him up. There would be a mighty to-do if her aunt came to know that the child had been to a Mahomedan's house.

"What a wretch you are," said the old lady, "you have got only one baby left, and yet you are beating him day and night." She began to yawn and nod again. Sarojini felt very depressed all of a sudden. She left the child and entered her bedroom.

Sarojini's husband's home was in a neighbouring village. At first, after her marriage she used to come home once a year, regularly. But after the children began to come, these annual visits grew less regular. This time she had come after five years. These years had brought her joys and sorrows with no niggardly hand. Of her three babies two had left her. Sarojini's heart was full of fear for the one that was left. Would God leave him to her, unfortunate woman that she was? She wanted to pour out all the wealth of her heart before the altar of this child-god but drew back in fear. So her treatment of the child was most inconsistent. Sometimes she would lavish an amazing amount of love on him, sometimes nothing but blows and scoldings would fall to his share. In his father's house Kanu did not have a very happy time, because he had no way of escape from his mother and had to submit to this capricious treatment. All the servants of the house were busy with him the whole day. If he made but one step out of the front door, he was at once captured and brought back.

But he breathed with relief when he came here. His mother spent most of her time gossiping and playing cards with her friends and sisters-in-law and had very little time to spare for him. The family was poor and did not keep any servants. So if he could once escape from his mother, there was no one to restrict his movements.

He made full use of this newly found freedom. He made friends with all the children of the neighbourhood, be they high-caste or low. His great favourites were Chhidam's grandchildren. Besides the children, there were puppies, kittens and a kid. He loved the kid most of all. He called the kid Panu, rhyming it with his own name Kanu, and presented it with the new coat, he had received from his parents this year as a Pujah gift. His mother, of course, retrieved the garment in no time. Kanu next tried

to make a present of his shoes, but had to give up in despair as he could not solve the problem of putting two shoes on four feet.

But the strict orthodoxy of his grandfather's house was a torture to him. Ever and anon he would be brought back in disgrace from Chhidam's house and washed and purified. Sarojini herself was not very orthodox, but she feared her old aunt and had to give way to their injunctions. But as she had come back after a long time, she spent a good deal of her time with her old play-fellows and so Kanu could roam about at large to his heart's content.

The few days of the Pujah festival passed away all too soon. Sarojini must go back now. She had obtained permission to visit her father's home with great difficulty. She had promised to get back before her husband's sister left for her own home. This sister-in-law had kindly consented to look after the house for the few days Sarojini would be absent.

On the day they were to leave, Kanu was dragged back from Chhidam's house with great difficulty. He clasped Panu in his arms and nobody could loosen his hold. The old Mahomedan felt sorry for the boy and said "Please let him have the kid, madam."

Sarojini turned up her nose at this impudence. "Why should he take it?" she said sharply. "Kanu, let go at once!" She dragged off the child by main force. "Take away your kid", she ordered the old man, "he will not stop, unless you take it away from before his eyes."

As Sarojini was about to enter the carriage, her aunt said, "Look here, my dear, don't beat the child too much. You have got only one left. And try to remember that you are born a Brahmin, and must act as one. Don't mix freely with all the low-caste people; it is a sin."

2

Kanu was very depressed for a few days after his return to his father's house. In the evening, as Sarojini went to give him his cup of milk, she found him sitting silent in a corner of the room. "Are you ill?" she asked anxiously. The child shook his head.

"Then why are you sitting with your face pulled so long?"

"I am hungry," roared Kanu all of a sudden.

Sarojini pushed the cup of milk to his lips and said, "Well, can't you ask for food, when you are hungry? You can talk like a parrot when nobody wants you to, but you are dumb, when you should"

Kanu pushed away the cup, after taking one or two gulps of milk. "Have you finished?" asked Sarojini

"The milk is bad, I won't take it", said the boy.

"Bad indeed!" said the mother. "I don't know what has happened to you, you little nuisance, you are always sniffling and finding fault with everything." She went away with the milk

As soon as her husband returned she went to him and said "You don't take any care of the child at all. He is getting queerer every day. He won't take any kind of food, and how is such a young child to live without food?"

"Why are you here, may I ask?" said the husband angrily. "Am I to work at the office and look after the child, too? I have no objection to working as a nurse to your boy, if you would kindly look after the office."

She went back with his eyes full of tears. She had come for a little sympathy and she got this. Her heart was heavy, partly with fear for her child and partly with anger against her husband.

Kanu became more and more unmanageable everyday. He would not take food, he would not bathe or sleep. Before, he used to fall asleep at eight and slept like a top all through the night. Now he woke up with a cry three or four times during the night and would sleep again only after a great deal of petting and cajoling.

A few days before the Kali Puja, Sarojini got up in the morning and found that Kanu was burning with fever. Bereavement had come more than once in her life, young as she was. She was almost petrified with fright. After a while she shook up her sleeping husband and said, "Kanu has got fever."

"Have you looked well?" asked her husband sleepily.

"I have, as much as I could", said she weeping. "You get up and see."

Kanu's father got up and examined him well. Then he began to put on his coat and said, "Don't feed him now, I am going far the doctor".

He went out. A black shadow seemed to

have descended over every thing and all seemed dark to her. She sat beside her child and felt too nervous to be afraid even.

Her husband Birendra returned after a while, with the doctor. He examined the child, wrote a prescription and went out. Birendra asked him something and he answered in English. Sarojini's heart grew cold with fear and she asked him anxiously, "What did the doctor say?"

"Nothing much," said Birendra; "the season is not good and he told us to be careful." He went out quickly as if afraid of her asking him anything more.

Sarojini could not attend to anything that day. She did not even take her meals. Luckily her sister-in-law was still there, or the whole family would have gone without food that day. Next day, in the morning, Birendra went to take the temperature of the child. "Has the temperature fallen?" asked Sarojini anxiously.

Birendra shook his head. This young couple had made the acquaintance of the god of death all too soon, and they sat silent now, without speaking to each other.

After a while Kanu opened his eyes and said, "I want fried rice, mother."

Sarojini passed her hand across his brow and said, "I have not got it now. I shall give it after a while. Take a little milk now, there's a good boy."

Kanu had not the slightest desire to be a good boy. He shook his head and cried, "I won't take milk, I want fried rice. Take me to grandfather's house, they have got fried rice there."

"All right, I shall try it now, you take this milk first", said his mother, consolingly.

But Kanu would not be consoled; he pushed away the cup of milk and wept, "I want to go to grandfather's house."

"Very well", said his mother, "we shall go there, get well first."

But Kanu did not show any sign of getting well. His fever grew worse, and complications developed. Sarojini's constant weeping drove Birendra to the town, from whence he fetched a doctor of great reputation. He prescribed a good many medicines, but these did not seem to mend matters much. The child grew weaker and weaker. He did not even weep or talk.

An old man practised homeopathy in the village. Sarojini went to him and wept out her tale. He heard the history of the disease and said: "Well, little mother, I

can prescribe medicine, but my treatment will not go with the doctor's treatment."

"I won't give him doctor's medicine, I will give yours only?"

When she came home, she found that Birendra had already given the child its medicine. Sarojini decided that two good medicines would have double effect, and administered the homeopathic medicine also. This occurred more than once. The fever showed no partiality for either treatment, but went on increasing.

In the early morning, she dreamed an ill-omened dream and woke up in tears. She ran to her sleeping husband and said, shaking him, "Please look after the child a bit. I am going to Kali's temple."

"You need not go anywhere now," he said. "Prepare Kanu's milk first." Sarojini did not listen to him.

She came back after a long while. She had been praying before the goddess with all her heart and soul and had lost all count of time. She had forgotten even about the child's meals.

When she came back, she saw her husband sitting with an angry scowl on his face. "What on earth have you been doing?" he asked; "the sick child had been crying for food. Have you no sense at all?"

Sarojini shivered with fear, lest his anger should offend the goddess. She changed the topic at once and said, "I have promised the goddess a pair of kids, if my child gets well. Have you fed Kanu, or shall I bring his milk?"

Birendra's face still scowled disapproval. "Do you think he would remain without food so long? I have spoiled half the milk, it boiled over upon my hand. It is hurting me like the devil, see if you can give me something to put on it."

Sarojini sat up through the whole night. She felt overpowered with sleep now and then, but the memory of last night's frightful dream brought her back forcibly from before the gates of dreamland.

As the eastern sky grew rosy with the approach of dawn, her heart felt light all of a sudden. She ran to Kanu, and placed her hand on his brow. The fever seemed much less. She did not believe her own senses. Misfortune had made her mistrustful even of small pieces of luck. She placed her hand again on the child. This time too the fever seemed less. She woke up her husband. "Just put your hand on Kanu once," she said.

"Why, why?" he cried sitting up in fright, "is the fever worse?"

"No, no," said Sarojini; "it seems less to me, so I want to be confirmed."

Birendra left his bed and approached his son, thermometer in hand. Sarojini gazed intently at that small tube of glass, with her two eyes full of hope and fear. It seemed as if her whole life hung in the balance. Birendra took away the thermometer and went to the hurricane lantern. He examined it closely and long. His wife grew alarmed and asked, "What are you doing with it for such a length of time? Is not the fever less? Why do you not speak?"

Birendra looked up at his wife's face, which had grown pale with fear. "Don't be afraid," he said consolingly, "did fear ever help matters? Why do you weep like a child? Kanu's fever is much less. See for yourself," he held out the thermometer to her. Sarojini took it and saw that he had told her the truth.

She went and threw herself on her bed. All her anxiety and agony of mind flowed out in the form of tears from her eyes. Birendra understood. He sat silently by her, and stroked her head.

Kanu's fever had really left him. He began slowly to recover. He began to talk, to ask for forbidden things, to quarrel with his mother and even to try to run out of the room. Sarojini had been working like a giant all these days. She had passed most of her nights without sleep, still she knew no fatigue of body or mind. Suddenly all her strength seemed to have left her. She had to drag herself up forcibly from her bed in the morning. She felt sleepy and tired all the day. She sat by the kitchen fire and nodded with sleep. Her cooking grew too bad to be believed.

"You need not cook any more," said Birendra, after a few days. "One day you will fall into the fire. I have engaged a cook. The doctor had prescribed a change for Kanu. I see that Kanu's mother needs a change more."

Kanu grew better without any change of air. Sarojini had to be on the alert the whole day, lest Kanu would give her the slip and escape out of the house. Though the cooking was no longer her duty, yet she was still too tired to look after a convalescent child. So she would grow irritable now and then and her old habit of beating the child would possess her again. But the hand

raised to strike would drop by her side again. This one too had been about to leave her. But for the mercy of the goddess, there would not have been any one left to annoy the unfortunate mother. Kanu used to prepare himself for the blow with his head bowed down and his back arched, but when the impending blow would retire from halfway, he would become dumbfounded with astonishment and the howl he had kept ready to announce his disapproval of his mother's behaviour, would die in his throat.

A few days passed away like this. Then Sarojini said to her husband, "You are keeping mighty quiet, have you forgotten that our principal duty still remains undone?"

"What is that, if I may ask?" said Birendra.

"I have promised to sacrifice a pair of kids to the Goddess Kali. Must not we see to it now?"

"Alright," said Birendra shortly. That day in the morning, as Kanu came out of the bedroom after taking his morning cup of milk, he jumped with surprise and cried out with gladness ringing in his voice, "Panu, Panu, see mother Panu has come to us."

Sarojini ran out hastily. A man had been despatched to the weekly country fair to purchase the kids. He had returned with them and tied them to a post in the big yard, without her knowing anything about it. At Kanu's shout of glee, she ran out and then felt ready to sink down at the sight that met her eyes. Kanu had clasped Panu in his arms and was dancing with joy. He was feeding it, stroking its glossy back and trying to lift it in his arms. Panu did not seem to enjoy these proceedings much, but he was taking the grass and other food offered quietly. Sarojini grew alarmed. How would it be possible to take away the kid from Kanu? But what else could be done? The kid had been bought as a sacrifice to the goddess and sacrifice it they must. It would be a terrible sin to think otherwise. For the good of Kanu, they must give him a little pain.

She tried to deceive the child. "What a silly you are," she said, "this is not Panu. Panu is not so big."

Kanu laughed in scorn at his mother's ignorance. "Oh no, it is Panu. Do you think I don't know? See, here are the marks of anklets round his legs." The kid had white marks on the legs. Sarojini had hoped to convince Kanu, with her lies, but she had

to retire discomfited from the contest.

Kanu did not give any trouble to any one that day. He did not budge an inch from Panu's side. The kid was so well attended to, that it bleated in fear and discomfort. At night Sarojini found it on her bed by Kanu's side. This time Kanu received some good slaps, but that did not diminish his ardour a bit. He too went with Panu, to the yard, to share the bed of straw. Sarojini had to admit defeat again and she arranged for the kid's staying inside, close by the door. The sacrifice was to take place the next day. How was Kanu to be persuaded to give up his playmate? His mother began to feel very nervous about it. At last she decided to take away the kid very early in the morning when Kanu would be still asleep and to place it in some neighbour's house. From thence it could be safely transferred to the temple.

But Kanu was even quicker than his mother. His protective instinct warned him of danger beforehand. Sarojini got up early, but found to her dismay that Panu was no longer there. As soon as she had got up, she had found Kanu absent from the room. She knew that both the runaways would be found together. She informed her husband, then sent out a servant to look for Kanu and Panu. She herself stood at the front door, looking anxiously in every direction for a sign of the missing ones.

No sign could be found of them, but a messenger came from the temple and informed her that it was nearly time for the sacrifice and the priest had asked them to come soon with everything ready.

"We are just starting," said Sarojini to the man, but she could not think of any way of managing this. Unless Kanu and the kid were found, what could be done? She forcibly dragged herself away from the front door and made all the other arrangements for the ceremony. She bathed and dressed and Birendra too was driven into getting ready.

Just at this time a clamour at the front door was heard. The child's cry mingled with the kid's bleating. Everybody ran to the door. A servant was trying to take away Panu from the child's grasp. Kanu clung to the kid with all his might and wept loudly.

Sarojini ran to Kanu and caught hold of him. The servant at once snatched away the kid and disappeared in a hurry. Kanu

one beat and scratched like mad, weeping all the time and crying, "I won't let Panu be killed."

Sarojini could not imagine who could have given the child this information. She tried to take him in her arms and comfort him. "Who told you that Panu is to be killed?" she asked; "they are taking it only to bathe it, because it is very dirty."

Kanu struggled frantically to get away from her. "You are telling me a lie," he cried; "Bhola has told me that you will kill him. I won't let you."

Sarojini was very late for the sacrificial ceremony. She could not soothe Kanu and at last left him crying in her sister-in-law's charge and hurried to the temple. The priest had waited for her and began as soon as she arrived. The ceremony was over very soon.

Sarojini felt very nervous as she returned home. She wondered how she would find everything. She heard the sound of Kanu's weeping even before she had entered the house. As she entered, she was informed that Kanu could not be fed by any means, he had fallen down and cut his forehead while trying to run out of the house. She entered her bedroom and found her sister-in-law sitting by Kanu, trying to make him sleep. Kanu had a bandage round his forehead, through which a red stain was slowly making its appearance.

Sarojini's heart suddenly seemed to turn to ice with fright. The stream of blood, she had just seen in the temple, seemed to have rolled here and touched her child's forehead. She had offered blood to the goddess for her child's good, but her child's blood had flown in consequence. Her eyes filled with tears and she bowed down again and again in her mind to the goddess and asked pardon of her for her child's misbehaviour.

Birendra had been out for a walk. Coming back, he found his wife in tears and asked in surprise, "What is the matter?"

"Go in and see," said Sarojini. Birendra went in without a word. He came out immediately after and said, "Don't you know that one has to call a doctor if some one lies down with fever? You have got three

servants in the house and they all know the doctor's house."

Sarojini's face turned white. "Has he got fever again?" she asked.

Birendra got annoyed and said, "You don't know even that? Then what on earth were you weeping about? Go in and see to the child. I am going for the doctor. You are all so supremely wise and needs must take away the kid by force from the boy. There were only those two kids in this world one would suppose."

"How can you talk so?" said his wife weeping. "The kid was purchased as an offering to the goddess; what could I do but take it?"

"Very well, you have taken it and now stand ready to bear the consequences." With this he walked out of the house.

The doctor came. "A relapse again?" he asked with a grave face. "This is rather serious. Such a young child, to have two attacks, within such a short time! Be extremely careful. Have this prescription made up at once and don't let the child get up at all. He must be kept well covered, too."

Birendra did not go to his office that day. He sat by the side of his son and attended to him. But the child was extremely restless. He would not lie down, he would not take any medicine and nothing could stop his loud weepings. His fever increased and gradually he began to sink.

On the morning of the third day he said suddenly, "I want Panu."

Birendra stroked his body soothingly. "Get well first, my darling," he said, "and I will bring you Panu."

The child pushed away his hand. "No, you won't," he wroth, "you have killed him."

Sarojini was sleeping the sleep of utter exhaustion. She dreamed that goddess Kali stood before her, saying, "It is getting late, where is my sacrifice?"

At the agonised call of her husband, she sat up in alarm. But one little playmate had already departed in search of the other. The child started on his last journey, dressed in the new coat which once he had presented to Panu.

MRS. SAROJINI NAIDU

By M P SARANGAPANI

OF one who had rendered noble services to France, Anatole France wrote, "Such a life is a masterpiece." With equal justification, and no less truth, one might repeat the sentence in regard to the life of the late Dr Aghorenath Chattopadhyaya, the father

Mrs Sarojini Naidu
From a photograph taken in Durban, 1920

of Mrs Sarojini Naidu Aghorenath was born in the village of Brahmanagan, in the district of Dacca, in the year 1851. He was the youngest of four brothers. After a distinguished academical career in the Presidency College, Calcutta, he proceeded to England with the Gilchrist scholarship of £ 300 a year for further studies. He joined the B. Sc. classes at the Edinburgh University, studying under Professors Crum Brown and Tait. Having stood first in the B. Sc., he obtained the Baxter Prize

in Physical Science in 1875. Soon after, he won also the much-coveted Hope Prize in Chemistry, standing first in a competitive examination for which some of the professors from Cambridge and London also sat. He then went to Germany, and carried on research work for two years at the university of Bonn, and studied "Crystallography" under Prof. Vomrath, Heat and Electricity under Prof. Clausius, and Organic Chemistry—the Benzene Group—under Prof. Kekule. Returning from Germany to Edinburgh, he took his D. Sc. in 1877. After completing his foreign education he had just returned to India when his father died. The late Nizam of Hyderabad, who was keen on spreading education in his Dominions, and who had come to know of Aghorenath Chattopadhyaya's brilliant intellectual qualities, invited him to organise education in his State. Aghorenath accepted service under the late Nizam, and set to work with zeal immediately. In a short time, education began to make rapid progress in Hyderabad, all through the initiative and organising ability of the young, enthusiastic educationist. He first established the Nizam College, and then set about establishing schools both for boys and girls, all over the Nizam's Dominions. His pioneering work was at once recognised, and thereafter he was known as the 'Father of Education' in the State. More than all his educational work, however, was his exemplary life that extorted the admiration of all for its nobility and purity, for its embodiment of all great ideals, of truth, of love, of justice and patriotism. Aghorenath Chattopadhyaya and his wife (who wholeheartedly cooperated with her husband in all his activities) threw open their home to all who might choose to come without any the least distinction. There were many students who were practically permanent residents of their home, and who were all brought up, so to speak, with equal tenderness and solicitude, cared for equally, along with his own children, of whom Aghorenath was blessed with eight, four sons and four daughters. All the children in the house who were not his own called Aghorenath

Chattopadhyaya their "uncle". It was natural that in such a home no notion of caste, creed or race should have entered the mind of the young, who must have lived in perfect comradeship and love. In that delightful and perfect commonwealth of children, all social and credal and racial differences should naturally have vanished and they must have lived as one happy family of brothers and sisters. There were no distinctions. All had equal privileges of a common home. To a cup of tea and hearty and endearing talk even strangers were welcome, at all time of the day. The home of Aghorenath Chattopadhyaya was known as the 'Seat of Learning', because there met all men of learning and culture and distinction—moulvis, pandits, European scholars, lawyers, public men, and indeed everybody who had some pretence to scholarship.

SAROJINI'S CHILDHOOD AND EDUCATION

Such was the home into which Sarojini came. The fortunate circumstances of her life cannot be measured in terms of worldly riches but by other riches more valuable than gold, more lasting. Fortunate, indeed, she was to have been born of so great parents as Aghorenath Chattopadhyaya and his wife. There is no doubt whatever that the first influences in her life shaped her general attitude once for all, which stood many a test, in the future, when she was confronted with thorny problems in her personal as well as public life. Sarojini Chattopadhyaya, the eldest living of Aghorenath Chattopadhyaya's children, was born at Hyderabad on the 13th of February, 1879. True educationist that he was, Aghorenath allowed his children to grow in perfect freedom. There was no sort of 'don't do that, don't do this' code in the house. Thus she enjoyed unrestricted freedom in the home. She was also brought up, in a sense, in the lap of luxury. Her father employed an English governess and a French governess with a view to giving her an excellent training. She had the luxury of having her own room, her own library, her own furniture and her own wardrobe, even when she was but a child. Aghorenath showed special attention to all her requirements. Being an educationist himself, he took pleasure in giving lessons in nature study and science by means of simple conversation to all the children in his house.

And quite early Aghorenath laid the foundation of Sarojini's sound general knowledge. Though Aghorenath Chattopadhyaya and his wife spoke Bengali in the home, the children all spoke to their parents only in Urdu, which was no doubt due to the influence of environment. This had one excellent result: the children became all good linguists. As Sarojini grew a little older, she had a Persian

Dr. Aghorenath Chattopadhyaya

teacher, and she had to take up Persian as second language in her school course. Appearing for the Matriculation examination of the Madras University when she was only in her twelfth year, she passed that examination creditably. Quite early she had developed a taste for literature. By the age of fourteen she had read almost all the English poets, her favourite authors probably being Shelley, Tennyson and Browning, as she read them more than others. About this period she showed signs of a fast developing mind, a mind that responded most sensitively to the beauty of external phenomena. She had a

distinctly poetical bent. In her, as yet, the poetic soul was struggling for self-expression. In her letter to Arthur Symonds she speaks of how her inborn poetic instinct struggled for mastery over circumstance, and how it ultimately triumphed

Srimati Baradasundari Devi,
(Mrs. Aghorenath Chattopadhyaya)

"One day, when I was eleven, I was sighing over a sum in Algebra. It *wouldn't* come right, but instead, a whole poem came to me suddenly. I wrote it down. From that day my 'poetic career' began. At thirteen I wrote a long poem *la 'Lady of the Lake'*—1,300 lines in six days. At thirteen I wrote a drama of 2,000 lines, a full-fledged passionate thing that I began on the spur of the moment without forethought, just to spite my doctor, who said I was very ill and must not touch a book."

It is not everyone who sits down to work a sum in Algebra, and gets disgusted with it, that could do the alternative feat of composing a whole poem on the instant, still less could one spout forth a drama, however short, on the spur of the moment, just to spite the doctor, who, in the ordinary performance of his duty, had pronounced the patient as too weak for any mental strain and advised stopping of book-reading. No surer evidence was required, after this amazing demonstration, to prove that Sarojini had the true poetic gift. The poet in her was all along struggling for self-expression, but the time was not come yet for the awakening of her full powers. That was still in the future. After passing her Matriculation examination, some time later, she wrote a little Persian play (in English) called "Meher Muneer". (It is not clear whether it is to

this one or some other that Sarojini refers in her letter to Arthur Symonds, just quoted. This play was, probably, influenced by her Persian study, which she was then making. Aghorenath Chattopadhyaya, who had always encouraged his daughter's literary proclivities, got this printed in the local press, as a generous mark of his appreciation and further encouragement. A few copies of the little Persian play were distributed to a few friends, and one copy was presented to the late Nizam in the year 1895. On seeing the work, and having already learnt of young Sarojini's preoccupations with poetry, and sincerely desirous of encouraging true genius, His Exalted Highness sent a message to Dr. Aghorenath Chattopadhyaya to inquire what his daughter would have as a royal gift. This little incident resulted in Sarojini being granted a foreign scholarship of £300 a year, with first-class passage, in 1895.

FOREIGN EDUCATION AND TRAVEL

Sarojini was then at the early age of sixteen, but of fears she knew none, though she was unwilling at first to go to England. She went to Bombay, and from there she sailed for England, with an old family friend to keep company during the voyage. In England she had the unique privilege of being the ward of the great Miss Manning, who was the pioneer worker for Indian students in England. To Miss Manning's salon some of the highest literary figures in England, and other highly cultured men in society, resorted. Here it was that Sarojini first met Mr. (now Sir) Edmund Gosse, who later stood sponsor to her in England, through the kind offices of Miss Manning. She met in the same place other literary critics of London who were to be her friends, met the late William Archer, the distinguished dramatic critic, who did so much to popularise Ibsen in England, met also Mr. Heinemann, her future publisher. As the rules of no college at Cambridge would permit the admission of a student before eighteen, and as Sarojini was then only sixteen, she attended lectures at King's College, London, until she could join Cambridge. Meanwhile, she had to be getting ready for her "Little-Go" at Cambridge. At eighteen she was admitted into Girton College, but obviously that kind of life did not suit her. She got tired of university life, with its routine and discipline. Her

MRS. SAROJINI NAIDU,

(From a Photograph taken in England a few years ago)

.

,

contemporaries in Cambridge used to say of her: "You have a little Indian girl here, who does nothing but write poetry!" In a few months her health broke down, and her career at Girton came to an abrupt end. Leaving Cambridge, she travelled on the continent, sojourning in Switzerland and Italy for a few months in the year 1897. The grandeur and beauty of the natural scenery of Switzerland and of the beauty-spots in Italy, no less than the historic past of Italy, stirred Sarojini's heart to its very depths. Italy, the mother of the Renaissance, Italy the land of Dante, the home of Raphael and Michael Angelo, and Italy which produced a Mazzini and a Garibaldi, must have appealed to her imagination by the rich legacy of history.

Major M. G. Naidu, M.B., C. M., (Edin.) Retd. Principal Medical Officer, H. E. H. The Nizam's Service, Hyderabad

A TURNING-POINT

When Sarojini was in London, and after she got herself once introduced to Edmund

Gosse, she was a frequent visitor to that critic's house, and soon became one of the most intimate and welcome of his guests. She had then been writing a lot of poetry, and one day in one of her irrepressible moods blurted out the truth to her host. Mr. Gosse requested to be allowed to see her compositions, and a big-sized bundle of MSS. was placed in his hands by Sarojini, a slip of a girl, who had entertained

Miss Leilamani Naidu (Second Daughter of Mrs. Naidu, studying at Oxford)

ambitions of achieving poetic fame in a language that was totally foreign to her! He scrutinised the bundle, and was utterly disappointed with the stuff. He was in an embarrassment, but there was no way out of the difficulty. He knew that Sarojini was young, enthusiastic, he would take the risk and advise her. Let Mr. Gosse himself speak

"I advised the consignment of all that she had written, in this falsely English vein, to the waste-paper basket. I implored her to consider that from a young Indian of extreme sensibility, who had mastered not merely the language but the prosody of the West, what we wished to receive was, not a rechauffe of Anglo-Saxon sentiment in an Anglo-Saxon setting, but some revelation of the heart of India, some sincere penetrating analysis of native passion, of the principles of antique religion and of such mysterious intimations as stirred the soul of the East long before the West had begun to dream that it had a soul. Moreover, I entreated Sarojini to write no more about robins and skylarks, in a landscape of our Midland countries, with the village bells somewhere in the distance calling the parishioners to church, but to describe the flowers, the fruits, the trees, to set her poems firmly among the mountains, the gardens, the temples, to intro-

duce to us the vivid populations of her own voluptuous and unfamiliar province, in other words, to be a genuine Indian poet of the Deccan, not a clever machine-made imitator of the English classics.

Sarojini accepted the good-natured criticism of Mr. Gosse, tendered to her with the best of motives, and what was more, acted up to his suggestion and advice. The result was that, when ten years later she published

The eldest son of the family, Varendranath Chattopadhyaya, an exile from home since 1901, when he was only 21 years of age

her first volume of verse, and still later two more volumes, her poetry struck an individual note, not to speak of its matchless lyric passion. Her maturer work, especially "The Bird of Time" (1912), was of such quality that, in the words of Mr. Gosse himself, there was "nothing, or almost nothing, which the severest criticism could call in question."

MARRIAGE AND DOMESTIC LIFE

After a stay of three years in England, with an interval of a brief sojourn on the continent, in September of 1898 Sarojini returned to Hyderabad. Even before she had left for England, in 1895, when she was only sixteen, the great struggle of her life began. But she must be constant to her love,

and loyal to the man to whom she had given her love. And so in the Deccan of the year in which she returned to England, she married Dr M. Govind Naidu, the man of her choice, by through the bonds of caste, firm resolve never to desert her cherished though friends might fail her and her community scoff at her and call her a renegade. It has been throughout a happy domestic life that Mrs. Sarojini Naidu enjoyed, though occasionally marred by illnesses caused by the general poor state of health which her lot from the beginning. Her constitution was delicate, and any little cause upset her. In one of her dejected moods, she wrote to Arthur Symonds in 1904.

"Do you know I have some very beautiful poems floating in the air and if the gods are kind I shall cast my soul like a net and catch them this year. If the gods are good and grant me a little measure of it, it is all I need to make my life perfect, I mean the 'Spirit of Delight' that Shelley dwells in my little home, it is full of the music of birds in the garden and children in the arched verandah."

Yes, "it (health) is all I need to make my life perfect." Dr M. C. Naidu was the most loving of husbands that one could imagine, and Sarojini found in him the fulfilment of her soul's deepest yearning. Children she was blessed with four, two sons and two daughters. In worldly riches she was fairly endowed. The poet in her was emerging, finding fuller expression. She had not yet realised some of her most cherished dreams. Would she be cut off in the middle of her life? That was the doubt that lingered in her mind. That was the cause of her despondency, deep-rooted pessimism. Though frail in body, and delicate in health, the spirit in her was defiant, willed and purposeful.

"THE GOLDEN THRESHOLD"

The period of despair, and the fear "any tomorrow I might die," was soon over. The clouds that darkened the sky of her hopes, her aspirations, her ambitions, soon lifted. Next year, in 1905, Mr Heinemann published the first volume of Mrs Sarojini Naidu's verse, called "The Golden Threshold," with an introduction from her friend Arthur Symonds. The poetry in this volume had the 'Eastern magic' which at once extorted admiration and secured for it the unanimous verdict of the English press that it

beautiful poetry." It was hailed by the literary critics of London as "pure gold," "surprisingly individual," "authentic poetry," and as expressing the "soul of the East". There was fundamentally something human in these poems, said one of them, which seemed to prove that the best song knew nothing of East or West. It might be said Mrs. Sarojini Naidu, as it was said in the case of Byron, she awoke one fine morning and found herself famous. Then followed no more volumes, "The Bird of Time" (1912) and "The Broken Wing" (1917), the former being introduced by Mr. Edmund Gosse. The poetry in these volumes, especially "The Bird of Time," added to her already well-established reputation as a lyrical poet of fine sensibility. Sarojini, too, has had some sorrow, and a good deal of suffering, which in service in the cause of the country (which she passionately loves) brought in its train. But her lyric energy slackened not a bit, as even her last volume "The Broken Wing" will show. The experience gained, on the contrary, served only to give a richer, graver music to her poetry, though something of the youthful ecstasy has passed out and some stern purpose has stepped in. And that is all to the poet's advantage.

SOME PERSONAL IMPRESSIONS

Mrs. Sarojini Naidu's personal charms are many. Some of us who are privileged to know her intimately cannot but regard her with high admiration for some of her excellent personal qualities, which endears her to one and all who come into contact with her. Her charm of manner, exquisite courtesy, child-like simplicity, these combined to make her the most lovable of friends and the most courteous of hosts. She is the embodiment of the very highest culture that one could think of, having been the product of both cultures, oriental and occidental. A sense of culture greets one on entering her drawing-room, where dwells the very spirit of beauty, where comfort has not been neglected. There is a happy combination of beauty and comfort, the by-side, beautiful objects of Eastern craft, richly coloured carpets and curtains, flower vases containing clusters of flowers, seeking to please the aesthetic sense of a visitor, while cushions meant for comfort-loving people are also provided. Fragile in person, yet there is a dainty grace in Sarojini's personality. Of her eyes, it might be recalled, Arthur Symonds has said: "Her eyes were

like deep pools, and you seemed to fall through them into depths below depths." Mrs. Naidu is an engaging conversationalist. Her wit and vivacity adds zest to her conversations. Sarojini loves a company of friends more than anything else. When she was once under her doctor's orders that she should rest quiet and must not receive friends or visitors, she had dozens of them pouring into

Mrs. Naidu's youngest brother, the poet Harindranath Chattopadhyaya and his wife Srimati Kamala Devi

her room.' It is a touching scene to see how she is adored by her children in the household. People who have seen Sarojini move from town to town, like some royal personage, and seen her only in public life, hardly realise that she has another side to her life. As wife, as mother and as the mistress of the house, she is an ideal person. Her conduct in domestic life is one of the most admirable aspects of her many-sided activities. Her devotion to her husband is exemplary, her

ove for her children is limitless, and her treatment of her servants in the home is most sympathetic and kind.

FIRST ENTRY INTO POLITICS

For many years past, before she threw herself into the Non-Co-operation movement, Mrs. Sarojini Naidu had been taking some part, though she never entered controversial politics of the movement, both in social and political work as patriotic duty demanded. For occasional public work, however, brought her into contact with many an eminent politician in the country. Of the early politicians who influenced her most, and who indeed might be said to have induced her to take to public work, was the late Mr. Lokhale. It was a long and intimate friendship that she enjoyed with him. Mrs. Naidu tells of how Lokhale would often speak to her of the joy and privilege of service for the country, of the unequalled opportunities for such service. When they were both alone, in the gathering twilight of one evening, stirred by some great emotion, Lokhale spoke to Sarojini

"Stand here with me, with the stars and hills as witnesses, and in their presence consecrate our life and your talent, your song and your speech, your thought and your dream to the Motherland. O poet, see visions from the hill-tops and spread abroad the message of hope to the flowers in the valleys."

These noble words of exhortation and noble counsel, at once solemn and inspiring, were in the nature of an imperative command, with perhaps a sting of admonition in it, that should have roused a quick response to the call of patriotic duty that was addressed to the poet. Those were the stirring moments when national affairs seemed dark indeed, when the relationship between the Hindus and the Muslims was getting more and more strained, when the gulf of separation between the Moderates and the Extremists was getting wider and wider. Lokhale was sick at heart with such politics.

It was an impossible task for any single politician, however great, to bring the country round to sane and constructive politics. Fortunately, however, the clouds that were threatening the political sky slowly lifted. Her historic session of the new Muslim League met in Lucknow on the 22nd March, 1913, to adopt a new constitution which was sounded the keynote of loyal co-operation with the sister community in all matters of

national welfare and progress. Mrs. Sarojini Naidu had the unique privilege of attending and addressing the huge assembly of Muslims. Here it was that she first appeared on the public platform as the ambassador of Hindu-Muslim unity and concord. Then, in the Bombay Congress of 1915, held under the presidency of Sir (now Lord) S. P. Sinha, she spoke from the Congress platform, for the first time, in support of the Resolution on Self-Government, concluding her eloquent speech with a poem on the higher vision of a United India. It is from that day that her political career may be said to begin. At the Calcutta Congress, which was presided over by Mrs. Besant, in 1917, she made an impassioned speech, and concluded.

"I am only a woman and I should like to say to you all, when your hour strikes, when you need torch-bearers in the darkness to lead you, when you want standard-bearers to uphold your banner and when you die for want of faith, the womanhood of India will be with you as the holder of your banner, and the sustainers of your strength. And if you die, remember, the spirit of Padmini of Chittore is enshrined with the manhood of India" (loud cheers.)

She also spoke at the Muslim League, held at the same time and in the same place, in support of the resolution demanding the release of Mahomed Ali and Shaukat Ali.

MADRAS PROVINCIAL CONFERENCE

The Madras Provincial Conference, held at Conjeevaram in May 1918, over which she was called to preside, proved one of the most stormy of sessions held in the annals of the Congress. But she showed conspicuous ability and tact in managing and conducting the proceedings of the Conference. She delivered an extempore speech calling upon young men to enroll themselves in the service of the empire. She then justified her entry into the political field, leaving her sanctuary of poetry and dreams. She said

"Standing before you to-day, I feel a thrill of pride to say that henceforth I am not only with you but of you. For, in this great city, I have seen once more the Vision Beautiful to which my life is dedicated. Often and often have they said to me, 'Why have you come out of the ivory tower of dreams to the market place? Why have you deserted the pipe and flute of the poet to be the most strident trumpet of those who stand and call the Nation to battle?' Because the function of a poet is not merely to be isolated in ivory towers of dreams set in a garden of roses, but his place is with the people; in the dust of the high-ways, in the difficulties of battle is the poet's destiny. The one reason why he is a poet is that in the hour of danger, in the hour of defeat and despair,

the poet should say to the dreamer: "If you dream true, all difficulties, all illusions, all despair are but *Maya*: the one thing that matters is hope. Here I stand before you with your higher dreams, your invincible courage, your indomitable victories." Therefore, to-day in the hour of struggle, when in your hands it lies to win victory for India, I, a weak woman, have come out of my home, I, a dreamer of dreams, have come into the market place, and I say, 'Go forth, comrades, to victory'."

JOINS THE SATYAGRAHA MOVEMENT

It was in the early months of the year 1919 that Mahatma Gandhi first inaugurated in India what was known as the Satyagraha movement, as a protest against the Rowlatt legislation. Mrs. Naidu was one of the earliest to take the pledge. It was wholeheartedly in support of Gandhi's method of protest that she went about exhorting the people to join Gandhi's movement during her tours in Madras and in other places in the north. She even sold prohibited literature in the streets of Bombay on the 6th of April, on the Satyagraha Day.

FRANCHISE FOR INDIAN WOMEN & ON DEPUTATION

When the question of franchise for Indian women became a burning topic in political circles, she stood up as the spokeswoman of her sex in the All-India Women's Deputation to the Hon'ble E. S. Montagu, Secretary of State for India, during his historic visit to India in connection with a scheme of a future constitution for India. Earlier she had spoken on behalf of the Indian women in England, but now she fully identified herself with the claim of Indian women for political enfranchisement. At the call of patriotic duty, Mrs. Naidu went to England as a member of the All-India Home Rule League Deputation, to plead on behalf of her country before the British Parliamentary

Sitting (from left to right) Srimati Ushabala Devi (Mrs. B. Chattopadhyaya), Srimati Mrinalini Chattopadhyaya, (Moral Sciences Tripos, Cambridge, Editor, *Shama's*, Madras), Harindranath Chattopadhyaya, Srimati Suhasini Devi (Mrs. A. C. N. Nambiar).

Committee in connection with the formulation of the promised Reform Bill. Her Memorandum to the Parliamentary Joint Select Committee on Indian Reforms on the desirability, nay justice, of granting full franchise and perfect political equality to Indian women will stand as a "remarkable combination of the prose of fact with the poetry of idealism." It won a deservedly high tribute when the chairman, on behalf of his committee, said "If I may be allowed to say so, it illuminates our prosaic literature with a poetic touch".

FOLLOWER OF MAHATMA GANDHI

Returning to India after her deputation to England, she recognised in Gandhi her ideal of a political leader, one "great enough

to accept and sustain the leadership of India." Once she accepted him as her political guru and leader, nothing daunted her from following him through thick and thin. She accepted her master's lead in the matter of the Khilafat, the Punjab and Swaraj, which had been agitating the mind of the country. It is as the follower of Gandhi that she spoke henceforward. But while voicing Gandhi's creed, she always im-

Mr. A. C. Narayanan Nambiar, Editor, "Industrial and Trade Review of Asia," Berlin, and Srimati Subhasini Devi (Mrs. Nambiar), youngest daughter of the family

parted to it her own poetic touch and fervour. She went to England again in April 1920, this time for the benefit of her health. All the same her country's cause claimed her first attention, and she took part in a meeting held at the Kingsway Hall, London, under the auspices of the Indian Khilafat Delegation. Later she spoke in the same Hall on "The Agony and Shame of the Punjab," over which speech there arose an exciting correspondence between herself and the late Mr. Montagu, who was then the Secretary of State for India. To Mr. Montagu's challenge, asking

for proof of certain statements of hers, Mrs. Naidu quoted the Congress Report and held her ground in a crushing reply. Allied to this, there was another incident in connection with the Martial Law episode during the Moplah rebellion in Malabar. Mrs. Naidu, in the course of a speech at Calicut in March 1922, spoke of the atrocious and brutal behaviour of the soldiery in Malabar and cited instances of shocking inhumanity. The Government of Madras called on her to give particulars, or to apologise, failing which she would be prosecuted. Hardly had the Government rushed out with their *communiqué* than an array of evidence was published in the press which corroborated the truth of Mrs. Naidu's allegations. The Government had an ugly exit from a muddle and the threatened prosecution of Mrs. Naidu never came, though she has not up till now withdrawn one clause or one word from her charges. When rumours about Gandhi's arrest became rife, Mrs. Naidu was in constant touch with her leader. The arrest of her leader on March 11, 1922 cast a gloom and depression over the country. Mrs. Naidu has given us one of the most vivid pen pictures of the historic trial on the 18th at Ahmedabad, she being present on the scene.

TRUE TO HER LEADER

After Mahatma Gandhi's incarceration, the Non-Cooperation movement was on the wane, partly due to the removal of a commanding personality and partly due to the bickerings among those to whom the leadership of the movement had fallen. The later history of the Non-Cooperation movement and the Civil Disobedience Enquiry Report will bear ample evidence with respect to that. But Mrs. Naidu has remained all along constant to her faith in her leader. That is the reason why she retains still her position as one of the principal leaders of the Non-Cooperation movement, while some of those who were with her in the early stages of the movement have gone into obscurity. It is in recognition of her steadfast services, and her magnificent services in the cause of her fellow-countrymen in Kenya and South Africa, rendered both in Africa and in India, that she has to-day been elevated to the highest position of honour in the gift of the country—the Presidentship of the Congress.

HINDU-MUSLIM UNITY

But Mrs. Naidu's title to her country's

gratitude rests on stronger foundations. Her contribution to Hindu-Muslim unity and concord is one of the most valuable and cherished by her countrymen. Long before Gandhi, indeed before any politician sought to make it the principal item of national progress in the country, she it was that clung to it, urged the immediate need for it and insisted on the politicians of the country tackling it before any other problem. The circumstances of her life have caused her to be a living epitome of what she seeks to achieve. Born as a Hindu, brought up in constant association with Mahomedans in a Mohamedan city, and again in her wedded life making her home and friends in the same place, inhaling the culture of Islam, she cannot but now seek to unify the two communities in mutual bonds of love and tolerance. Even her criticism of the Sangathan

movement, which has been so much misunderstood, has its basis in that harmony of creeds and communities which she seeks to bring about, by mutual understanding, by mutual respect and concern for each other.

With but one extract from a speech by Mrs. Naidu we will conclude this sketch.

It used to be said with reference to Italian liberty, that Mazzini by himself was merely a dreamer and that Garibaldi was by himself merely a soldier and either of them separately could not have built what is one great liberated Italy of today. But it was the genius of Mazzini the dreamer Mazzini that became the deed of Garibaldi, that made Italy free. And so in the evolution of our national history the Hindus are the Mazzini and Mussalmans the Garibaldi. A combination of the visionary, the dreamer, with the statesman the soldier the mystic genius with the virility of manhood that is what we want today in this great India of ours.

NOTES

Sir J. C. Bose's Scientific Career

Sir J. C. Bose is known to-day as so great a plant physiologist that young journalists and students of science are apt to think that his whole career as an original investigator in science has been concerned with plants. But in reality his researches were at first connected with light and electricity. It is not necessary to ransack the pages of inaccessible scientific publications to discover the details of some of his earlier researches. So well-known, authoritative and easily accessible a work of reference as the *Encyclopaedia Britannica* mentions some of them. For instance, the article on Electric Waves by Sir J. J. Thomson, F.R.S., in the *Encyclopaedia Britannica*, latest edition, Vol. IX, pp. 203-208 contains references to and descriptions of some of Bose's researches. *Re Coherers*,

"Bose showed that with potassium there is an increase of resistance and great power of self-recovery of the original resistance after the waves have ceased."

Re Generators of Electric Waves,

"Bose (*Phil Mag* 43, p. 55) designed an instrument which generates electric waves with a length of not more than a centimetre or so, and therefore, allows their properties to be demonstrated with apparatus of moderate dimensions."

A description of the instrument and its working, with an illustration, follows, which we need not quote. Bose's researches on Electric Waves have been quoted, among other works, in Poincaré's *Wireless Telegraphy*.

Menschen Und Menschenwerke, an encyclopaedia in English, French and German, gives an extended account of Bose's scientific career (Vol. II, 1925, pp. 23-26), which says, in part ---

"Prof. Bose's first researches were on the production of 'shorter' electric waves and of the determination of the indices of refraction of various substances for the electric ray (1894), two problems which coming shortly after Hertz's discoveries and shortly before Marconi's invention, attracted more than passing interest. In pursuing these studies, Bose discovered the polarisation and selective absorption of the electric ray by various crystals, important facts in support of Maxwell's theory. At that time, too (1894), he was occupied on the technical problem of firing weapons and explosives at a distance by means of wireless waves. This was one of the first experiments, attempted also by many scientists in recent times, at using electric waves as transmitters of energy."

The same tri-lingual encyclopaedia writes ---

"Among the inventions of the great scientist, in addition to those already touched upon, the following deserve special mention. Apparatus for

production of the shortest electric waves (1891).
 Micro-radiometer for measuring the energy of
 rent rays of the spectrum, the Conductivity
 ance for nervous impulse, the Automatic
 nograph, the Automatic Radiograph,
 onant Recorder for Automatic record of periods
 short as one thousandth of a second, the Resonant
 order for response of plants, the Electric
 be for detection of pulsations in the interior of
 s. Mechanical and Electric Recorders for
 urement of rate of Ascent of Sap Recorder
 determination of rate of photosynthesis."

Presidential Address at the Indian Philosophical Congress

We publish in this issue the presidential
 dress delivered by Rabindranath Tagore
 the first session of the Indian Philosophical
 Congress on the 19th of December last,
 for the heading, "The Philosophy of Our
 Age."

The Indian Philosophical Congress

The holding of an Indian Philosophical
 Congress is a move in the right direction.
 The proceedings of the first session, which
 was held last month in Calcutta, were con-
 ducted in English and the papers were all
 written in English. So far as the proceedings
 are concerned, it was perhaps best that they
 be conducted in English. But some of the
 papers should and might have been written in
 Sanskrit. For, Indian Philosophy is still taught
 and studied through the vehicle of Sanskrit in
 Benares, Navadvip, Mithila, etc., in northern
 India, and several places in western and
 other India, and it would be proper to
 create the professors and advanced students
 of Indian Philosophy in these places in the
 proceedings of an Indian philosophical con-
 gress. English-knowing professors of philo-
 sophy who hold the chairs of Indian philo-
 sophy in our universities— as for example, the
 late George V. Professor of Philosophy in
 Calcutta University, may be expected to
 write papers in Sanskrit on some Indian
 philosophical topics. But if they be unable to
 do so, some of the professors in our indigen-
 ous seminaries of learning can most probably
 be induced to contribute such papers and
 read them. We throw out the suggestion, for
 it is worth, to those whose duty it will be
 to hold the second session.

It has appeared to us rather inexplicable
 that neither the leading professor of philosophy
 nor any of his colleagues in the post-graduate

department of the Calcutta University appear
 to have contributed any papers on any subject.
 The rules of hospitality may have prevented
 them from becoming sectional chairmen; but
 it would not have been a breach of any
 such rules for them to provide philosophical
 fare of their own manufacture for the guests,
 rather, it would have made their hospitality
 perfect if they had provided such fare. As
 some of these gentlemen have written and
 published books, shyness could not have
 stood in the way.

The Hon. Mr. Justice Greaves, Vice-
 Chancellor of the Calcutta University, wel-
 comed the delegates in a brief and appro-
 priate speech.

His Excellency Lord Lytton in opening the Con-
 gress said that poets and philosophers had this in
 common that they were both seekers after joy, and
 it was with great pleasure that he learnt that the
 most eminent philosophers of India had chosen the
 greatest living Indian poet to be the president of
 their conference.

No department of human thought can be segregat-
 ed from all others and made the subject of isolat-
 ed research. Religion, philosophy, science, politics
 are all interdependent. Though we ourselves may
 have no training in science we are profoundly
 affected in our daily lives by the scientific research-
 es of others. Though we may never have studied
 philosophy the trained intellects of those who
 have supply all unknown to us, the foundations of
 our own spiritual happiness.

The man in the street whom you have roused
 from the lethargy of ignorance whom you have
 taught to think for himself and of whose existence
 I am here to remind you demands with ever increasing
 intensity that life shall be made rich for the many
 as well as for the few, that the changing experiences
 of every-day life should embody enduring values
 and that the solution of life's problems shall be
 found not by escape to another more perfect world
 but by the attainment of greater happiness in
 this.

The satisfaction of that demand, gentlemen, is
 as much within your power as that of Government.
 Mere material prosperity can never satisfy it, and
 from politics and science, material well-being only
 is to be derived.

As the first session of the Congress was
 held in Bengal, it was quite in the fitness
 of things that Rabindranath Tagore was elect-
 ed general president and that he expounded,
 not any system of philosophy contained in
 any book, but the philosophy of the great
 bulk of the people of Bengal which was
 sprung from the soil and racy of the soil.
 This was a blend of poetry and philosophy
 produced by a wonderful process of spiritual
 chemistry, which Rabindranath Tagore was
 best qualified by his genius, experience of
 life and meditations to expound.

Hindu University Convocation Address

In his convocation address delivered at the Hindu University in Benares Sir J. C.

Bose observed —

The life of the tree may be taken as a parable of our national life. The tree is not a mere congeries of unrelated parts but an organised unity. Our world organism, a shock from the most distant corner reaches all the rest and organises them anew. In the life of the tree also a provision has been made for the stimulus of external shocks to reach the interior so that the organism may not be of inaction. It is essential that the different organs should be coordinated for the advantage of the community for any disharmony means the destruction of the commonwealth.

The tree persists because it is rooted deeply in its own soil which is the place of its birth. It is its own soil that provides its proper nourishment and endows it with strength in struggling against the waves of change and disaster that have passed over it. The shocks from outside have never been able to overpower it but have only called forth its latent powers. It had met external change by internal change. The decaying and effete ones have been cast off as worn leaves and changing times have called forth its power of readjustment. Its racial energy has also been an additional source of strength every particle of the embryo within the seed may thus bear the deep impress of the mighty avyavart tree. The sprouting seedling thus forces its roots into the yielding earth to anchor it more firmly, the stem rises high against the sky in search of light and the branches with their canopy of leaves spread out in all directions.

What is the source of strength that confers on a tree its great power of endurance by which it emerges victorious from all peril? It is the strength derived from the place of its birth, its reception and quick readjustment to change, and its inherited memory of the past. The efflorescence of life is then the supreme gift of the place and its associations. Isolated from these what fate awaits the poor wretch nurtured only in alien clime and ways? Death dogs his footsteps and annihilation is the inevitable end.

Is there any such strength for the constant renewal of our national life? Is the past to remain a mere memory or is it to be a dynamic power to be awakened up once more in a new pulse of enthusiasm? That there has been such a latent power is proved by this ancient seat of learning with its unbroken history of intellectual efforts nearly four thousand years. There is then something in Indian culture which is possessed of an extraordinary latent strength by which it had withstood the ravages of time, and the destructive forces which have swept over the earth. And we need a capacity to endure through infinite transformations must be innate in that mighty civilisation which has seen the intellectual life of the Nile valley of Assyria and of Babylon wax and wane and disappear and which today gazes on the future with the same invincible faith with which it met the changing problems in the past.

Let this not lead us into easy complacency, for our national life is now at its ebb, and the perils with which we are confronted are even greater than at any other time. We must find out what

has been India's strength in the past, and what is the weakness that has paralysed her activities.

Prof. Bose examined the assertions of those critics who have denied India's capacity to advance positive knowledge. That the ancient Hindus made some progress in some sciences and that some of their descendants have also done some original work in different branches of science prove that we do not suffer from innate or racial incapacity to advance positive knowledge.

It may now be asked whether theological bias in India obstructed the pursuit of inquiry. The fact is well-known that two different schools of thought flourished here side by side, one of which relied on faith and was supported by established authority. The other based itself on pure reason, and refused to accept anything which could not be substantiated by demonstrable truth. It is remarkable that the unorthodox were in no way persecuted for their heresy.

As regards the modern epoch, Sir J. C. Bose said —

Knowledge is never the exclusive possession of any favoured race the whole world is interdependent and a constant stream of thought had through ages enriched the common heritage of mankind. India in the past had given out her best for the enrichment of the world. Is that power now lost for ever? Let us confine our attention to the advancement of exact scientific knowledge. The specific acquirements for making great discoveries are vivid inner vision, great faculties of invention and experimental skill of the highest order. Aimless experimentation brings forth no great result; unrestrained imagination, on the other hand leads to the wildest speculation, subversive of intellectual sanity. A true enquirer has at every step to compare his own thought with the external fact; he has to remorselessly abandon all in which these are not agreed. In this path of self-restraint and verification, he is making for a region of surpassing wonder. When the visible light ends, he still follows the invisible. When the note of the audible reaches the unheard, even then he gathers the tremulous message. Undaunted by the limitation of our senses, he creates artificial organs of unimaginable sensitiveness which require great genius of invention and skill of construction. It is enough to say that Indian workers have shown special aptitude in advancing science by their faculty of introspection, of experimental skill and power of invention.

WIDER SYNTHESIS

The excessive specialisation of modern science has led to the danger of our losing sight of the fundamental truth that there are not sciences, but a single science that includes all. India from her habit of mind is specially fitted to realise this wider synthesis. One of the greatest contributions in the realm of science would undoubtedly be the establishment of a great generalisation, not merely speculative but based on a real demonstration, that the life reaction of the plant was identical with that of the animal.

This great generalisation has been fully

established by the investigations which have been carried out in India. In other fields also great advances have been made by the labours of devoted workers in different parts of India.

With regard to the prevailing unemployment and severe economic distress Professor Bose observed—

It is tragic that our country with its great potential mineral wealth and possibilities of industrial development should be in this plight. Mining and industrial development by our countrymen on which the prosperity of the country so profoundly depends, have so long been paralysed by an assertion as ignorant as it is unfounded that this country is incapable of producing great discoverers and inventors. These assertions have now been completely disproved. There are now a very large number of young men who could be specially trained in efficiently conducted institutes the standard of which should bear comparison with any in the world. It should also be our aim, as of any self-respecting country, to be independent of foreign countries for our higher education and for our economic needs. For carrying out such a programme a far-fetched and comprehensive State policy would be required.

Objects of the Hindu Mahasabha

In the full text of Lala Lajpat Rai's presidential address, delivered at the Bombay Hindu conference and issued as a supplement to *The People*, the objects of the Hindu Mahasabha are quoted from its constitution—

"The objects of the Sabha are the following—

(a) To promote greater union and solidarity among all sections of the Hindu community and to unite them more closely as parts of one organic whole.

(b) To promote good feelings between the Hindus and other communities in India and to act in a friendly way with them, with a view to evolve a united and self-governing Indian Nation.

(c) To ameliorate and improve the condition of all classes of the Hindu community, including the so-called low castes.

(d) To protect and promote Hindu interests, whenever and wherever necessary.

(e) Generally to take steps for promoting the religious, moral, educational, social, economic and political interests of the entire community.

NOTE—*The Mahasabha shall not side or identify itself or interfere with or oppose any particular sect or sects of the Hindu community, or any political party, nor shall it interfere with the personal convictions of anybody.*

In explaining these objects the speaker stated that

The Sabha aims at creating a spirit of unity between the different sections of the Hindu society, without any ulterior design against any other community or class of persons outside that society. Ours is a unifying and integrating function and in no way a disuniting and disintegrating one. The Hindu community is the largest and

the biggest in the country that goes by one name. Outside India the word "Hindu" stands for "Indian." It may be a surprise to you to learn that *even in Egypt* a pre-eminent Muslim country, in the compound of the greatest Muslim University (that of Alazhar) in the world, *Indian Muslims are called Hindus* and the quarter reserved for their residence is known as the Hindu section of their Boarding-House. In America, both North and South, all Indians are called and described as Hindus. This would have been an ideal condition of things if the non-Hindu inhabitants of this country had adopted that name without giving up an iota of their respective religious faiths or departing in any way from their religious practices. The name of the country is Hindustan and all those who accept it as their home ought to be called or known as Hindus. But we know that is not so. There are large groups of humanity having their homes in this country who resent being called Hindus, and in its efforts to keep up these differences, the Government of the country has gone even so far as to divide the people of the country for all legislative and administrative purposes into Muslims and non-Muslims. The division, if any, should have been, into Hindus and non-Hindus. But the request for separate recognition having emanated from the Muslims, the Government adopted the present nomenclature, which threatens to become permanent. Some Hindus resent it, but I do not object to it as to me it signifies that except for the Muslims, the whole of political India is one and united. Recent developments, however, indicate that a time may come when every other community known by a separate distinctive name, may get special representation with separate electorates and the Hindus may be the only people in India left to be known as non-Muslims. It looks ridiculous, but nothing is ridiculous which has the approval and the sanction of the gods that be.

As the word 'Hindu' has both a regional as well as a credal meaning, there is some difficulty, though it is not insuperable, for all Indians calling themselves Hindus irrespective of religious belief.

As "organisation means power, influence and prestige, those who neglect to organise must give way to the organised." For this reason we think the Hindu Sangathan or organisation movement is justified. But caste, with untouchability as its worst symptom, stands in the way. Lala Lajpat Rai is for making Brahminism synonymous with Hinduism by admitting into its fold all those non-Brahmins who are not doing the work of the Shudras. He is also for the abolition of untouchability. We have no quarrel with anybody who wants to do away with the numerous divisions and subdivisions of Hindu Society even to a small extent; we would rather support any such movement. But our own conviction is that half-measures would not be effective.

The following passage from Lalaji's address

supply necessary information on the subject of communalism and communal representation —

In the *United States* there is a thick wall that separates the Jews and the Christians. In fact the division is not between the Jews and the Christians but between Jews and non-Jews. Nor is the distinction of the making of the Jews alone. There are Jewish hotels where non-Jews are not admitted, and there are non-Jewish hotels where Jews and blackmen are not admitted. The Government of the country, however, recognises no such distinctions and a time is sure to come when these distinctions will altogether disappear even from the social field. This might have been the case in India as well, if the Government had not intervened and created communal compartments for political purposes and out of political motives.

So far as secular interests are considered, why should any one claim any such rights as a Muslim or as a Hindu if the idea be to evolve a common nationhood? The whole idea of the existence of such separate interest in a negation of Nationhood and it must be frankly confessed that those who desire a perpetuation of religious-communal distinctions in the secular line must be considered to be opposed to Nationalism. New York is the largest Jewish City in the world and even there the Jews are in a minority as against the Christians, yet they have never put forward a claim for communal representation. The same may be said of the coloured people of the U. S. A. who socially form an entirely separate community with whom the white have hardly any social relations at all. The population of the United States is a polyglot population consisting of the British, the Germans, the Italians, the French, the Russians, the Spanish, the Arabs, etc. It is a standing complaint of American publicists that these groups keep up their separate communal existence for several generations. But no one has ever asked for communal representation. In fact of all great countries, the idea is singular in India. Its acceptance is entirely due to the desire of the foreign rulers to perpetuate our differences and thus make impossible the evolution of a common nationality. The plea that it is a temporary case and will cease after some time is untenable in the face of it, as experience has now abundantly proved that the principle is one which tends to perpetuate itself when put into practice even for a short time. I have already remarked that it is a principle of such a kind that if you concede it in your case of one community you cannot deny it in the case of others.

Lalaji thinks,

No educated Hindu possessed of a feeling heart and love for his community, can help being a social reformer. Social reform on an extensive scale is the greatest need of the community, and political advance of a substantial nature can be secured without it.

He would abolish child-marriages, bring about the remarriage of child-widows, remove the ignorance and superstition that corrode the intelligence of Indian women, improve their food, give them the advantages of open air and exercise, impart proper education

to them, and make them more independent, more assertive, more self-reliant and physically more competent than they are now.

Lalaji is against University examinations, diplomas and degrees for women, though he would place no limitations on women's right to knowledge and scholarship. We are entirely in sympathy with his object, and we think that the more independent educational institutions of an improved type for women we have in the country the better. But just as Mahatma Gandhi's denunciation of the schools, colleges and universities started, maintained, aided or recognised by the Government did not bring into existence and keep alive a sufficient number of good and well-equipped "National" institutions, so severe and merely destructive criticism of the existing schools and colleges for women would, as things stand, practically result in placing "limitations on women's right to knowledge and scholarship" though the Lala is opposed to such limitations.

Christian Missionaries and Nationalism in Asian Countries

Some of the young nationalists in China, India, Turkey and other Asian countries are avowedly anti-Christian and opposed to all activities of Christian Missionaries. We are fully aware of the dark sides of missionary movements and their denationalising effects. But we must praise them for their systematic and well-planned work and the spirit of sacrifice shown by them. According to Dr. Harold Balme, President of Shantung Christian College, "Today, out of approximately 500 modern hospitals in China, 301 are connected with missions, and there are 800 missionary physicians and nurses caring annually for nearly two million Chinese patients." In China, Christian missions "maintain 7,726 primary and secondary schools offering modern instruction to 285,479 scholars and 186 colleges and universities containing 7,664 students." When we look into the contribution of the mission schools and colleges in India, we cannot but admire the result. The present tendency of Christian missions is to capture the educational field of the younger generation.

Let us frankly confess that there is no such national movement in India, which maintains such a large number of primary and secondary schools and colleges to promote the educational welfare of the nation.

Instead of merely condemning the Christian missionaries, it is very desirable that some systematic efforts be made so that the nationalist movement in India and other Asiatic countries may enter deeply and extensively into the field of national education. Christian missionary education has certain denationalising effects. But if the people of Asia do not do their share to awaken the people educationally, they cannot very well object to the activities of the missionaries, when they are of an educational and philanthropic nature.

T D

Admiral von Tirpitz's Opposition to the Locarno Treaties

Grand Admiral von Tirpitz, who stands high in the councils of the German Nationalist Party, formulated on November 14 last ten reasons for voting against the Pact in the Reichstag. His ten reasons are—

(1) That Article I of the Pact cannot be construed as implying no renunciation of German territory, because Article 6 expressly maintains the integrity of the Treaty of Versailles in all its points.

(2) That the Western Pact permanently sets up a demilitarized zone upon German soil, the voluntary recognition of which is beneath Germany's honour.

(3) That the Pact binds Germany permanently with regard to Danzig, the Corridor and Upper Silesia since Germany's enemies would always find good reasons to oppose any revision of these frontiers.

(4) That in accepting the agreements, Germany ties herself to the Western Powers against Russia and the ascendant political and military peoples that are behind her. This orientation of Germany towards the West would be fatal, especially as the idea is being toyed with in England of a contest between the Western Powers and Soviet Russia, which accounts for Tchitcherin's opposition to the Pact.

(5) That the Arbitration Treaties are worthless because in such questions physical force will decide as it always has done.

(6) That the League of Nations into which Germany is being compulsorily forced is a League of Germany's enemies, because it does not include either Russia or the United States, and up to the present its actions have always been based on enmity towards Germany.

(7) That the agreements are permanent, as all possibility of terminating them in case of need is made practically impossible for Germany.

(8) That it is absurd to speak of a footing of equality between an armed and a disarmed nation and that the spirit of Locarno is only outward courtesy, of which the English especially are masters when they want to attain their ends cheaply.

(9) That alleviations in the Rhineland regime may be granted, as neither England nor France has any vital interest in refusing them to the Rhinelanders, but they may be expected to represent no more than the minimum.

(10) That even if they represented the maximum that Germany demanded, they would be dearly bought at the price of a fresh voluntary recognition of the impossible situation created by the Treaty of Versailles.

Times (London), Nov. 14, 1925.

League Slavery Convention

INVITATION TO THE POWERS.

Geneva, Oct. 20,

The League Secretary-General has forwarded to all the Governments represented in the League, as well as to those of Afghanistan, Germany, Ecuador, the United States, Mexico, Egypt, Russia, the Sudan, and Turkey, a draft convention on slavery the approval of which was recommended by the last Assembly.

In accordance with the resolution of the Council of September 28, the Secretary-General invites the Governments to adopt without delay measures conforming with the convention and to collaborate in abolishing the slave traffic, slavery, and similar conditions by all practicable means, and, in particular, by the conclusion of special agreements between themselves.

The above news item reminds us of the virtual slavery existing in plantations of India, Ceylon and other parts of the British Empire, where Indians are treated as slaves. It would be interesting, if some Indian member of the Indian Legislative Assembly inquired into the actual efforts of the Government of India in giving accurate information regarding the plantation labor situation to the League of Nations. The Indian Legislative Assembly should demand that everything which concerns India's relation with the League of Nations and all foreign Powers should be presented before the Assembly for its consideration.

T D.

An Asiatic League.

The New York Herald (Paris edition) editorially writes the following on the possible formation of an Asiatic League—

The report may or may not be true that the formation of an Eastern League of Nations, in rivalry with that of Geneva, is seriously proposed. Turkish statesmen are said to have taken the lead in such an incipient movement, with assurance of the support of Soviet Russia. The Western policy of treating the Asiatic peoples as inferiors, with the exception of Japan, and as incapable of wholly managing their own affairs, not to be taken

into European counsels and as fit subjects of foreign exploitation, if long enough persisted in, would naturally and inevitably have an unpleasant, even dangerous result. Then, ultimately, the dreaded struggle between the Orientals and the Occidentals for dominance of the world might become a reality. If the East arms itself after the most destructive modern fashion, its formidable numbers would make this such an Armageddon as even the Biblical seer could not envisage in his moments of widest prophecy.

As things are today in Asia, there is no possibility for the people of Asia to outdo the Europeans in the manufacture of weapons used in modern warfare. Then again, the communal, tribal, national or fanatical religious spirit will also stand in the way of forming an Asiatic Alliance in the near future. The Arabs vs the Turks, in the Near East and the Syrian Christians fighting with the French against the Arabs, the existing communal spirit in India and the civil war in China, make it clear that the European nations are dominating over hundreds of millions of people in Asia because the latter are not only disunited but are willing to fight for their foreign masters. We know that there are Indian patriots who hope for Asian independence through Asian co-operation. At the present stage of the political awakening of Asia, the only kind of Asiatic league, which will be of value, is the league to promote cultural understanding among the peoples of Asia, and this can be furthered through exchange of professors, students, scholars, and the intimate personal relations between the poets, artists, thinkers, scientists, journalists, business men and political leaders of Asiatic nations. So long as the spirit of communalism dominates Indian politics, it will not be possible for India to play her legitimate part in the world's political affairs. On the other hand, unless Indian political and communal leaders participate in world affairs, their present narrow vision will not be broadened beyond communalism.

T. D.

Anglo-American-German Enmity to the Soviet Government in Russia

While the Soviet Government in Russia is doing its best to settle outstanding differences between Great Britain and Russia, it is now apparent that the British, American and German governments are following a determined anti-Soviet policy. This is evident from the following news items.—

Mr R. C. Wallhead, M.P., who, with four other members of the Parliamentary Labour Party, has

recently been engaged in investigating economic and political conditions in Soviet Russia, has received replies to the four following questions which, since the return of the delegation, he, on behalf of the delegation, had addressed to M. Rykoff, President of the Council of People's Commissaries, "in order that no misunderstanding should exist in Great Britain as to the attitude of the Russian Government"—

1. Is the Russian Government prepared to compensate British nationals whose property or investments in Russia were sequestered?

2. Is the Russian Government prepared to enter into immediate negotiations to settle all outstanding questions between the two countries?

3. Can you state what classes and quantities of manufactured goods and machinery made in Great Britain could be immediately purchased by the Russian Government, assuming, of course, competitive prices and reasonable credit facilities?

4. Can you state the credit terms required by the Russian Government for the main categories of goods referred to above?

M. Rykoff, in the course of a communication, dated October 24, made the following replies to the questions—

1. You ask me whether the Soviet Government is prepared to compensate British subjects whose property has been nationalized in Russia. The readiness of the Soviet Government to solve this question on the basis of mutual benefits is proved by points (Articles) 10, 11, and 12 of the General Treaty signed by Great Britain and the Soviet Union on August 8, 1924, which deal with the order of the examination of claims and the conditions of their settlement.

2. In reply to your second question—"Is the Soviet Government prepared to enter immediately upon negotiations for the settlement of all outstanding questions between the two countries?"—my answer is in the affirmative.

3. With regard to your third question as to the kind and amount of merchandise and machines of British manufacture which can be immediately purchased by the Soviet Government, provided there be favourable price and credit conditions, this question has been answered by M. Rakowsky, Charge d'Affaires of the Soviet Government in Great Britain, in his statement made in July last, regarding our intention to place orders for British manufactures to the amount of £15,000,000 sterling.

We looked upon this order only as a starting point in the creation of extensive and solid relations between British industrialists and Soviet economic organizations. I have given instructions that you be supplied with a list of our approximate needs in merchandise and machinery for which we would wish to place immediate orders in England. If the initial order had been placed, we were prepared, in the interests of developing our industry and agriculture, to place new orders. Unfortunately, this programme of ours has only been partially fulfilled. We were able to place only one-fifth of our orders for textile machinery in England. The failure of our attempt to get into closer touch with British industry is due to the refusal of the English banks to grant facilities to British industrialists ready to trade with the Soviet Government.

4. The expansion of Anglo-Soviet trade is closely

connected with the regulation of the question of credits which you mention in point 4. Credits, of which our industrial and economic organizations are in need for their trade operations in England may be divided into two categories, short-term credits for the purchase of commodities, and long-term credits for the purchase of machinery. Neither type of credit exceeds the facilities accorded by British merchants, industrialists, and banks to citizens or firms of other foreign countries.

The British attitude, to this effort of the Soviet Government for a friendly understanding, has been expressed unmistakably by the rude insult inflicted upon the representative of the Soviet Government in London. *The New York Herald (Paris edition)* Nov 15, 1925 writes:

LONDON, Saturday.—The British Government made it perfectly clear to-day that the famous spirit of Locarno does not apply to Soviet Russia when it permitted M. C. K. Rakowsky, Moscow's Charge d'Affaires here for the last two years, to leave London to take up his new duties as Ambassador in Paris without officials of the Foreign Office being present at the railway station to see him off. The deliberateness of this affront can be judged by the fact that hitherto the courtesy has been so invariably a rule of the Foreign Department that a British Government representative went to the station to bid farewell to the German Ambassador as he took his departure on the outbreak of the World War in 1914.

To-day's slight is the second act of rudeness recently shown to Mr. Rakowsky by Downing Street. When the Russian envoy held a reception at Chesham House on November 7, the anniversary of the birth of the Soviet Government, the British Foreign Office boycotted it, though many of the diplomatic corps here, including the German, Austrian and French Ambassadors, attended.

Though he was not given an official British adieu, Mr. Rakowsky was seen off by a large labor contingent, including Mr. George Lansbury, Lady Cynthia Moseley and Mrs. Claire Sheldan, sculptress. The Foreign Office's discourtesy is certain to be the subject of an attack in the House of Commons next week by Laborites and Liberals.

American foreign policy is against the Soviet Government and that is clear from the fact that America is the only great nation which has not recognised the Soviet Government. Over and above this fact, the American attitude is made clear in the following news despatch from New York, published in the *London Times* of Nov 12, 1925 —

"The former Secretary of State, Mr. C. E. Hughes, was the guest of honour last evening at a banquet in New York, which more than 1,000 leading citizens had arranged in recognition of his distinguished services in directing the foreign affairs of the United States through four critical years.

Mr. Elihu, proposing the toast of the guest of the evening, dwelt on the four chief achievements of Mr. Hughes—the Washington Conference on the limitation of armaments, "own sister to Locarno,"

his foundation of the Dawes Commission (above all, his refusal to be diverted from the view that it was the sole possible curative for the reparations-muddle), the avoidance of the recognition of Soviet Russia, and his constant advocacy that the United States should join the World Court. The mention of the World Court was greeted with cheers."

The present German Government is apparently following the foot-steps of Great Britain and America and the following report on the recent speech of Dr. Stresemann is rather illuminating —

An alliance with Bolshevism would be dangerous to German culture. Herr Stresemann, Foreign Minister, warned his hearers at a meeting of the German People's Party at Duisberg to-day. The Locarno Treaties, he said, carried into effect the principle of the German Government's Note of July. Better international collaboration was necessary for economic prosperity in Europe, he urged. With regard to the existing negotiations, he said the confidence of the German delegates in the words of Briand, Chamberlain, and Vandervelde had been in no way disappointed.

Indian Clerks

As clerks in Bengal are, on the whole, neither better nor worse than clerks in other provinces of India, we have Chosen to give this note the caption of 'Indian Clerks,' though it is concerned mainly with Mr. I. B. Sen's presidential address at the All-Bengal Clerk's Conference.

Mr. I. B. Sen, M.A., B.L., Barrister-at-Law, was, we learn from his address, a clerk for some time. Subsequently also he has had experience of clerks, and of their failings, grievances and disabilities. He, therefore, spoke from experience. As clerks form a large proportion of literate Indians, particularly of those Indians who are literate in English and as the work and life of clerks touch Indian life at many points, we have thought it right to devote some space to Mr. Sen's address, published by himself. Says he. —

During my short experience as a clerk, I witnessed and keenly felt how their official superiority behaved towards my brother clerks often without sympathy and occasionally with rudeness. Since then in the course of my practice of the law, I have come across hundreds of clerks, not all of the right type, and a few unscrupulous office masters who have not hesitated to get rid of their subordinate clerks whom they disliked, taking the fullest advantage of the clerks' timidity and helplessness before an exacting and unjust but otherwise capable task-master clothed with authority.

In the following passages Mr. Sen points out the worst features in the relation of clerks to the public they deal with.

When I become a clerk I knew as an unsophisticated member of the public that I was joining a branch of public service where corruption was the general rule. That unenviable reputation is not on the wane yet. If anything, it has affected other branches of clerkdom. Only a few months ago I was discussing the subject with a very successful solicitor who is known far and wide throughout India not so much as a lawyer as an eminent public man. Speaking of the clerks being ill paid, we could not say that the clerks of the offices of the original side of the High Court were ill paid judged by the standard of wages which obtained in India. And yet my friend remarked that, whereas corruption was unknown among such clerks in his younger days, it was tending to become more and more prevalent in these days. Whatever might be the cause of the infection spreading, we could not say it was not. I wish it could be said of other offices that they were free from the infection.

Mr. Sen then states and deals with the excuses brought forward to extenuate, if not to justify, corruption among clerks.

I know that our social traditions and institutions imposing obligations on us as to joint family, marriage of daughters, festivals and ceremonies, are often pleaded as excuses for corruption in ill paid clerks. Other excuses are put forward which are not quite without foundation in truth. It has been said by way of excuse that the standard of rectitude among higher officials whose duty it is to check corruption among clerks and to set example by their official conduct is not very high one. If the Burra Sahibs receive presents for their wives from persons who are about to enter into a big contract for supply of coal by such persons to the firms which the Burra Sahibs represent, how can their clerks be expected to have clean hands in their dealings with the public?

If a member of the Board of Revenue by his conduct encourages however indirectly the litigants in distant districts to believe that by engaging a near relation of his to represent their case before him, their case will have a better chance of being properly considered than otherwise, can he expect his subordinate clerks not to yield to temptation? Why should not the subordinates of Calcutta Corporation be permitted to excuse their shortcomings by pointing out that some of their high functionaries enrich themselves in a round-about process which may not be direct bribery but is very near it and almost indistinguishable? No. No argument of social tyranny, no fact of corruption in high places can justify corruption among clerks. The public look down upon them because of their corruption, just as the public while outwardly bowing low, at heart look down upon men in high position because of their encouragement to dishonesty, even though such dishonesty may not in every case directly enrich the high functionary.

The clerks by excusing their conduct only accuse themselves of corruption and it is an accusation which draws sure condemnation from the public.

Mr. Sen has also pointed out what clerks and other people say of some High Court judges. We, too, have often heard of such things. And in a recent issue of *The Statesman*, the following 'legal notes' were published.

The anniversary of the death of Sir Gooroodas Bannerjee recalls to mind a characteristic trait of that distinguished judge which, perhaps, is not known outside the profession. He made it a point never to allow his son (now the President of the Improvement Trust Tribunal), or his son-in-law (now a judge), to practise in his court, lest it might be felt that he would be prejudiced to their favour. It must be regretfully admitted that the excellent precedent has not always been followed even in the High Court. It would appear from a case reported in the *Statesman* of December 2, that a junior counsel, who was a near relation of the Master, was engaged to conduct a reference before him. The point of professional etiquette involved in such cases was recently considered by the Calcutta High Court, where Newbould and B. B. Ghose, J. J. observed that "it is undesirable that a member of the legal profession should practise in a court presided over by a near relation" while, in England, the Bar Council, whose duty it is to see that the fine traditions of an honourable profession are scrupulously observed, were of the same opinion. The Council came to the conclusion that in such cases "it is almost inevitable that partiality will be suspected, even though there may be no real ground for such suspicion. The practice might even lead to briefs being delivered to the barrister because it is believed that his client would have an unfair advantage over his opponent."

In this connection, the dictum of Lord Hewart, L. C. J., may be appropriately quoted. "It is important," he said, "that justice should be done; it is hardly less important that it should manifestly appear to be done;" and the same view was often expressed by Mr. Justice C. C. Ghosh in the Calcutta High Court.

In the abstract, it may be unjust to restrict a litigant's right to engage any lawyer he likes; but concrete cases have to be dealt with on their merits, particularly when it is found that some lawyers who, it is said, used formerly to charge senior counsel's fees when appearing before a particular judge are now almost briefless. But let us hear what Mr. Sen has to say.

If a judge of the High Court allows a general impression to grow among litigants and their legal advisers that by briefing a particular counsel law will be stretched, discretion will be exercised and even facts will be weighed favourably to the litigant represented by that counsel, so that that counsel while practically without a brief before other judges, has a super-

abundance of bribe in the court of that judge alone. His clerks cannot be expected to be just without the incentive of extra valuable consideration in their dealings with the litigant public. The High Court judges who are guilty of such dereliction from the high standard of rectitude expected of them may not be influenced by a desire to fill their own pocket. They may be helping only a friend or a relation to get into practice. But argue the clerks then dereliction is equally dishonest and is only less excusable than that of the poor clerks who are less able to withstand the tyranny of social institutions.

Another ugly feature, says Mr Sen, of the relation between the clerks and the public they deal with is the injustice which cannot escape the notice of persons who have seen clerks in Europe and America.

A poor ill-dressed man who has to get service from a clerk across the counter is attended to after a man in European clothes or a man in decent Indian dress, even though the poor man may have presented himself earlier than the latter. The peons and chaprasis are made to wait while the well-dressed man is being attended to. It is time to introduce in right earnest the system of standing in a queue in all crowded offices, so that the rule of "first come, first served" may be observed in every case. I have always felt ashamed and resentful and sometimes openly protested when preference in treatment has been offered to me, keeping others waiting. I am not saying that the clerks by themselves can remedy this injustice. The co-operation of their office masters is necessary. Co-operation from the public is equally necessary. The school ought to teach boys and girls to stand in queues without any compulsion from outside.

My last remark on this topic of relation between the clerk and the public they serve is then want of a spirit of helpfulness and of courtesy. It is one thing to point out to members of the public a defect in their procedure and another thing to tell them the way to set the defect right. They go to the clerk to get some thing done. They do not want merely to learn that it cannot be done. They want to know how it can be done correctly. In European countries a clerk dares not be discourteous to the public across the counter. He will not be retained in service if he displeases the public, as such displeasure may mean loss of a customer to his employer. He is expected to attend to and serve the members of the public at the counter in preference to attending to his office work which may be done when he is by himself. The public must not be kept waiting at the counter. And as to courtesy, courteous words take no more time and consume no more energy than discourteous words. No clerk can afford to be discourteous to the public across the counter without risk to his reputation as an efficient clerk.

The speaker did not overlook the sterling merit of the Indian clerk.

Lord Curzon publicly bore testimony to their good points and did not hesitate to claim for them that the best Indian clerk was the best clerk in the world. If the average Indian clerk is less

quick and has less sustained energy, he is more careful as to detail than his American and English brother and sister. He is quicker than his Japanese brother, though he would be considered very slow in New York and slow in London.

Mr Sen regrets to have to admit that instances of petty corruption are more common and conspicuous in our country than elsewhere.

When in October, 1923, after an absence from India of nearly 20 months in a dozen countries, I landed at Bombay, in spite of the intensive campaign all over India for national self-purification, I was made to feel at once that I was back to my own country of corrupt practices. I became aware that corruption had spread even among porters carrying baggage. I have already said that men in high offices are sometimes not free from it. I do not want you to assume that I was or am myself above the temptation. But if we want our nation to be great, corruption must be stamped out. The clerks must first resolve to eradicate the evil before they can expect the public to help them in improving their relation with their employers. And they must remember that the strength of a nation depends upon the efficiency and honesty of its average units. Much depends, I know, upon the terms of employment and the surrounding atmosphere where the employers or the public want efficient and honest clerks. The public must come forward to help the clerks to be efficient and honest. The public must be no party to creating an atmosphere of corruption or efficiency.

Mr Sen refers to the poor starting pay of some clerks and the other unjust and grievous terms of employment. It must also be added that we, members of the public, often offer the expected bribes to clerks to save some time or trouble. This we ought not to do.

After advising the clerks to set their house in order, the speaker said that the will of the exploiters to exploit brain-workers must be resisted and restricted. And for that resistance and restriction a "well-organised and living federation of trade unions is a necessity."

Let us try to set our own house in order and purge it of corruption and injustice and illuminate it with a noble ideal nationalism which shows in their true perspective the different component economic parts of the vast Indian nation. Let us then combine into Federation of trade unions, conscious of the indispensable character of the services rendered by the clerks to administration, industry and commerce. We are not combining with the objective of preparing for general strikes. Let us hope that no strike will be necessary. We believe that Dalhousie Square and Clive Street also have a soul, though this craze for exploitation seldom allows their soul to function normally. To curb that craze for exploitation, it is necessary that the clerks should gain strength, individually and collectively, so that vigour confronted by vigour will lead to recognition of the divine manhood, that

s in clerkdom. Then and only then shall we have any right to call ourselves the sons and daughters of Bharatavarsha.

Dr. Murari Lal's Welcome to Congress Delegates

Doctor Murari Lal, Chairman of the Reception Committee of the Cawnpore Session of the Indian National Congress, delivered a short speech in welcoming the delegates.

He said at the time of extending invitation to Cawnpore, they had great hopes and high aspirations about according reception befitting the dignity of the representatives of the National Assembly, but a combination of causes stood in their way besides the difficulties which faced the country, they had to contend with local difficulties.

After referring to the deaths of Mr C. R. Das and Mr Surendranath Banerjee, he mentioned the Hindu-Muslim tension which in Cawnpore, however, led to no untoward happenings. The opponents of Indian National progress, seeing their temporary weakness had begun to talk disparagingly of their policy and programme, but they had not grasped the full significance of their peaceful methods of work. Mutual recriminations had led many a seasoned soldier to relax his interest in healthy national activities. Their workers were handicapped for want of adequate financial aid owing to depression in trade. The economic policy of Government was one of heartless and cruel exploitation. The organised pillage of the disarmed nation had undermined their manhood and deadly evil of poverty had made the lives of millions unbearable. Despite these and several other discouraging factors like obtaining a site for the Congress they worked undaunted and there was the Kakori trial which had snatched away many of their ardent and sincere workers, many of whom had not been even committed to bail. These incidents painfully reminded them of the low value that was attached by the bureaucratic Government to their right of liberty and citizenship, but he was confident of the success of their struggle. The policy of non-co-operation had shaken off the frightful terror of coercion and intimidation. To say that the movement was dead was to ignore facts. They might have temporary setbacks, but at no distant date the movement would bear fruit.

Cawnpore Congress Session

The fortieth session of the Indian National Congress held at Cawnpore in the last week of December was well attended, the pandal having been filled to its utmost capacity. It is estimated that there were fifteen thousand persons present there, including visitors. Among the latter, there were about a thousand ladies, some sitting behind the purdah.

After the singing of welcome songs and

recitation of a poem in Hindi, Dr Murari Lal, Chairman of the Reception Committee delivered his brief speech in Urdu in an impressive manner. The substance of his speech has been given above in English.

After finishing his speech Dr Murari Lal requested Mr Girdhari Lal to read the messages of good wishes and regret for absence sent by distinguished persons and public bodies. Among these was one from the poet Rabindranath Tagore, who expressed a hope that the President, as a poet and a woman, would be able to direct the Congress activities to love and service of the cradle of the people where our Great Mother's milk for her children had run dry through poverty, ignorance, disease and disunion, where life was waning and the light of joy was nearly extinct.

Sjra. Basanti Devi (widow of Mr C. R. Das) asked the President to light up an undying fire and let the united nation rise out of smouldering ashes purified and strong. India's freedom's battle must be made a worthy fight for which Deshabandhu Das gave his life and for which two hundred of their sons were abiding their time behind prison bars.

Mr. B Chakravarti urged a policy by which to consolidate national forces and make national demand irresistible.

Mr. C. Vijayaraghavachari (Salem) suggested constitution of a committee for drafting Indian constitution to be adopted in a special session of the Congress.

Mrs Annie Besant said to the President 'May Congress be guided by you along the path to Home Rule by union of all parties who work for India's freedom and revive her splendid past.'

Hon Mr. G. S. Khaparde wanted Mrs. Naidu to restore the Congress to its truly political character with responsive co-operation as the settled policy.

Lord Sinha sincerely hoped there would be a great gathering and a successful session.

Mr Jinnah said the immediate issue was securing the revision of the present constitution, but any action on the principle of direct action would be fraught with serious consequences and imperil political advance.

The Indian Congress Committee of Nairobi said, unless the whole of India was united and attained to Swaraj, all efforts to secure equal status for Indians in British colonies and foreign countries would be futile.

Transvaal Indians, through their committee, asked the Congress to support the South African Deputation. Pretoria 'British Indians' Association made a similar request.

Hon Syed Reza Ali from Maritzburg wired appealing for modification of the constitution to admit all parties.

Dr. Abdur Rahaman, leader of the South African Indian Deputation, in a short speech said the Deputation was presenting to one of the greatest women of the world (Mrs. Naidu) her photograph. The South African Indians had 'given India the greatest living man (applause). Mahatma belongs

to us (applause). Mrs Naidu also belongs to us. You will have to give us at least one of the two to go to South Africa and fight our battle. If we take the greatest woman of India, we are leaving behind her photograph so that you may look at it and be satisfied. We present this photograph to our mother and our aunt in token of love of the South African Indians.

Mrs Naidu then delivered her presidential address. She did not read it out as printed but delivered it extempore, amplifying what she had written.

Mrs. Naidu's Presidential Address

In her succinct and beautifully worded presidential address Mrs. Naidu said that she was aware that the nation had bestowed upon her the richest gift in its possession, "not merely as gracious recompense for such trivial service as" she "may have been privileged to render at home or abroad, but rather in generous tribute to Indian womanhood and as token of your loyal recognition of its legitimate place in the secular and spiritual counsels of the nation."

In electing me to be the chief among your chosen servants through a period so fraught with grave issues and fateful decisions, you have not created a novel precedent. You have only reverted to an old tradition and restored to Indian woman the classic position she once held in a happier epoch of our country's story: symbol and guardian alike of the hearth-fires, the altar-fires and the beacon-fires of her land. Poinantly conscious as I am of my own utter unworthiness to interpret so exquisite, so austere an ideal of wisdom, devotion, and sacrifice, as embodied through the ages in the radiant heroines of our history and legend, I trust, that to the fulfilment of the lofty task you have allotted me, even I might bring some glowing ember of the immortal faith that illumined the vigil of Sita in her forest exile, and bore the feet of Savitri undaunted to the very citadels of Death.

Mrs. Naidu holds that "our abject helplessness [is] born of our foolish disunion and [is] nourished by our long dependence upon the caprice or the compassion of Imperial policies." She asks —

What means shall we devise, what schemes shall we evolve to deliver ourselves from the manifold dangers that encompass us? How shall we combat the deadly forces of repression that challenge our human rights of liberty, how defeat the further encroachment of ruthless and rapacious Imperialist exploitation that despoils the remnants of our moral and material heritage? How circumvent the insidious and ingenious aggression of other foreign races, eager to profit by the conditions of our economic and intellectual servitude? How shall we avert the implacable doom that menaces our unfortunate kindred in the Colonies, how quell

the rampant forces of reaction or divert the disaster of our internecine feuds?

In her opinion,

The answers that we need are fully enshrined in the magnificent Gospel of sacrifice enunciated by Mahatma Gandhi, in which he vainly strove to teach us the heroic secret of national selfredemption. But we, so long disinherited from the epic faith that sustained our brave forefathers, were too weak and unworthy to respond for more than a brief period to the demands of that noble and exacting creed. Whatever may be the verdict of history, it cannot be gainsaid that the movement of non-violent non-co-operation that swept like a tempest over the country shook the very foundations of our national life, and though to-day it is quiescent and its echoes are almost still, it has irrevocably changed the aspect of our spiritual landscape.

However remote may be all our programmes for the future from the principles and ideals of Mahatma Gandhi, they must inevitably be permeated by the influence of these recent years which have permanently shifted the currents of our political thought and altered the direction of our political destiny.

She thinks that,

We need to-day some transcendent miracle of intrepid and enduring statesmanship to enable us to remobilize, reconcile and discipline our scattered and demoralised energies to a supreme unanimous effort for the final deliverance of India from the last shackles of her political subjection, and to devise a comprehensive scheme that shall act as a natural and indispensable auxiliary of political emancipation, and include within the scope of its interest or benediction all the enterprises and endeavours that substantially contribute to the social, economic, industrial and intellectual advancement of India, consistently with the requirements of her own peculiar conditions and in accordance with the finest ideals of modern progress.

Mrs Naidu adds,

To give concrete expression to our decisions in regard to these ancillary activities, the Indian National Congress should create definite departments to be governed by groups of men and women specially qualified by their capacity or enthusiasm to administer to the vital and divergent wants of the people. The main divisions might be few but should include within their sphere of responsibility all cognate matters.

The main divisions, as formulated by her, are twelve in number. The first division relates to village reconstruction.

To my mind it is of paramount importance to formulate a practical scheme of village reconstruction on the lines of Deshbandhu Das's dream. For this purpose we must try to enlist a large band of missionary patriots of burning zeal who set free from material wants by the pious charity of the householders of the country as in ancient times, should carry through the length and breadth of the land the beneficent evangel of self-reliance and self-respect, taking the immemorial twin symbols of the plough and the spinning wheel as the central

text of the teaching that shall liberate our unhappy peasantry from the crushing misery and terror of hunger, ignorance and disease.

Long before Mr. C. R. Das merely formulated a scheme of village reconstruction, others had not only formulated but have been carrying on the work with unremitting zeal. This fact should not have been and ought not to be lost sight of.

The workers may not care whether they get any credit or not. But what is of practical and vital importance is that the experience gained by them may be of use to those who may begin the work afresh in new fields and in untried ways.

To make the workers depend on "the pious charity of the householders of the country" may on the one hand lead to their losing some of their independence and self-respect, and on the other

the creation of a new class of idlers like the professional beggars who call themselves *sadhus* and *sannyasis*. Perhaps, therefore, some other means of subsistence for the village workers, devised in modern lines, may be preferable.

The next division of work to which Mrs. Naidu draws attention is meant for the welfare of the industrial workers in crowded cities.

Closely allied to the task of village reorganisation is the task of organising the industrial workers in the crowded cities, who are so often compelled to live under conditions that degrade and brutalize them, and who, dislocated from the steadying influences of the familiar traditions and associations of the rural homes, they leave in search for bread, are so hopelessly exposed to the temptations of immorality and vice. It should be our endeavour to assist in securing for them improved housing conditions, better wages and a cleaner atmosphere, and to establish an equitable and harmonious co-operation between Capital and Labour as a valuable joint asset of national progress.

The third problem which has received the President's attention is Indian education, on which she observes

I am appalled at the criminal apathy of our general attitude towards the urgent problem of Indian education. The surpassing evil of foreign domination has been to enslave our imagination and intellect and alienate us from the glorious tradition of our national learning. We are to-day no more than the futile puppets of an artificial and imitative system of education, which, entirely unattuned to the special trend of our racial genius, has robbed us of our proper mental values and perspectives, and deprived us of all true initiative and originality in seeking authentic modes of self-expression. It is preeminently our duty towards the young generation to so recreate our educational ideals as to combine in felicitous, and fruitful alliance all the lovely regenerating wisdom of

of our Eastern culture with all the highest knowledge of art and science, philosophy and civic organisation evolved by the younger peoples of the West.

There is much truth in Mrs. Naidu's indictment of our present system of education, though its evil effects appear to have been somewhat exaggerated. Of course, the lines along which our educational ideals are to be recreated have been rightly enunciated. This re-creation has been going on.

The fourth problem is that of military training, on which the speaker observed.—

In addition, I would insist with all the force at my command on including a complete course of military training as an integral part of national education. Is it not the saddest of all shameful ironies that our children whose favourite lullabies are the battle-songs of Kurukshetra and whose little feet march gaily to the stirring music of Rajput ballads, should be condemned to depend for the safety of their homes, the protection of their sanctuaries, the security of their mountain and ocean frontiers, on the fidelity and strength of foreign arms. The savage Massai, the primitive Zulu, the Arab and the Afridi, the Greek and the Bulgar may all carry their tribal weapons and claim their inalienable right to defend the honour of their race, but we whose boast it is that we kindled the flame of the world's civilization are alone defrauded of our privilege and have become cowards by compulsion, unfit to answer the world's challenge to our manhood, unable to maintain the sanctity of our homes and shrines.

The next division also relates to allied matters and has been thus elaborated

Whatever the experiments recommended by the Commission now sitting to explore the avenues of military advancement for our people, it is incumbent upon the Congress to form forthwith a national militia by voluntary conscription, of which the nucleus might well be the existing volunteer organisations. Further we should also carefully consider the question of nautical as well as naval and aerial training to equip the nation for all purposes of defence against invasion or attack.

On this topic we wish to draw the attention of our readers to the observations of Professor Ross of America in the December *Century Magazine*, which will be found extracted in the Foreign Periodicals section in our present issue.

This is neither the place nor the occasion to raise the pacifist issue or to lay stress on the principle of non-violence, on which point, by the way, Mrs. Naidu does not seem to be a follower of Mr. Gandhi. But without denying the need of military training it may be observed that, as military training given to our educated young men will make them weapons in the hands of aliens as our uneducated sepoys have long been, it is worth pondering over whether that will make for

self-rule to a greater extent than the military training of our sepoys has done.

There is no harm in bringing the pressure of arguments and criticism to bear on the British rulers of India in order to secure military training for the educated classes in all provinces. But it would be wise to recognise that in this matter the ultimate decision rests with aliens. We may decide to have a national militia by voluntary conscription. But the Government will not allow them either to purchase arms or to undergo military drill. Nor will the Government allow any private bodies or agencies to possess aeroplanes or ships for giving training in aerial or naval warfare.

For these reasons, we should devote greater attention to cultivating friendly relations with all our neighbours and also with distant peoples than we have hitherto done. It is prudent to be always on guard; but we need not always assume, as people subject to war hysteria do, that foreign people are always thinking only of attacking India. Even if that be a fact, there is no harm in trying to obtain their love and respect by cultural and other means.

The sixth question to which Mrs. Naidu draws attention is our duty towards those sisters and brethren of ours who have settled in South Africa and other foreign countries and are subject to many disabilities and indignities. On this subject she said:

Let it not be said of us, however, that our selfish absorption in our own domestic affairs has made us oblivious of the distress and difficulty of our kinsmen in foreign lands. Our adventurous patriots, who have crossed the seas to seek their livelihood in the dominions and colonies, have from time to time been subjected to restrictive and repressive legislation. The White Paper still stands as a reproach against our failure to redress the wrongs of the Indian community in Kenya. But in the whole chronicle of civilized legislation there has never been so cruel and relentless an outrage against humanity as is deliberately embodied in the anti-Asiatic Bill which is calculated to exterminate the Indian community from South Africa.

Shall we not send across the seas a loving and ready response to their heart-rending cry for succour and, through their ambassadors whom we welcome to-day, offer to our harassed and afflicted brothers in South Africa the assurance that India stands behind their courageous struggle to vindicate their inherent civic and human rights against the onslaught of such terrific injustice and oppression?

Never before has our duty to our kindred in foreign countries been so vividly brought home to our minds nor the necessity of establishing a close and living contact with all their changing fortunes. We should not lose a single moment

in forming an Overseas Department in the Congress manned by those who can keep themselves vigilantly aware of all the legislations and enactment that adversely or otherwise affect Indian settlers abroad.

We may not be able to do all that we wish to for our countrymen abroad, before we have won self-rule, but that is no reason for cessation of activity as the result of a *non possumus* attitude.

On the plight of political exiles Mrs. Naidu observed with feeling:—

Here my heart pleads with me to remember those sorrowful and lonely exiles, pining in strange and far-off corners of the earth, consumed with a desperate hunger and nostalgia for a glimpse of their motherland, to which they cannot return because, once they sought to serve her and win her freedom in ways unrecognised by the common law. But many amongst them surely have made fullest atonement for all the fervent folly of their too impatient youth. Surely they, who have been chastened in the searching crucibles of dreadful suffering and privation have been refashioned to become consecrated vessels of selfless service for the amelioration of the poor, the fallen, and the depressed.

She next laid stress on the need of an efficient publicity and propaganda department.

I cannot conceive how we have allowed ourselves to be so heavily handicapped by the lack of an efficient publicity which is the first essential of any campaign. We should therefore take immediate steps to form a department for widespread political propaganda and for the education of the masses in all matters pertaining to their civic and social interests, to the wrongs under which they labour, the struggles in which the nation is engaged, the iniquitous and unstable fiscal and financial policies so ruinous to the prosperity of the country. I am confident that we could secure the willing co-operation of those who, otherwise prevented from active participation in public affairs, would gladly place their expert knowledge at our disposal, to advise us on questions connected with the revival of cottage industries, on commerce, railway, shipping, cooperative banking, and all other branches of development necessary for our material welfare.

Mrs. Naidu proceeded to add:

The nationalist press both vernacular and English should be amongst the accredited channels of our propaganda, above all, a reliable foreign news service should be established to transmit to all the chief centres of the world the correct version of Indian affairs, and friendly embassies appointed to foster feelings of goodwill and understanding between India and the people of other lands.

The tenth problem, not in order of importance, to which she addressed herself was Hindu-Moslem relations.

And now I approach with the utmost hesitation and regret the most baffling and most tragic of all the problems before us, I, who have dedicated my life to the dream of Hindu-Muslim unity.

cannot contemplate without tears of blood the dissensions and divisions between us that rend the very fabric of my hope. I have tried to arrive at a just appreciation of the many unfortunate causes that have brought about so deep a rift between the two communities, and tended to quicken such a sharp and importunate sense of aloofness on the part of my Muslim brothers, which, to the profound alarm and resentment of the Hindu community, manifests itself in a growing and insistent demand for separate and preferential rights and privileges in academic, official, civic and political circles of life. Though I am convinced that the principle of communal representation, whether through a joint or a separate electorate, frustrates the conception of national solidarity, I am compelled to recognise that, situated as we are to-day, in an atmosphere so tense and dark and bitter with unreasoning communal jealousy, suspicion, fear, distrust and hatred, it is not possible to reach any satisfactory or abiding readjustment without the most earnest and patient collaboration between Hindu and Muslim statesmen of undeniable patriotism to whom we should entrust the delicate and difficult task of seeking some sovereign remedy for so devastating a disease. I beseech my Hindu brothers to rise to the height of their traditional tolerance which is the glory of our Vedic faith and try to comprehend the intense and far-reaching a reality is the brotherhood of Islam, which constrains seventy millions of Indian Mussalmans to share with breathless misery the misfortunes that are so swiftly overtaking the Islamic countries and crushing them under the heel of the military despotism of foreign powers.

In their turn I would implore my Muslim comrades not to permit their pre-occupation with the sorrows of Syria, Egypt, Iraq and Arabia, to obliterate the consciousness of their supreme duty to India their motherland, who must always have the first claim upon their devotion and allegiance. If Hindus and Mussalmans would both learn to practise the divine qualities of mutual forbearance and accord to one another perfect liberty of worship and modes of living, without the tyranny of fanatical interruptions of one another's appointed rituals and sacrifices, if they would but learn to reverence the beauty of each other's creeds and the splendour of each other's civilizations, if the women of the two communities would but join together in the intimate friendship of their common sisterhood, and assure their children in an atmosphere of mutual kindness and harmony, how near we should come to the fulfilment of our hearts' desire!

The people and princes of the Indian States were not forgotten.

We should grossly fail in our duty to our neighbours were we to omit to try and foster cordial relations of sympathy and trust between ourselves and the princes and people of the great Indian States, by resolutely refraining from all interference in their internal concerns but always ready to serve in their wider interests.

The last subject which she spoke upon was the Frontier Provinces.

Nor can we afford to ignore the claims of the Frontier Provinces, which owing to their peculiar geographical and strategic position on the map, are

governed by a form of perpetual martial law. We should render them all the assistance in our power, in their efforts to obtain the normal, civic and social amenities which are so abundantly enjoyed by their sister provinces.

These twelve labours she spoke of as "accessory features of our work." "The real function however of the Indian National Congress is the speedy attainment of Swaraj."

Mrs. Naidu spoke of the Swaraj Party's "striking record of success". That party certainly succeeded on many occasions to capture the imagination of a sensation-loving public; but we cannot call its record one of striking success. There are many discreditable and sordid episodes in its history which ought not to be forgotten, blinked or white-washed. Moreover, it has not followed any consistent principle.

Nor do we agree that the Swaraj Party "invites" all other parties to the Congress "with open doors." Of course, those who may choose to walk into its parlour with eyes open and knowing the conditions, may do so.

It is true of all the principal political parties in the country that

All of them have openly acknowledged that the Reforms of 1919 which were to have created a new era of progress have proved nothing but a mirage and the powers they professed to transfer to the people nothing but a deceptive myth. All of them, surely, are tacitly agreed upon some common maximum of the wrongs they are still prepared to endure, some common minimum of the rights they are now determined to enforce. And whatever be my own personal conviction, they at all events, are all in favour at least as an initial form of self-government, of the ideal of Dominion Status, so elaborately expounded in the Commonwealth of India Bill, and more succinctly and emphatically embodied in the National Demand which has been endorsed by the representatives of all political schools in the Legislative Assembly. Below the limits of that demand the Indian nation cannot descend without irretrievable damage to its dignity and self-respect.

Leaving aside the question of dignity and self-respect, which may appear a merely sentimental consideration to hard-headed men, what is to be seriously considered is whether any constitution which England may agree to our obtaining will be largely futile like dyarchy or will really make for self-rule and be practically synonymous with self-rule to a large extent. If the latter be not the case, we do not want such a constitution.

Mrs. Naidu wants the Government to make a responsive gesture. We do not expect that it will

If the response be sincere and magnanimous, with ample guarantees of good-will and good faith on its part, it will necessitate an immediate revision of our present policy. But if by the end of the Spring Session we receive no answer or an answer that evades the real issues, the National Congress must clearly issue a mandate to all those who come within its sphere to vacate their seats in the Central and Provincial Legislatures and inaugurate from Kailas to Kanyakumari from the Indus to the Brahmaputra, an untiring and dynamic campaign to arouse, consolidate, educate and prepare the Indian people for all the progressive and ultimate stages of our united struggle and teach them that no sacrifice is too heavy, no suffering too great, no martyrdom too terrible, that enables us to redeem our Mother from the unspeakable dishonour of her bondage, and bequeath to our children an imperishable legacy of Peace.

As this sort of ultimatum has been often given before, though not in such beautiful language, without any perceptible result, so far as the Government is concerned, and as civil disobedience may not be within the range of practical politics, the British people may consider such an utterance as mere bluff. We have always been opposed to bluff, or what may appear as bluff.

Mrs Naidu closed her address with the immemorial Indian prayer,

Lead us out of the Unreal into the Real,
Out of the Darkness into the Light,
Out of Death into Immortality.

So far as the general outlines of the problems before the Congress are concerned, nothing which is of the greatest importance has been left out in the presidential address delivered at Cawnpore.

The So-called German Corpse Factory

During the last world war many stories of German barbarities and atrocities were circulated by their enemies to make them hated and loathed by all mankind. Some of these stories contained such obscene details that nothing but the exigency of war could have led any newspaper to print them. To these there is no need to revert. But there are other war lies, which did their work during the war and have recently been exposed, which require and will bear repetition.

One of these relates to the alleged factory where the Germans manufactured fat, etc., from the dead bodies of their own soldiers. This lie has been exposed in consequence of a speech which General Charteris made in

New York on October 19th last. We need not dwell here on all the comments and discussions caused by that speech in the American and British journalistic world. We will quote here only a part of the summary given in *The Nation and the Athenaeum* of London, dated October 31, 1925.

The gruesome tale of the Corpse Factory in our Press begins on April 16th, 1917. On that day the daily column of the Times, "Through German Eyes," contains a section with the headline, "Use of Dead Bodies, Callous Admission." A paragraph is taken from the correspondence of Karl Rosner, representative of the Berlin *Lokalanzeiger* on the Western Front. It is described as "the first definite admission concerning the way in which the Germans use dead bodies." Next day the paragraph is repeated in italics. The Times remarks that it corroborates the *Independence Belge*, which, on April 10th, had copied from *La Belgique* of Leyden a description of trains "arriving full of bare bodies," and being unloaded at the *Deutsche Abfall-Verwertungsgesellschaft*, in the Eifel district, south-west of Coblenz. Two days later (April 19th) the Times prints a facsimile of the passage from Rosner's dispatch, as it appears in the *LOKALANZEIGER* of the 10th, with a translation. Here are the essential sentences,—

"We pass through Evergnicourt (north of Reims). There is a sickly smell in the air, as if glue were being boiled. We are passing the great Corpse Utilisation Establishment (*Kadaververwertungsanstalt*) of this Army Group. The fat that is won here is turned into lubricating oils and everything else is ground down in the bones mill into a powder which is used for mixing with pigs' food and as manure. Nothing is permitted to go to waste."

On April 20th the Times gives a German wireless message in which it is stated that "*the English Wireless Service is spreading the loathsome and equally ridiculous report*." The message goes on to say that, as everybody conversant with German knows, the word *Kadaver* "is never used for human bodies, but only for the carcases of animals." The Times thereupon begins a discussion, which continues for some days, on the meaning of the crucial word. It cites two famous German dictionaries (Meyer and Muret-Sanders), and insists that *Kadaver* is applied to ordinary human corpses—in addition to its acknowledged use, like *cadavre*, in anatomy. Other pieces of evidence are gathered in, and on May 5th the Times completes its case by printing the photograph of a typewritten document, described as an order of the day from the headquarters of the Sixth German Army, with a short paragraph referring to deliveries at the Corpse Utilising Establishment. And, while this has been going forward in the news columns, readers of the Times have been doing their part. On April 18th, the day after the first reference, there appears a letter from C. E. Bunbury, dated the Royal Automobile Club. To this person, it would seem, belongs the credit of first suggesting that the *Lokalanzeiger* had afforded Britain an opportunity for propaganda "that should not be missed" among the Eastern peoples.

In Parliament the corpse factory is first heard of on April 25th, when Mr. Ronald McNeill withdrew a question of which he had given notice

He asked it, however, on the 30th, whether the Prime Minister would take steps to make known "as widely as possible in Egypt, India, and the East generally" the fact that the Germans were boiling down their dead soldiers into food for swine. Mr. John Dillon followed, had the Government any solid ground for believing it? Lord Robert Cecil, Minister of Blockade, replied. He said he had no information beyond the extracts that had appeared in the Press, but "in view of other actions taken by the German military authorities, there is nothing incredible in the present charge against them." He added:

"His Majesty's Government have allowed the circulation of the facts as they appeared through the usual channels."

Pressed further by Mr. Dillon, Lord Robert admitted that he had not seen the *Frankfurter Zeitung's* explanation, and said it was no part of the Government's duty to institute inquiries as to what went on in Germany. On May 17th we have the German Foreign Secretary, Herr Zimmermann, commenting upon Lord Robert Cecil's statements. The story of the corpse factory, he said, had appeared first in the French Press, which was misled by the uses of the word *cadavre*. The *Frankfurter Zeitung*, a fortnight earlier, had assumed that the French deemed it "not worth while to go on bearing the disgrace of such a grotesque lie."

The foregoing summary traces the corpse factory as propaganda only in a single journal, and within the space of one month in 1917. Its proliferations in the British Empire, the United States, and the Far East could not be described. The memory of them staggers the imagination. It should, however, be noted that in the British Press references to the corpse factory came speedily to an end. General Charteris and Mr. Masterman have doubtless indicated the sufficient reason.

And that sufficient reason was that it was a lie.

Other War Lies

We have quoted above from the *London Nation*. Let us now give two more examples of war lies from the *New York Nation*, Nov. 16, 1925. It is to be borne in mind that both England and America fought together against Germany, neither being pro-German.

The first lie is about the *Baby of Courbeck Loo*, which baby never existed. *The Nation* New York writes thus about it—

The Charteris incident has stirred people's memories as well as their ire. Thus the *Glasgow Forward* disgusted by the hypocritical comment of the *London Daily Mail* upon the Charteris case that "The special feature of the British propaganda was that it told the truth. Great care was taken in obtaining facts and rectifying them." It reprints a delightful statement by a former *Daily Mail* correspondent, a Captain Wilson. This appeared in *The Crusader* of February 24, 1922, as follows: The *Daily Mail* telegraphed out that they wanted stories of atrocities. Well, they had not

any atrocities at that time. So then they telegraphed out that they wanted stories of refugees. There was a little town outside Brussels where one went to get dinner—a very good dinner too. I heard the Hun had been there. So I wrote a heart-rending story about the baby of Courbeck Loo being rescued from the Hun in the light of the burning homesteads. The next day they telegraphed me to send the baby along, as they had about 5,000 letters offering to adopt it. The day after that baby clothes began to pour into the office. Even Queen Alexandra wired her sympathy and sent some clothes. Well, I couldn't wire back to say there wasn't a baby. So I finally arranged with the doctor that took care of the refugees that the blessed baby died of some very contagious disease, so it couldn't have a public trial.

And he got Lady Northcliffe to start a creche with all the baby clothes, concludes the account.

Since the end always justifies the means in war time, the baby creche undoubtedly paid for the invention of that touching baby of Courbeck Loo. And now the *Daily Mail* and all the Rothermere-Beaverbrook newspapers, which were the chief liars during the war, are howling for a parliamentary inquiry into General Charteris's allegations.

The other lie concerns a British nurse both of whose breasts were alleged to have been cut off by the Germans. The *New York Nation* relates the incident in the following paragraph—

The town of Dumfries, which is represented in Parliament by General Charteris, also writes the *Glasgow Forward*, has before this had some experience with war lies. Early in the war much publicity was given to the case of a Dumfries nurse in the army. The press said the poor thing had had both her breasts cut off in Belgium by some bestial "Huns." Naturally, all Dumfries saw red and its boys flocked to the recruiting stations—until the outraged nurse in question, who happened to be not in Belgium but in the good British town of Huddersfield, read the story of her mutilation and telegraphed a denial. That was bad taste we admit; had she been a true patriot, she must have acquiesced in the loss of her breasts. Some curious personal pride in the perfection of her anatomy kept her from assenting. But the *London Times* was equal to the occasion. It pointed out that this outrageous journalistic carving-up of an entirely complete British woman was due to a story circulated by a German spy!

The comments of the American paper run as follows—

Even the *New York Tribune* now concedes that the atrocity business was faked. At least in its issue of November 15 it allowed its London correspondent to say that a few months ago General Charteris's indiscretion would have been bluffed out on the ground that all is fair in war. Today, he declares, "with a more or less shame-faced recognition that all the belligerents told a pack of lies during the war there is anxiety that this country should not stand out as the champion liar of the war." Hence there is even the belated admission of the truth of Admiral Sims's statement that stories of German submarine atrocities were

greatly exaggerated. Thus truth, crushed, rises again.

An Unearned Certificate

Mr. Edward Thompson the Rev. E. J. Thompson, sometime principal of the Bankura Wesleyan College,—has announced in his recently published book, entitled *The Other Side of the Medal*, his discovery of a serious Indian rival to the British manufacturers of lies, and to him he has given a glorious certificate. Says he in his aforesaid book —

"Our misrepresentation of Indian history and character is one of the things that have so alienated the educated classes of India that even their moderate elements have refused to help the Reforma. Those measures, because of this sullenness, have failed, when they deserved a better fate. And Indians misrepresent us, taking revenge in their turn. The most widely read of their monthlies has always seemed to me a study in steady, conscienceless misrepresentation." Pp 131-124 "The Other Side of the Medal"

To be without conscience is a very high qualification indeed. But as the editor of the monthly referred to above never had to make any efforts to get rid of that troublesome encumbrance, he feels that he has not earned the certificate Mr. Thompson has been graciously pleased to give him. We shall tell Mr. Thompson the reason why.

There is a theory that it is only persons belonging to conquering and ruling nations who have a conscience. Another theory is that it is only white (or pale pink) persons who have a conscience. A third theory is that conscience is the monopoly of Christians, particularly of British Christians. A fourth theory is that Christian missionaries alone have conscience. There is a last theory which states that ex-missionaries alone have a monopoly of it. Of course, all persons belonging to conquering and ruling nations, or all white men, or all Christians, or all Christian missionaries, or all Christian ex-missionaries do not subscribe to the theory which would credit them with the sole possession of conscience. But as there are so many classes of monopolists in the market, and the editor of the monthly referred to above does not belong to any of them, he readily admits that he never had any conscience—he was born without it. And, therefore, being naturally conscienceless, he had not to try to get rid of that inconvenient excrescence. It is for that reason that he feels that he has not earned Mr.

Thompson's certificate, though there is no doubt he does not possess a conscience.

However, as so great an authority on the subject of consciencelessness as Mr. Edward Thompson has given him such a splendid certificate, the editor in question will not fail to take advantage of it when occasion arises for his doing so. In fact, he has already resolved to apply for the post of Director-General of the British War Lies Department, when war breaks out again between Britain and some other nation or nations.

Hindu-Moslem Unity

In our search for stable foundations for Hindu-Moslem unity we have found that a sure basis for such unity would be a common love and respect for India. That India is worthy of love and respect is self-evident to those who are aware of the ancient achievements of our ancestors. As a large proportion of Indian Musalmans are descended from Indian ancestors, they are as much entitled to be proud of these achievements as those in India who are Hindus, Buddhists and Jains by religion. That these Musalmans are not proud of them is not wholly their fault. We Hindus have often denied them that privilege by thinking and speaking of them and treating them socially as *melechhas* and *yavanas*. The modern Greeks and Italians, unlike the ancient Greeks and Romans, are Christians, and do spiritual homage to the prophets and messiah of Palestine. But they are not on that account the less proud of the achievements of their ancient non-Christian ancestors of Greece and Rome, or do not for that reason exert themselves the less to cultivate and conserve the ancient arts and literatures of Greece and Rome. Such should likewise be the joint attitude and endeavour of the modern Hindu and Musalman descendants of the ancient Indians with regard to the ancient culture and civilisation of India.

Coming down to mediæval times, we find that the fine and industrial arts of that age owed at least as much to the Musalmans as to the Hindus for their development. Indian Musalmans still excel in music, in architecture, in painting and in many of the crafts which have come down to us from earlier ages. Whether Urdu literature may be considered almost entirely a Musalman achievement, need not be discussed.

But Hindi literature and Bengali literature, not to mention some other literatures, owe not a little to some early Muslim writers and patrons of learning.

Why then should not Indian Musalmans be proud of the medieval culture of India and their Hindu brethren?

We know it is religious doctrines and practices which are thought to divide Hindus and Musalmans. But if we

do not confine our attention only to externals but note some thought to spiritual endeavour and civilization, we shall find that saints and seers have sprung from Indian Moslem society as they have from Hindu society. We do not refer here to those who were considered strictly orthodox but to those mystics who were noted for their spiritual vision. Among these some are evidently Moslem names. It is to be hoped that Prof. Kshitimohan Sen will be able to find time to make known to contemporary writers of truth. There are many, more distinguished, who cannot be claimed to have been indubitably Hindus. For instance, it cannot be said that Kabir was beyond doubt a Hindu. Most probably he was a Musalman by birth. Similarly the case of Dadu, whom Hindus have made their own and whose teachings and hymns in Hindi, like Kabir's, were probably a Musalman by birth. Probably his name was Daud, which Dadu is a diminutive affection. But whatever they have been by birth, Kabir and Dadu and a good many other saints were spiritual Indians and are glories of our common Hindu-Moslem

—
Of the Baishnab singers of Bengal of the *Baools* many have been Musalmans by birth.

Greetings to Romain Rolland

In January last year Romain Rolland sent

his salutations of love and respect to India through the small group of young writers who conduct the Bengali magazine "Kallol". His sentiments found expression in the following words, translated from the French

"TO MY FRIENDS OF INDIA—

"Asia and Europe form parts of the same vessel, of which the prow is Europe and the

Romain Rolland

watch-chamber India, the Empress of Thought, with eyes innumerable. Glory to thee, mine eyes! Thou art mine and my soul is thine. We are but one and the same being.

Romain Rolland"

A mes amis de l'Inde

L'Europe et l'Asie sont un même vaisseau. L'Europe
est la proue et la chambre de veille est l'Inde, empire de
la pensée aux yeux innombrables. Mais à vous, mes gens !
Car vous êtes nés. Et mon espoir est juste. Vous ne sommes
qu'un seul être.

Romain Rolland

19 Janv. 1925

Romain Rolland's sympathies and appreciation know no bounds of race or clime. He belongs, therefore, not only to France, but to India and all the world. He has been able to love and respect even Germany, which has been looked upon by his countrymen as the enemy country for decades. A people are to be judged not by the worst that they have done but by their ideals and aspirations. Hence we take Rolland to be a truer representative of his people than those who recently perpetrated the barbarities at Damascus. We are aware that few of us have realised in our lives the ideals and aspirations of India which have won for her the love and adoration of a master spirit like Rolland. But his words are to us a fresh reminder of what India stands for in the minds of men who belong to all the world. For this reminder and for all that he is and has done, we salute Romain Rolland with love and respect on the occasion of his completing his sixtieth year, when there is to be a celebration of the event in Switzerland by his friends and admirers. May we not on our part be totally unworthy of that India which the great ones of our country and of the world have seen in their visions?

Calcutta Session of the National Liberal Federation of India

There is a passage, relating to deterioration of public life, in the presidential address of Sir Moropant Joshi, delivered at the 12th Calcutta session of the National Liberal Federation of India, which should receive the attention of all of us. He calls it a matter of great importance and says.—

We find a wrangle of political parties and an internecine war of mutual recrimination instead of united or at any rate confluent action toward the realization of the common political goal. In the eagerness to emphasize their own superiority of policy and method, fierce attacks are made not only on the policies and principles of rival political parties but upon individuals and there is very little attempt made to understand the respective view-points. Leaders of parties as also responsible editors of newspapers who are expected particularly to discourage such an attitude, are, I repeat, not always careful in guarding themselves against it. Again, very little sanctity attaches to age, experience, self-sacrifice, or recognized moral worth found in leaders of other parties. The interests of party are not unoften placed above national interests and this has made political life in this country a tangled skein of camouflage and dissimulation. Is it too much to hope that the evils of such tactics will be perceived and the tactics avoided?

It is to be regretted that the matter to which Sir Moropant draws attention in the

ive passage has not received strict attention in the address of the Chairman of the Reception Committee of the Federation, in which certain bantering expressions have been used to describe Mr. M. K. Gandhi, his powers and his political methods and things, though Mr. Krishna Kumar Mitra's speech has some merits of its own.

We need not consider whether the achievements of the Liberal Party recounted to him are great or small;—what is material is that they are achievements. But in claiming credit for them, he has failed to consider two things. Some of the achievements relate to a period when in political life did not know any distinction of parties, no distinction between Moderate and Extremist, Non-co-operator, Rajast or Independent. Therefore, the credit for them belongs not merely to the Liberals, but to the other parties as well, as Englishmen and Americans may boast of the achievements of Shakespeare, Milton and Cromwell. Again, the Government made some concessions to the Moderates in former years partly, if not mainly orally, to "rally the Moderates"—a phrase which is certainly known to present-day Liberals. Therefore, the credit for obtaining concessions or reforms belongs partly at least to those who were not Moderates. Mr. Krishna Kumar Mitra claims that the Liberal Party of politics to which the Liberals belong have never been found wanting". It cannot be said that historically this is a strictly true statement.

Again, Mr. Mitra claims Raja Ram Mohun as a Liberal. But what have present-day Liberals to say to the Raja's well-known statement that, if the British Reform Bill of 1832 were thrown out by the House of Lords, he would sever all connection with the British empire? Was it not Non-co-operation in intention? And was the Chhi cum Boycott agitation of the Bengal Non-co-operation days 'constitutional agitation' in a sense in which the Bengal Liberals of to-day understand the expression? We do not think that Mr. Mitra was quite fair, or just to his opponents when he made the following sentence,—

"The novelty of the new cult, and the irresistible attraction of getting Swaraj within three months without making any sacrifice whatsoever in men or money,—in life or limbs,—but simply by turning the wheel of a peaceful Charka,—in fact by using a magic in point of which Aladdin's wishes were as nothing,—and the very simplicity of the process of getting Swaraj so

cheap, and so quickly, had practically turned the heads of our countrymen.

For our part we have never believed in fixing a date by which Swaraj can be won by any means or process whatever, and have never made a secret of our scepticism. But we cannot say, have never said, that Mr. Gandhi ever stated or suggested that Swaraj could be obtained without any sacrifice in men or money, life or limb. On the contrary, he has all along demanded the utmost self-purification and sacrifice from Non-cooperators. And as a matter of fact, many of them have made great pecuniary sacrifices, and some have become invalids for life, and some others died, in consequence of imprisonment.

Mr. Krishna Kumar Mitra's defence of his party against the charges of being service-seekers and place-hunters, of hating to mix with the people, and of merely supporting and carrying out the mandates of the Government without rendering any services to the public, etc., is good so far as politics is concerned. But it is somewhat irrelevant to claim the scientific, medical, juristic, commercial and other non-political work of Sir J. C. Bose, Sir P. C. Ray, Sir Ashutosh Mukherjee, Sir Nilratan Sircar, Sir Rajendranath Mukherji, etc., as achievements of the Liberal Party.

As regards direct action, the present-day circumstances of India are not suitable for such a policy; and even the Non-cooperators have pronounced that opinion after appointing a committee which toured through all the provinces and reported against the starting of civil disobedience even in the near future. But when Mr. Mitra appears to state or imply that direct action produced no beneficial results whatever in Russia, Ireland, Italy, Austria, and Portugal, and that "it was at last by the tried road of constitutional progress that the countries [named above] were saved and restored to their legitimate share of independence," he seems to have partly forgotten his history. Sir Moropant Joshi appears to have given a better indirect interpretation of the principles of the Indian Liberal Party when he said in his address:—

Another question to which an answer is expected is what is the method which the Liberals are prepared to adopt to put pressure on Government and to enforce the national will to be free. The Liberals have always had an abounding faith in the people. They believe that it is quite feasible to bring adequate pressure to bear on Government to grant India dominion status if the electorate and the people as a whole take much keener interest in matters political. The will to be free must be infused in the

masses and intensity of feeling secured by constant reiteration of the birthright of Indian citizens. The Liberals have still faith in constitutional methods which they believe have not been adequately tried. *As extreme measures nothing is ruled out for achieving political emancipation— not even revolutions, much less civil disobedience and obstruction.* But the Liberals firmly believe that without adequate preparation of the people, little pressure can be put on Government. Mere gnashing of teeth and stamping of feet is neither dignified nor expedient. As soon as we concentrate on the preparation of the electorate a stage must arrive when the rulers must find it prudent to yield rather than risk civil disobedience and revolution. Without adequate preparation of the people no compelling pressure upon Government is possible, and once they are prepared, civil disobedience will be unnecessary.

The means and methods advocated by Mr. Mitra for harmonising the conflicting interests and attitudes of landlords and tenants, capital and labour and of "high-caste" people and the depressed classes are worthy of support. And we believe with him that we "cannot achieve anything greater good unless through the path of truth and righteousness," and that,

Whether you are a Co-operator or a Non-co-operator,—whether you are a Socialist or a Swarajist, whether you are a Liberal or an Independent, we are all of us, brethren, children of the same Mother, and working for the same cause. Do not create confusion of tongues by coining new words and magnifying the old and forgotten differences. Let us put our heads and join our hands together and march on steadily to the common goal.

Not having received any advance copy either of Mr. Krishna Kumar Mitra's or of Sir Moropant Joshi's address, we are unable to deal with them properly.

The latter dealt with the following topics in his statesmanlike address: constitutional reform, Lord Birkenhead's speech, the Secretary of State's objections, diarchy, the Nagpur Flag agitation, the civil services, the demand, its nature and justification, communal disturbances, excise duty on cotton goods, Indians in South Africa, Non-political work by Liberals; the Liberal party and Government, Liberals and other parties, plea for unity, party organization; deterioration of public life.

To Lord Birkenhead's speech he has devoted much space and characterised it as 'a curious blend of light and darkness, of half truths and fond misconceptions, of rays of hope and a dismal trail of disappointment.' His criticism of the speech is weighty.

Though he has pointed out what good has been done by elected legislative councils,

he has no hesitation in saying: "If diarchy is found to have failed in its main purpose, as it has failed, little doubt remains of its failure."

With regard to the Civil Services, he says, in part.

The Secretary of State has praised the civil services in India. Nobody grudges them praise where they deserve it, certainly no Indian who had to deal with the services as a member of Government. Indians, however, want to be responsible for policies, and this causes resentment in a service used to take the initiative and to the formulation of policies, and this again reacts on the Indians. Nobody grudges the services just and fair treatment, but it is expected that they will perform functions similar to those of the civil services of other countries. What strikes people in India is the extraordinary rapidity with which the question of the interests of the services was taken up and decided.

Not only have their emoluments been increased but allowances which have been subject to the vote of the Legislature have been made non-votable. Not only has the financial burden of the taxpayer been considerably increased but a backward constitutional move has been taken, the limited power of the Legislatures being further curtailed, and the 'steel-frame' has been further strengthened. While a comparatively small interest, because it is concerned with the continuance of British domination, is thus dealt with promptly and generously, larger questions of great public importance which concern the entire Indian nation have evoked little sympathy and powerful opposition. The contrast is so great, and it is painful.

In the matter of minority rights and communal disturbances, he observes—

No Britisher, I hope, expects to be here for all eternity. The fear of minorities being unfairly treated comes with ill grace from the Britisher. What of the intolerable position of the Catholics in England for so long a time? A country that can undertake the responsibility of planting a Zionist minority amongst adverse Bedouin surroundings ought surely to be capable of securing provisions for the reasonable claims of minorities in this country.

In his opinion, "Kenya and South Africa emphasize the need of Swaraj."

In his observations on the Liberal Party and Government, Sir Moropant clearly brings out the fact that though the Liberals co-operated with the Government whenever they could do so conscientiously, the Government has not treated the Liberals fairly and considerately "to all outward appearances the cry of the Liberal and the Non-cooperator, the friend and the obstructionist, is treated with equal indifference by Government."

Sir Moropant's "Plea for unity" is well conceived.

Whatever a Britisher may think, the Liberals have no reason to reckon themselves enemies.

parties that do not agree with them in the methods adopted to secure the goal. However fortunate and deplorable their methods might happen to be, the Liberals realize that all are working for a common objective. Circumstances which drive persons like Mahatma Gandhi and Mrs. Das and Nehru into a mentality that sees cooperation and advises obstruction are only unfortunate and deplorable, and the Government responsible for them must reconsider its attitude. From our national point of view, union of all political parties is extremely desirable at this juncture. It is quite conceivable that the Liberals, Independents, Conventionists, Responsive Cooperators would not find it difficult to have a common platform.

Government by Shopkeepers and for Shopkeepers ?

The British Government of India began its commercial undertaking, and although its developments covered things up with an imperial mantle, British interests in India were mainly commercial and the Government officials have, ever since the beginning of the British occupation of India, always kept this fact in mind. We do not blame the Government for this weakness in view of the fact that they have always accepted, and advised others to accept, British avowals, in relation to their commercial ventures, their deepest attachment to philanthropy and the uplift of the masses, with an addition of salt. The example of the Moghuls never sacrificed the "comic" arts to "Christianity" no more than the doctrine of *Maya*. They have been good to humanity no doubt, for are not all British human beings? But they have proved themselves to be unadulterated imperialists, in so far as their efforts had always been directed to the greatest happiness of the greatest number of Englishmen and not of the Indians. If by what they have done they have caused much unhappiness to fifty million more people in India, they may be excused because they have never fully realised that the Indians are just as much human beings as the British. Why we assumed such a sub-imperial character before our rulers is out of the question. Suffice it to say that it is always very important from the point of view of human happiness that India should have a free exchange for the facility of the Indian trade, and British officials to uphold "law" and "order" wherever British goods are sold, and British surgeons wherever British soldiers have to open shops, and railways wherever there are Indian goods to be re-

placed by British goods, and British armies wherever they can be trained up at the cost of the Indians. Do not ask, what about Indian happiness, for that is that and human happiness is human happiness. In view of the history of British rule in India, should we wonder that Indian Government officials always make it a point to sympathise much more with British commercial interests than with things which have a deeper relation with India's national well-being but little to do with the happiness of the British? Indian education or Indian sanitation and health never occasion such demonstration of official interest and sympathy as do meetings of chambers of commerce or dinners organised by British tradesmen. The highest officials in the land take what would be called unusual interest in other lands in the affairs of avowed money-makers. Of course, it is one of the functions of the State to look after the commercial prosperity of the land and Government officials never go beyond their rights in expressing sympathy with business men. Still to one who is not well versed in the psychology of the rulers of India and who has studied the national problems of India, official love of business men of British or allied origin as found in India, appears a bit out of proportion. The whole thing savours of a deeper governmental attachment to British shops in India than to the needs of the millions whom they are proclaimed as uplifting. In the West, too, one hears of the capitalistic nature of the State and of government officials abusing their powers to help their mates in their work of exploitation of the lesser members of society. But as one does not see such palpable misery in the West as in India and as the State officials seldom go out of their way to proclaim their sympathy with (let us say) either the boot and shoe or the coal trade, one does not attach much more importance to such statements than to classify them as expressions of class jealousy. But here, in India, where millions die every year of preventable and curable diseases, where practically all people live through a life of dire poverty and bestial ignorance, if government officials wax eloquent in expressing their keenest interest in the prosperity of a few foreign shopkeepers, one cannot help questioning oneself, is the government of India a government by shopkeepers and for shopkeepers?

A. C.

Associated Chambers Anti-Japanese

Japan was an outstanding figure during the meeting of British business men (with a sprinkling of sympathetic and official Indians) and British officials where they discussed the well-being of "India". One of the main items on the agenda was a motion recommending abrogation of the Government of India's convention of 1905 with Japan. According to this convention, India has to treat Japan as a most favoured nation in levying import duties. The contention put forward by a Bombay representative, who moved the motion, was that on account of the (unfair) competition of Japan, the Indian cotton mill industry was suffering badly. Hence the convention of 1905 should be abrogated and a duty, heavy enough to save the cotton mills from Japanese competition, should be imposed on textiles imported from Japan. (The Japanese competition is unfair in this sense that Japanese workmen are made to work for longer hours for low wages and thus the Japanese producers can undersell producers in countries where shorter hours are enforced by law.) It was also mentioned that the Britishers' "hard-earned Lancashire trade" was also badly hit by Japan. Nevertheless, Indian Mills received the place of honour in the order of naming the victims of the Japanese competition.

The discussion which ensued, following the motion, revealed the fact that it would not be very safe to do away with the convention of 1905 in an offhand way, for Japan could and most certainly would retaliate against such action by putting heavy duties on Indian goods entering Japan. One of the things that the Japanese would very much like to tax is Indian steel. Japan has no Iron and Steel of her own, but she has considerable interests in the rapidly growing Iron and Steel industry of China. India is a serious competitor of the Chinese Iron and Steel industry, the profits of which mainly go into Japanese pockets. If India taxed Japanese textiles, Japan would most certainly not lose the opportunity to tax Indian Iron and Steel. So that the chances are that by abrogating the convention of 1905 India will lose more than gain. Bengal and Madras voting against the motion, the motion was dropped.

When we go into the details of the case and through the statistics of Japanese and other textile imports into India, we find

that Japan is probably hitting Lancashire harder than she is hitting India. This is all the more probable in view of the greater differences between Japanese and British costs of production as compared with Japanese and Indian costs. Another argument in support of this view is the fact that British business men have taken so much trouble to have the situation redressed. It is not usual for members of the British business community to spend time and energy to serve Indian mill-owners. Moreover, they themselves admit that Lancashire is suffering from the Japanese competition. Whatever that may be, we are told that the Indian mill industry has a serious rival in Japan and that if proper and timely steps are not taken against this menace, things may end in a tragedy. The suspension of the Cotton Excise Duty go to prove that the Indian mills are really in a bad condition. But the suspension of the Cotton Excise Duty will help Indian mill-owners to lower prices and thus injure the cottage weavers of India. The cottage weaver's well-being is of much more importance to India's economy than the prosperity of the mill-owner. The better policy, therefore, would have been to do something which would not enable Indian mill-owners to lower prices, but at the same time serve to reduce foreign competition.

If the Indian Government had further increased the duties on all textile imports, (including those from Lancashire), the Japanese would still receive the treatment afforded to the most favoured nation, but would be less of a competitor to Indian mills. And the convention of 1905 remaining intact, there would not be so much fear of retaliation. Of course, such a course would hit the British shopkeepers hard, and that is why nobody thought of it. But when we discuss our own affairs, selfish people as we are, we naturally think of all sorts of absurd ways of improving India's fortune.

The Professor of Italian in Visva-Bharati

Dr. Giuseppe Tucci, deputed by the Italian Government to initiate Italian studies in Rabindranath's Visva-Bharati has opened his lectures in Santiniketan. The public of Calcutta have already had the pleasure of listening to the learned discourses of the two eminent Italian savants in the All-India

Dr Tucci

Philosophical Congress, held under the auspices of the Calcutta University. While Prof. Tucci communicated a strikingly original paper on the corroboration of the Upanishadic idealism from the latest researches of the old-famed Prof. Planck of Germany, Dr. Tucci read a learned discourse on "Indian Materialism", showing the lines of constructing that much-neglected chapter in the history of ancient India. Dr. Tucci is not only a keen student of Sanskrit, Pali and Indian Prakrits, but a sound scholar in Chinese and Tibetan as well. To mention a few of his outstanding contributions, he may point out that he has published studies on Kalidasa, on the Sundarananda of Asvaghosa, and on the Divyavadana. He has published an edition of the Saptasatika Vinayaparamita as well as the Satashastra of Aryadeva from Tibetan. But the versatility of Dr. Tucci is even more wide-ranging. Not stopping with Tibetan, he goes forward to master the difficult yet none the less indispensable Chinese Buddhist texts, making a comparative study of the Chinese and the Sanskrit versions of the Lankavatara sutra and the course of this year publishing another monograph on Aryadeva's *Chatuh-shatuka*, studied in its Sanskrit, Tibetan and Chinese

versions. So Dr. Tucci is specially endowed with the capacity for writing a comprehensive history of Mahayana Buddhism, which claims so many races, languages and climes as its dependencies. We hear that a preliminary study of Dr. Tucci on the history of Mahayana is already going through the press in Italy and we hope that he would soon publish an English version of that work for the benefit of our Indian students. Indology apart, Dr. Tucci has published a volume on the "Apology of Taoism" and a "History of Ancient Chinese Philosophy". So it is only natural that his researches would bring him the honour of occupying the chair of "Religion and Philosophy of India and the Extreme Orient" in the University of Rome. We are thankful to Signor Mussolini for having sent such a versatile scholar to represent the Italian Science in the republic of Indian letters.

Indian Art and Art-critics

We still clearly remember the days when our young ladies were taught "art" by memsahibs and produced oil-paintings of a cucumber, a crescent-shaped slice of melon, one or two pomegranates and a bunch of grapes and other real and unreal sort of fruits in baskets and fruit dishes of various shapes. These generally decorated the walls where the parents could see them always and dream of the matrimonial prospects of their fast-growing daughters. In those days the stomach was the pivot on which our thoughts revolved, and we cannot say now that we did not like those appetising paintings as they came into our vision on our return from school. Then came days when everybody painted fat women and doubtful flora and fauna for a change. But the climax came when Germany flooded the Indian market with oleograph reproductions of the late Raja Ravi Varma's paintings and of those of his followers and imitators. The womanhood of India seemed to go mad all of a sudden and began to "dress" those cheap prints. "Dressing" meant cutting up pieces of silk and snipping off locks of hair to sew these on to those parts of the picture which represented clothing and hair. They did it well with silk, brocade, locks of hair and tinsel but what waste of labour and what a stupid thing to do! We do not remember what name they gave "art" in those days; it was not "art." Anyhow,

the whole business was silly in the extreme and as artistic and beautiful as darning old socks or making an album of newspaper cuttings. Of course, "drawing" was taught in the schools and some of us could copy eagles and reindeer, objects as familiar to us as the Chinese dragon, and draw ink or tea pots with only a few defects. That was the road we were following under the guidance of nobody who knew anything of art, either Eastern or Western. Some will ask, what about the Government Schools of Art? Did not people learn something good at least there? We do not know. These schools did not enter our life as does the Indian art of to-day. The schools still exist and turn out artists, some of whom paint very well.

But Indian art, with which we are connected by bonds deeper than school instruction and which appeals to us through a thousand associations, was revived and reinstated into national life by the effort of idealists who were not "art" teachers and who travelled in the right direction instinctively, groping in semi-darkness, guided by faint signs and urged by the dissatisfaction of serving an "art" which did not mix with their life and abounded in motifs and technicalities evoking no pleasant reaction in their heart. There were a considerable number of non-painters who helped in this revival by their writings and by encouraging the movement in other ways. The name of Dr. Abanindranath Tagore will stand out in the history of this renaissance like that of Giotto in the history of European art. S. Nandalal Bose is another outstanding figure. They have been the guiding spirit of the movement since its beginning and will, we hope, be so for many years to come. Round them have grown up many artists of fame. Some, like S. Devi Prasad Roy Choudhury, have shown great originality and have opened out fresh avenues of progress in painting and sculpture.

Ever since the beginning of the movement, critics have cropped up to hamper its growth as do weeds round most useful plants. Practically all their criticism was based on false assumptions regarding the principles of art in general and Indian art in particular. In turn, Indian art lacked technique and expression and meant nothing to its critics. Among the first lot of critics were disappointed drawing masters, photographers, poster designers, jute brokers, members of the Indian Civil Service and many England-returned gentlemen of erudition. In their opinion, as

in the opinion of all self-confident people, Indian art was following the line of least resistance and was approaching perfect degeneration; for it painted things as they never are in reality, and ascribed meanings to paintings which they never expressed, and so on. They forgot that

"...art does not believe in the reality of anything at all, (and) the artist incorporates an incident in his work not because it is true but because it is appropriate by aesthetic, that is, imaginative standards."

(*Speculum Mentis*, Collingwood)

Also that Indian art was not a "suburb of European art, that its technique had a different evolution in a different environment and that its further progress meant going back (at first) into the past where it was woven into the life of the people and picking up the lost threads of technique and tradition in order to retain the wholeness that it would otherwise lose by tearing itself away from Ajanta, Bagh, Sanchi, Konarak, etc., etc., and approaching Messrs. Thos. Cook and Sons for Steamer, Railway and Tube-railway tickets to the "National Gallery." It would not do for us to reject the Ramayana as a source book of ideas and to find inspiration in the Gospels or in King Arthur. For even if some of us may cram up enough information of foreign affairs to work out a solution to our London, Paris, Berlin or Vienna-inspired creations, they would still puzzle our brethren and yield us only that joy in the field of art which translators feel in the field of creative literature. Hence it was the right policy to revert to our art-life of days which saw it flourishing and to start the old process anew. It would have been mad to cut off the tree and ship it to Europe as lumber for turning out "Indian style" objects of art (We have not been able to stop this from taking place altogether). We have done well to wait and grow proper roots in the original soil. The foliage, flowers and fruits would follow. There is an eternity all round us to inspire life and progress in our art.

To return to our critics. Dr. Ananda K. Coomarswamy has well answered those who find no expression in the face of figures representing all sorts of things in Indian art. Referring to a statue of *Yogi Buddha* he says it is a

"dramatic image of withdrawal, of complete independence, of involution." "The likeness of the seated *Yogi* is a lamp in a windless place that flickers not" (*Gita* VI 19).

"It is just this likeness that we must

look for in the Buddha image, and this only. For the Buddha statue was not intended to represent a man, it was to be like the unwavering flame, an image of what all men could become, not the similitude of any apparition.

"A like impersonality appears in the facial expression of all the finest Indian sculptures. These have sometimes been described as expressionless because they do not reflect the individual peculiarities which make up expression as we commonly conceive it. When however we look to those qualities which in their literature were held to be the ideals of life' (Flinders Petrie, *The Arts and Crafts of Ancient Egypt*) we begin to understand the facial expression of Hindu images.

"In each, emotion is interior and the features show no trace of it, only the movements or the illness of the limbs express the immediate purpose of the actor. That it is this body, not the most self, that acts, that slayeth or is slain is as clearly expressed in the Indian sculpture of the golden age, as anywhere in Vedic literature."

The expression-mongers bother us no more. They have been effectively silenced and may be passing their time in company with highly expressive salon pictures.

But there has grown up a new school of critics (such as one who recently wrote sorts of meaningless things in the *Statesman* over the signature St. K), mostly foreign experts and "authorities" who have nibbled long and short enough in Indian art to acquire an imperfect knowledge of it and to judge subjects, who are showing symptoms of acute "didactitis", the usual product of cerebral inflation. They have started by subdividing the whole field of art into mutually exclusive areas, and a school of art to them like a Leibnitzian monad. Eclecticism is branded a sin and their theosophæsthetic interpretation of Indian art has reduced it to something of an *Achalayatan*. (the metaphorically sealed city within whose outside of walls Rabindranath Tagore enacts the drama of the same name). Right through history, India has assimilated the world's art and learning and has created greater things by harmonious fusion. But here we are face to face with a spiritual reactionism whose absurdity is only surpassed by the foolishness of those who thought of it. Eclecticism, like everything else (such as impressionism), can be carried to excess and cause harm to true art, but it is nevertheless, if properly used, a great vehicle of progress. As a matter of fact, India has never developed any great art without borrowing the best from other spheres. The arts of China, India and Europe are good examples, so that those who understand Indian art an inflexible attachment to classical Indian technique and motifs want

the living soul of India to be a mere museum of the past. But Indian art will progress, by eclecticism as well as by intuition. It will not thereby lose its Indian character, but Indian art will acquire a richer significance. Indians do not look at India and things Indian in the way that some foreign theosophists would like them to do. That is why the influence of Dr. Abanindranath Tagore is often misinterpreted. Revival means setting life in motion anew. And this means the awakening of fresh ideas and the yearning to explore new fields. Some critics who would concede us this much would strongly disapprove of any developments which in their opinion are not sufficiently "spiritual" and "intellectual". That is to say, if Indian art is allowed to venture beyond limits of its past experience, it must do so along paths beaten by Hebraic, Slavic or Teutonic explorers of the world of art. Some would like us to see creation as a crazy China floor, some as composed of cubes and some as an analysis of component colours. But Indian art looks at creation, not from a descriptive standpoint but from the emotional point of view. The pictures may not *express* emotion, they *evoke* emotion in the artist and in the sympathetic seer. Here there is no hard brain-work for the artist to *think out* queer ways of looking at things. He leaves his heart open to feelings and that is all. This is where the art of Dr. Abanindranath Tagore and his school differs fundamentally from the "intellectual art" of modern Europe. And we think that as art is fundamentally intuitive and not a conceptualistic process, Indian art is more artistic than the "creations" which have reduced modern European art to the state of a New Geometry. Art is a statement, not an interpretation. May the Almighty preserve us from reducing art to a geometric rendering of philosophical fads!

A. C.

Indian Currency and its Future

One of the fundamental virtues of a good currency is steady and fixed relations between its various coins. Supposing one could get sixty-four pice for a silver rupee or for sixteen anna bits, but only three pice for one anna bit, or if the number of annas that one got for a rupee changed from day to day, one would hardly call the rupee-anna-pice currency a sound currency. And the disorder that would ensue as a result of such discord

would cause the greatest harm to the economy of the area which is served by this currency. An economic area (that is, an area within which people usually exchange goods and services on the money basis) must have for its progress and well-being, a system of currency of which the component parts are definitely related to one another. Such an economic area may include more than one geographically or politically distinct area within it. With the growth of international trade and its facilities, the whole world is fast becoming one economic area. There are, of course, countries which are more intimately linked with one another than with others. For this reason fixity of the exchange rates of the currencies of different countries has become highly necessary now-a-days. Internal trade and international trade are also very closely related. For example, a thing sold as produced within the country very often has foreign components. The demand and supply of foreign and home-made goods are related in many ways. So that for the economic prosperity of a country it is no longer sufficient that its own currency should be sound internally. It is also required that this currency should bear steady and definite relations with the currencies of such other countries as have commercial dealings with it. The ideal in this respect is never realised on account of the changefulness and peculiar mechanism of international exchange, but preventable conditions also very often go to make the situation worse. One such condition and a very potent one, is difference between the standards on which the different currencies are based. For example, some countries have gold standard currencies, while others may have a silver standard (or a bimetallic standard). Currencies based on the same metal have more chances of keeping stable relations with one another than if they were based on different metals. In the case of India of to-day, we find a peculiar circumstance in that the Indian currency is based on silver, while the Indian government attempts to maintain its exchange value stable by fixing an artificial relation between the silver rupee and the gold pound. This has, of course, never worked with any great success. As a result of this, India has suffered in two ways. First, on account of the instability of the exchange, which has a detrimental effect on India's well-being in so far as it depends on the smooth working of her

trade with other countries. Secondly, through intentional or unintentional abuse of the official system of keeping the exchange at an artificial ratio. There have been cases in very long ago of India losing crores through doubtful management of the Gold Exchange Standard whereby foreigners (mainly British) have profited correspondingly. Moreover fluctuations in the exchange are also reflected on internal prices as the latter are closely related to the demand and supply of foreign goods.

The arguments that the British authorities in India and England have put forward in support of maintaining this system are mainly (a) that gold is too costly a medium to serve as currency in a poor country like India where transactions are mainly made in terms of annas and pice, (b) that gold will be hoarded and not used as money by the people of India, which is a veritable sink for precious metals, and (c) that the cost of maintaining a gold currency would be too heavy for the Indian exchequer. The arguments are not convincing, because if crores of rupee worth of ten-rupee, twenty rupee and higher denomination notes could freely circulate in India, one cannot very well believe that a ten, fifteen or twenty rupee gold coin would be too costly for circulation. The second argument also is wrong. People hoard sovereigns at present, because they are scarce. Gold coins have actually circulated in India in the past. It is because gold has been taken out of circulation that people have developed a morbid love of hoarding gold coins. This will disappear with increasing familiarity with gold coins. Moreover, the Government need not put actual gold coins into circulation. The gold can be kept in the treasury and notes circulated on its strength. Gold should be freely obtainable and evidently no more people would take the trouble to get gold from the treasury and hoard it than there are at present who buy sovereigns in the market for the same purpose. This will also do away with the third argument.

This is not the place to discuss the real reason why Britain kept India a silver standard country, although she had extensive trade relations with gold using countries. One reason may be that the warring nations of Europe have always found it expedient not to part with their gold in view of its importance as supplying the sinews of war. At the present moment the Western nations are faced with the problem of an all-round rise of prices.

ing to the accumulation of too much gold in the West. This fact may account for the want of enthusiasm even among Westerners to introduce the Gold Standard in India.

Supposing India did have a Gold Standard, one thing should be kept in mind. It is to keep all reserves in India. It would be very nice for India, if she had a currency backed by "Gold in London".

A. C.

Herr Luther's Views on the Locarno Pacts

In Germany popular opinion is sceptical of the value of the Locarno Pacts. The German people even distrust the motive of the Governments interested in the promotion of the Locarno Treaties. On November 23, 1925, Herr Luther, the German Chancellor in his speech before the Reichstag gave the reason for the popular distrust in Germany in the following way —

With the conclusion of the Pact, the Chancellor announced, the occupation of German lands had even in the view of the other side, its inner location. The mere fact of the occupation was by Germany as an expression of mistrust, and German people counted upon the French, and as they were by their own national laws, to take this into account. Since even if it was not possible to foresee when the end of Germany for the end of the occupation would be realized, foreign opinion must not be misled if there was a lack of rejoicing among the Germans who were quite prepared to give their full support to the Pact. A nation which had followed the thorny path traversed by Germany in the process of her reconstruction could not be expected to get up enthusiasm at a separate step, even when it was plain that the step constituted an unmistakable advance. It is quite understandable that the German people find it difficult to appreciate the Pact at all value so long as the occupation and the question it involved were continued. The situation of the Cologne zone was independent of the alleviations. It was Germany's right on January 10, and the German people had not been able to see why the occupation of a part of the whole area should be made dependent on an insignificant remainder of the disarmament demands.

However, Herr Luther made it clear that the whole Germany will be benefited by the Locarno Treaties and pointed out that discussion on the air restrictions had already been begun.

According to Herr Luther, the greatest benefit of Germany by the acceptance of the Locarno Pact is as follows :—

' Locarno the assurance had been secured that Germany should have a permanent seat on the

Council of the League and that her right to colonial Mandates should not only be recognized but should be given practical effect. Though the question of Germany's responsibility for the war had not been settled, the German view had been brought to the attention of the Governments concerned, and the German delegates had re-affirmed it in the discussion at Locarno. It would be adhered to also in the League of Nations.

Herr Luther holds that Art. 16 of the League of Nations would not work against German interest, if Germany entered the League and he presented the following argument :—

At the same time, Germany must secure herself against possible future political dangers inseparable from her geographical position, and was, therefore, at once confronted with the question of Article 16 of the Covenant. From the many discussions that had taken place on this Article, there was no doubt that no binding decision could ever be taken against the will of a country—in this case, Germany—as to whether the preliminary conditions for the application of Article 16 against a particular State as a disturber of the peace were present.

The possibility that Germany might be required to take part in an action against a State she did not regard as the aggressor was, therefore, excluded. The question of Germany's participation in such action arose only when Germany herself had decided that it was quite clear who was the aggressor. From this it followed that in no case could another member of the League acquire the right to force Germany to take action against her will, even to the extent of tolerating the march of troops through her territory. Germany could, therefore, enter the League in all sincerity and without secret reservation.

There were, nevertheless, special limitations to her capacity under Article 16, notably her disarmed condition and her central position. It was necessary to clear up this point in advance so that accusations of disloyalty and the consequent moral isolation might not subsequently ensue, hence the declaration agreed upon in Locarno that Germany was only committed to an extent consistent with her military and geographical situation. This applied both to the economic and to the political measures. It was thus expressly admitted that Germany was herself entitled to decide whether and in how far she would take part in executive measures. He did not hesitate to declare that in accordance with this new interpretation of Article 16, no dangers now remained for Germany as a result of entering the League.

He further emphasised the point that Germany has not in any way committed herself against Russia.

"Moreover, Germany attached the greatest importance to the maintenance of her relations with States which did not belong to the League, and was determined that, as far as Russia was concerned, she would not allow the conclusion of the Locarno Agreements to disturb in any way the friendly relations between the two countries."

Once Germany entered the League of Nations, as a member of its Council, she would work for (1) disarmament, (2) revision

of the Treaty of Versailles and (3) for enforcing the claim of self-determination of German minorities in Poland and Czecho-Slovakia

"Within the League Germany would be able to co-operate in the work begun at Locarno. For example, the question of investigation of armaments would be the more easily dealt with when Germany had a seat upon the Council. General disarmament had been one of the problems discussed at Locarno. It was absurd to talk of real equality between nations when one was disarmed and the other bristling with armaments. It would be Germany's part to keep alive the idea of general disarmament which had been agreed to in principle by all parties to the Protocol and the Pact. It must not be forgotten that this question had gone beyond the stage of ideals and Utopias and now formed part of the practical politics of all Cabinets

Nothing had thereby been morally or politically or legally changed with regard to the German attitude to the individual clauses of the Peace Treaty. What it did mean was that the policy of sanctions and ultimatums had been rendered impossible by the arbitration clauses of the Pact. This was an extraordinary achievement in the interests of the maintenance of peace. From the Pact there had resulted a regrouping of the Powers. All five countries now stood on an equal footing and the danger of a Pact directed against Germany had disappeared for ever

The League made provision for revising treaties, the maintenance of which in view of changed international conditions might endanger the peace of the world. One might be sceptical of the practical application of the article, but the principle was beyond doubt, and the right of self-determination was in no way prejudiced or abandoned by the German Government.

We wish to emphasise the fact that according to Herr Luther's statements, two definite promises have been made to Germany by the other signatories of the Locarno Pacts and they are (1) Germany will get a seat in the council of the League of Nations and (2) Germany will get some colonies as mandates. These are positive gains of Germany, while others are debatable and even may become liabilities,

T. D.

Sir Moropant Joshi

Sir Moropant Joshi, President of the

Calcutta Session of the National Liberal Federation, was a member of the legal profession. According to *The Leader* of Allahabad,

He soon achieved success at the Bar and his eminence at the profession was recognised by his being enrolled as an advocate, first of the old Judicial Commissioner's court in Berar and next of the court of the Judicial Commissioner of the Central Provinces. He had commanded extensive and lucrative practice, first at Amraoti and next at Nagpur, for many years before he was appointed a member of the Government. Sir Moropant Joshi, who is now sixty-four years of age, joined the Congress at Allahabad in 1888 when he was twenty-seven years old. In 1890 he went to England with Messrs Hume, Surendranath Banerjee, Norton and Mudholkar as a delegate of the Indian National Congress to press for the expansion and reform of the legislative councils, but owing to ill-health he had to return earlier than his colleagues. Ever since he has been an ardent nationalist and patriot attending many of the annual sessions of the Congress and taking part in their deliberations, working in his own province and contributing generously to Congress and other public funds. He was treasurer of the reception committee of the Congress held at Amraoti, his native place, in 1897. He was among the many old Congressmen who in 1918 severed their connection with the Congress owing to differences of opinion on fundamental questions and among the earliest to join the Liberal party which was organized to continue the work of the old Congress. He took part in the proceedings of the first session of the Liberal Federation at Bombay in November 1918. In December 1920 he was appointed a member of the Executive Council of the Central Provinces and he will complete his term of office in the third week of this month (Dec., 1925). As Home member of the Central Provinces Government, Sir Moropant Joshi has shown moderation and discretion combined with firmness and independence. Last year he dissented from the Governor (Sir Frank Sly) and the other I.C.S. members of the Government and in a brief but telling note of dissent from the dispatch of the Governor in Council, sent for the information of the Muddiman Committee, pleaded for complete provincial autonomy. Throughout these years Sir Moropant Joshi has been a convinced and consistent advocate of social reform. He has spent nearly a fortune on the education of his daughters, the eldest of whom is Dr Joshi practising at Bombay after having received the highest medical education in Bombay, England and Ireland, and the second is the Rani of Sangli. Simple and straightforward, clear-headed and sincere, Sir Moropant Joshi is one of our most disinterested patriots.

DACCA.

**The Historical Works of
Major B. D. Basu, I. M. S. (retired)**

For Modern Review Subscribers.

1. Rise of the Christian Power in India.

Five volumes Rs. 5-each; Postage Extra.

The Author has explained in the preface why the British Power has been called the Christian Power.

2. Story of Satara.

True history of how Satara was annexed and its Raja deprived of his Sovereignty.
Rs. 10 ; Postage Extra

**History of Education in India under the Rule
of the East India Company.**

The author has shown that English Education in India was first begun by the themselves, and that when the Government took it up, it was done with selfish motives. These motives have been laid bare from official papers.

Rs. 2-8; Postage Extra.

All and any of these books will be sold up to the 28th February, 1926, to our subscribers at 25 per cent. less than their published prices.

That is to say, Our Subscribers will get

1. Each Volume of RISE OF THE CHRISTIAN POWER IN INDIA for Rs. 3-12 instead of Rs 5/-;

2. STORY OF SATARA for Rs 7-8 as instead of Rs 10 ;

3. HISTORY OF EDUCATION IN INDIA UNDER THE RULE OF THE EAST INDIA COMPANY for Re. 1-14 ; instead of Rs. 2-8. Postage Extra in all cases.

All public Libraries, All University Libraries, All college and School Libraries, All libraries of Educated Indians should possess these valuable works.

They supply the corrective to our incorrect knowledge of Indian History. The author supports his conclusions by copious extracts from official dispatches, Parliamentary and proceedings, and the works of British and other European Authors, which few libraries possess.

Total price of all these books being Rs. 37-8as Our offer means that our subscribers will make a profit of Rs. 9-6as by buying them.
Offer will be withdrawn on March 1, 1926.

Himalayan Remedies

(REGISTERED)

Wonderful Discovery in the Medical World!!

For some Obstinate and "Incurable" Diseases

Secured from the hidden stores of Great Lamas and Yogis of Tibet, Burma and Himalayan Hills, by C. Mukerjee B.C.E., M.S.C.E., F.T.S. Vidyalahsan, late Resident Engineer, Calcutta Corporation for his tours and travels in the obscure regions of these mysterious lands while Engineer to P. W. D., of India and Personal Assistant to the Chief Engineer of Kashmir State.

The fruits of many years' hard researches in the Himalayas and 25 years' successful experiments by founder and 12 eminent Physicians of Calcutta and elsewhere are now placed before the public for the relief of suffering humanity in general.

Since 1918 the founder has been practising in Calcutta as a SPECIALIST IN LEPROSY, LEUCODERMA and DIABETES and has cured a good many serious cases successfully.

THE HIMALAYAN REMEDIES GUARANTEE CURE OF

I. Leprosy, Leucoderma, Gangrenes and all incurable types of Sores, Skin-diseases, and of ulcers, either on or outside also sinus and fistula in ano etc.

II. Obstruction of urine and all urinary troubles due to Gravel, stone, &c (a) Renal colic, (b) Gall-stone - No operation or catheter-passing is necessary.

III. (a) Diabetes of all stages, (b) Pulmonary Phthisis up to the stage when the patient has not been emaciated and reduced to skeleton but has vitality enough to digest our medicines.

Cure is effected by regular and scientific treatment with these unique medicines under the founder, assisted by an able Medical Board who help the founder so far as Diagnosis of any critical case is concerned.

For an experiment we request the sufferer to try any of the following cheap but wonderful medicines - Serious Malaria Special Preparation, pumal Asthma and dreadful Dysentery of all stages, Re 1-8 each, Scorpion Bite as 8 Extreme Dyspepsia and hopeless Nervous Debility, Rs 2-8 each, Gastric Ulcer, obstinate Eczema, all eye complaints except cataract, as well as long-pending Rheumatism of all joints, Rs 2 each.

Medicines are Free from any Injurious Substance.

All confidential letters are to be addressed to Mr. A. Banerji M.D. (Homeo)
Secretary to the Medical Board

UNSOLICITED OPINIONS A FEW OUT OF A LARGE NUMBER

LEPROSY CURED. Dr. A. P. Bagchi, M.B., B.S., Calcutta, writes 5-7-18. "You have successfully cured a female relative of mine of her leprosy. Her case was of 14 years' standing and tried by most of the well-known Physicians of Calcutta as well as of other places but with no effect. Prior to your treatment she suffered from severe attacks of fever. Her skin was paralyzed in many places and had sores and swellings all over the body and lost three toes. But under your marvellous treatment for the last 9 months, she has been completely cured of all her ailments."

CURE OF EXTREME DYSPEPSIA. Mr. C. Mukerji M.A., B.L., C.F., the late renowned Minister of Kashmir State and Vice-Chairman, Calcutta Corporation - writes 14-6-5. "I was suffering from a long and confirmed Dyspepsia, torpidity of liver and extreme nervous debility. I did not expect to live long. But now under your excellent treatment I find that normal tone has been restored

to the alimentary canal and the peristaltic action so revived evacuates the bowels easily and twice every day and I feel stronger daily with the expectancy of a further lease of life."

Major-General A. W. HUGHES writes from Darjeeling 15-10-15. "I am an old man of 72, your medicine reminds me of my young age of 32."

Dr. S. K. LAHIRI, M.D., writes 15-8-07. "After sufficient trial I have found your (1) Himadrihalpa (Nervous Debility), (2) Himadri Sudha and (3) "Zerula" colic to be excellent medicines and undoubtedly far above the known specifics for diseases in which your Remedies are applicable. I am sure they will do immense good to the public."

Mr. R. MUKHERJEE, late Chief Justice of the High Court, Kashmir State, writes 9-4-15. "The case of KALA-AZAR which occurred in my house and was declared as hopeless by all doctors, has been completely cured by your Fever-end, Himalayan Remedies."

Apply with history of your ailments to—

Manager.

THE BEST BOOKS ABOUT INDIA

A NATION IN MAKING *Being the Memoirs of Sir Surendranath Banerjee* Indian Edition Rs 6

A GREAT FUTURE IN THE HANDS OF A GREAT MAN—*The Statesman*

This book has already run through a large edition at Rs 10 8 and we have made every effort to reduce the cost of the 2nd Edition that has been clamoured for since last July. We have succeeded in reducing the price to Rs 6 but are convinced that the book in its present form is indispensable in certain unavoidable respects to its production.

WITH THE INDIANS IN FRANCE By General Sir F. M. Willockley, K.C.B., Rs 10

The book brings before the public the dramatic part played by Indian Troops in France.

THE LIFE OF JAMSETJI NUSSERWANJI TATA

By F. R. Harris 15s

This is the first biography of Indian's Steel and Cotton king—the founder of the great firm of Tata & Sons—whose service to India was as great as his love for her was profound.

THE LARL OF RONALD SHAW'S TRILOGY

THE HEART OF ARYAVARTA A Study of the psychology of Indian unrest 14s

INDIA A BIRD'S EYE VIEW Mainly a book of external impressions 18s

LANDS OF THE THUNDERBOLT (Sikhim, Chumbi and Bhutan) 16s

A Study of the concentration of the Indian mind

Lord Ronaldshay was for some years Governor of Bengal and in these three works has given the public the fruit of a first-class mind that has enjoyed unique experience.

BERNARD SHAW'S BOOKS

All editions of Bernard Shaw's famous plays and novels are procurable from us—we would particularly direct your attention to the extremely cheap edition of the novels that we have to offer.

Works by Prof. SANTOSH KUMAR DAS, M.A. (Hist. & Econ.)

1. THE ECONOMIC HISTORY OF ANCIENT INDIA

Recommended by The Calcutta University for the M. A.

Prof. GARNER says it is "a work of unusual Scholarship" Dr. JOLLY says it is a "valuable work, very thorough and very lively". Dr. KEITH thinks it contains "much valuable material, carefully selected and presented in an interesting and clear manner" The MODERN REVIEW says it is "a vivid compact little book" The HINDUSTHAN REVIEW calls it "A veritable Encyclopaedia." The ECONOMIC MAGAZINE considers it "A pioneer work"

Cloth Bound 311 pages. Price Rs. 3.

2. THE LEAGUE OF NATIONS

In this book Prof. Das deals with the League's Theoretic and historical background, its constitution, its achievements in the fields of international relations and humanitarian activities and finally its relation to India.

Price Rs. 2.

To be had of the Author at 5-2, Ananda Dutta Lane, HOWRAH.

Are you interested in your future welfare?

Have you moments of anxiety, care and suspense,

WHEN YOU WOULD GIVE ANYTHING JUST TO KNOW WHAT THE
 FUTURE HAS IN STORE FOR YOU, JUST TO HAVE THE THICK
 VEIL OF FUTURITY LIFTED A BIT?

**THEN why not utilise the highly scientific, efficient and unerring
 predictions of our renowned "Nilakanta Upasi" ?
 Charges—(surprisingly moderate and to suit every one's ability.)**

Wire or write at once (stating the exact standard time of sending the wire or writing your questions) to us and we place our able service at your disposal on all astrological matters.

If you but send your horoscope or the place, the correct date and time of your birth you get a wonderfully accurate delineation (based purely upon calculations) of your character and position and correct predictions concerning your future. We feel sure we can clearly tell you (in your data) what you are best fitted for in life, and all that can be told from calculations and *sana sakti* about your health, prosperity and longevity.

Our famous "**Jothi Nabagraha Kabacha**" (talisman) is a wonderful remedy to minimise evil influences of malefic planets. It is sure to give (by virtue of the *sastraic* and *manthrika* knowledge spent in its preparation) the wearer peace of mind, happiness, success and prosperity in (Testimonials highest).

Price Rs 10/- net.**

1 FEW OPINIONS

Dr Ganganath Jha, M.A., LLIT VICE CHANCELLOR, ALIHAHAD UNIVERSITY Writes :

"I am glad that the book has taken a new line. I myself have never been able to reconcile myself to the idea that the cradle of our race lay outside the boundaries of our own country. It is a great consolation to find that these prejudices of mine have after all some scientific basis. I value your book specially on this account."

The Ananta Bazar Patrika Writes

"Dr Das has reconstructed with consummate skill, the life of the RIGVEDIC ARYANS as they had actually lived it and we are brought, face to face, with our ancient Aryan ancestors as it were, in their very flesh and blood. We do not remember having recently read such a valuable and fascinating work as 'RIGVEDIC CULTURE' and we thank the publishers heartily for bringing it out. Every lover of Ancient India, and every social, political and religious reformer should make it a point to read it. Dr. Das has shed a light on the name of the University he serves, and we only wish that there were a few more like him in the other Indian Universities. RIGVEDIC CULTURE is destined to remain a lasting monument to his name and fame."

The Forward (17th January 1926)

DR. DAS HAS DONE A VALUABLE SERVICE TO INDIA by bringing out a handy volume on "RIGVEDIC CULTURE". His book leaves distinct traces of his patriotic spirit which inspired his labours. He has conclusively shown that Indo-Aryans in RIGVEDIC periods selected their kings under an elective principle. The Book gives the reader a glimpse into their social and Socio-religious customs of the Aryans and speaks of their truly democratic instincts.

Elementary Banking

(For Indian Beginners)

By B RAMCHANDRA RAU, M.A., I.T.

Author of "Present Day Banking in India," "Economics of Leather Industry," "Some Currency Lessons of the War" Etc Etc, and Lecturer in Economics and Commerce, Calcutta University.

Demy 8vo pp. 209 Price Rs 3

This book analyses the work of the Banks and estimates the economic importance of their operations viz. deposits, note-issue, discounting, loaning and acceptance business based on wide reading. It tends to explain the Scientific aspects of banking theory in a vivid and stimulating manner. It is indeed a long-felt need in this country that a Text-Book shown of unfamiliar historical details of banking history of other countries should be written and this book would remove the long-felt want. Now that the banking system of our country is about to be studied in detail by a committee, the people should be prepared to understand the work of a bank by buying and carefully digesting a copy of this book. No commercial student should be without a copy this book.

WONDERFUL REMEDY OF EVIL INFLUENCE OF PLANET

If you be not benefited by the Kavacha, money will be refunded. We send a letter of guarantee with each Kavacha.

Sani Kavacha—It will save you from adversity and misfortunes and while lengthening your life, will increase your wealth, fame, peace of mind and success in undertakings. Price Rs 3-6.

Shyama Kavacha—It is many in one. While making you free from debts, it will give you plenty of wealth with a happy band of joyous children and at the same time, make you proof against all attacks by enemies. Moreover, as the goddess Shyama is the spiritual-guide of Saturn, it is sure to make its wearer free from the wrath of Saturn and avert its evil influence. Price Rs 9-10.

Dhanada Kavacha—Its wearer earns immense wealth with little struggling. Whenever a wearer thinks of something he gets the result without delay. The goddess Lakshmi always resides at his house and gives him son, wealth, long life and fame. In conclusion it will give even a beggar the wealth of a king. Price Rs 7-10.

Shatrubashi Bagalamukhi Kavacha—It will help you to overcome your enemies. Moreover the wearer gets his desired object and is released from the court when he is prosecuted as an accused or is a plaintiff through some accident. Price Rs 9-2.

Mr. P. Singh, Wakil, High Court, Calcutta—I am well astonished seeing wonderful effects of your Shyama, Dhanada and Bagalamukhi Kavachas within a week. 29-4-24

Babu J. K. Roy, Zeminder, Honorary Magistrate, Chittagong—I was surprised at the efficacy of your Shyama, Nabagraha, Nrishingha and Sani Kavachas. They made me quite well. 4-4-25

Mr. Banka Satyanarayan, B.A. Deputy Tahasildar, Kothapeta, Godavari, Madras—I have been perceiving the effect of your Sani, Nabagraha and Bagalamukhi Kavachas which I brought from you. 30-10-24

Mr. A. H. Cumming, Judge High Court, Calcutta—On examining my forehead, the exact time of birth of me and my son was correctly stated. He made some wonderful predictions about me which were proved to the last letter. 27-7-12

Mr. S. C. Sircar, M.A. 70, Shyam Bazar Street, Calcutta—I have got wonderful effects by using our Nabagraha and Shyama Kavachas. 13-12-23

Our Kavachas have been circulated through all the lands from Hongkong on the Pacific Ocean to Baghdad situated almost in the westernmost country of Asia; and crossing the boundaries of Asia they have been running to the different provinces of the continents of Africa, Australia, Europe and America. We have always been receiving numerous unsolicited testimonials regarding the efficacy of our Kavachas as well as our astrological calculations, from those quarters, which are published here for want of space. A copy of them may be sent, if asked for with one anna stamp or some of them vide the May issue of the "MODERN REVIEW," 1925.

The biggest Astrological Society in India with a magnificent library, containing Astrological and Astronomical works. For Horoscope, Thikujil, and foretelling of all kinds, please drop a line to-day with one anna stamp.

All-India Astrological & Astronomical Society,

President—Pandit B. K. Bhattacharya, Jyotirbhushan Vidya Bhawan, c. I. 5
370, (m), Upper Chitpore Road, Jorasanko, Calcutta. Branch 49, Dharmatala Street, Calcutta.
Phone No. 1375, Barabazar.

Surjya Kavacha—Its wearer is sure to shake the most obstinate diseases such as fistula, leprosy, Pthisis, Asthma, Rheumatism, Diabetes, etc. By the use of its virtues its wearers will enjoy long life, and get full vigour in mind. Price Rs. 5-3.

Mahamrityunjay Kavacha—It will ward off all serious disasters and accidents that might otherwise end in premature death. Price Rs. 8-2.

Nrishingha Kavacha—It will cure Leucorrhoea, Barrenness, Hysteria and other diseases in women and enable them to bear healthy and long-living children. It is sure to save you from the influence of bad spirits. Price Rs 7-5.

Mahakala Kavacha—By wearing this even women who are hopelessly barren will get children and those whose children never live will be mothers of children who will live long. One wearing the Kavacha comes out winner in disputes and lawsuits. And even a fool becomes learned as an effect of this Kavacha. Price Rs. 11-9.

Nabagraha Kavacha—Its wearer is sure never to lose any lawsuit and will easily secure good jobs and promotions. He will not die heirless. It effects easy delivery in case of women. Price Rs 4-4.

Mr R. C. Das, Retired Dy. Magistrate Chittagong—I am really charmed by the effect of your Bagalamukhi and Dhanada talismans, 2-4-24

Mr Chabaldas Jessaram, Agent, Eduljee, Vinslaw Press, Marwarpati—I have got immense benefit by your Dhanada and Shatrubashi Bagalamukhi talisman. 11-2-25.

Mr. S. N. Ghose—Merchant, Burdwan—I am quite astonished at the marvellous effect of Shatrubashi Kavacha you sent me. 2-2-22.

Babu H. L. Banerjee, Jaypur, Jessore—I have used your Nrishingha and Akshaya Kavachas and found that they have marvellous powers to change the destiny of men.

Mr. Dwarka Nath Chakravorty—Judge, Calcutta High Court—Pt. B. K. Jyotirbhushan is an expert Astrologer. I am sure he will satisfy any body.

Mr. K. L. Dutt—Retired Accountant General, Madras and Registrar, Calcutta University—Jyotirbhushan possesses extraordinary power in Astrology and Palmistry, 20-1-18.

WORKS OF PROF. JADUNATH SARKAR, M. A.

AURANGZIB

50 years' eventful history, and a life's task in research.

Complete in 5 vols. sold separately, Rs. 16.

Vols. I & II together (Second edition)

Reign of Shah Jahan and War of Succession, Rs. 5.

Vol. III. Northern India, 1658-1681, 2nd ed. Rs. 3-8

Vol. IV. Southern India, 1616-1689, Rs. 3-8

Vol. V (1689-1707) Rs. 1

Based mainly on original contemporary Persian sources, viz. the Mughal State Papers, daily bulletins of the Mughal Court, the letters of Aurangzib and his contemporaries, (more than 5,000), Marathi *bakhars* and letters and the Assamese *buranjis*, besides contemporary Factory records of the English, French and Portuguese.

H. BEVERIDGE—"Jadunath Sarkar may be called *Primus in Indis* as the user of Persian authorities for the history of India He might also be styled the Bengalee Gibbon."

VINCENT A. SMITH—"You are doing first-class work. I have the highest opinion of your learning, impartiality and critical ability."

W. FOSTER, C. I. E.—"It is easily the best authority on the period with which it deals."

Studies in Mughal India

320 Pages. Rs. 2.

Contains 22 Historical Essays on India in the 17th century and Mughal civilization in all branches.

ASIATIC QUARTERLY REVIEW—"A series of essays of the most entertaining description."

INDIAN ANTIQUARY—"All the essays are brightly written and several contain information not hitherto available in English."

Mughal Administration

Second edition, size more than doubled.
Rs. 3.

A study of the administrative system of the Mughal Empire, the Departments, the functions of the chief officials, the provincial administration, its influence on the peasants, the legacies of the Mughal Empire, the causes of its downfall,—Emperor—aristocracy—State factories, *farmans*

SHIVAJI

Second edition, revised & enlarged. s. 4.

PIONEER—"Probably the only really first-class piece of work in English on Maratha history published during the present century."

H. BEVERIDGE—"Jadunath Sarkar.....All works are good, but perhaps the best of them *Shivaji*. It is full of research and gives a striking picture of the birth of the Marhatta nation." Based on an exhaustive use of all the available original materials—Persian, Marathi, Hindi, Dutch and English—most of which were unknown to Gier Duff. Shivaji's character and achievements, and the Maratha institutions and system of Government are discussed in two long chapters 45 pages."

Anecdotes of Aurangzib

English translation, notes and a long life of Aurangzib
2nd. Ed e 1-8

The work is exceedingly interesting and valuable as it throws much new light on Aurangzib and exhibits his pithy sayings, and his principles of government.

Ahkam-i-Alamgiri

Persian Text of Anecdotes, 2nd ed. Rs. 1.

Chaitanya

2nd ed., Greatly enlarged Rs. 2.

Original life of the greatest Vaishnav saint of Bengal, with an old portrait.

C. F. ANDREWS—"The book is of surpassing value. The picture drawn of the saint is one of extraordinary beauty."

Economics of British India

4th edition, (1917), 384 Pages. Rs. 3.

The handiest and most accurate description of India's economic condition and problems. "An indispensable *vade mecum*." (MODERN REVIEW)

Later Mughals, 1707-1739

By William Irvine, I.C.S.

edited and continued by Prof. SARKAR.

2 thick vols., Rs. 8 each, sold separately.

Prof. P. E. ROBERTS—"A contribution of first-rate importance, certainly will always remain one of the chief authorities for the period. A piece of work done with amazing thoroughness."

K. R. Qanungo's

SHER SHAH, Rs. 4.

The authoritative history of the great Pathan.

JAT HISTORY

Vol. I. (down to 1782) Rs. 3-8.

An original contribution to Indian History in the 18th century, with a foreword by Jadunath Sarkar.

M. C. Sarkar & Sons, 90-2, Harrison Road, Calcutta.

Chatterjee's Picture Albums

Each containing 16 coloured reproductions of paintings by renowned artists. The first numbers of these Albums are ready. The price of each number is Rs. 2 ; per V. P. P. 10.

Besides these, an ALBUM OF EUROPEAN PAINTINGS is also published. Price as above.

MAKARADHWAJA

karadhawaja has from the Vedic era been led as one of the crowning miracles of the Vedic Treatment. It is a compound of pure and other metals prepared after laborious and processes. It is a potent drug in curing lung and chest diseases. Its action is powerful in stimulating muscular activity and circulating blood. In fact, if administered in different and suitable vehicles it has the power to all diseases in human system. In heart with impending death, nervous debility and clogging of bowels it is an infallible remedy. Sovereign Tonic for the new born infant and other. Re: 1 per week, Rs 4 per month; Rs 6 per tola. V. P. etc. annas 6.

Concession of Price of

**The Historical Works of
Major B. D. Basu, I. M. S. (retired)**

For Modern Review Subscribers.

1. Rise of the Christian Power in India.

Five volumes Rs. 5-each; Postage Extra.

The Author has explained in the preface why the British Power has been called the Christian Power.

2. Story of Satara.

A true history of how Satara was annexed and its Raja deprived of his Sovereignty.
Rs. 10 ; Postage Extra.

**3. History of Education in India under the Rule
of the East India Company.**

The author has shown that English Education in India was first begun by the
Hindus themselves, and that when the Government took it up, it was done with selfish
motives. These motives have been laid bare from official papers.
Rs. 2-8; Postage Extra.

All and any of these books will be sold up to the 28th February, 1926, to our
subscribers at 25 per cent. less than their published prices.

That is to say, Our Subscribers will get

1. Each Volume of RISE OF THE CHRISTIAN POWER IN INDIA for Rs. 8-12
instead of Rs 5/-;

2. STORY OF SATARA for Rs 7-8 as instead of Rs 10 ;

3. HISTORY OF EDUCATION IN INDIA UNDER THE RULE OF THE EAST
INDIA COMPANY for Rs. 1-14 ; instead of Rs. 2-8. Postage Extra in all cases.

All public Libraries, All University Libraries, All College and School Libraries All
libraries of Educated Indians should possess these valuable works.

They supply the corrective to our incorrect knowledge of Indian History. The
author supports his conclusions by copious extracts from official dispatches. Parliamentary
papers and proceedings, and the works of British and other European Authors, which few
Indian Libraries possess.

The total price of all these books being Rs. 37-8as. Our offer means that our sub-
scribers will make a profit of Rs. 9-6as by buying them.

This offer will be withdrawn on March 1, 1926.

**A Boon to scholars of Indian Antiquity !
Ancient India as Described by Megasthenes and Arrian**

Being a new edition of the great work by the late Principal

J. W. McCrindle

(first published 50 years ago).

Principal McCrindle's Work requires no introduction. It is invaluable to all—student, professor or the research scholar;—perhaps the best foreign testimony to the culture and greatness of India in the past of a great nation, which lost the authoritative records of its greatness,—an epitome of what the Greeks of Alexander's time *saw in the wonderland of the East*

CONTENTS

The work comprises interesting information on all topics, *i.e.*, Geography and Topography of India—its size, rivers, plants and mineral wealth, gold and silver mines; Animals—wonderful elephants, elephant catching and hunting, treatment of horses and elephants, snakes, snake-charming, fertility of the soil—honey-bearing reeds and wool-bearing trees; legends about Herakles and Dionusos; Ceylon and its pearl fishery.

The people of India—the seven classes (castes) of people and their duties; Indian philosophers—their contempt for wealth; Indian Kings—their wealth, armies and power: Emperor Chandra Gupta.

City of Pataliputra (Patna) and its municipal administration perhaps more efficient than that of our own days.

Indian races and tribes; the Gangarides, Modogalingoe; the Andaroe; the Prasii; the Pandaeon.

Indian Manners and Customs—Indian honesty, truths and virtues—no drinking—thefts rare; highest chastity of women.

Indian Administration—its efficiency; The King—His splendour—His Guards of Women—His vast army of horse, foot, elephant and chariot—naval force—Indian weapons—mode of fighting

Indian Tribes, legends and myths about tribes: fabulous races, description—men with one eye—with huge ears—race of pigmies; Quaint manners and customs; gold-digging ants and talking birds.

Legendary history of India: Antiquity of Indian Culture.

Price Rs. 7-8 only.

Treatment for Leprosy and Leucoderma etc.

A place where lepers are treated and which is well known to physicians and educated and respectable men throughout Bengal, Bihar, Orissa, Central Provinces, United Provinces, Madras, Bombay, Siam, Ceylon, &c.

Patients suffering from Leprosy, Leucoderma, Batrakta, all sorts of skin diseases, and having the following symptoms are wonderfully treated and cured here:—

Red, Black, White, Brown and Copper coloured patches circular spots, rough dry and elevated spots, either plain or uneven in the middle and having circular border, spots the side of which are ring-worms but the middle is plain, insensibility of spots and other parts of the body even if they are pricked with a needle, roughness of the skin of the body, a terrible sensation throughout the whole body, if the elbow happens to strike against anything, Hyperaesthesia and numbness of the body, lame-ness, cutmarks in the heel, rough or shining appearance of the skin, swellings of the nose, ears, fingers, other parts of the body, swelling of the body with patches like blobs which when they burst out give fetid watery discharges, pimples in every pore of the skin, Anaesthetic patch, scaly patches which when scratched send out dust-like substances or scales.

Feeling of suffocation during sleep, specially during sleep at night, coming out of catarrhal discharges and blood-clots from the nose, burning sensation throughout the body, inflammation of the ulnar spinal nerve of the elbow-joints, inflammation and thickening of the main nerve trunk of the upper and neck, pain in the joints of the body, submanillary regions, thighs, hypogastric and right left iliac region and back-bone, ulcers in the feet and coming out of maggots and pieces of bones from the said ulcer called Madura, small diffuse thickenings and nodules in parts or in almost all over the body, ulcerated general nodular thickenings of the whole body secreting pus and watery discharges, contraction and necrosed condition of the fingers and toes ultimately phalanges being lost. Wonderful results in 45 days' treatment. "Treatment of Leprosy with Family Treatment" Free.

YOGA-MIMANSA

EDITED BY SHRIMAT KUALAYANANDA (J. G. Gune)

The journal is a quarterly organ of the *Kaivalyadhama* recording scientific researches in Psychology, spiritual and Physical culture etc., with their application to Therapeutics. Each number has 80 pages of the royal 8vo size including 16 full page illustration. The matter is divided into different sections so as to meet the needs of all types of readers. The journal appears in the months of January, April, July and October. Second year begins in Jan. 1926.
ANNUAL SUBSCRIPTION, POST FREE, INDIAN. Rs. 7., FOREIGN, 12sh. SINGLE COPY Rs. 2.

A few Appreciations

"The first issue before us is a very valuable and interesting production and fully justifies the place and importance of the journal in the realm of modern scientific and philosophical literature. The printing and get-up of the journal is fine, as befitting a scientific journal recording great truth." (Trent Thought, Madras)

"From its general appearance and get-up of the journal and the matter it contains one can see the work is in able hand and in time the institution will be as useful and popular as the New York Institute of Science. (United India and Indian States, Delhi)

"Yogic culture is looked upon as something mysterious and secret. This endeavour to bring it before the popular gaze and to interpret it the light to modern sciences is altogether unprecedented in this country." (The Kesari, Poona) "Your attempt to explain Yogic physical culture in the light of modern sciences has my heartfelt sympathies." (Prof. Manikrao, Baroda)

"...I have gone through the book carefully and have found the researches very interesting....." (Mahamahopadhyaya Kaviraja Sen, M.A., L.M.S. Calcutta)

"...Your excellent journal is a new venture of its kind and I have read it with interest..." (Dr. Bishard, M. R. A. S. London, Calcutta)

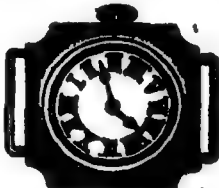

"...I have only had time just to glance at it, but am already convinced that it will be of great value to serious students of Yoga in the West." (G. R. S. Mead, Editor of the Quest, London)

BEGAM SAMRU

Rs. 2-8

Rs. 2-8

By **Brajendranath Banerjee**

with a foreword by **Prof. Jadunath Sarkar, C.I.E.** Profusely illustrated.

The career of Begam Samru, the celebrated Princess of Sardhana,—Composed of truths stranger than the most imaginative fiction—has attracted many a pen in the past. But the present work is the first attempt to write her biography on the basis of all the contemporary records in Persian, French, Marathi and English. The author, by the kind permission of the Government of India, spent many months in searching among the MSS. of the Imperial Record Office Calcutta with very happy results.

SIR EVAN COTTON —

"A most readable and valuable book."
(*Bengal Past & Present*)

PIONEER --

"A fascinating historical romance of the 18th century... the result of patient, laborious research... a judicious blending of a powerful romance with true and accurate historical information on the downfall of the Mughal Empire (18-10-25).

H. BEVERIDGE, I.C.S. :—

"The author has written an interesting account of the Begam, and has given much valuable information about her."

PROF. P. E. ROBERTS (Oxford) :—

"I have found it extremely interesting and I congratulate you on having found so good a subject and also on having treated it so ably and vividly."

R. B. RAMSBOTHAM, M.A., I.E.S., :—

"Your book is an admirable type of scholastic work which I hope other Indian writers will copy

ESTD. 1901.

The premier, the cheapest and the most reliable Ayurvedic Factory in India.

Factory—Dacca, Head office—Patuatuly St., Dacca. Branches—Mymensing, Rungpur, Chittagong, Gauhati, Bongaigaon, Sylhet, Sirajgunj, Patna, Benares, Lucknow, Calcutta Branches—(a) 52-1, Beadon St. (b) 227, Heron Rd. (c) 154, Bowbazar St. (d) 71-1, Russa Rd., Bhowanipore Madras Branch—Broadway, G. T., Madras.

SARIBADYARISHTA—Rs. 3 per seer (ideal blood-purifier tonic of the day)

H. E. Lord Lytton, the Governor of Bengal says : "I was very interested to see this remarkable factory and the success to the energy and enthusiasm of its proprietor, Babu Mathura Mohan Chakravarty. The preparation of indigenous drugs on a large scale is a very great achievement. The factory appeared to me to be exceedingly well managed and well equipped, and that it may continue to prosper." 11-6-2.

H. E. Lord Ronaldshay, ex-Governor of Bengal says : "I visited the Sakti Oushadhalaya (Dacca) on 11-6-2, and was shown everything by the proprietor Babu Mathura Mohan Chakravarty, B. A. I was very much interested in all that was shown, and was astonished to find a factory at which the production of medicines was carried out on as great a scale ... Babu Mathura Chakravarty seems to have brought the production of medicines in accordance with the prescriptions of the ancient Shastras to a high degree of efficiency." 17-7-20.

H. E. Sir Henry Wheeler the Governor of Bihar and Orissa says : "I had no idea that the manufacture of indigenous drugs was carried on upon so large a scale. The whole thing bears marks of enterprise and success." 22-7-2.

Dr. J. C. B. Das says : "I desire to place on record my high appreciation of the work of the Sakti Oushadhalaya, which is carried on in an orderly and organized manner. Supervision leaves nothing to be desired. I congratulate the proprietor on the success which this business has already attained." 24-10-22.

WHOLE NO.
280

THE PLACE OF NON-COOPERATION IN INDIAN NATIONALISM

By K. NATARAJAN

that Mahatma Gandhi's influence is on the wane and the country is being pushed up to a different line of action than that suggested by him, it is just the time when an attempt should be made to give the movement adumbrated by him. His power was felt most, there was a plurality of opinions being biassed. Freed from the oppressive influence of his personality and the frothy wave of enthusiasm kept the people on, his work and the fact that he attempted to work out can be subjected to an impartial review in a proper objective.

A cry is heard on many sides and in many quarters that non-cooperation is that it is a thing of the past; that it is unlikely to revive even with the fervent cry of its sponsor, Mahatma Gandhi. Those who talk in this vein can have but a poor grasp of what non-cooperation means and stands for. The cry of non-cooperation as a political slogan is only a minor cry; it may have assumed a feebler note. Non-cooperation, in its essence, is not a mere weapon but a spiritual discipline; it is a destruction of Governmental institutions and a strengthening of soul force. Those with titles may not have renounced them; lawyers who gave up their practice have resumed it; students who discarded uniforms may have gone back to their uniforms; khadi-clad youngsters may have returned to the trammels of fashion. But the worker and the student are not the same as they were before the renunciation. Their mode of life is different, their habit or

thought has suffered a transformation, they have a better appreciation of the correct values of things. The trousered and collared gentleman does not strut about with the same swaggering air of superiority as of yore. They look apologetic for what they do. If they did not 'stick on,' it was not because they were convinced of the irrationality of non-cooperation but because their power of endurance was exhausted, the weakness of the flesh told. It was a confession of *their* failure, not that of the movement. For to say that the movement has failed is like saying that truth has failed or righteousness has failed. There may be individual instances of deviation from truth or aberrations from righteousness but truth or righteousness, as such, can never die.

The movement aims at making the people lead a better and a purer life. It is a course prescribed for the individual for the attainment of self-realisation. The means adopted is that of simplicity in raiment and food, of sincerity in thought and word, of sweetness in disposition, of fortitude in suffering, of non-violence in action. It is a programme of high ideals. Its efficacy is based not on numbers but on quality, not on brute strength but on moral excellence, not on temporary spectacular successes but on abiding capacity for endurance and sacrifice. It requires great courage for a man to stand shoulder to shoulder with his comrades-at-arms on a field of battle and march against the foe to the beat of drums. His courage is sustained by the feeling of security engendered by being one among myriads of

men. It requires rarer courage for a man to stand his ground when panic has overtaken his comrades and he sees them fleeing before a pursuing enemy. The courage that Mahatma Gandhi calls upon the Indians to exhibit is of a piece with this, distinguished only by being on the moral plane instead of in the physical sphere. He wants to build a nation of men of moral force—men who seeing a thing to be right and essential, and for it as for truth unheeding any consequence. When that wish is consummated, the attainment of self-government is easy of achievement.

For what do the rulers rely on for the maintenance of their power over an alien people, if not upon the weaknesses of the subject nation? They win the people with smiles and sweet words, they bribe them with offices and titles, they incite them to glorious actions by temptations of rewards and emoluments. The baser instincts of man are appealed to, then moral sensibility is audaciously sapped. Their physical deterioration is nothing compared to the moral corruption that corrodes their manliness, their finer promptings. And the longer the yoke is allowed to remain, the surer is the grip of vice, the swifter is the process of demoralisation, and the uphill task of regeneration of the fallen becomes increasingly arduous. With rare insight Mahatma Gandhi saw the danger of cooperating with a system of Government which does not result in the moral uplift of the nation. The only remedy was to dissociate the people from an atmosphere which draws out the basest instead of the best in them and put them to a course of discipline which would strengthen their moral fibre, their soul force. Men should have a sure grip of themselves in the face of trials and temptations and when there are a few who have attained the capacity to resist the allurements of power and pelf, they would set a glorious example to others in leading the nation to its cherished goal of freedom.

Freedom is a beautiful ideal to work for, and the motive force should likewise be true and beautiful. It is love of country that should inspire, not hate of the enemy. The means adopted should be clean and worthy of acceptance. It should not only help the nation to attain its freedom but to retain it when attained. It should not only lead the nation to success but should avoid the possibility of brutalising it in the

process. No physical victory can compensate for spiritual surrender. Freedom will not be worth the winning if it should be at the cost of moral debasement. The process of attaining self-government should likewise be the process of making men the fittest citizens, when it is attained. A deep study, a large outlook, a generous sympathy, a capacity for work and a subordination of the need of the individual to that of the society—all qualities that would go to make a good citizen are required of a true non-cooperator. He should not be impatient of criticism nor scornful of opposition, neither boastful of his virtues nor contemptuous of others' weaknesses. He should not have a fine conceit of himself as having a monopoly of wisdom. Humble in demeanour, simple in habit, courteous in behaviour, his acts more than words should speak for him. He should be ready for sacrifice and suffering at the call of duty to the country. The policeman's baton should not frighten him into submission, the prison should not cow him into an apology. He is a soldier of freedom marching on heedless of dangers and unmindful of consequences until victory is won.

But there were men of feeble faith who were sceptic of the programme leading up to self-government. They argued, "how can the renunciation of titles by title-holders or of practice by lawyers or of studies by students affect Government?" How can the filling of prisons with persons or the wearing of khaddar force the Government to yield?" The question betrays the extent of degradation. Are not titles, law courts and colleges the agencies by which the nation is imperceptibly drawn into the net of slavery more deadly in its strangle-hold, because of the delusion of the victim that he is being embraced? One cannot have the cake and also eat it. Men cannot hold on to titles and curse the giver; they cannot help the Government in the administration of law and expect to be free from its domination; they cannot allow boys to read books which make heroes of the Westerners and wish them to entertain an undiminished love for their country. But the real prompting of the doubting Thomases was not an honest disbelief in the efficacy of the programme but cowardice to face the ordeal of sacrifice and suffering. Some made honest admission of their weakness; others sought to hide their trepidation by finding fault with the movement; and yet others built in heroic mould, though fit and ready to

ace dangers themselves, were shaken from their purpose by love for their kith. No country has won its freedom without passing through fire, and when faced with an enemy at its door, if considerations of filial and domestic ties were to affect a man in joining the army of fighters, that nation is doomed. The woman is there to help a man to play his part worthily. Love of country and desire for freedom is as much her longing as his. Can she, will she, then, keep back a man in the hour of crisis caring more for domestic happiness than for national honour? A nation's life is not counted in years but in generations and men, if they wish to win their country's freedom, cannot hold back from the struggle because the goal will not be attained in their lifetime. There is no glib tongue to say that the need now is not to die for the country but to live for it. To slip apologetically through existence without life, and if such a mean philosophy were to prevail, the country would soon be full of shivering creatures without the capacity to live or the courage to die. Mahatma Gandhi's programme was to knock pettiness, meanness, craven cowardice out of men and make of them real standard-bearers, faithful to the flag unto the last. It is to make men and women realise that a nation with self-respect is preferable to comfort with contempt, that life of want and glorious struggle is better than the endurance of a parasite, that individual equanimity should be driven out, if national servitude is to be got rid of.

Non-violence which is the chief plank of Mahatma's programme is not the passive submission of a weakling. It is the courageous resistance of the strong to acts of iniquity without physical retaliation. To submit to a blow in fear of a superior power betrays, the words of Bernard Shaw, 'the mind of a servant'; to give blow for blow in the face of oppression is the act of a man on whom the grip of servility has not yet taken a fatal hold, to rise above retaliation and to face an unjust authority with head erect and tense muscles held under leash is the strength of a superman. When the Mahatma calls upon his countrymen to rise to such heights of courage and fortitude, he is not asking for the moon. The brave Akalis when they showed themselves to be felled down by the grip of the pigmy preservers of law and order proved that heroism was not dead but only dormant, waiting for the sympathetic

stirring touch to galvanise it into play. Their bodies were smeared with streaks of blood but their souls shone with the splendour of the molten gold. Brutal force could not pit itself against such spiritual strength for long and the Akalis won their point. At Nagpur, a passing patriotic pastime was raised to the dignity of a consummate plot of revolt and law was vindicated by clapping men into jail until the show had to be abandoned in despair. It is needless to multiply instances to show that non-violence wins in the end, if practised in the right spirit and for a right cause.

And what a unique example would it be in the history of the world for a nation to gain its freedom without shedding the blood of the ruling race? The people have so long been habituated to silent suffering that, even from a practical view-point, it is easier far to tune them to stand the strain of a non-violent resistance than to rouse them into violent activities. The religious susceptibilities of the majority are against the use of force, their natural bent is for peace, not for war; their training has been to foster their mind at the cost of their physique. To give physical training to the whole nation and provide them with arms is a difficult feat besides the fact that an open advocacy of violence is sure to be nipped in the bud. The only alternative is the surreptitious supply of arms and the carrying on of revolutionary propaganda through secret societies. What chance had such a method in the past when it was tried in Bengal and what greater chance has it in the future for the achievement of a larger purpose? It is futile to think of any means other than a non-violent one to reach the desired end.

The other insistent appeal of Gandhiji for people to wear Khaddar has come in for a good deal of sneering criticism. Men pretending to move with the times, air out their views that to depend on the charka and the hand-loom in these days of machinery and mass production would be to put back the hands of the clock, to cripple our power to compete with the West in the race for wealth. But it is forgotten that the race for wealth by a few is a race leading to the misery of the many, that the machine which presses the cotton and draws out the thread crushes as well the body and draws out the spirit of men leaving them their skeletons with just a breath of life, that mass production

is mass concentration with its attendant evils of over-crowding, scanty enjoyment of God's light and air, drunkenness and debauchery. In copying the West, we need not be such whole-hoggers as to copy it in its evils. India is a spacious country and can nurture her sons without huddling them like cattle. The call of the land is not heeded because of the lure of the cities with their specious temptations of riches. It is charka that is to wean men away from disease and misery to health and comfort by providing them with work and the means of clothing in their hours of enforced idleness.

And the economic effect it will have on the foreign manufacturers is not to be minimised. In the first two years of the increased use of khaddar, it had an adverse influence on the English mills which could not find a market for their productions and in the long spell of years before then, when the mill products were the only competing elements, the English manufacturers did not feel the strain of competition. Nothing tells on the westerner so much as the enforced emptying of his bloated purse and the cry

that was raised at the time for preferential treatment is an eloquent commentary on the extent of the deprivation of their earnings which were legitimately turned over to the pockets of Indians.

More than all, khaddar is an emblem of simplicity, the common bond of unity between the classes and the masses, the breaker of the barrier between the rich and the poor, the outward visible link of brotherhood between the highly placed and the lowly. That is why the Mahatma wants the leisured classes also to spin for half an hour a day so that it might bring home to the toiling millions of their countrymen their kinship with the favoured few, besides affording them an incentive to follow. The country's salvation cannot be attained without carrying the masses with us and the common dress of home-made khaddar will be more stirring in its appeal than platform harangues. It is not for nothing that a scientist of repute like Mr. Roy is charka-mad. If we have not the calibre to follow a great man, let us at least be given the understanding to know his worth.

BRITISH EXPANSION IN TIBET

CHAPTER I

By TARAKNATH DAS, M.A., Ph.D.

Anglo-Tibetan Relations from the days of Warren Hastings to Lord Curzon

SINCE the days of Warren Hastings, Great Britain has had relations with Tibet with the ultimate object of bringing the country under its control. But the nature of the British policy towards Tibet, to an ordinary observer, seems to be somewhat vacillating and slow. In reality, however, it has always been steady and well calculated, leading to success—"taking the opportunity, striking while the iron is hot, not letting the chance go by, knowing our mind, knowing what we want, and acting decisively when the exact occasion arises".¹

In 1772, the Bhutanees attacked Kuch Behar, a part of Bengal, and the king of

Kuch Behar was taken prisoner. Warren Hastings, representing the East India Company, took energetic steps to clear the enemy out of Bengal. The Lama of Tibet then interceded in favour of Bhutan and wrote to Warren Hastings to be considerate in dealing with Bhutan. Warren Hastings was polite to the Lama, but he had his own policy.

"Warren Hastings's policy was, then, not to sit still within the borders, supremely indifferent to what occurred on the other side, and intent upon respecting not merely the independence but also the isolation of his neighbors. It was a forward policy and combined, in a noteworthy manner, alertness and deliberation, rapidity and persistency

artiveness and receptivity. He sought to secure his ends by at once striking when danger threatened also by taking infinite pains over long periods of time to promote ordinary neighborly intercourse with those on the other side."²

Bhutan's attack on Kuch Behar and the Tibetans' appearance on the scene in her favour, gave Hastings, "the greatest of all the Great Governors-General of India" (from the standpoint of extension of British imperialism), an opportunity to further his forward policy, and he sent a mission to Tibet. This mission is known as Bogel's mission (1774). Bogel was clothed with the widest possible power to negotiate with the Tibetan Government to further trade relations between Bengal and Tibet. Bogel, with boldness, started his negotiations with the Tashi Lama even to the extent of establishing an alliance with Tibet.

Bogel then hinted at the advisability of the Tibetans coming into some form of alliance with the English so that the influence of the latter might be used to restrain the Gurkhas of Nepal from attacking Tibet and its feudatories."³

The Tashi Lama was rather willing to consider the proposition but it failed because of the opposition of the Regents at Lhasa and the Chinese authorities.

The Lama said that the Regent's apprehensions of the English arose not only from himself, but also from his fear of giving offence to the Chinese, whom Tibet was subject. The Regent wished, therefore to receive an answer from the court at Peking."⁴

The attitude of the Regent against any relation with the British was strengthened by the attitude of the king of Nepal toward Tibet, as well as the English. The Gurkha Raja of Nepal assured the Tashi Lama and the Regent at Lhasa of his friendly attitude towards Tibet and his intention of keeping the English out of his territory, and asked the Tibetans "to have no connection with the Fringies (English) or Moghuls and not to allow them into the country, but to follow the ancient custom, which he has resolved likewise to do." He even suggested that the Tibetans should send Bogel back, as he was going to do with an English agent who came to him.

According to the report of Bogel, as early as that time the Tashi Lama had certain ideas about the importance of Russia and Russo-Chinese relations affecting Tibet. Bogel was told to leave the country, although Bogel's formal petition to the Regent contained

only this request: "I request in the name of the Governor, (Warren Hastings), my master, that you will allow merchants to trade with this country and Bengal." This request was not granted and it only became an accomplished fact after a century and a quarter when the British entered Tibet by armed forces.

From the report of Bogel's mission it became evident that, as early as 1774, the British authorities found three distinct obstacles in the way of establishing Anglo-Tibetan relations, to the interest of Great Britain; they were —(1) the anti-English attitude of the border States like Nepal and Bhutan which wanted to draw Tibet with them; (2) the attitude of the Chinese Regent at Lhasa who represented strong Chinese opposition to British penetration in Tibet; (3) growing Russian interest towards Tibet.

After Bogel's mission had returned to Calcutta in 1775, Warren Hastings did not give up his ideas regarding Tibet and in 1780 again appointed Bogel as a Special Envoy to proceed to Lhasa. But the death of both Bogel and the Tashi Lama in 1781 marred the progress of the mission. In 1782 Captain Samuel Turner was entrusted with the responsibility of the mission. The new Tashi Lama was somewhat willing to establish some commercial relations with the British, but owing to Chinese opposition no satisfactory arrangement could be reached in spite of all the British efforts. According to Turner.

"The influence of the Chinese officials overawes Tibetans in all their proceedings, and produces a timidity and caution in their conduct more suited to the character of subjects than allies."

At this time Tibet was really a Chinese protectorate. In 1792, when the Nepalese invaded Tibet and defeated the Tibetans, the Chinese Government sent armies to the aid of Tibet and defeated the Nepalese forces and concluded a peace treaty by which Nepal agreed to pay an annual tribute to China, and a friendly relation of co-operation was established between Tibet and Nepal.

Between the period of Turner's mission and the Manning Mission, which was despatched in 1810, the British Government in India refrained from taking any aggressive step in the Tibetan question. In 1810, Lord Minto provided all facilities to Mr. Manning, an accomplished scholar of the Chinese language, to go to Tibet. He started with a Chinese servant, and after a great deal of

difficulty reached Lhasa. But he could not accomplish anything of political consequence because of the opposition of the Chinese Regent, and returned to India in 1812.

It must not be supposed that the British Government showed laxity in carrying out its Tibetan policy. She was forced to postpone her forward policy in that area, because she had, at that time, to concentrate her whole strength on the solution of important problems. She had her hands full of wars in the eighteenth and nineteenth centuries. The question of the conquest of India proper and the establishment of British supremacy there was much more important. The European situation, until the fall of Napoleon, kept England quite busy. The Anglo-French war in Southern India was not an insignificant affair. Then the British conflicts with the Marhattas (1797-1806), the Burmese wars (1823-'26, 1852), the Sikh Wars (1815, 1848-49), the Afghan Expedition (1839-42), the Sepoy Rebellion (1856-1858), and also the Russian encroachment towards the Mediterranean, resulting in the Crimean War, kept the British Government too busy to bother with Tibet. However, Britain was engaged in indirectly solving the Tibetan problem by attacking and weakening China, the overlord of Tibet (the Opium War 1839-42; the Arrow War 1857-1860). Until the Treaty of Berlin in 1878, Britain was more concerned with coping with these situations, and her attention could not have been seriously concerned with Tibet. Statesmen, empire-builders must exercise a sense of proportion in their adventures and game of extending boundaries, and the plan of operation should be tackling one problem at a time—gaining strength through acquisition, consolidating gains already obtained, while attempting to secure fresh booty; and this has consistently become the British policy in building up her world-empire.

To ultimately reduce Tibet into virtually a British province, the British Government followed the path of least resistance, eliminating each one of these three obstacles already cited, viz. resistance of border States, Chinese opposition, and Russian influence, in a masterly fashion. The first step was to detach the border States of Bhutan, Sikkim and Nepal from Tibet. The British Government not only succeeded in winning the confidence of these States, she even reduced them to British protectorates, although Bhutan and Sikkim really were Tibetan dependencies.

It has been noted that Bhutan attacked Kuch Behar successfully and the British failed to intervene. Nepal was strong enough to defeat Tibet single-handed and it was through Chinese aid that Tibet retained her position and Tibetan-Nepalese friendship was established. If all these three States had combined with Chinese support, then the British march towards Tibet might have been checked.

After the unsuccessful mission of Major-General Bristow directed her attention to Nepal. This State, situated along the northern frontiers of Bengal and Oudh for about several hundred miles from the Sutlej to Sikkim, a running back with an average breadth of about a hundred and thirty miles up snow-clad slopes of the Himalayas, inhabited by the war-like Gurkhas, was getting stronger every day in that region. In 1814, the British Government sent an expedition of about 34,000 men, which was opposed by Gurkha army of about 12,000 men. Gurkhas at first virtually routed the British, but later, in 1815 and 1816, the British won a victory after protracted battles.

A treaty (Treaty of Sagauli) was signed in March, 1816, whereby a British Resident was allowed to reside in Katmandu, the capital of Nepal. The Nepalese "gave up their claims in the Tarai or lowlands along their southern border. The Provinces of Kumaon and Garhwal at the extreme end were surrendered, and the site of Simla, a future hot weather capital of British India, was acquired; the northwest frontier of the Company's possessions was carried right up to the mountains. A pathway was opened up to the regions of Central Asia."

Nepal was virtually reduced to a semi-independent State. Since then Great Britain instead of annexing Nepal outright, followed the policy of friendly co-operation, keeping guard against her having any independent foreign relations with any nation. Nepal's support was utilized by Britain to suppress the Sepoy Mutiny (1857) to facilitate Younghusband's expedition against Tibet and to fight the World War. In case of British territorial expansion towards Chinese Turkestan or Central Asia, Nepal's support would be invaluable, and thus a treaty was signed in 1924 between the British Government and Nepal.

In 1826, the British march towards the eastern frontier of India reached beyond Bengal, and Assam was annexed. This brought the territories of Bhutan in contact with the

ish possessions and constant friction regarding the border. The British authorities, for strategical reasons, wanted to have the control over the Duars, "passes" between the two States. The Bhutanese were engaged with raiding the British territories. At first, the British policy was to make an a virtual protectorate, suggesting that Bhutan could pay a tribute to the British and, in turn, keep possession of the Duars. When this failed, Great Britain annexed the Duars and gave the Bhutanese an annual subsidy.

When, when the time was ripe, in 1865, to avenge the insults inflicted upon the Hon. A. Eden, a British official, a campaign started against Bhutan. Bhutan was to become a British protectorate and Great Britain to give an annual subsidy to the prince on condition of tranquillity and friendship with the British authorities.⁶

The significance of Sikkim in relation to British expansion towards her cannot be over-estimated. The most important practicable route from India to the Kulu Valley, a part of Tibet, passes through Sikkim over the Himalayas.⁷ Thus, from the point of protection of the Indian frontier as well as an eastward expansion from India, it is essential that Sikkim should be brought under the British Government, which, as a primary step toward its march to Tibet, would bring this country to a British protection.

The method adopted by the British Government to establish a protectorate over weak nations is exemplified by Sikkim. This can be divided into three successive stages: (1) bringing it into contact with the weak nation, (2) giving assurance of friendly relations while making plans for absorbing it, (3) making advantageous treaties to pave the way for establishing British supremacy with some semblance of legal sanction, (3) taking steps to make the responsible native high officers to be those who would serve the British interests in every way possible.

The first step of the British policy towards Sikkim is clearly explained in the following extract of Hon. A. Eden, Envoy and special commissioner to Sikkim, to the Secretary of the Government of Bengal (dated 5th Feb. 1861)

Paragraph 35.—The instructions under which I have been enabled me from the very first to give most solemn assurances that we did not wish to obtain possession of any portion of Sikkim or any of its territory, and I attribute it entirely to the confidence which was placed in these assurances that

the surrounding States held aloof altogether from the quarrel. Nepal is tributary to China, Tibet is tributary to China, and Sikkim and Bhutan are tributary to Tibet, and therefore, secondary to China. Had these States not distinctly understood that we were not advancing with any intention of annexation, it is impossible to believe but that with such combination of interests, they would all have joined to oppose us."

But the real motive of the British was to take steps for eventual annexation of Sikkim. The following articles of the treaty concluded between Great Britain and Sikkim (April 16, 1861) will illustrate the second step of the method generally adopted by Great Britain to spread her imperial power in a peaceful way, if the poor and weak nations fail to fight the British Empire successfully:

"Art. 17. The Government of Sikkim engages to abstain from any acts of aggression or hostility against any of the neighboring States which are allies of the British Government. If any dispute or question arises between the people of Sikkim and those of neighboring States, such disputes or questions shall be referred to the arbitration of the British Government, and the Sikkim Government agrees to abide by the decision of the British Government.

"Art. 18. The whole military force of Sikkim shall join and afford every aid and facility to British troops when employed in the hills.

"Art. 19. The Government of Sikkim engages not to give lease of any portion of its territory to any other State without the permission of the British Government.

"Art. 22. With a view to the establishment of efficient government in Sikkim, and to the better maintenance of friendly relations with the British Government, the Raja of Sikkim agrees to move the seat of his government from Tibet to Sikkim and reside there for nine months in the year. It is further agreed that a vakeel shall be accredited by the Sikkim government, who shall reside permanently at Darjeeling."

The third stage of having one of the high native officers serve as a British agent was successfully carried out, as shown by the following extract from the report of the Hon. A. Eden, April 1861—

"In conclusion, I must place on record the great obligations under which I am to the Cheebho Lama, who supplied a large number of coolies and accompanied me throughout. He is universally respected by the Pancha population and trusted by the Raja. Without his aid, I should have had very great difficulty in dealing with the people of the country. He is the most intelligent and enlightened native whom I have ever met. He has travelled much in Tibet. He is the most influential adviser of the present Raja, and it is mainly through his good counsels that the Raja has agreed to throw the country open. He is now the Raja's Dewan (Minister) and his employment in that position is an ample proof of the future good conduct of the Sikkim Government. So long as he remains in

that post, there is no fear of any policy being adopted hostile to British interests.

This absorption of Sikkim took place after China was defeated in war with Great Britain and France in 1857-1860, and thus Tibet could not, single-handed, give any effective opposition to the British by aiding Sikkim. Thus, it is evident that the British methods of peaceful penetration and spreading British influence, undermining Chinese sovereignty, has been no less ingenious and pernicious than those of Russia, Germany, France or Japan. Britain evidently had an early start in the game, and she certainly surpassed others in carrying out her policy more subtly and coolly without arousing much international opposition or agitation.

It is enough here to say that the British fought with Nepal, Bhutan and Sikkim and brought them under her protecting wings, before decisive efforts were made against Tibet. Before China recovered from the effects of the Taiping Rebellion, in 1873, attempts were made to open up trade with Tibet, and a good road was constructed through Sikkim to the Tibetan frontier in 1876. The British Government planned that a mission to Tibet might also be sent through Peing, thus coming from the side of the Yangtse region. So, in the Chefoo Convention, concluded between China and Great Britain, a clause was inserted that China should assist in securing the protection of the mission in Tibet.

About 1886, Great Britain signed agreements with the Chinese Government regarding sending Missions to Yunnan and Tibet.

The mission to Tibet was given up, because it was found that the Chinese Government was not anxious to allow the British Government to undertake this work. So, in the Convention between Great Britain and China relative to Burma and Tibet, in August 25, 1887, the Tibetan mission programme was abandoned. Art IV of this Convention reads

"Inasmuch as inquiry into the circumstances by the Chinese Government has shown the existence of many obstacles to the Mission to Tibet provided for in a separate article of the Chefoo agreement, England consents to countermand the mission."

After the British annexation of Burma in 1886 and the consequent temporary settlement of Anglo-French rivalry, and after the failure of the proposition of sending a mission to Tibet, there arose a misunder-

standing between Tibet and Sikkim. Tibetans held that they were exercising right in Sikkim which existed before, while the British held that the Tibetans were encroaching upon the right of Sikkim a British protectorate. After considering unsuccessful negotiations, the British started the expedition and the Tibetans refused to fight, retired and were defeated.

The British version of the case has been admirably summed up in the following way

"It was in the autumn of 1886 that a party of Tibetans crossed the Jelap La and dug themselves in—walled themselves in, would be the more accurate description at Langtu. By so doing they violated the sanctity of Sikkim and challenged our authority as the suzerain power. We referred the matter to the Chinese, and waited patiently for year for redress, which never came. Then we took action. We wrote a letter to the leader of the raiders, ordering the evacuation of Langtu. This was towards the close of the year 1887. We were precise—almost meticulous—in our language. We said that the evacuation must be effected by the fifteenth day of the following March. Immediate developments were not promising. The letter was returned whence it had come—unopened. A representation to the Dalai Lama like-wise remained unanswered; and on March the 20th, a British force advanced upon Langtu. The Tibetans retired without fighting, and the punitive force took up a position at Gastong. Twice more during the year 1888, in May and in September, did the Tibetans return, and twice more they were driven back over the Jelap La.

"This seemed to the authorities to be a suitable occasion for setting in motion once more the complex apparatus of diplomacy, and another year of desultory negotiations with the Chinese rolled by. And then an unexpected thing happened—the stock of British patience was exhausted. This not only surprised, but alarmed the Chinese, who with characteristic perverseness and with an altogether (?) alacrity, pressed for a diplomatic settlement on the points at issue. Out of this new-born enthusiasm for agreement came the Anglo-Chinese Convention of 1890 and the subsequent trade regulations of 1893."

The above passage shows great magnanimity instead of any spirit of opportunism on the part of the British Government. But a careful analysis of the situation will throw a different light on the subject. There is no doubt about the fact that Sikkim, Bhutan, Nepal as well as Tibet, were parts of the Chinese Empire. And Tibet directly used jurisdiction over Bhutan and Sikkim. The establishment of the British protectorate over Sikkim is a clear usurpation of Tibetan rights. The Tibetans knew that they were acting in Sikkim within rights as a suzerain power, and did not want to have anything to do with the British authorities in matters pertaining to

It was, therefore, necessary for Britain to proceed slowly. For it would have been very bad diplomacy on the part of Britain to start an expedition against the Tibetan Government without asking China to remedy the situation, because Tibet at that time was undisputedly within the Chinese jurisdiction. It would have wounded the Chinese pride and would have hurt British interests. About this time Russian influence was gaining preponderance at the court of Peking, trying to replace British ascendancy there. Britain, by giving China an opportunity to settle the Tibetan question, not only tried to please China, but also tried to thwart any possible move of China to cooperate with Russia. Britain about that time had to face French rivalry in Siam and on the Burmese borders and was busily engaged in Egypt. It was also good diplomacy on the part of Britain to make an attempt to settle the China committed one way or the other regarding the Tibetan question. If China refused to take action, then it would strengthen the position of Britain to take independent action, and if China agreed to stop her from asserting her rights in Sikkim, then it would mean alienating Tibet from China and, at the same time, result in Chinese recognition of the right of the British to establish independent treaty relations with Sikkim, which, according to the Chinese understanding, was remotely a Chinese dependency.

The result of the Anglo-Tibetan war was the defeat of the Tibetans, and in 1889 the Chinese Resident at Lhasa appeared on the scene to make a settlement. The Indian Government was not anxious to press the question of settlement, except asserting supremacy in Sikkim and securing rights for the British traders in Tibet. But the Chinese pressed the matter and asserted, "China will be quite able to enforce in Tibet the terms of the Treaty", and thus an Agreement was signed in 1890 by Lord Lansdowne and the Chinese Resident in Calcutta on March 17, 1890, by which, among other things, the British protectorate over Sikkim was recognized.

The terms of the Agreement are as follows:—

Article 1. The boundary of Sikkim and Tibet shall be the crest of the mountain range separating the waters flowing into the Sikkim Teesta and its affluents from the waters flowing into the Tibetan Mochu and northwards into other rivers of Tibet. The line commences at Mount Gipmochi on the Bhutan frontier and follows the above-mentioned

waterparting to the point where it meets Nepal territory.

Article II. It is admitted that the British Government, whose protectorate over the Sikkim State is hereby recognized, has direct and exclusive control over the internal administration and foreign relations of that State, and except through and with the permission of the British Government, neither Ruler of the State, nor any of its officers shall have official relations of any kind, formal or informal, with any other country.

Article III. The Government of Great Britain and Ireland and the Government of China engage reciprocally to respect the boundary as defined in Article II, and to prevent acts of aggression from their respective sides of the frontier.

Article IV. The question of providing increased facilities for trade across the Sikkim-Tibet frontier will hereafter be discussed with a view to mutually satisfactory arrangement.

Article V. The question of pasturage on the Sikkim side of the frontier is reserved for further examination and future adjustment.

Article VI. The High Contracting Powers reserve for discussion and arrangement the method in which official communications between the British authorities in India and the authorities in Tibet shall be conducted.¹²

Regarding the unsettled questions mentioned in the articles 4, 5, and 6, quoted above, further negotiations went on, and on the 16th of January Mr. J. H. Hart, Secretary to the Chinese Ambassador, on behalf of the Chinese Government, agreed to the British point of view. The outline was worded as follows:—

"First Pasturage—Such privileges as Tibet enjoys on the Sikkim side of the Frontier will be enjoyed by Sikkim on the Tibetan side.

"Second . Communication . Communication shall be between the Chinese Resident in Tibet and India and shall be transmitted through the medium of the officer in charge of trade in the Chumbi Valley.

"Third.—Trade—Place of trade or trademark, yet to be designated, shall be opened under regulations and with tariff yet to be arranged."

The final agreement on these disputed points was not arrived at until the 5th of December, 1893, the terms of which are:—

"Regulations regarding Trade, Communication and Pasturage to be appended to the Sikkim-Tibet Convention of 1890.

"I. A trade-mart shall be established at Yantung on the Tibetan side of the frontier and shall be open to all British subjects for purposes of trade from the first day of May, 1894. The Government of India shall be free to send officers to reside at Yantung to watch the condition of British trade at the mart.

"II. British subjects trading at Yantung shall be at liberty to travel to and fro between the frontier and Yantung, to reside at Yantung, and to rent houses and godowns for their accommodations and the storage of their goods. The Chinese Government undertake that suitable buildings for the above purposes shall be provided for British

subjects and also that a special and fitting residence be provided for the officer or officers appointed by the Government of India under Regulation I. to reside at Yantung. British subjects shall be at liberty to sell their goods to whomsoever they please, to purchase native commodities in kind or in money, to hire transport of any kind, and in general, to conduct their business transactions in conformity with local usages, and without any vexatious restrictions. Such British subjects shall receive efficient protection for their persons and property. At Lanh-jo and Ta-chun, between the frontier and Yantung, where rest-houses have been built by Tibetan authorities, British subjects can break their journey in consideration of a daily rent.

"III. Import and export trade in the following articles--arms, ammunition, military stores, salt, liquors and intoxicating or narcotic drugs, may, at the option of either government, be entirely prohibited or permitted only on such conditions as either Government on their side may think fit to impose.

"IV. Goods, other than goods of the descriptions enumerated in the Regulation III, entering Tibet from British India across Sikkim-Tibet frontier or vice versa, whatever their origin, shall be exempt from duty for a period of five years commencing from the date of the opening of Yantung to trade, but after the expiration of this term, if found desirable, a tariff may be mutually agreed upon and enforced.

"V. All goods on arrival at Yantung, whether from British India or from Tibet, must be reported at the Custom Station there for examination, and the report must give full particulars of the description, quantity and the value of goods.

"VI. In the event of trade disputes arising between British and Chinese or Tibetan subjects in Tibet, they shall be inquired into and settled in personal conference by the political officer for Sikkim and the Chinese frontier officer. The object of personal conference being to ascertain facts and do justice. Where there is a divergence of views the law of the country to which the defendant belongs, shall guide.

"VII. Despatches from the Government of India to the Chinese Imperial Resident in Tibet shall be handed over by the Political officer for Sikkim to the Chinese frontier officer, who will forward them by special courier.

"Despatches between the Chinese Imperial Resident in Tibet to the Government of India will be handed over by the Chinese frontier officer to the Political Officer for Sikkim, who will forward them as quickly as possible.

"VIII. Despatches between the Chinese and Indian officials must be treated with due respect, and couriers will be assisted in passing to and fro by the officers of each Government.

"IX. After the expiration of one year from the date of the opening of Yantung, such Tibetans

as continue to graze their cattle in Sikkim will be subject to such regulations as the British Government may from time to time enact for the general conduct of grazing in Sikkim. Due notice will be given to such regulations."¹³

These articles of the Convention are of supreme importance in view of the fact that at a later date the British Government contended that the agreements were not lived up to by the Tibetans. It may be said in fairness, that by enacting the free trade clause Tibetans lost revenue, and it see that the Tibetans had to make everything agreeable so that the British subject trade in Tibet. By Article VI, the theory and practice of extra-territorial jurisdiction and the idea of mixed courts was established. By Article IX, it was expressly stipulated that the Tibetans would not enjoy similar privileges in Sikkim, even in the case of the privilege of pasture, but they will have abide by the regulations that will be inaugurated by the British authorities from time to time.

During the period of 1894 to 1899 the were constant irritations between the British officials on the one side and the Chinese and the Tibetans on the other side.

In 1895, the British Government approached the Chinese Government regarding the demarcation of the border between Tibet and India. British, Chinese and Tibetan envoys assembled for the purpose; but the Tibetans as a matter of protest, destroyed many the pillars erected on the border, because they thought it to be an intrusion in the territory. The British Government did not take any decisive action at that time. But with the advent of Lord Curzon, the attitude of the Government of India changed considerably. Indeed, it may be said that the Government of India from the time of Warren Hastings to 1895, was anxious to extend India's boundary lines towards Tibet. But Downing Street which had to look after the interests of a far-flung Empire acted only in opportune moments, to avoid international complications, and exercised a moderating influence upon these energetic British "empire-builders" in India.

RELIGION : ITS NEGATIVE SIDE

By MAJOR B. D BASU, I.M.S. (Retired)

It is not necessary to trace the origins or history of religion, but it may be safely said that it is very difficult to define religion. Perhaps those thinkers are correct who consider it as a psychological phenomenon and a concern of individual subjective thought. Had this opinion gained ground amongst mankind in the past ages, the history of the world would have been written differently from what it has been. Instead of finding man to man, instead of being the end of human society at large, it has done calculable mischief by setting man against man nations against nations.

In the name of religion, blood has been shed, murders have been committed, lives have been lost and property has been wantonly destroyed. How human progress has been arrested in its name is evident to those who have read the well-known work named "Conflict between Religion and Science" by the late Dr Draper of America.

But it is the Semitic religions which are more responsible for the state of affairs mentioned above than any other creed of the world.

It should be mentioned at the same time that the Hindu doctrines of "untouchability" and of the greater purity or impurity of the castes than of others have caused the stagnation and arrested the progress of nations for ages.

Those religions which are proselytising are, as a rule, with the honorable exception of Buddhism, mostly intolerant. The Semitic religions are mostly so. Many of their followers hold that those alone who belong to their creeds will be saved and others outside

the pale of their creeds will be cast into eternal hell. For the benefit of the souls of the heretics, many kinds of torture and refined brutalities were practised on their physical bodies. D. G. Ritchie, in his work on Natural Rights, (p 169) says :—

"Persecution, in the sense of repression for the purpose of maintaining true doctrine, is the outcome of Christianity... Christianity has been a persecuting religion, and persecution has been of the essence of it in a sense in which that could not be said of any of the older tribal or political religions which it supplanted. This is the historical sense of Christianity."

Theological persecution of heretics is an article of faith in the creed of some of the proselytising religions. Thus, according to Thomas Aquinas, heretics are to be compared to utterers of false coins. Says he—

"For it is a much heavier offence to corrupt the faith, whereby the life of the soul is sustained, than to tamper with the coinage, which is an aid to temporal life. Hence, if coiners or other malefactors are at once handed over by secular princes to a just death, much more may heretics, immediately they are convicted of heresy, be not only excommunicated, but also justly done to die."

What is said of Christianity above, is also applicable to Muhamadanism, as the stoning to death of heretic in Afghanistan in 1924 goes to show.

It is not necessary to multiply instances of religious persecutions which have greatly hampered the progress of Humanity.

Again, some of the religious faiths of the world, including some forms of Hinduism, enjoin slaughter of animals, which cannot be conducive to the growth of the sentiment of humanity. The slaughter of animals is called "sacrifice". The slaughter of certain

animals held sacred by votaries of one religious faith, has caused bloodshed of innocent men and prevented harmony amongst followers of different creeds inhabiting the same land.

Some of the religious faiths have caused degradation of women. In some Hindu and Buddhist scriptures, there is evidence of women having high ideals and a high social status. But many Hindu and Buddhist scriptures blacken women's characters also. In the *Contemporary Review* for September 1889, Principal Donaldson writing on "The Position of Women among the Early Christians" says :—

"It is a prevalent opinion that woman owes her present high position to Christianity and the influences of the Teutonic mind. I used to believe this opinion, but in the first three centuries I have not been able to see that Christianity had any favourable effect on the position of women, but, on the contrary, that it tended to lower their character and contract the range of their activity." *

Muhamadanism is popularly, though incorrectly, as far as we are aware, credited with denying the possession of soul to woman. This argument is brought forward to account for the low position which women are said to occupy in Moslem Society. But in some respects, e. g., possession and inheritance of property, the right of widows to remarry, Islam gives to women a higher status than some other faiths. Again, some religious creeds sanction prostitution of women. The author of "The Sexual Life of Our Time" writes —

"In a certain sense, the history of religion can be regarded as the history of a peculiar mode of manifestation of the human sexual impulse, especially in its influence on the imagination and its products.... A scientific study of these relations teaches us that all religions exhibit to a greater or less degree this sexual admixture...."

Then he says

"One of the oldest, if not the oldest of religious sexual phenomena is religious prostitution—the 'lust sacrificio', as Eduard von Mayer happily expresses it, since therein the sexual act is regarded as a sacrifice made to the deity. ...According to the researches I have myself previously published regarding religious prostitution, this may be divided into two great groups

1. A single act of prostitution in honour of the deity.
2. "Permanent religious prostitution"

It is not necessary to follow this author

* This extract is taken from the footnote on p. 172 of D. G. Ritchie's "Natural Rights". The italics are ours. On the subject of the position of woman in the Christian Church, Lecky's History of European Morals may be also usefully consulted.

in what he says regarding religious prostitution in the different creeds of the world. It will suffice for our purpose to recognise the fact that certain religions by sanctioning prostitution, have degraded man and woman and so proved detrimental to the cause of the uplift of humanity. A mere reference to the institution of *devadasis* in Hindu temples in southern India will suffice.

Religion has brought into existence a class of people known as ascetics. Whether ascetics have done more harm than good to humanity is a question that has to be carefully considered by those interested in sociology. But in India, the class of ascetics—passing under the names of yogis, sadhus, fakirs, etc., is a great pest and nuisance and represents degraded humanity. It may be safely asserted that a very large majority of men turn ascetics from motives which can hardly be called spiritual.

It should be mentioned here that we do not say anything against the ideal of asceticism. What we say is meant to apply to ascetics as a class who practise asceticism not from any higher motive than that of securing their own happiness. Professor Clifford has very rightly observed :—

"Happiness is not the end of right action. No happiness is of no use to the community, except in so far as it makes me a more efficient citizen; that is to say, it is rightly desired as a means and not an end."

But are ascetics as a class useful citizens? Do they take any interest in what they call worldly or mundane affairs?

Prof. E. J. Urwick, in his well-known work on "A Philosophy of Social Progress" says —

"We need nature's processes of struggle, selection and elimination of the unfit. Society is becoming clogged with its unfit, whom we must keep alive by checking every natural agent of Selection.... And the influence of religion is the worst of all. In its highest form it sterilizes the best members of society by the celibacy imposed upon the men and women who are admittedly the holiest, in all its forms it saves the unfit from destruction by insisting upon mercy and pity, and by teaching charity, support the feeble and the failures". (pp. 77-78)

Some religions, such as Christianity, have spread false notions regarding anthropology. Writes a well-known English author :

"The conversion of the [American] Indian to Christianity was, no doubt quite sincerely, alleged as a justification of the Spanish conquests in America. The Puritans in New England, like the Dutch settlers at the Cape, were somewhat

influenced by the scriptural example of the utter destruction of the Canaanites."

Ritchie's *Natural Rights*, p. 268

Some of the religions inculcate the notion that by a belief in certain dogmas or confession to a priest, or through the mediation of certain persons one's sins will be washed away. Many votaries of those creeds do not hesitate to practise all sorts of iniquities under the belief that all their misdeeds will be condoned by mere confession or through the intercession of some mediator. The Spaniards practised every species of cruelty on the Mexicans and the Peruvians, and considered themselves absolved of their sins by confession on death-bed.

Not a few of the religions foster superstitions. It may be said that some of the religious beliefs are inseparable from superstitions. Witchcraft and taboo are superstitions which exist or existed in many religious creeds of the world and these cannot be said to be beneficial to the cause of the uplift of humanity.

The proselytising creeds often have ulterior ends to serve rather than save the

souls of those who do not belong to their faith. Thus

"It is well known that the Protestant propaganda, especially in England and America, is very intimately connected with the propagandism of the material and commercial interests of those two great nations, and it is known also that the object of the latter propagandism is not at all the enrichment and material prosperity of the countries into which it penetrates in company with the word of God, but rather the exploitation of those countries with a view to the enrichment and material prosperity of certain classes, which in their own country, aim only at exploitation and pillage." In his work on "God and the State," Michael Bakounine, Founder of Nihilism, apostle of philosophical anarchy writes:—

Religion has hampered the upward and onward march of humanity because it is responsible for

(i) intolerance and causing persecution of so-called heretics and infidels and suppression of freedom of thought.

(ii) degradation of woman and sanction of religious prostitution.

(iii) bringing into existence a class of people known as ascetics who do very little good to society. (It also makes fanatics)

(iv) fostering superstition.

THE WORLD'S WORST IN CRIME

By DR. SUDHINDRA BOSE,

Lecturer in Political Science at State University of Iowa

AMERICAN newspaper and magazine-writers are prone to see the end of American paradise if it is to open to Oriental immigration. To them, Asians are a menace to American civilization which is depicted as pure and white as a lily. The flaming prophets of American racial purity draw blood-curdling pictures of Asian vice and criminality, and warn their countrymen that Asian "goblins will get us yet if we don't watch out". The fear of Oriental bogy is so persistently preached and hymned in these States that it has become almost a national article of faith. While the citizens of America are asked to shake in their shoes before the wicked inferior Asian who is sure to corrupt the purity of democratic govern-

ment, it appears that they have a better reason to shiver and tremble over their own moral disintegration. Only a little while ago, an American statesman described the United States as the most crime-bent nation in the world.

AFRICA—CRIME CENTRE OF WORLD

Stories of most revolting, diabolical crimes are reported in newspapers almost every day. A wife poisons her husband, and now she is trying to collect Rs. 30,000 from a Life Insurance Company in which he was insured in her favor. The policy provided that the wife was to get Rs. 15,000 if the husband died decently in his bed, but twice as much

if he died by violence. The jury believes that the death was violent.

A mother in Iowa slashes her 15-day-old infant's throat and wrists with a razor, because it cried and irritated her.

A public meeting is being held in a town square of Massachusetts when a group of citizens determine to break it up. It is a battle royal in which hundreds participate. Rocks and eggs and shots are freely used. Chief of Police is overpowered by the crowd.

Down in Ohio, a mother places her six-week-old son in a wash-boiler she has filled with water, and lights the fire under it. Several hours later the woman's husband discovers the child boiled dead.

A young man of Illinois, veteran of the late "war for democracy", returns home one morning. The sight of his aged father makes him furious. The son straightway appeases his wrath by running a sharp bayonet through his old father.

Two women drive into a town of South Dakota, enter a bank, and while one points a pistol at the bank cashier, the other scoops up all the money in sight. "Don't stir", the older woman orders, as she points the loaded pistol at the cashier. "I hate to take a life, but I mean business, and I'll do it if I have to". The female bandits flee in a waiting motor car.

A New Yorker attacks a woman with a sledge hammer, because she would not desert her husband for him. He beats her about the head until she falls unconscious. Then he drags her downstairs to the basement and thrusts her, still living and moaning, into the blazing furnace which heats the kilns. Slamming the furnace door shut and propping a shovel against it to keep it closed, he coolly leaves the wailing woman on fire and she burns to cinders.

Extreme as some of these recent incidents

are, perhaps they have their significance. The show which way the wind is blowing. They are typical of the spirit of disorderly conditions in the Republic. Americans boast of having the grandest civilization in the world; but they also hold the record of being the greatest criminal nation on earth. "This country is suffering under an indictment," said Judge Alfred J. Talley of the Court of General Sessions of New York County, "when

The Challenge

His revolver, handcuffs, and nightstick are stolen. Policemen are shot and beaten.

Two university students of Chicago, scions of wealthy families, decide to commit a "perfect crime". They lure a little boy for a ride in their automobile, hammer his brains out in cold blood, and then throw the body of the little fellow under a culvert. An exhibition of perfect crime in "God's own country".

DAY AFTER DAY
—Kirby in the New York World.

tide which has been rising progressively in the United States for the last quarter of a century. The murder-rate, according to Dr. Frederick L. Hoffman, the consulting statistician of the Prudential Insurance Company of America, has doubled in twenty-four years. Forty thousand Americans were killed in the late European crusade for self-determination. Now the number of murders in the United States since the great war is larger than the number of Americans lost during the war. The annual toll of felonious homicides in America exceeds 11,000. During the last fifteen years, the murder-rate in this Republic has been between 80 and 100 per thousand. In Japan, Great Britain, Ireland, Holland, Switzerland, and Norway, the murder-rate runs from 3 to 9 per hundred thousand. "A point has been reached in our national life," says Dr. Hoffman, the most accurate authority on the subject, "where no one is safe anywhere at any time. Murders are committed with fiendish cruelty and often with superhuman ingenuity which baffles the authorities and defeats the ends of justice,"

proclaims it the most lawless on earth. You will find that the United States must plead guilty to that indictment." This is to say, that there is more crime committed in America, in proportion to population, than in England or France or Italy or Japan or any other civilized country under the sun.

Sneaks, murderers, thieves, robbers, black-mailers, speeders, professional bombers, crooks, gunmen seem to feel a dismally large part of the American picture. A gun is as common as a man's tobacco pipe or a woman's powder puff in the domestic economy of this country. Americans apparently must needs go armed constantly, lest highway-men stick them up at the point of a gun or rain-robbers pour them full of hot lead.

Chicago, in point of population, is the second largest city in America and third in the world. Now the murder rate in Chicago for the current year is a little better than one a day. Last year there were 347 murders, the year before that 270. It makes Chicago "the crime capital of America", nay, the crime capital of Christendom.

RIISING TIDE OF CRIME

There is no crime wave ; it is a crime

'That for You'

A strange commentary upon the progress of American civilization'

According to the recent report published by the Associated Press of the United States, the toll of human life taken by motor vehicles last year in this country was at the rate of more than two for every hour in the day. "America's death-rate due to automobile

accidents leads the world, being 148 fatalities for every 100,000 population against 53 in England and Wales, and 43 in Scotland, 46 in New Zealand and 36 in Canada during 1923. Figures for 1924 show that for 158 American cities the automobile accident death-rate was 194 per 100,000 population, causing not less than 17,400 deaths in automobile accidents, not counting accidents which involved railroad trains, or street cars and automobiles."

Speed-lovers obviously think more of amusement than of human life. In the City of New York, 300 children are slaughtered

every year by automobiles. In Chicago, 250 children are killed annually. Thus in these two cities alone, 550 children are massacred every year by automobiles. At this rate one may calculate that in the entire United States no less than 7,000 innocent children become victims of automobile fatalities. "What should we say," asks a correspondent of the New York Nation, "if the Turks were to massacre 7,000 Christian children every year?"

Enormous property losses are also suffered each year by the American people through robbery. Boys and girls hold up trains with automatic revolvers. Train robberies have become so frequent that for the past two years the Post Offices over the greater sections of the country have stopped sending registered mail by night trains. Mail coaches, even during the day-time, are armed with small artillery.

Since last October, the main Post Office and each of the eighty-three branches in the City of Boston have been turned into miniature fortresses with expert rifle and pistol-men as guards. Post Office receipts are transported in steel-armored trucks, each manned by four men who are experts with the pistol. Every Post Office Clerk serving at an open window is armed with an army revolver. That is in Boston, "the Athens of America, the hub of the world".

Last year, six times as many people were robbed in only two American cities, Chicago and New York, as in the whole of the British Canada. "William J. Burns, formerly head of the Bureau of Investigation of the Department of Justice, estimates that more than Rs. 300,000,000 a year in property is stolen from railroad, express and steamship companies and from trunks and piers," reports a writer in the *New York Times*. "Figures published by the American Bankers Association for the year ending August 31, 1922, show that among their members alone there were 136 hold-ups and 319 burglaries, representing a loss of Rs. 3,673,467. That means that every day in the year there is a bank robbery or hold-up of importance, not to mention those committed against banks that are not members of the Association." "What America is at the mercy of crooks and thugs? Is robbery becoming an American national habit?"

HORRORS OF LYNCHING

As a result of ceaseless campaign of agitation by Negroes, there has been in recent years a considerable decrease of lynchings in America. Lynching, however, is not yet abolished. For thirty years prior to 1919 the average number of lynchings per year was 107. During the last five years from 1920 to 1924, the number of persons lynched was 234. Every State in the Union except four has had one or more lynchings in the past forty-years, the exceptions being Vermont, New Hampshire, Rhode Island, and Massachusetts.

Making bonfires of human flesh is unfortunately attended with circumstances of god-dish cruelty and horror. I quote the following description of a typical lynching from the Chattanooga (Tennessee) *Daily Times*, February 13, 1918

TORTURED AND THEN BURNED

Still Springs Scene of Blood-Curdling Lynching
Jim McIlherron, Negro, Executed by Masked Men

Thousands of men, women, and children witness proceedings.

Many crying for the negro's blood—
Laver of Rodgers and Tigert captured Tuesday.

"Jim McIlherron, the negro who shot and killed Pierce Rodgers and Jesse Tigert, two white men at Still Springs last Friday, and wounded Frank Tigert, was tortured with a red hot crowbar and then burned to death here tonight at 7-40 by twelve masked men. A crowd of approximately 1,000 persons, among whom were women and children, witnessed the burning.

"The captors proceeded to a spot about a quarter of a mile from the railroad station and prepared the death fire. The crowd followed and remained throughout the proceedings. The negro was led to a hickory tree, to which they chained him. After securing him to the tree a fire was kindled. A short distance away, another fire was kindled and into it was put an iron bar to heat.

When the bar became red-hot, a member of the mob jammed it toward the negro's body. Grazed with fright, the black grabbed hold of it, and as it was pulled through his hands the atmosphere was filled with the odor of burning flesh. This was the first time the murderer gave evidence of his will being broken. Scream after scream rent the air. As the hot iron was applied to various parts of his body, his yells and cries for mercy could be heard in the town.

"After torturing the negro several minutes, one of the masked men poured coal oil on his feet and trousers and applied a match to the pyre. As the flames rose, enveloping the black's body, he begged that he be shot. Yells of derision greeted his request. The angry flames consumed his

clothing and little blue blazes shot upward from his burning hair before he lost consciousness."

REMOVING BASIC CAUSES OF CRIME

This unspeakable reign of terror and lawlessness is going on in a country which boasts of superior Christian Culture. I do not wish to belittle the material achievements of America. Only one hundred fifty years ago, thirteen little jealous colonies on the Atlantic sea-board were still under the domination of King George. In four generations, the Yankee has threaded a continent, built cities, and accumulated immense wealth. While other countries are suffering from the shortage of gold, the United States is holding four and a half billions of the world's nine billion dollars gold reserve. The material success of America, remarkable as it is, cannot be everything. Moreover, it is being overshadowed by moral and spiritual bankruptcy. Internal disorders, racial differences, and religious hatreds are on the increase. Tolerance, the truest mark of democracy and of civilization, is almost lost sight of. There must be something wrong with the character of the American, something must have weakened his moral fibre.

Is there any way to restore the American national sanity? Are Americans so morally anemic that they are incapable of redressing the chaotic situation? Of the many remedies advocated for the reduction of crime none is heard more often than that of swifter and severer punishment. But is punishment alone a sure and a sufficient deterrent of crime? The trouble, I need hardly say, is much more deep-seated. More than half a million persons, male and female, are annually penned up in jails or reformatories in the United States. They are now building great new prisons, for "all the States are overcrowded with criminals and defectives, with the average age of prison inmates ten years below what it was a decade ago." The present system of punishment does not seemingly reach the heart of the problem of crime; it remains, therefore, a "futile exercise in despair and bad humor."

The advanced criminologists are seeking for causes of crime in emotional or psychological reactions. Dr Max G. Schlapp, Professor of Neuropathology at the Post-graduate Medical School Hospital of New York, looks upon the prevalence of crime as a symptom—along with increasing feeble-

minedness and insanity—of a basic disturbance in the nation's emotional stability. "We are headed for a smash in this country," he says, "if we keep on the way we are going. There is a curve in the emotional stability of every people which is an index of their growth and power as a nation. On the upswing, the nation expands and prospers and gains in power with the normal development of emotional life. Then comes a time when emotional instability sets in. When it reaches a certain point, there is a collapse. We have almost reached that point. This emotional instability causes crime, feeble-mindedness, insanity. Criminal

conduct is a pathological matter, just as these other disorders."

I am not here concerned as to how America should rid itself of criminals. That is my problem at this time. Each nation must make its own way out of the crime monster as best it can. All I have been endeavoring here to do is to indicate that inasmuch as Americans enjoy the reputation of being the crime-centre of the world, they cannot afford to assume a self-righteous air. Indeed, it comes with ill grace for Americans to condemn other peoples as "inferior", or degradingly "Asiatic".

ENGINEERING TRAINING

A comparison of University and Industrial discipline and methods.

By S GHOSH,

ASSOC. M.S.T., M.I.E.R., AMI MECH. E., MEMBER I.E.E., ACTIVE MEM. A.I. & S.E.E., M.I.E. (INDIA)
Chief Electrical Engineer, Tata Iron and Steel Co., Ltd., Jamshedpur
 & A. R. GUPTA, A.M.I.E.E., ELECTRICIAN.

THIS article* is intended for those, who have made up their minds to adopt Engineering as their career, but I hope it may also be useful to those who are still considering the question. I propose to describe the kind of education and training suitable for a young man anxious to join the higher ranks of the Engineering profession.

Mr Henry Burkinshaw in his presidential address delivered to the Institution of Engineers (India) mentioned that as India is passing from an almost entirely agricultural, to an industrial country of importance, the need for Engineers will increase.

I would like to point out the fact that India had her days once in trade and industry. The Dacca muslin, the Kashmir shawl, the brass work of Benares and a lot of other industrial products used to cross the seas or were sent overland through the Kharbar pass to compete with goods manufactured in the West. The Asoka Pillar at Kutub in Delhi has withstood the deteriorating influences of the

weather for centuries. The caves of A are a standing testimonial to the magnificent engineering skill which the Hindus attained long before the beginning of the Mohammedan Era. Think of the Taj at Agra standing like a white picture against the background of the Heavens, filling the eyes of the spectators from all parts of the world with awe and wonder. But this was 200 years ago and India has fallen into a slumber in the matter of arts and crafts for a long time before and after the advent of the English. The impact of the Western Civilisation has awakened her from slumber and India may now be on the verge of a revival of her Industries and Arts. It is but fitting therefore that Indians should devote the best of their time and attention to the development of this Industrial Renaissance.

The vast resources in men and materials that India possesses are bound sooner or later to place her in the front rank in the Industrial World, but to help this process it is necessary to create the right type of Industrial Engineers to guide her to her destiny.

In olden times the activities of

* Read before a meeting of the Alumni Association of the National Council of Education, Bengal, at Jadavpur.

concerns here were directed largely to those who had grown up from apprenticeship and who were primarily mistries men. The work of modern engineering resulted in the development of enormous industries which require a greater skill, intelligence and knowledge, a higher order of administrative ability, which was entirely lacking in the days of workshops and limited organizations. It is therefore that the type of mentality needed in this great industrial development is other than the limited education and intelligence which the old-time shop Superintendent usually possessed.

The fundamental purpose of the technical education is the training of men to become competent and willing workmen for the good of themselves and for the good of the community.

The point from which I view technical education is that of employer, not that of educator. I have been engaged for years with the Tata Iron and Steel Co. This has brought me into intimate personal contact with a large number of technical students, and I have become well acquainted with their strong points, which are many, and, at the same time, with a few of those points which lead me to call for further development and protection. Something may possibly be deduced by considering what has seemed to be the friends of our young technical students to be the one defect which they generally all have in common.

For a period of six months to two years after leaving technical schools, they are, generally speaking, discontented and unhappy. They are apt to look upon their employers as unappreciative, unjust and even tyrannical. It is frequently only after changing employers once or twice and finding the same lack of appreciations in all of them that they finally settle down in their real work of usefulness.

It is, then, that these young men are disappointed and of practically little use during the first year or two after passing out of Technical Schools?

To a certain extent, this is unquestionably so. The sudden and radical change from life spent as boys almost solely in absorbing and assimilating knowledge for their own use, to their new occupation of applying knowledge for the benefit of others. To a large extent it is the sponge objecting to the pressure of the hand that uses it. To a greater

degree, however, I believe this trouble to be due to the lack of discipline and to the lack of direct earnest and logical purpose which accompanies, to a large extent, our Indian University life.

During the 3 or 4 years that these young men are at Engineering Schools, they are under less discipline, and are given a greater liberty than they have ever had before or will ever have again. Is not the greatest problem in University life, then, how to animate the students with the ideal of service?

In facing this question, I would call attention to one class of young men who are almost universally imbued with such a purpose; namely, those who through necessity or otherwise, have come into close contact and direct connection with men working for a living. These young men acquire a truly earnest purpose. They see the reality of life, they have a strong foretaste of the struggle ahead of them, and come to the University with determination to get something practical from the college training which they can use later in their competition with other men.

They are in great demand after graduating and as a class make themselves useful almost from the day that they start work.

Neither their earnestness, however, nor their immediate usefulness comes from any technical knowledge which they have acquired while working outside the University, but rather from having had brought home to them early the nature of the great problem they must face after graduating.

Unfortunately, laboratory or even shop work in the University, useful as they are, do not serve at all the same purpose, since the young man is surrounded there by other students and professors, and lacks the actual competition of men working for their living. He does not learn at college that, on the whole, the ordinary mechanics and electricians, and even poorly educated workmen, are naturally about as smart as he is, and that his best way to rise above them lies in getting his mind more thoroughly trained than theirs, and in learning things they do not know. Nothing but contact with work and actual competition with men struggling for a living will teach them this. It cannot be theorized over or lectured upon, or taught in the school, workshop or laboratory.

Let me repeat that our students, after passing out from the Technical School, must spend three years in some big engineering

workshop in order that they may not only come in touch with workmen and obtain commercial manufacturing experience, but by undertaking commercial work, they must build up a keen sense of responsibility. They must build materials which are to be sold; complete commercial tests, design apparatus which must meet actual needs; install plants erect machinery or negotiate for and close contracts covering apparatus which is to do work in the World. These engineering apprentices are no longer in the college class-room or laboratory where the result of mistakes in calculations or judgments mean no particular personal discredit. They are in direct contact with the working world. They must think clearly and self-reliantly and the effect of errors due to lack of ability, study and sound judgment become quickly apparent and are brought home to them sharply. It is by such treatment that I would supplement the college course and broaden the view-point of the young engineers.

Our present Technical Schools in India do not give higher training in mechanical and electrical engineering. To my mind, they are trying to produce a better class of mechanics and electricians with some knowledge of mathematics and drawing, but not engineers, who can be safely trusted with responsible positions. I feel that my countrymen should have every facility for getting proper training in engineering, especially in mechanical and electrical sections to qualify themselves, not only for subordinate but for responsible position. I would like to impress upon our educational ministers and future leaders the fact, that the present system of engineering training is merely a waste of time, money and materials, which I consider to be a crime, as we are not only neglecting our duty to ourselves but to the community at large.

I propose to consider education under the following heads —

- (1) Preliminary or General education
- (2) Technical training
- (3) Practical training.

It is quite good for an engineer to get a general education like a member of any other profession. I. Sc. passed students of our Universities will do. I do not speak here of the trained artisans for whom I think the elementary school knowledge supplemented by an apprenticeship with evening trade classes is sufficient. I speak of engineers for business or professional work in applied science or construction. The word "Engineer" is not, as is

popularly supposed, derived from the word engine, a machine. For educating these engineers different methods in vogue in the different technical institutions in India are. (1) four years of part-time college studies, one week workshop, one week class; morning workshop and evening class, etc., and (2) the four years course in Sandwich system—6 months apprenticeship and 6 months college (lately introduced in the Engineering College of the Benares Hindu University). The former method has been generally followed in nearly all the technical institutions in India and the ill effect of that has already been pointed out in my experience outlined in the foregoing.

Two requirements stand first in selecting a course of training for the future engineering student, viz—(1) obtaining the necessary scientific knowledge, (2) acquiring the requisite practical experience. If either be disregarded, the result is to handicap the student in his work and to exclude him from the best posts in the engineering world.

I would like to emphasise these points upon those of our Indian students proceeding to England, America or other foreign countries for engineering training, who are so very eager to obtain the degrees and pay little importance to their practical training. They spend a few years in the University, some of them taking very high places, and come back to India. It has, however, been found out that they prove themselves unsuccessful in practical life here. Some of them take a course of practical training for a couple of months or three months in some workshop in England or America during the vacation period, which is, however, far too short for any practical training. The chance of handling a job rarely comes in this short space of time. On the other hand, students who after the completion of their University career have taken a thorough practical course of training in some workshop in England or America for at least three years, have proved themselves to be very capable men. It might be that many of them were very low in the University Examination, but their having a systematic practical training makes up the deficiency in their theoretical portion. I, therefore, think that intending students proceeding to foreign places for this branch of training, should be prepared to spend at least six years—three years to be spent in some University for the theoretical course, after finishing which

er three years are to be spent as indentured apprentices for a thorough training.

As regards the State and other Scholarship-holders, I think the authorities concerned could do well, if they are not in a position to extend the scholarship for the above-mentioned period (i. e. 6 years), to pick up students from Indian Technical Schools and colleges and then send them out for their practical training for three years. If this be done, then we can have really qualified men.

With the present system of engineering training in India, it is impossible in the workshop of a training college to give a student practical acquaintance with workshop methods that can only be obtained in works, actually manufacturing machinery for sale. All that can be imparted is instruction in the use of tools and machinery. Methods of management—working to time and price—the discipline, so to speak, of actual operation can only be obtained in the works. We must recognise this, and consequently, should make arrangements, so that the student can supplement the training given in the workshop of a technical school, by experience in manufacturing under conditions imposed by commercial competition.

As you all are aware, in this country it is a big problem to arrange for apprenticeship in any engineering workshop, and this difficulty can only be solved if the State and other public organisations come to the rescue by making arrangements with well-known engineering companies, power stations and Railway Engineers, to pass pupils through a course of practical experience in the manufacturing works and generating stations on a living wage.

This Association of Engineering Works, in which the colleges will cover every branch of engineering, the two sides of the training being correlated by means of regular reports checked by the Manager of the works and by a member of the staff of the college, should frequently visit the affiliated

works and keep in touch with the work of his pupils.

The Factory training will bring out clearly the serious and to some students the disappointing fact, that an Industrial Concern is not running a shop school but a business proposition, and that they are likely to acquire more in the way of general discipline than technical information; and it is well that this is so, for more apprentices fail for lack of ability to get along efficiently with other people than for lack of technical knowledge.

When employers of technical students say that they are unsatisfactory, it is usually not because they are not full-fledged engineers, but it is because they are not good beginners.

In conclusion, I beg to say that to the average Indian mind the title of Engineer has only a vague meaning. As generally understood, a Mechanical Engineer is a Mechanic who is attending a Boiler or driving a Steam Engine. Similarly, the Electrical Engineer is a man who repairs fans and lights. These examples are not exaggerated but correctly represent the general idea of the Indian people in regard to the profession of Engineering.

Years ago, Engineers were individuals of little consequence, compared with men in other learned professions. Now they, too, form a profession of recognized importance.

Practically, every operation in which a man is now engaged involves directly or indirectly the work of the Engineer.

To-day, Engineering is more of an exact science than it was in the rule-of-thumb days of fifty years ago, and many of its branches have already reached the stage of almost astronomical precision. It is for this reason that a systematic mental training in technology, before entering engineering practice, is so desirable. The men of the future who will occupy leading positions as engineers will be those, who have had a college training combined with practical workshop experience.

RABINDRANATH TAGORE AND KNIGHTHOOD

BEING aware that a discussion has been raised in regard to my knighthood, I feel it right to put clearly my own view of it before the public. It is obvious that it was solely to give utmost emphasis to the expression of my indignation at the Jallianwalla Bagh massacre and other deeds of inhumanity that I followed it that I asked Lord Chelmsford to take it back from me. If I had not fully realised the value of this title, it would have been impertinent on my part to offer it as a sacrifice when such was needed in order to give strength to my voice. I have not the overweening conceit discounteously to display an insincere attitude of contempt for a title of honour which was conferred on me in recognition of my literary work. I greatly abhor to make any public gesture which may have the least suggestion of a theatrical character. But in this particular case, I was driven to it when I hopelessly failed to persuade our political leaders to launch an adequate protest against what was happening at that time in the Punjab.

A title of personal distinction for some merit that has a universal value is never a reward of favour. To show honour where it

is truly due is the responsibility of the party who does it and any token of it should not be thrown away, unless for an exceptional occasion or purpose which is painfully imperative. I am not callously insensitive to the approbation which I have been fortunate enough to gain from outside my own country, and for the same reason, I also feel proud that men like Jagadish Chandra Bose and Prafulla Chandra Ray have won a title valuable like any other real recognition which our country may rightfully claim. The only complaint that can be made is that this title is fast losing its distinction through its heterogeneous association and that the above-named illustrious countrymen of ours are made to put up with too many strange bed-fellows in their career of glory. While concluding, I confess to an idiosyncrasy, which has already been pointed out by the Editor of this journal, that I do not like any addition to my name,—Babu or Srimut, Sir or Doctor, or Mr, and, the least of all, Esquire. A psycho-analyst may trace this to a sense of pride in the depth of my being and he may not be wrong.

RABINDRANATH TAGORE

ITALIAN INDOLOGY

By PROF. G. TUCCI, Ph D.

IS there in Italy a real interest in India and Oriental thought? Can we speak of an Italian Oriental school? If you rely on the history of Indian philology written by so

great a scholar as Windisch was, the answer would be a negative one. I do not know how to explain his silence about Italian indology because, even if we had not so many philo-

logists of a world-wide reputation as Germany had, India and Indian thought and literature were and are seriously studied in Italy. Perhaps the German professor did not pay sufficient attention to the works of our indologists, because of the language in which they are written, or because we never specialized in those technical and mere philological researches which are a privilege of German scholarship. In Italy that humanistic spirit is still living, to which we owe the glorious blossoming of our Renaissance and which, through philology permeated with philosophical spirit, lead us to direct contact with ancient or foreign civilizations, thus realizing in our soul a sympathetic understanding of every thought and every literature. More than to write, we prefer to read and to enjoy what we read. I confess that there is perhaps a bit of egoism in this attitude of our mind. However, we cannot but be proud of it, as to it only we owe the possibility to feel so deeply the spiritual exigencies of so many and so different civilizations. Therefore, the value of Italian orientalism is not always to be sought for in their books or in their works; the best part of them is their own personality, their enthusiasm, their faculty to revive and to feel what they know. Certainly this represents a loss for science, but how could we renounce this inborn curiosity, this plunging into our favourite texts, this unifying ourselves with our author, and follow, during all of our life, the tiring and hard work of mere philological researches? To the joy of discovering the sources of this poet or that, our masters preferred to live with and to feel them. We had for example a great scholar in Teza. He was really what can be called a linguistic genius: he knew thoroughly Sanscrit and Iranian, Pali and Prakrits, Chinese and Tibetan, Japanese and Mongolian, Armenian and Turkish and many other languages. But with this marvellous and almost unsurpassed science, he did not leave any work worthy of his knowledge. Of this wonderful man only some articles remain which hardly could give an exact idea of all he knew. It was neither idleness, nor the scruple of precision, nor the fear of the mistakes so common in many scientific researches which could have prevented him from giving vent to his never satisfied curiosity and to his thirst after new literary emotions.

This ideal preoccupation was the *leit motif* of the spiritual and intellectual life of our

orientalists. Our libraries are not so rich in collections of Oriental Texts and manuscripts as those of France, England and Germany. Before obtaining a regular appointment in some university, we are obliged to work seriously for years and years. Nevertheless, we are proud of our studies, and like Indian pandits meditating in the wild retreat of the woods we dedicate our life to them, only because of their answer to a spiritual and ideal exigency of our Soul, not because they can give us practical welfare or any renown. To this humanistic and romantic attitude, we owe the literary tendencies which are prevalent among our orientalistes who are not only men of science but specially men of letters. What we like is to interpret our texts, to understand them, to feel them, and then we do our best in order that our students or brother souls can partake of our own impressions and feelings. I know that a translation is usually considered as an easy task and that, as an *oeuvre de divulgation* the work of the translator is scarcely appreciated by many scholars. But let us say on the contrary that a good and artistic translation is very difficult: because it needs not only a serious philological preparation but that *acribia*, that exegetical ability, that harmony of feelings which only can prepare a spiritual atmosphere able to explain many more things, than mere science can. To understand, it is necessary to love and we Italians are full of love. This love you find in the works of our orientalistes. Gorresio went quite young to Paris, studied Sanscrit with Burnouf and dedicated all his life to the edition and the translation of the Ramayana, that are still a real monument of erudition and accuracy which will be much more appreciated when we remember the difficulties in the midst of which Gorresio worked.

Angelo de Gubernatis, one of the first professors of Sanscrit in Italy, cannot be compared with Gorresio, he was possessed by a true mania, the mania of writing and publishing, and of course the multiplicity and variety of his literary productions impaired the scientific value of his contributions. But we cannot forget that he went to India in order to study Vedic texts and religions. It was the time of Max Mueller and Kuhn, the principal assertors of that comparative mythology which found in de Gubernatis one of his more convinced paladins and that he was the first and alas the last, to collect a

good number of Sanscrit manuscripts, many of which, on Jaina subjects, are preserved in the library of Florence and known to scholars through the catalogue of Aufrecht and the supplement to it by Prof. Pavolini.

It is also interesting to remember that he was the first to write a drama on the story of Rama, now almost forgotten, because of the absolute lack of dramatic ability in the author. The best work of him seems to be the studies on the Italian missionaries in India and specially on Dr. Paolino a San Bastolomeo, who wrote, as is well known, the first Sanscrit grammar in Europe.

Prof. Kerbacher, who occupied for many years the chair of Sanscrit at the University of Naples, had the soul of a poet and the knowledge of a true scholar. Everybody can exactly appreciate the real value of his studies on the Mahabharata and the Sakuntala but only we Italians can realize the beauty and the harmony of his poetical translation of the Mricchakatika, which can be considered, as his master-piece, as it is certainly one of the best poetical works of our modern literature. And this was also acknowledged by so great an authority as Poscoli, who, when invited to publish a poetical anthology for our schools, selected many a passage from the large work of Prof. Kerbacher. Owing to these translations, which looked as a revelation from an unknown world, the interest in Indian literature was increasing by and by; so that now Italy is the only country in Europe which has the greatest number of chairs of Sanscrit. Almost every faculty of letters has got its professor of Indology, Ballini and Pezzagalli in Milan, Suali in Pavia, Belloni Filippi in Pisa, Formichi in Rome, Cimmino in Naples, Pavolini in Florence, Vallauri in Turin.

I am sure that many of these names are known to our Indian colleagues, because some of these professors not only contributed to diffuse a better knowledge of Indian classics and of Indian thought among our people, but also pursued scientific researches in very scholarly papers and books.

The many-sided activity of Prof. Formichi is known to the readers of the *Modern Review* through the article of Prof. Kalidas Nag published in the December number. I quote here the "Introduction to the Study of Indian Philosophy" by Suali, which is a serious contribution to the history of Nyaya and Vaisesika and I remember the wonderful activity of a great scholar of whom we can

but deplore the immature death and who our Indian colleagues well knew and appreciated. I mean the Poet Tessitori, whose short life made so many contributions to the history of the Indian vernacular. Prof. Ballini, specially interested in Jaina and Jaina Prakrits, we owe a very useful study on Indian metrics based on Sanscrit metrical treatises and this work is an attempt to trace the historical evolution of Indian verses.

Prof. Belloni-Filippi, besides some lectures he gave in Pisa with Prof. Formichi on Indian philosophy and religions and some very happy and accurate translations of the *Svapna vasavadatta*, the *Charudatta*, the *Brhad-ranyaka Upanishad*, particularly studied the Indian versions, editing with a large amount of a very useful commentary the *Naciketa Upakhyanam* and published an important work on the *Kathaka Upanishad*.

Prof. Pavolini, in many very scholarly papers published in the *Giornale della Societa Asiatica Italiana*, which with the *Rivista degli studi orientali*, edited by the oriental school at the University of Rome, is the most important Oriental Review we have in Italy, largely contributed to the study of Indian novels and poetry. Now, he is preparing a large work on Indian gnosis literature.

But, as I said before, our Indologists are doing not only the work of scholars but also the work of love; and they are seconded by the majority of our cultivated people among whom the interest in India and Indian thought is increasing day by day.

As Prof. Formichi justly remarked in his article on "India and Italy," you can realize how Italians understand India from the enthusiasm they have for Tagore. I think that it is difficult to find another country where the great prophet of India is more loved. We have for the Poet not a mere intellectual sympathy but we can feel him. When we read his songs, which are an indisputable unity of the good and the beautiful, of thought and religion, of love and hope, we forget that he belongs to another country whose destinies are quite different from ours, but we discover in him only that deep humanism which renders his poetry an eternal living harmony.

And the more we know Tagore, the more we are interested in India. It is evident that a country where such a great man can be born and be understood must have

spiritual and intellectual value which needs must represent a great part in the history of modern civilization. So that an increasing interest in modern India begins now among our people. A serious movement has started which tries to diffuse a better knowledge of contemporary Indian art; and of course, there is no good artist who does not know the name and the works of Abanindranath Tagore. We begin to realize that India is no more a dead country, the country of enormous poems or mystical speculations, of Yogis and pandits, of Maharajas and mysteries, but a great and living country, rather a world—so many being the races, the languages, the religions which can be found in it—a world which has every possibility to announce a new message to suffering humanity. The time has come to recognize that Indian civilization is no more an object of scientific or literary curiosity. We must acknowledge that the study of Sanscrit is no more sufficient in order to rightly understand this marvellous country. Of course, it will be always necessary, because many features of modern Indian thoughts are based on those conceptions which have been elaborated or which found their best expression in Sanscrit literature. But we cannot forget that new ideas are arising from the older ones, that beside the ancient wisdom there is a modern literature,

because there is a modern soul. The knowledge of medieval Indian religions, like those of Kabir, Tulsī Das, Nanak—almost ignored in Europe, will throw an unexpected light on this wonderful country, which is an inexhaustible source of thought.

Therefore, I hope the Italian Government, realizing all these facts will establish in some of our Universities a chair of the most important modern literary vernaculars of India. This would be very interesting in bringing about that collaboration among Western and Indian scholars which would prove very useful to our common studies; because I think that it is honest to recognize that if Indian scholars have a good deal to learn from us, we also, on our side, have much to learn from them. Our critical method is greatly advanced: but this is not a good reason for neglecting what our colleagues are working on. The Sanscrit or Pracrit field is so vast and so difficult that a friendly collaboration will be rich of results. We in Italy fully realize the necessity of it, and it was owing to this conviction that Prof Formichi and myself started a new Review; *Studi e Materiali di Storia delle Religioni*, specially devoted to the study of Oriental Religions and philosophy in order to establish a regular exchange between Western and Eastern scholarship and to invite also our colleagues of India to work with us.

KEDARNATH AND BADRINATH]

By B. CHATARJI, M. A., LL. B.

THE names of Kedarnath and Badrinath are so wellknown in India that little is needed in the way of introduction or explanation. These famous places of pilgrimage are both situated in the British District of Garhwal, not far from the border of Tibet, in the midst of ranges of snow-clad peaks and high mountains, unrivalled in the whole world for sublime grandeur. This district is the Hindu 'what Palestine is to the Christian, the place where those whom the Hindu esteems most spent portions of their lives, the home of the great gods, the great way to final liberation. This is a living

belief, and thousands every year prove their faith by visiting the shrines of Kedarnath and Badrinath. To many the fruition of all earthly desire is the crowning glory of a visit to the sacred places by which the sins of former births are cleansed and exemptions from metempsychosis obtained". (Atkinson's *Himalayan Districts*).

The above aptly describes the importance of these two places among Hindu places of pilgrimage. The present article has been compiled from the notes taken by an English missionary gentleman during his visit to Kedarnath and Badrinath in May, 1923. He

Tibet

went on foot like other pilgrims sharing with them their hardships and joys. He actually covered 450 miles on foot and took six weeks to complete the journey.

The pilgrim route is indicated in the map. Most of the pilgrims come by train to Haridwar and either walk or ride to Rikhikesh to which place there is a pucca road. Beyond Rikhikesh vehicles cannot go and the road, averaging about 6 feet wide, follows the valley of the Ganges, sometimes close by the water's edge, sometimes thousands of feet above, now making a detour to avoid some special engineering difficulty, now making a short cut over the shoulder of a hill round the foot of which the river winds until Rudraprayag is reached. After Rudraprayag, the main body of pilgrims leave the river to follow a tributary, the Mandakini. After 35 miles, a short excursion in a westerly direction

brings them to a minor sacred place, Triyugi Narayan. From there they return to the Mandakini and follow it to Kedarnath at its source (gigantic snow-clad mountains and impassable glaciers prevent further progress northward, and the pilgrims return along the same road for about 20 miles and then crossing the Chopta Pass meet the Mandakini again at Chamoli. From Deva Prayag to Vishnu Prayag, the river is called Alaknanda and from Vishnu Prayag to Badrinath it is called Vishnu Ganga. The pilgrims on their way back to their homes return to Chamoli and follow the Alaknanda to Karma Prayag and then take another road to Melchauri. Here they change coolies and proceed to the next way at Ramnagar.

This gives in a nutshell the whole journey to the shrines of Kedarnath and Badrinath. We shall now proceed step by step from

Women in 'Khandi'

we began to try to get an idea of the suitable places to be reached on the journey. We begin from Rikhi-kesh. 10 miles from Rikhi-kesh Mon Ki Reti in the State. There coolies engaged by the pilgrims through a contractor are responsible for their behavior. The coolie the pilgrim each keeps a duplicate of the contract. Rate of remuneration settled according to circumstances and varies according to the route. Then, the time of the day and the current prices of food. For

75, a coolie would carry 80 lbs. to the sacred places, Trijugi Narayan, Kedarnath and Badrinath. He also gets a rupee at each of these places, and gets besides

a seer of *kicheri* of half anna per diem per gram. If pilgrims want to make their own arrangement for coolies they may do so, but it may be risky. The Nepali coolies are more hardy than the coolies of the Tehri State and can easily carry a load of 120 lbs. while the latter carry only 80 lbs. But recently a woman had been murdered by a Nepali coolie and as these people can easily evade justice by crossing over to the Nepal Territory, they are at a discount. Coolies are not only engaged to carry luggage but they are engaged also to carry pilgrims on what is called a "Khandi", a kind of sedan chair made of a wild plant growing in the hills known as "Ringal". This chair-like basket is carried on the coolie's back. Pilgrims are often fast asleep while they are carried in these chairs and present a ludicrous appearance as their heads roll from side to side as they are carried along by the coolies. There are other methods of conveyance, viz. the "Jhampan", a string-woven seat slung on two poles and carried by four coolies. The most comfortable but comparatively costly method of being carried is the "Dundy", a thing familiar to people who have been to a hill-station like Darjeeling. But the majority of pilgrims travel on foot, which is the best method.

A mile and a half of almost level ground brings us to Lachman Jhola with its fine

Lachman Jhola

suspension bridge about 80 yards long. This place is very popular with the sadhus, who live here in large numbers and the river bank is studded with huts on both sides.

It is a place of pilgrimage by itself, and large numbers of people visit it from Hardwar, bathe and worship here and return. From here onward the real pilgrimage begins. Between this and his journey's end, the pilgrim will only find one or two bazaars, which will remind him of his home in the plains, otherwise everything else is different.

Chattis are a valuable asset on this pilgrimage. There is a whole chain of them at intervals of about 3 miles. They provide shelter to the pilgrims during nights and against inclement weather.

They are something like 'Serais' or halting places familiar throughout India. But they are owned by private persons, who are generally small dealers of grain, fuel, etc., who keep their stall in these "chattis" and expect the pilgrims to buy their requirements from them. If a pilgrim violates this convention, he finds himself in hot water and may be turned out of the chatti when the weather outside is most uncongenial and inhospitable. Nothing is charged for the use of these "chattis," but, as stated above, the hire is included in the price of food, purchased from these chatti owners. Only the utmost necessities are stocked in these 'chattis', wholemeal flour, ata, rice, dal, salt and pepper are generally the articles stocked. Government spends a lot of money on sweepers to keep these places clean. But still the surroundings are dirty and there is

Devaprayag

Chatti at Bijni

such a host of flies and fleas in these places that no real rest could be had either by day or by night. The pilgrims are also subjected

of the tributaries are crystal clear, but two kinds of water may be seen running side by side for some distance before

to the constant fear of fire owing to the gusts of wind which blow over these places.

About 25 miles from Lachman Jhola is the Ganges gorge. The slope of the hill coming sharp down into the water is typical of practically the whole course of the river. The water is opaque, of a greenish-white colour, and seems to have a very fine matter in suspension. This colour of the water is maintained right to the very source.

Those of our readers who have seen the confluence of the Ganges and the Jumna at Allahabad will appreciate this remark.

Devaprayag is the first of the sacred junctions known as "Prayags" where the Alaknanda and the Bhagirathi rivers meet and the united streams are from this place known as the Ganges. The main part of the town perches on a rocky promontory between the two rivers in Tehri State, but on the British side there is a considerable bazaar and a post office. The two portions of the town are connected by a suspension bridge. Opinions differ as to the source of the Ganges. Hindu religious opinion favours

and village he or she comes from, and unless one is able to satisfy them that a certain person is his or her Panda, the whole body of them consider him or her as fair game. At

Rudraprayag

Devaprayag, there are not many Dharamsalas and pilgrims generally put up in the houses belonging to Pandas, who take care that pilgrims live with them so that they may not lose any of their customary dues.

The next 'prayag' is *Rudraprayag* (elevation 1980 feet), where the Mandakini and the Alaknanda meet. This place is 90 miles from Hardwar and from here the difficult portion of the journey begins.

As we proceed along the road, we come across groups of Tibetans who carry on trade between India and Tibet and also supply the needs of pilgrims. You will often find bands of them sitting in groups taking tea in their own fashion, in little wooden bowls. They do not use milk and sugar with their tea but use instead, ghee and salt just as the Bhutiyas use butter and salt in the Darjeeling Hills.

The next place of importance is *Trijuga Narain*. Here there is the old temple with a small bathing tank where pilgrims bathe. The road from Jamnotri Gangotri joins the road to Badrinath here.

The road near Gaurikund is much narrower and often the descending pilgrims have to stand with their backs to the rock to allow the toilers upward to pass them in safety. The hill-side was most precipitous and to lose one's balance would often mean a sheer drop of some hundreds of feet into the river rushing in a series of cataracts.

Gaomukh Temple—31 Miles from Rudraprayag

stream which issues from the Gaomukh in Gangotri and forms the Bhagirathi (shown on the left of the picture). Scientific opinion favours the Alaknanda, which has a much longer course and a much larger volume of water all the year round. It is said that Ramchandra retired in his old age to Devaprayag for meditation and a temple and image have been erected in his honour. Devaprayag is the headquarters of the Badrinath Pandas, and judging from the substantial houses they have been able to build for themselves, they seem to be thriving in their business. A crowd of these people surround the pilgrims as soon as they set their foot on this place and in the manner of Pandas in other sacred places in India, they question each pilgrim about the district

below. Those conversant with the road think it probable that some lives must be lost in this way each year. So many of the pilgrims are extremely old and feeble that people who seem to be travelling alone and would not perhaps be noticed if they were to fall over. In many places the bottom of the gorge cannot be seen and is inaccessible.

At Gaurikund there are two tanks where the pilgrims take a dip—one in each tank. In one the water is pretty cold, about 74° , though

Kedarnath Peak, with the Village, at the Bottom

Above Rambara Chatti

the water in the river would be about 46° . In the other tank, situated within 50 yards of the first, the water is 124° and pilgrims who take an honest dip come out asping.

Three miles of stiff climbing from Gaurikund brings one to Rambara, the last *chatti* before Kedarnath. There is a large number of *chattis* here, as it is a popular halting place and pilgrims have to be accommodated both going up and coming down. It is to be remembered that few people spend the night at Kedarnath owing to its intense cold. In the sheltered places near Rambara we come across a lot of snow even in the month of May and some of the *chattis* are found buried in snow. When the snow begins to melt, great masses come sliding down into the valleys, filling the riverbed from side to side. The river (Mandakini) makes a tunnel for itself under the snow and the snow masses form bridges, sometimes of great thickness which in some places form the only means of getting across. The picture shows the rapid waters of the Mandakini river just above Rambara, issuing from under one of these snow bridges. Even in the month of May, some of the *chattis* lie buried in snow.

Rather two miles of steady climb and all trees are left behind. The mountain sides are saturated with melting snow and little streamlets lined with gold king-cups cross the path every few yards. The wild roses too were just coming into flower both blue and purple, and a few mauve and white anemones showed up brightly against the dull brown of the grass that had lain for months under the snow. A sudden turn in the road brings us face to face with the towering Kedarnath peaks, the highest point of the huge mass being 22840 feet high. The village and temple of Kedarnath are visible from above

Kedarnath Temple

mile away, the last part of the road being almost level.

Kedarnath temple and village stand at the far end of a oval valley at an altitude of about 12,000 feet. There is no doubt that Kedarnath has been a sacred place for many hundred years, though the present temple does not appear to be very ancient. The offerings of the pilgrims in a good year amount to about Rs. 15,000.

Leaving the busy scene outside the temple where pilgrims crowd to press their way into the temple to have a view of the image of God, one sees a small building at a little distance which has been erected over a spring. Every few seconds large bubbles of some gas burst through the clear water and those favoured with a vivid imagination assert that the firstling bubble says "*Bom Mahadeo*", and

thus the spring has acquired a sacred character.

The surrounding country affords other places of interest, among them being the famous cliff from which some devotees used to precipitate themselves as an offering to Shiva. Another place of interest is a frozen lake (frozen for the greater part of the year) about 1½ miles from Kedarnath and about 1,500 feet higher. It is a most picturesque spot but appallingly cold, the wind coming straight from vast stretches of pure white snow. It is said that even now, devotees wander off into these vast snow-fields never to return. As one stands looking on the vast stretch of pure white snow, one feels how very easy it would be to get lost in the snows.

The village of Kedarnath is not large, consisting of Panda's houses where the pilgrims who are willing to face the rigours of the climate are accommodated. A few shopkeepers too live here during the summer months and supply the pilgrims' bodily needs. There is also a post office here.

Though the Badrinath peaks are only 12 miles away from Kedarnath, straight as the crow flies, and Badrinath itself only about 20 or 24 miles, the country in between is utterly impassable and consequently the journey to Badrinath takes about 9 days. The pilgrims return the way they have come

Chaukhamba from above Ukhimath

as far as Bhenta, where the road divides and a sudden descent brings them down to the Mandakini, which is crossed by a suspension bridge and a correspondingly steep climb brings them to Ukhimath. This is the winter headquarters of the Rawal (the High Priest)

of Kedarnath. There is a Government hospital here, which is well patronised by the pilgrims.

There is a lake on the top of the mountain above Ukhimath which is of remarkable beauty, and known as Dinri Tal. It is an exceedingly stiff climb up an almost perpendicular mountain for three miles but the view from the top there is well worth the effort. The lake is surrounded on three sides by deep forests of oak, pine and rhododendron and the latter are such huge trees that one would scarcely believe that it was so unless he saw with his own eyes. The fourth side yields the wonderful views of the Kedarnath and Badrinath peaks which on a still day are reflected in the waters. The mountain called *Chaukhamba*, visible from here (22,907 ft.), is one of the most magnificent peaks in the world.

A few miles beyond *Ukhimath* the ascent of the Chopta Pass begins and for seven miles there is an unbroken rise through the most glorious forest scenery. The next

here called the *Oli Gursal*. It is a difficult climb and the top can be reached after 6 hours' hard climb reaching an elevation 12,454 feet. But one is immensely compensated. In every direction except the south one is surrounded by magnificent ranges of snowy mountains, the *Trisul Ridge* being nowhere less than 20,000 feet for a distance of 10 miles.

We next come to Joshimath, one of the four 'maths' established by Shankaracharya for his disciples and is now the winter seat of the Raval of Badrinath.

From Joshimath the road immediately descends in a zigzag manner down the mountain,

Vishnuganga Gorge, 2 Miles above Vishnuprayag

objective of the average pilgrim is a temple at the summit of a fine peak over 12,000 feet high called Tungnath.

Nanda Devi (25,660 ft.), the highest mountain in the British Empire, can be seen from Tunganath. Going past Chamboli, we come to Garur Ganga, a tributary of the Alaknanda, where there is a bathing pool and a famous temple, a picturesque spot.

If one is fond of snowy peaks, he can feast himself from the top of a mountain

Near Hanuman Chatti,
4 miles below Badrinath

Road near
Gaurikund

for 1,350 feet within 2 miles to Vishnuprayag. This is the junction of the Dhaul river with the Alaknanda. Above this place the place is called Vishnu Ganga. The Dhaul river rises near the Niti Pass into Tibet and one of the main trade routes follows its valleys up to the pass. It comes rushing down its steep narrow gorge with tremendous roar to mingle with the equally swift waters of the Vishnu Ganga.

For the next 10 miles or so, the scenery in the Vishnu Ganga gorge is particularly fine. The mountains rise almost perpendicularly from the stream to a great height on both sides, while tall straight chir pine trees cling to the rocky precipices in many places. No European is supposed to go beyond Vishnuprayag without permission of the Deputy Commissioner of Garhwal, as is what is called the inner frontier.

"It is not a question of 'colour bar' similar restriction prevails all along

him, Bhutan and Tibet frontiers and is not perhaps to protect Europeans straying into dangerous territories as much as to prevent intrigue in these territories against the British Government.

After a night's rest at Lambagar Chatti cross a small suspension bridge and proceed to Hanuman Chatti, the last chatti before the goal. This journey is most lovely, the road is not difficult and the scenery is varied. Various kinds of fir trees abound, the white wild roses and clematis are in very best and spread fragrance all round. Occasionally one has glimpses of the peaks.

The picture illustrates two methods of carrying luggage. A woman with a blanket over her shoulder and bundle on her head is one method. The man in front is carrying his bundle suspended over one shoulder. The other method is to have two blankets, one tied to each end of a pole carried over the shoulder, this method is unsuitable for some of the dangerous and narrow parts of the road. The method which experience has shown to be the best in every way is a large bag slung across the shoulder like a soldier's panniers. This kind of bag is used only by country people during railway journeys in the Central Provinces.

Badrinath Temple and Taptkund

Above (the white line)—Josimath
Below—Taptkund at Gaurikund

The borderland between India and Tibet is inhabited by a race of people called Bhotiyas. They are of Tibetan origin and are known by various local names.

Those inhabiting the Mana Valley in which Badrinath is situated are known as *Marchas*. They claim to be Hindus (unlike other Bhotiyas, who are Buddhists), and as Badrinath is situated in Marcha territory, the Marchas of Mana village receive an annual payment from the temple both in cash and in kind.

"The payment is conditional on the fact that at the Janam Ashtami festival, when the idol is carried through Mana to be bathed at the waterfall and fed at the Mata Murati, the women of Mana led by the Malpa women clothed in festive attire shall sing hymns in honour of the God." (Sherring, *Western Tibet and British Borderland*).

At last the crest of the hill is reached and half a mile away, a little below him, the pilgrim sees the town of Badrinath and the white domes of the temple, the goal for which he has been aiming all these weary days. At the place where the temple is first

Badrinath from North, Showing Narayan Sarbat

sighted, many of the pilgrims prostrate themselves and touch the ground with their foreheads. Just outside the town, there is a well-built Government hospital and a new Dharamsala built by funds left for the purpose by a wealthy Hindu merchant. The river is then crossed by a wooden bridge after which another tributary, the Rishiganga, is forded by a little bridge. This stream is fed by the snows of the magnificent Nalikanta.

The temple, which is sacred to Vishnu, has a plain dome very much like what is seen in the Central Provinces and quite unlike the Kedarnath style of architecture seen everywhere else along the route. The temple is said to owe its foundation to Sankaracharya. The building has been repeatedly devastated by earthquakes and avalanches and now has no appearance of antiquity.

"The idol in the principal temple is of black stone or marble about 3 ft. high. It is covered with rich gold brocade and above its head is a small mirror which reflects objects from outside. The idol is adorned with one jewel, a diamond of moderate size in the middle of the forehead."

A little way below the temple and reach by a steep flight of stone steps, is "Taptkund" or warm spring where all pilgrims are expected to bathe. It is at this place that the Pandas receive their remuneration from their clients. The water is not so hot as in the spring at Gaurikund. A flight of steps leads down to the river and some of the pilgrims also bathe here. But the water is freezing cold.

On each side of the southern side of the Badrinath valley is a high mountain, the peaks are named Nar and Narayan, after the famous Rishis who are said to have lived here. In the picture Badrinath is seen from the North with Mount Narayan behind.

The cold at Badrinath is intense. During the day, as long as the sun was shining, the temperature was very pleasant and it was a great relief to be in a place where there are no flies, which are a pest all along the journey in the chattris.

Most of the pilgrims at Badrinath put up at the Panda's houses in the town but for those who do not wish to do so there are two Dharmasalas belonging to the Kalikamala Community. The pilgrims rarely stay longer than three days at Badrinath. For one thing the living is too expensive and people's resources are depleted towards the end of the pilgrimage. Some of the prices there were as follows—Ata (adulterated) 8 as per seer, Pur Re 1 per seer, Dal Re 1 per seer., Milk Re 1 per seer, sweets and sugar Rs. 2 per seer. Wood quite unfit for cooking purposes Re 1-8 per maund. According to Government orders, dry wood ought to be procurable in the bazaar from contractors at Re. 1-8 per maund but owing to the swindling of interested persons, dry wood was unprocurable by the ordinary pilgrim.

Just beyond Mana village the valley seems to have been blocked by an enormous land-slide. Up on the side of the hill can be seen the entrance of Vyas Gufa, the cave in which the famous Vyas Muni is said to have compiled the Puranas and the Mahabharata. The Saraswati river makes its way through the land-slide and here issues into the day-light after flowing for some distance practically underground. The pure blue waters came dashing in a series of cascades from one circular pool to another to be absorbed in the turbid water of the Vishnu Ganga, which by now seems to have acquired the name of Alaknanda. After crossing the Saraswati by the natural bridge formed by one gigantic stone which

seen from above and which covers the river from edge to edge, one has proceeded for above half hour before he comes to the top of the ridge from which a magnificent view of the Satopanth peak can be obtained. At the foot of this snow-covered mountain meet the two glaciers which are the source of the Alaknanda. On the left, hidden behind a steep mountain, is the Niv, which is filled by the Satopanth glaciers, extending up to the great peaks of the Chaukhamba. On

right can be seen the Bhagat Kharak glacier. A few yards further, one can actually see the ice cave out of which the waters of the Alaknanda issue from under the glacier.

The main object of the journey, once accomplished, the pilgrims turn thier back on Badrinath and make their way for home with the speed of which they are capable. Hitherto, they have been sustained by the prospect of the vision they have been promised and faith in the blessing which they believe will be granted to them as the result of their efforts. This has enabled them to perform wonderful feats of endurance and severance. Now, footsore and weary, they still have nearly 200 miles to cover before they can reach the railway. As far as Amboli nearly 50 miles, the road is familiar beyond that they continue to follow the course of the Alaknanda for about 20 miles further. At Nandprayag, the junction of the Mandakini with the Alaknanda, pilgrims bathe again. A little further the road passes through some fine pine forest at Sonla where some of the large chirs are to be seen.

Karnaprayag is the last sacred bathing place. There the Pindar river meets the

Source of Alaknanda

Alaknanda. From Karnaprayag the pilgrims usually leave Alaknanda valley and proceed across the country to Melchauri. Here coolies are discharged and fresh ones engaged to go the short way to Ramnagar. At Ramnagar, the pilgrims take train for their respective homes.

Before closing, we should note the remarkable body of Sadhus called "the Kali Kamliwalas." They are the disciples of the saint of that name and do very useful and humanitarian service on this pilgrimage. They have got Dharamsalas for the accommodation of pilgrims and also afford medical aid in places where it would be most difficult to secure it otherwise. One word more. The fine instinct of the ancient Hindus which has invented these glorious though inaccessible places with a religious halo has made it possible for even the humblest to enjoy some of the most glorious scenery in the world. These places have not been converted into pleasure or health resorts, as in Europe they would be, (e.g. the Alpine resorts), but man comes back from them chastened and elevated by the mystic atmosphere of the region, supposed to be the abode of the immortal gods, where great seers have sought liberation for themselves and for their race.

SOME SUGGESTIONS FOR THE REVIVAL OF INDIAN ARCHITECTURE

By SRIS CHANDRA CHATTERJEE, A. M. A. E., M. R. A. S.

THE well-known Indian jurist and political leader Sir Hari Sing Gour of Nagpur, when interviewed by a representative of the *Bombay Chronicle*, expressed his opinion that the planning and execution of the New Delhi had been a "colossal failure." As remedies ensuring the artistic regeneration of India in its architecture, he has suggested the foundation of chairs of Indian Arts in all the universities of India and planning of artistic buildings and the publication of these plans for the public. "The Municipalities," he says, "must encourage the construction of beautiful buildings. There is a great future for Indian architecture, a great deal more than the greatest enthusiast can dream of, but it requires sustained effort on the part of the few who take interest in the subject." What Dr. Gour has said has long been felt by lovers of Indian Art. They have repeatedly urged upon the Government that when erecting buildings with public money the Government should utilise the living Indian tradition. In my article in *The Modern Review* for January, 1925, on the "Revival of Indian Architecture" I expressed the same views and invited the special attention of the Indian Municipalities to our revivalistic endeavours. I said,

Modern Municipalities in a Philistine zeal to be up-to-date and sanitary seek to make clean sweep of the old quarters by removing old buildings and opening up new roads flanked by ugly modern buildings. Even the slightest attempt has of been made at conservation by preserving the old-world beauty while introducing sanitation, such as has been done in the old cities of Europe like Venice, Naples, Edinburgh etc. in their older quarters."

Other suggestions I put forward in *The Modern Review*, and I also appealed to my countrymen, through the medium of different papers to take up the cause seriously. Months back, at the annual re-union of the students of the Sibpur Engineering College, urged upon the necessity of establishing a Chair of Indian Architecture and my views on this matter received the enthusiastic support of most of the students and professors

besides some ex-students among whom were some high P. W. D. Officials. The idea did not appeal to the Principal on financial grounds, as there was no money from the Government to establish such a chair—he otherwise appreciated the necessity of teaching Indian Architecture in an Indian Engineering College. Recently Rai S. C. Mitra Bahadur, Officiating Chief Engineer of the Calcutta Corporation, wrote to the press suggesting definitely the establishment of chairs of Indian architecture in Engineering Colleges.

The excellent suggestion of Dr. Gour to prepare plans of artistic buildings and the publication of the same will, I am afraid, fail to serve the purpose for which it is intended, specially in places like Calcutta, unless and until arrangements are made by the Municipality to help the citizens in the actual construction of such buildings. I should like to make the following suggestions, therefore, for consideration of my countrymen. They may devise other means by which our dying building-art may be revived or developed even in these days when tawdriness receives its permit of existence, and even arrogant existence, in our beautiful new public roads merely on grounds of economy.

These are my definite plans —

(1) To establish a new department of Indian Architecture in the leading municipalities, like the departments of water works, drainage, roads and buildings &c. Engineers, Overseers and Draftsmen, with special knowledge in Indian architecture and experience in the construction of buildings in Indian style, shall be employed therein. Successful students trained in such an institution as the Jaipur School of Art or of Baroda Kala Bhavan or similar institutions where students have opportunities of coming in actual touch with master-craftsmen or master-builders or experienced engineers from Rajputana or other provinces where Indian architecture is still in vogue as a living thing should be employed in this department. When I visited Baroda, a

Bengalee young man came to me with a request to employ him as an Overseer in the Bikaneer P. W. D. under me. He had passed out from the Kala Bhavan and, he said, he could not get employment in Bengal P. W. D. or Calcutta Municipality, where his qualifications were not appreciated. Such people should find scope for their attainments and talents in beautifying our cities.

The "Indian Architecture" Department of the Municipalities should deal with the auctioning of plans and construction of buildings in the Indian Style. It should design buildings for the public, if desired, at reasonable price and carry out the actual construction at the expense of the owner, reserving a small profit for its own maintenance with a view to rescuing Indian Architecture from the state of neglect to which it has been consigned by the gradual establishment of the "styleless" architecture in our cities. Care should be taken to make the designs simple and cheap at the same time, not going in for over-decoration but making artistic use of Indian motifs and symbols and bringing a genuine Indian feeling about the structure.

Standard plans of various types of buildings—residential, office, school, hospital &c—should be prepared and kept for sale at reasonably low price like the present system of selling *bustee* house plans by the Calcutta Corporation. Approximate cost of such constructions should, in all cases, be indicated by the Architects and Engineers and Builders. Calcutta would then derive help from those standard drawings and specifications in time in designing their own buildings.

(2) Classes should be conducted in the Municipality to impart instruction on Indian Architecture. The present Engineers and Craftsmen of the Municipality, who are trained in the construction of the modern hybrid styles of buildings, should be induced to receive special training there with a view to training them to apply principles of Indian decoration and construction intelligently in their own line. Just as some English Officials under the Government acquire a knowledge of the vernacular language and pass a compulsory test of proficiency, a training on these lines might even be made compulsory, which will ultimately do away with the necessity of having a special department of Indian Architecture.

This Engineering Department of the Municipalities should gradually, as funds

permit, and with the increase of funds, be equipped with a Library containing books and photographs. There should be a model room exhibiting models in wood or stone or plaster or clay of distinctive buildings in Indian styles. The Municipalities should use these as well as lantern slides in its work of instruction.

"Roorkee Treatises" have dominated too long our architectural and Engineering departments. Municipalities like those of Calcutta, Madras, Bombay, Allahabad etc., should prepare and publish treatises for use in their own districts or provinces, taking into full consideration the local conditions and materials, climatic conditions &c, as well as local usage and traditions in house-building. Researches in the study of methods and materials of our older house-building craft and town-planning in different parts of the country, should be encouraged in order to enable us to profit by the old system which have been killed by the P. W. D. specifications.

It should be noted in this connection that the durability of old Indian mortar, bricks, stucco-plaster roofing, wall-painting &c, strikes our modern engineers with wonder. A modern building, costing a huge sum, leaks within a year, whereas ruined temples and ghats still seem as fresh as on the day they were finished. We must get back these specifications. To do that not only the Engineers and others but the general public should be urged upon to find out from the old masons and builders in interior districts not touched by the P. W. D., the specifications handed down from generation to generation. These specifications for brick and tile-making, preparing mortar, stucco-plastering, wall-painting and terracing of the old days superior by far and more suitable than the present day ones—which are mostly the same prescribed by the London County Council and suitable for England alone—should be found out and put to use again. The present writer during his stay at Bikaneer and his sojourn in other architectural centres has obtained a few of these specifications from hereditary craftsmen. He invites co-operation in this matter.

3. The Calcutta Municipality has a special store section with store-yards. Like that and like the Government Telegraph Store-yard at Alipore or the Government Brick-fields at Akra—a storeyard may be established in or near Calcutta, preferably on the river-side, where standard-sized pillars of different types

brackets, jalis, hand-railings, staircases, *mangala-ghat*, *kalasa*, *kirtu-Mukha*, elephant etc., and ornamental and simple mouldings symbolising Mahomedan religion and custom and even the oriental types of bath-tubs, showers, tables, wash-hand basins &c., can be moulded in concrete or other materials or cast in brass and kept for sale. Kilns are to be made for manufacturing ornamental bricks and tiles with the figures of *hamsa*, *shankha* (conch), lotus &c.

Institutions like the "Kala-bhavan" at Shantiniketan, or the School of the Indian Society of Oriental Art, or even the Government Art School (so long as it has at its head an authority on Indian Art like Mr Percy Brown) should co-operate with the Municipalities and supply terracotta panelings &c., and send students to decorate the rooms of the houses in Indian type, should their services be required.

All these works should be directed by experts, assisted by a limited number of experienced stone and brick masons, sculptors and wood-carvers bought from different parts of India. Local students should be trained in such a workshop to be established by the Municipality. The problem of unemployment is a serious one and needs to be tackled from various directions. Youngmen of moderate education, who find other departments closed against them, can receive training at this Municipal school of crafts, eventually become skilled craftsmen and easily find work. There has been no Municipal school of arts and crafts in a big place like Calcutta for taking up the work of beautifying the city as a practical proposition and with that end for view, establishing a storeyard and workshop as suggested, such a practical school of crafts in connection with the work of actual construction of buildings could be started as a matter of course. As such combination takes place, the Corporation will work both as manufacturer and supplier of materials and as contractor and will be in a position to erect buildings at considerably lower costs than the P. W. D. or other private firms can. And I am perfectly convinced that such an arrangement will pay its own way and even, if the public are weaned to an appreciation of beautiful buildings, will leave a decent margin of profit to the Municipality and relieve considerable distress through want of employment. With the growing demand for Indian style of buildings constructed by Corporation, its storeyards and

workshops and kilns may be developed as the Corporations are organised properly and strengthened in all its branches. The Public Works Department will ultimately cease to be necessary. To control its Public Works Dept. and to carry on its functions should be the ideal of our Municipalities. It is in all the civilized countries, barring, of course, large engineering schemes affecting the whole country which can be taken up by trusts like the Calcutta Improvement Trust and the Calcutta Port Trust etc. The big engineering and building firms should co-operate with the Corporation by sending their apprentices to the Municipal School of Architecture, such as would be established if these suggestions are taken up. The Government should be properly approached in the matter. But our own national resources should be adequately drawn upon to set an example to the Government. In this cultural work, intended to win us *Swarajya* in our house-building, surely the national funds at the disposal of the Bengal National Council of Education, the Bengal National Fund, the Albert Institute Fund, the Tilak Swaraj Fund and the Deshabandhu Memorial Fund should help.

4. Special privileges should be given to all those proprietors who build houses in the Indian style. Thus, the Corporation of Calcutta ordinarily requires that one-third of the total space must be kept open in all residential buildings within the city. The house-holder may be tempted to build in the national style, if special rule is framed that "in case of buildings erected in Indian style, the space kept open may be one-fourth instead of one-third." Whether such a concession could be made without affecting general sanitation is a question which can be threshed out. The Calcutta Corporation regulations are *not* the final word on the subject. The plans of old cities like Benares or Ujjain, or of Naples or Venice in the West, which in spite of their narrow and tortuous lanes and apparent over-crowding, are not more unhealthy as compared with Calcutta or Allahabad, should be studied first before making a sacrifice of space at the altar of Hygiene. Other concessions may be thought out so as to tempt the proprietors to build in the Indian Style.

5. An Advisory Board or special Committee as a step towards ushering in the necessary movement in establishing Indian Architecture should forthwith be formed.

enlightened Municipalities where the representatives of the people have felt the need of the revival. Such a Board, taking into consideration the condition of the town concerned, may take up in part, entire, or in modified form, the programme I have suggested.

It is a matter for sincere congratulations to the lovers of Indian Architecture, to find that national leaders are waking up to the necessity of its revival and recognition in our communal life. Dr Gour's views will be agreed by many; that the attempt to impose a foreign style has produced a soulless and bad style—it has been a "colossal failure." It should be up to the custodians of our national welfare—the accredited leaders of the people to try to prevent this "colossal failure" from perpetuating itself. The genius supreme artist in Abanindranath Tagore has fully supported the efforts of the present writer in what he ventures to consider as a national work. He has met with encouragement from responsible people like Mr C. Mukherjee, the offg. Chief Executive Officer of the Calcutta Corporation, Rai S. C. Bahadur, the Chief Engineer and from one like Mr O. C. Gangooly, Editor, Rupam, and others who share in his belief in Indian Architecture. Rabindranath, Sir Jagadish, Gaganendra Nath Tagore and Mr Keshab Chandra Gupta have been showing by practical work of building in Indian style that they consider the thing possible. Can the people and their representatives in the Legislative Assembly, Councils and the Municipal Corporations remain inactive any more?

Before concluding this paper, there is one point to which I would like to draw the attention of the Feudatory Chiefs of the Rajas, Maharajas, and Nawabs, who might cast their eyes on these lines. I have during the course of my travels throughout India and in North and South India and to my great disappointment that Indian Architecture (in common with other Arts) is not only suffering from a general neglect, but what is worse, it is giving way to the deluge of on-laughs of European Architecture. Pure Indian motifs are being discarded in many new constructions and European motifs, not at all understood in their history and significance, are coming in—a Corinthian

capital besides a Gothic pointed arch here, a segmental arch beside an Indian bracket there—all this producing a grotesque effect which does hurt the eye of the true art-lover. While I was in Bikaner, I thought long over this matter, how could this be avoided, and Indian Architecture saved from this inner decay. I attempted to enlist the sympathy of the Ruling Chiefs in doing something preservative in this matter—to form an Indian Architectural Association, which would endeavour to arrest this decay and disintegration, but my efforts failed through lack of understanding and insight in the proper quarters. But the matter is a very vital one for the Indian States. Foreign travellers come to India from the most distant parts of the globe attracted in the first instance by its glorious architecture. They come to see real, *Indian* India, and for that naturally they go to the Indian States. There are, of course, a few serious scholars who come for Sanskrit and other studies, but to the majority the word *India* evokes a vision of Benares and Agra, Delhi and Jaipur, Jodhpur and Ujjain, Gwalior and Udaipur, Madura and Tanjore, with their wonderful buildings and temples and mosques. The foreigner is no longer overwhelmed by the elephants and jewels of the rajas, and their cavalcades and their carriages of state, much less by their up-to-date palaces, their marble *Darbar* Halls in a mongrel European style. But they are impressed by the architectural beauty and grandeur of a Jaipur Street or a Jodhpur Fort or an Udaipur palace, or a Bikaner *Mahalla*. The Indian Chiefs should know that as things stand, their only heritage (apart from the deathless deeds of some of their ancestors) is the atmosphere of beauty in their cities and that heritage is in danger of being impaired. Should Jaipur or Bikaner become a barbarous mongrel place like Calcutta or Bombay, the Indian princes will not attract a hundredth of the attention they now receive from all foreign British officials and globe-trotters from outside. It is a question for all India, no doubt, but specially for the Feudatory States, for, not only is the special outward manifestation of Indian Culture connected with her architecture, but also the *izzat* of the Indian princes, but even their *raison d'être* in the pageant of Indian life is based on it.

HOARDING AND CURRENCY REFORM IN INDIA!

BY PROF. J. C. DAS GUPTA

INDIA is given to hoarding, gold that flows to India seldom comes out of it and adoption of the gold standard by India will cause such a run on the world's reserves of gold as to throw the currency systems of the gold-using countries out of gear—such has been the line of reasoning of a school of thinkers of the West. A study of the extent of this economic evil and the causes which lie at its root is in many ways instructive.

It is well to realise clearly at the outset that everywhere on the globe there is a strong prejudice in favour of gold. Mr Hartley Withers in his 'Business of Finance' says that "owing to centuries of habit and convention, gold is still regarded as the one commodity which can always certainly be relied upon in times of acute crisis." If hoarding of gold is a world-wide vice, India should not come in for special blame, unless it can be proved that she hoards beyond all proportions.

Before we examine the extent of the evil, we must put before our mind a few facts that are not always placed in their proper setting. Firstly, hoarding presupposes a surplus over the cost of living which is non-existent in the case of millions of our countrymen. Secondly, India is fifteen times the size of the United Kingdom in point of area and seven times in point of population. Absorption of the precious metals should, therefore, normally be much larger here than in the United Kingdom. Thirdly, there are only 55 principal banks with 304 branches to mobilise the financial resources of this vast country. Added to these is the fact that as regards education 93 per cent of the population cannot either read or write. Sir Stanley Reed, the able Editor of the '*Times of India*' sums up the position with characteristic lucidity thus.

"The attempt to fasten on India an exceptional and invidious responsibility for the consumption of gold cannot be too vigorously combated... India's normal demand for the industrial arts, and for the satisfaction of the social customs of 315 millions of people was met before the war by about ten millions of gold annually. The United States of America (with a population, be it noted, less than half that of India) was reported recently

to be absorbing a million sterling gold per month for industrial purposes. Yet no one says that the United States is a bottomless sink in the matter of her gold absorption. Every country in the world uses gold and silver for industrial and domestic purposes, and it induces a sense of angry injustice to find that the Indian demand for the precious metals for precisely the same purposes, perverted into senseless hoarding, especially when the history and conditions would justify a larger gold absorption than the western nation with their general literacy and highly organised credit system can claim."

An examination of the currency history of this country makes it abundantly clear that people in India were never guilty of an excessive fondness for the yellow metal. India was a gold-using country in the past and "hoarding" to quote the words of the Fowler Committee "did not render a gold circulation impossibility in the past." As early as 1826 Lord Dalhousie had to demonetise gold to stop the flow of gold coins coming into the Government treasuries; gold coins returned freely to the treasuries again in 1900, the year in which an attempt is said to have been made to introduce gold coins in circulation in India. It is surprising to find that these instances of gold flowing to the treasuries were taken to imply that people in India did not desire to have gold coins. If, on the other hand, such coins had not returned, that would have been doubtless attributed to Indian innate habits of hoarding!

The key to the causes of the absorption of gold coins in India is really to be found in the currency policy of the country. All possible human contrivances have been made use of to stop the free flow of gold to India. The system of selling Council Bills in limited quantities was inaugurated in 1894 when this could not check the flow, a branch of the Paper Currency Reserve was opened in England. The Gold Note Act, a temporary measure passed in 1898, was, on the plea of giving elasticity to the Indian note system, made a permanent act. Finally, it remains to add that gold accumulations in the Paper Currency Reserve in India have often been diverted to England. The result of

systematic policy was that the end of the war, which saw Japan and America suffering from a plethora of gold, found India one of the largest suppliers of war needs, in a monetary crisis which could be tided over only by help from America. Scarcity of gold, on account of such restrictions on Indian imports of gold on the one hand and too extensive use of the token currency, an inevitable concomitant of the gold exchange standard, on the other, have brought the Reserve Bank into operation, sovereigns have gone out of circulation. It is but natural that people should desire to store their values in full-bodied gold coins rather than in the debased rupee.

But hoarding or no hoarding, India must have the right of self-determination in

economic matters. "It is the inalienable right", says an eminent writer, "of every creditor country to determine for itself the form in which its debts shall be paid" and no attempt should be made to deprive India of her legitimate share of the world's stock of gold. The Gold Exchange Standard has been weighed in the balance and found wanting, Indian opinion is, therefore, unanimous in the view that an effective gold standard based on the principles of the free inflow and outflow of gold can only solve our exchange difficulties. The last two Commissions recognised the importance of 'giving the people' the form of currency which they demand and it rests with the present Commission to give effect to the expressed will of the people of the soil.

REVIEWS AND NOTICES OF BOOKS

[Books in the following languages will be noticed: Assamese, Bengali, English, Gujarati, Hindi, Marathi, Malayalam, Marathi, Nepali, Oriya, Punjabi, Sindhi, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses, etc., will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer, etc., according to the language of the books. No criticism of book-reviews and notices will be published.—Editor, M. R.]

ENGLISH

GOVERNMENT OF INDIA UNDER A BURFAUCRACY. John Dickinson, Jun., M. R. A. S., F. R. G. S., London 1873. Reprinted and Published by Major D. Banerjee, I. M. S. (Retd) Bahadurganj, Allahabad for Rupees Two.

This book was written on the eve of the termination of the East India Company's Charter in 1854, and its object was to investigate the character of the alterations to be effected in the constitution of the Government of India. The author seemed to think that all would be well if the Indian Government were made directly responsible to the Parliament at home. We now know after all these years, that he was labouring under the greatest of delusions. The Mutiny of 1857 was almost foretold by him in the following page.

"I am convinced that the Government will some day regret the system that is making so many mistakes. It will some day absorb a native state, many, and feel a pang like one who has put a hornet into his mouth with a hornet in it....a storm may arise in India which will cost us more to maintain our power than all we have gained, and can ever hope to gain, by our confiscation."

Since then, India has been brought directly under the crown, but all that he complained of, flourishes like the green bay tree, as the following extracts will show. Even the attitude of the Parliament, now made directly responsible for the Government of India, is substantially the same as it was at the time of the renewal of the Company's Charter in 1813 and 1833, of which the author speaks as follows:—

1813

"The natives of India were treated like so many cattle. Their interests, their feelings, their hopes, and their fears, were alike forgotten. The only thing the House of Commons was well informed about was certain private, pecuniary, English interests. The battle of the Charter was fought over the heads of the natives, by parties eager for their trade, but too eager to give a thought to the myriads of human beings who yielded its profit. The leaders in the House of Commons, that is ministers intent on securing Parliamentary support, Directors and merchants, greedy for private interests, at length struck their bargain, and having done the best they could for themselves, and professed much concern for the natives, they agreed for a fresh twenty years

lease of India, to the old irresponsible Government."

1833

"They met the judicial evils by the mockery of an additional member of Council at Calcutta; they met the necessity of appointing the natives to high office, strongly insisted on by such men as Malcolm, Elphinstone, and Munro, by the mockery of declaring their eligibility and leaving it to the Directors to carry out this eligibility, who of course treated it with utter contempt."

"In fact, they showed as before, that the only matters on which they were really well informed were certain private, pecuniary, English interests."

I. THE ARGUMENT THAT NO CHANGE IS POSSIBLE BECAUSE INDIANS CANNOT AGREE

"I shall be met, I know, by the old argument that the Legislature cannot make any change because Indian reformers do not agree among themselves upon what ought to be done. But is this argument really serious? Why, men must have remained savages ever since the creation of the world, if nothing had ever been done till all men were agreed upon what ought to be done. The argument is as much as to say that there shall be no progress until a condition is complied with, which is notoriously impossible. Besides, I apprehend that it is not merely the function of legislators to redress grievances, but their duty to find out the means of doing so. There is not the same obligation on a private person who proves the grievance, he is only one of the patients, a legislator is the state physician, and if it is not the business of members of Parliament to know and apply the proper cure for political grievances, then what is their business?"

II. BURKE'S DESCRIPTION OF THE STATESMANSHIP OF A BUREAUCRACY

"Burke's description of the statesmanship of a bureaucracy is not in the least exaggerated, 'there is no trade so vile and mechanical as Government in their hands. A large, liberal, and prospective view of the interests of States, passes with them for romance; and the principles that recommend it, for the wanderings of a disordered imagination. Littleness in object and in means to them appears soundness and sobriety.'"

III THE INDIAN DRAIN

"The effect of foreign maladministration in draining away the capital of the natives of India, independent of the illegitimate gains of the last century, of the enormous sums of money abstracted from the country in good old times, when it was possible for a young Englishman to go out with nothing at all, and return at the age of thirty-four with a fortune of a million sterling (vide the histories of Clive, Paul Benfield, and scores of obscure "Nahobs"), independent of the savings of English officials, who monopolise the most lucrative employments in the State, and go home, of course, when they have realised a fortune— independent of the "resumptions" of landed estates and the gradual extinction of the native princes who spend their incomes in the country, to make room for more English officials—in other words, to provide more patronage for the

Home Government—independent of all this, there is a regular drain in hard cash every year of about three millions sterling from India, to claims in England designated "the Home Charges."

Now, it has been said by the historian, Professor Wilson, that the transfer of surplus revenue to England is an exhausting drain upon the resources of the country, the issue of which is replaced by no reflux, it is an extraction of the life-blood from the veins of national industry, which no subsequent introduction of nourishment is furnished to restore," and some such effects must result from the annual transfer of so large a proportion of the produce of Indian taxes to England."

IV. THE LIBERALITY OF THE COURT OF DIRECTORS—TO WHOM?

"I often hear people talk of the liberality of the Court of Directors; and many instances of this liberality to their servants and friends, and relations or connections, have come to my knowledge; a liberality visible in hard cash, and paid for with the ryot's money. But I confess, I should like to see some exercise of this liberality to save these poor people dying of famines. Was it with over-assessing them, and destroying the aristocracy, merchants, and manufacturers, that we have reduced them to a low ebb and the liberality of the Court of Directors would be well employed in saving them from local famines."

V. QUOTATION FROM AN ENGINEER ON FAMINES

"Lord *** wonders at my vehemence about public works; is he really so humble a man as to think no better of himself than to suppose he could stand unmoved in a district where 250,000 people had perished miserably of famine, through the neglect of our Government, and see it exposed every year to a similar occurrence?" (Remember that, reader!) "If his Lordship had been living in the midst of the district at the time, like one of our civilians, and had every morning to clear the neighbourhood of his house of hundreds of dead bodies of poor creatures who had struggled to get near the European in hopes that there perhaps they might find food, he would have realised things beyond what he has seen in his *** shire parish."

VI. SERVICE OF THE PEOPLE, NOT THE PRINCIPLE OF BUREAUCRATIC GOVERNMENT

"I know not if my feeble voice can reach my countrymen, but if it can, I tell them plainly that the bureaucratic Government to which they have entrusted the irresponsible despotism of India, has not secured the happiness of the natives in the person, honour, property, or moral sentiment. It has not acted on what ought to be the principle of every Government, viz., to serve the people, and root the sovereign in their interests and affections. Instead of this, it has acted on a system of distrust and exhaustion, like that of a bad tenant who feels that his lease will soon expire, and encourages that land to get all he can off his farm before he is forced to quit?"

VII. ABSENCE OF COMPLAINT, NO PROOF OF GOOD GOVERNMENT

"It is a great mistake to suppose that the times about which history is silent are the best."

mitous to mankind. All calamities are not equal; they require a certain dignity, a certain connection with politics and individuals such all the world can see the chain of causes effects before they attract sufficient notice to be recorded in history. But calamities may afflict nations, not the less real because from their social position, by which a whole people may feel themselves, as men more than as citizens, degraded, moralised, disgraced in their own eyes, ruined their fortunes, and deprived of hope so long as the power of voluntary effort; and all this without the connection between politics and their position being evident to the world, or any national effect of public interest attracting notice to their inward bleeding wounds.

I shall endeavour to show the reader that this has been the case in India notwithstanding the absence of complaint."

I. INDIA HAPPIER UNDER NATIVE SOVEREIGNS THAN UNDER A BRITISH BUREAUCRACY

The more I study the subject, the more I feel growing conviction that the natives were happier, more so under their good princes, but happier than the average of their native sovereigns, than they have been under an English Bureaucracy.

In discussing this point, we have always asserted to have the advantage of being the judges in our own cause, therefore, because we first acquired power in India during a revolutionary period, we have assumed that the normal condition of Indian government was a chronic state of revolution, we have assumed that the mass of the people have been miserable, because we can prove that many of their native sovereigns were weak, cruel, &c. But we must recollect that India is as large as the whole of Europe; and suppose we were to apply the same ingenious process of comparison to Europe that we do to India,—"if we were to reckon up the wars and acts of oppression of European princes, as we do for the Indian princes, down to end of the eighteenth century and calculate the amount of bloodshed and misery caused by the ambition and selfishness of the princes to the fate of the masses—suppose we were to rake out of a few centuries of history, for Europe as we do for India, all the deliberate cruelties inflicted on mankind by religious fanaticism—finally, suppose we were to see what the contemporary writers of the time say of the condition of the great bulk of the people in Europe, down to the end of the French Revolution?

If we were to do this with any good faith, we should begin to find it impossible to cast the first stone at India. We should begin to admit that if there had been wars, if there had been bigotry, if there had been misgovernment in India, there had been such things elsewhere. But there had been no compensations in India, there had been long-ruled Governments, and great masses of contented subjects, the Mahomedan conquerors settled in the country, and identified themselves with the interests and sympathies of its subjects, they had as the rule, respected the laws and religion, and private landed property of the people, and any infraction of the rule was condemned by their own historians as it would be

by Europeans; they had preserved the municipal institutions, and arbitration system and excellent police, which gave the best security for person and property at the least cost, they never burdened the country with a national debt, and had spent great sums out of the taxes for the people, on public works and grants for education, and had not attempted to destroy their native aristocracy, whose capital was the support of the labourers, manufacturers, and merchants of India; finally, they had not treated the people as an inferior race of beings, they had maintained a free social intercourse with them; they had not confined them to such low ill-paid offices as they could not fill themselves, they had frequently left the most important share of the civil offices of State in their hands, and had allowed them to rise daily from among the lower orders to all ranks of civil and military employment, which "kept up the spirit of the people," said Mr. Elphinstone.

In short, the Mahomedans did not, by dividing the community into two distinct bodies of privileged foreigners and native serfs, systematically degrade a whole people. In a long course of time, and among a hundred millions of men, they had oppressed many, but they had left hope to all, they had thrown open to all their subjects the prizes of honest ambition, and allowed every man of talent, industry, and courage to aspire to title of honour or political power of high military commands, with corresponding grants of land.

Very different from this has been the Government of the English conquerors of India.

We have kept the peace in the country for our own sakes, and this has of course, to a certain extent, increased cultivation and commerce, because the instinctive efforts of men to better their condition will always ensure the material progress of any people, until they reach the point where misgovernment sets a limit to progress.

But this benefit of keeping the peace in India is the only one our rule has conferred on the natives to make up for the loss of all the compensations mentioned above, and if I show this to be the case—if against one benefit is to be set our systematic impoverishment and degradation of a whole people, what will after ages say of our passion for aggrandizement in India?

IX. "THE BLESSINGS" OF BRITISH RULE

"And why, for what purpose, is this incessant aggrandizement? Is it to give the natives 'the blessings of British rule?' Let us see what these blessings have been.

"1stly. In Bengal, by one of the most sweeping confiscations the world ever saw, we transferred the whole landed property of the community to a body of tax-gatherers, but under such conditions that this body of newly-invented landlords were ruined almost to a man, and sold up by our Collectors, and their estates transferred to new men, within ten or twelve years; and in making the new landlords, we promised legislative protection to their tenants, yet we have left them from that day to this at the mercy of the Zemindars, and only the other day it was said by the 'Friend of India,' Sept. 16th:—"A whole century will scarcely be sufficient to remedy the evils of that Perpetual Settlement, and we have not yet begun the task. Under its baneful influence, a population of more than twenty millions have been reduced

Rule (Gulliver's defence of "his dear country" king of the Brobdingnags.

to a state of such utter wretchedness of condition and such abjectness of feeling as it would be difficult to parallel in any other country."

"2ndly. In Madras, by another sweeping confiscation, perhaps without a precedent in history, we assumed that the Government was the owner of all property in land, and that, in the words of Government, we should "avoid all material evil if the surplus was in all cases made the utmost extent of our demand," this being the landlord's rent, and leaving to the cultivator only a bare sufficiency for his own subsistence, and this surplus produce being demanded from the riots, not as a corn-rent but as a money rent, and being assessed and collected in districts averaging 7000 square miles, and 150,000 individual tenants, by one or two Europeans, assisted by informers, with notoriously incorrect surveys.

"3rdly. When this Ryotwari system had ruined Madras, we forced it upon Bombay, in spite of Mr. Elphinstone's opposition, and nowhere did we at any time lower our assessments until the agriculturists were beggared, and we retain the system to this day.

"4thly. We established and maintained for the better part of a century, transit duties, which broke the manufactures, decayed the towns and demoralised the people of India, and left it a matter of wonder that any trade could be carried on at all.

"5thly. We destroyed those municipal institutions which had, according to Mr. Elphinstone, "preserved the people of India through all their revolutions, and conducted in a high degree to their happiness, and to the enjoyment of a great portion of freedom and independence." We destroyed these and with them the excellent arbitration system and native police which gave the people full security for person and property at the least possible cost, and we set up instead an exotic system of English law, which has utterly deprived the people of security, besides corrupting their morals, that in our civil courts, "which give every opening for fraud, perjury, and forgery," all the most important interests of the country have been rapidly converted and transferred, and no man's estate is safe, and in our criminal courts, nothing but his most singular ill-luck can bring an accomplished criminal to justice; and even within a circle of sixty or seventy miles round our capital city of Calcutta, no man of property can retire to rest without danger of being the victim of Dacoits before morning.

"6thly. We levied great taxes on the people, and drained away one-seventh of their net-revenue to England, at the same time burthening them with a load of national debt for the first time in their history; and yet in spite of their admitted rights and necessities, we gave them back next to nothing in public works, never anything for education unless forced by pressure from without and the vigorous initiative of private individuals, and then as little as possible; and in most districts beyond comparison less for roads, bridges, tanks, &c., than has been given by wealthy native merchants and country gentlemen.

"7thly. We have long been systematically destroying the native aristocracy, who furnished consumers for the articles of commerce and luxury, who stimulated the production of the labourers, the manufacturers, and the merchants, who were the patrons of art, the promoters of agricultural im-

provement, the co-operators in public works, the only class who could enable us to carry any comprehensive amelioration of native society and we are extinguishing the native States which the effect is, according to Sir Thomas Mun "in place of raising, to debase the whole people and according to the Duke of Wellington, degrade and beggar the natives making them enemies," and meanwhile, our threat of absorbing hanging over their heads, deprives both prin and aristocracy of any inducement to improve the country.

"8thly. We regard the natives rather as vassals and servants than as the ancient owners and masters of the country. we have as little possible of social intercourse with them, and though we allow them to do above ninety-seven per cent of the work of administration, we monopolise the credit and emoluments of it, and every high office for ourselves. The establishment of our rule in any part of India at once shuts the door on the honest and laudable ambition of the natives, all prospect of enjoying those honours and distinctions, and lucrative situations of trust and power, which reconcile men to the oppressions of arbitrary rulers in natives is thenceforward cut off. We divide the community into a government, foreign officials on the one hand, and a nation of serfs on the other, of foreigners, constantly shifting their quarters, having no permanent connection with the country, and always looking forward to the day when they shall return to England with a fortune, and of serfs, who are the natives of the land, linked and identified with its interests and sympathies, and many of whom are regarded as a little better than menial servants, who might have been governors of provinces but for us, all of whom as a rule are confined to such low, ill-paid offices as the Covenanted Civil Service disdains to accept. And therefore is the spirit of India broken under the Company's government—therefore do we hear of robberies and oppressions in Oude and Hyderabad and yet the people do not fly to us because hope is with them, and the future is not blank, instead of flying into our territory, they flee from it, often in flocks, come into it, they never do only the other day some important works at the Kistnah were stopped because the people of the country fled, en masse into the Nizam's dominions.

"And why do they prefer to live under "effete native Government" because they do not feel themselves degraded as they do under us, for it is not the arbitrary power of a national sovereign, but subjugation to a foreign one that destroys national power and extinguishes national spirit, and this the mainspring of whatever is laudable both in public and private life—but we make them feel the rule of the stranger to their heart's core we set a barrier of privilege between the natives and their foreign masters: the lowest European official in a black or red coat, is above every native gentleman, though the latter may be the descendant of a line of princes, and is often a man of the most chivalrous feelings and the highest accomplishments, nevertheless, we treat them as an inferior race of beings, and we are making them so our monopoly of every high office, from generation to generation, is systematically degrading the people of India: the deterioration of native character under our rule is manifest to every one, and so

Munro went so far as to say, "it would be more desirable that we should be expelled from the country altogether, than that the result of a system of Government should be such an enrichment of a whole people." Here are samples of the blessings of British rule."

THE DESTRUCTION OF THE NATIVE ARISTOCRACY
The author says "To bring the subject home to English heart and mind, let us turn our thoughts to our native land, and compare the effects produced by individual example and influence there, to what might have been the case here. Let us represent to ourselves an English country gentleman, overlooking his estates, promoting the improvement of agriculture, superintending the roads and public buildings, and subscribing to the charities as a neighbour, opening his house, and by his hospitality affording the means of intercourse to his neighbours, all the distant members of his family contributing their share to the general good. Contrast the picture of the state of things in India. The upper classes of the natives, who used to occupy the best situations, ruined, and their places supplied by foreigners, who keep aloof from the people, whose ultimate object is to return to England with a fortune." He adds: "As to the number of respectable people who have suffered, let any one visit the English stations, few and far between, and to the country towns and villages and there he will find the innumerable houses which not many years ago were in good repairs, and inhabited by men living in the style of gentlemen, keeping up establishments and servants, horses, elephants, and carriages, but which are now all falling to decay, and their owners or their descendants are living in mud huts, with little more than the necessaries of life." And let the reader reflect that the destruction of the native aristocracy is still going on with unrelenting vigour, and that the "blessings of British rule."

SUBMISSION TO FOREIGN RULE, NO INDICATION OF NATIONAL COWARDICE

Sir Ellenborough said last session, that "no gentleman would submit to our Government, and though he alone would say it, I am convinced in my own mind that many think it, and many countrymen in their hearts despise the Government of India, because they do submit to our Government." Nevertheless this submission does not argue cowardice in those who submit. We enforce submission by an overwhelming mercenary army; and as that army is faithful, submission is a matter of necessity, but although, under such circumstances, they submit to our Government, it is not a race on the face of the earth who show more personal courage than the men of England, and the fact is not altered by their submission to us, because the bravest people in the world may be subjugated by foreigners, when they are divided against themselves, which was the case with the natives of India when we founded our empire there.

and not only were they divided, but for half a century before an opening was given for our supremacy, the great powers of the country had been shattered by wars, which may be called wars of anarchy, from the magnitude of their operations

In the last great battle, in 1808, which decided the contest between the Mahrattas and Rajputs, the forces brought into the field by the latter were 125,000 strong, and by the former 111,000 strong,

"I could add many other proofs of the personal bravery of the natives, but it has always been conspicuous: so I will merely remind the reader of the brilliant native armies of Clive, Lawrence, and Coote, which carved out our way to empire. And yet those armies, unrivalled for valour and loyalty, were officered by native gentlemen, with only one or two Europeans to a brigade, and this was our original system in India, until the thirst for patronage, as usual, surmounted every other consideration, and substituted European for native officers."

THE COMPANY AND THE CROWN By Hon'ble T. J. Hall-Thurlow, William Blackwood and Sons, 1866 Reprinted and published by Major B. D. Basu I. M. S. (Reid). Bahadurganj, Allahabad.

This book was written shortly after the transfer of the Govt. of India from the East India Company to the Crown. It appears to have been written in the interests of the services and contains some pen pictures of civilians and military men but very little of general interest to the people of India nor is the tone of the book quite sympathetic and liberal. Major Basu's reprints are usually very carefully selected, but in the present instance he seems to have backed the wrong horse, and we say this after a careful perusal of the whole book. The Calcutta High Court was established during the regime of Sir Charles Wood, and the following extract will prove of interest

"Its doors were also to be open to barristers from home, and on its bench two new and startling precedents had been adopted. Natives were to be appointed to this high tribunal...the effect of this was quite electrical...Ramaprosad Roy was a name, at the very sound of which corrupt Vakils or pleaders quitted court. He was without price, and the office had been made for him, but ere the letters patent had reached Calcutta he had died. Sambhunath Pandit Roy Bahadur, indeed, was found to reap the honours invented for another; but the new High Court went forth shorn of its greatest ornament."

INDIA REFORM TRACTS. NOS. IV AND IX. LONDON 1853. Reprinted and published by Major B. D. Basu I. M. S. (Reid) Price 1 as. each.

These tracts were written with a view to the renewal of the Company's charter in 1854. No. IV is headed 'The Native States of India' and No. IX 'The State and Government of India under its native rulers' The following extracts will show the drift of these pamphlets:—

SIR THOMAS MUNRO: IF ALL INDIA COULD BE BROUGHT UNDER THE BRITISH DOMINION

"I doubt much if the condition of the people would be better than under their native princes. The strength of the British Government enables it to put down every rebellion, to repel every foreign invasion, and to give to its subjects a degree of protection which those of no native power enjoy. Its laws and institutions also afford them a security from domestic oppression unknown in those States, but these advantages are dearly

light on London during the Dutch War of 1665-1666 and the Great Plague.

THE RISE OF THE IMAMS OF SANAA. By A. S. Tritton. (Oxford University Press, 1925) Pp. 170. Price Rs. 6.

Sanaa is a small (present population 18,000 souls) but very ancient town, the capital of Yaman or the south-western province of Arabia. As it lies in the farthest corner of the Islamic world, its history has been most "turbulent" (*Encyclopaedia of Islam*, C 147). It has frequently changed masters, e.g., in the twelve years from 901 to 913 A. D., it was taken no less than twenty times. Only one small sector of the bewilderingly changeable history of this town is dealt with in the volume before us, viz., its conquest by the Imam Md. Qasim of the Zaidi section of the Shi'as, from the hands of the Ottoman Turk's governor, 1628-1631 A. D. In this book, which was his doctorate thesis at the University of Edinburgh, Dr Tritton has translated and annotated an anonymous and fragmentary Arabic MS (ascribed to Sayyid Ahmad-ush-Shamfi), "controlling the story" with the help of three other Arabic books in the British Museum dealing with the period.

As a piece of microscopic study of a small and obscure dynasty in a far-off and obscure nook of Dar-ul-Islam, the volume may have value for minute specialists. But the general reader is apt to be repelled by the abundance of proper names, the lack of a clear outline of the history of Sanaa (which might have placed the incidents described in this volume in their true perspective) and the translator's omission to supply modern conveniences like sectional headings and Christian equivalents of Hijra dates. The 9th chapter on religion and social life, though short (11 pages), is interesting.

J SARKAR

SOME SAYINGS OF THE BUDDHA. (ACCORDING TO THE PALI CANON). Translated by F. L. Woodward, M. A. (Cambr.). Oxford University Press. Pp. 356. The book consists of passages from the Vinaya Pitaka, the Four Great Nikayas and the short Nikayas.

Among the many religious beliefs originating in the speculative Oriental mind, Buddhism is one which becomes increasingly attractive to Occidentals. In the number of its adherents and in the area of its prevalence, Buddhism surpasses any other creed; and its existence through twenty-four centuries entitles it to be considered one of the most venerable forms of belief. Mr. Woodward's only desire seems to be, to make this book an ambassador of goodwill and understanding between East and West—the old world of Thought and the new of Action. He has succeeded in his attempt through his own veneration for the sayings of the Great Lord Buddha.

A BOOK OF MODERN VERSE. Chosen by J. C. Smith. Oxford University Press. Price 2/6 d. Pp. 63.

This is a collection of poems of the Modern English poets including Mr. Bridges, Mr. Kipling, Mr. Masfield, Mr. Rupert Brooke. The poems are well chosen. The book gives the reader a fair idea of the later 19th century and 20th century English poetry. It is a finely got-up book.

CONQUEST OF BENGAL. By Basanta Coomari. By M. A. B. L. Chatterverty Chatterjee and Co. Ltd. Calcutta, pp. 99, price annas 8.

The author has shown with apt quotations from the best authorities that Bengal was conquered by the East India Company.

YOUTH AND THE NATION. By T. L. Vaswani. Greater India Series. Ganesh and Co. Madras. As. 1. Pp. 31.

Mr. Vaswani calls the Youth—the Energy—Renewal. He gives his message of hope to the Youth of India and the high place that is India's in the regeneration of the world is depicted with emotion. He says, "India's way will not be the way of Violence and War. We must show Shakti before we reach Freedom or Freedom reaches us."

S K I

C. R. DAS. By S. N. Bisi. Published by Gurumhanath Mitra from the Book Company College Sq., Calcutta. Pp. 76, 1925. Price mentioned.

This book is the English translation of the author's Bengali book entitled "Reminiscences of My Vast Deshbandhu Chittaranjan Das." The author has portrayed the greatness of Deshbandhu's soul as was, reflected in the sundry little events of his everyday life. We hope that this illustrated book will be of interest to all who adore the memory of Deshbandhu Chittaranjan. The printing and get-up of the book leave nothing to be desired.

P C S

HINDI

JIBAY KA SADVIYATA. "Haribhan Upadhyay. Navajwan Prakashan Mandir, Ahmedabad, Price 1/-. Manava Jiban ka Vidhana—Sankaram. The Indian Press, Ltd., Allahabad. Price 1/2-.

These two books are translated from the English work called "The Economy of Human Life" which is said to be "written by an ancient Brahmin." On the whole both these translations are tolerable. The title could best be translated as "Manu Gita" or "Jiban-Gita."

SURYA SIDDHANTA. By Mahavir Prasad Suro. B. Sc., L. T., Vijnan Parisat, Allahabad.

The first chapter of the Surya Siddhanta which is called "Madhyamadhikara" is translated and explained in this book. The charts, diagrams, and calculations are very useful and lucid. The work discusses other editions of the original, and compares with the theories of modern Western Astronomy.

PRACHIN BHAGAVATGITA. Mangalananda. Mangalabad.

We congratulate the writer for publishing an old text of the Gita which was at first discussed by Dr. N. G. Sardesai in his article "The Bhagavat Gita from the Island of Bali" in the "Modern Review" of July, 1914. The text contains only 70 slokas unlike the ones current in India containing 700 slokas. The writer tries his utmost in establishing the link between these slokas.

BRAHMA YAJNA : By Sivami Mangalananda
Pr. Sarasvatindra Prastakalaya, Benares.

This pamphlet contains original texts and English and Hindi translations of the various Vedic texts relating to Gayatri.

RAMES BASU

MARATHI

LIVES OF SHIVAJI THE GREAT : By Malhar R. Sane,
edited with copious notes by Rao Bahadur Kinnath Narayan Sane. (Kalayan, 1921.) Pp. 16+376. Price Rs. 2.

The lives of Shivaji and his descendants written in Marathi by Malhar Ramrao, a hereditary clerk (dewan) of the Rajahs of Satara, in 1810, is the source of Grant Duff's history so far as these are concerned. The section of this work dealing with Shivaji the Great was first edited and translated by Rao Bahadur N. V. Kirtane and ran into a second edition in 1894. It has long been out of print. And now an altogether new edition has been published by Sane with admirable industry and scholarly accuracy. Every variant has been noted with meticulous care, on the basis of three manuscripts. Kirtane had changed the language of the original and modernised the text in many places. Sane's edition wisely avoids such methods and is valuable to scholars. His notes are minute, bulky and valuable. Thus, in chapter one, the text (with notes too) covers 32 pages, while the separate notes appended to the chapter run to 21 pages. Before this, Sane had edited the second and third edition of the vast history of Chitnis, namely the reigns of Shambhaji, Rajaram and Shahu. In this edition, he had published with scholarly notes the *Asaf Bakhar* and the *Bhanu Sahibbanchi Bakhar* of which have gone into several editions. It is pleasing to note that Rao Bahadur Sane, who has already exceeded the length of days allotted to man by the Psalmist and has had more than an ordinary share of sorrow and sickness, is continuing that service to Maratha history to which he has consecrated his long life. His last work is even greater care and even finer scholarship than his earlier works, deservedly admired as these

by Rao Bahadur Sane in his Apology (nivedan) of 1913 (rendered into English here by the reviewer).

I next learnt that the finely written MS. [of *Chitnis Bakhar*] belonging to the Maharajah of Satara had gone to Seth Mawji of Bombay and that the Sethji would study the MS. for 2 or 3 months and then return it. So I wrote twice or three times to him. Then came his reply—'I am still engaged in reading Chitnis's autograph work and before the aforesaid life is not being returned'. A few months later I wrote to the Sethji offering him a man to him to fetch the book, to which the Sethji replied that the MS. had gone to Rao Bahadur D. B. Parasnis.

I now wrote to the Rao Bahadur, who replied that the MS. had gone to Seth Mawji. Then I wrote again to the Seth, but he replied that he had given to Rao Bahadur Parasnis the entire autograph work of Chitnis. In fact [I was] sent post to pillar and pillar to post again. In

these circumstances, I despaired of seeing the MS. that had once belonged to the Satara Maharajah. Finally, I was told that the book was with Rao Bahadur Parasnis, but he was intending to print and publish it. I wrote to him, 'Do you print and publish it. Let the authentic text of this book be published in any way. That is what we wish.' But no satisfactory or decisive answer came from him."

In view of the fact that a definitive edition of the *Chitnis Bakhar* is a matter that concerns all students of medieval Indian history, the state of things revealed in the above extract is truly astounding. Surely, Rao Bahadur D. B. Parasnis owes an explanation to the Indian public, and our readers ought, in fairness to him, have his version of the affair placed before them. Or, better still, his edition of Chitnis without any more delay!

JADUNATH SARKAR

TELUGU

HAIDAR AND TIPPU SULTAN: By M. Sitarama Rau,
B. A., I. T. Pp. 200, price Rs. 1-4-0. Printed at the "India Printing Works"—Madras.

Mr Sitarama Rau is one of the few writers in Telugu who has undertaken the task of educating the youths by offering a very remarkable and lucid exposition of the history of our country. It is very necessary that more books of the stamp should be written and read. One great feature is the strict impartiality with which he judges Tipu's doings. We heartily recommend it to our youngsters.

CHANDRAGUPTA: By S. Kameswar Rao. Pp. 184.
Price Re 1. Printed at the Sujana Rangini Press, Rajahmundry.

This is a prose drama depicting the well-known story of Chandragupta, the first of the Mauryan Emperors. It is an intelligent adaptation of D. L. Roy's masterpiece—"Chandragupta". The style is simple and the dramatic interest does not suffer by the omission of songs and poetry. The careful manner in which Chanakya is portrayed reminds one of Vedam Vankata Raya Sastri's Yudhisthir in his Prataparudriyam.

B. RAM CHANDRA RAO

TAMIL

ISLAM (ILLUSTRATED): By the P. Dowood Shah Sahib, Editor, "Dar-ul-Islam", Madras. Price as. 14.

This book is an excellent treatise on the rules and practices of worship according to Islamic doctrines. The book is intended for those Tamil-speaking Mahomedans, who have not access to original Arabic or Urdu texts on their sacred religion. It is written in simple and chaste language with authoritative quotations.

MOKSHA SADDHANA RAHASYAM: By Sriput Subramania Siva (Swatantrananda). Sri Sadhu Ratna Sarguru Book Co., 4-34, Nannappa Naiken St., Madras. Price Rs. 4. (Edition de luxe Rs. 5).

The book was originally begun by Sri Subramania Siva, while he was in Trichinopoly jail serving a term of imprisonment as a result of his patriotic

activities. Owing to his illness, it could not be finished as he had expected but he took the work in hand early in 1922 when he was released from prison. The book treats of Karina yoga, Bhakti-yoga, Hatha-yoga, Raja-yoga and Jnana-yoga aspects of Hindu philosophy and is profusely supported by well-known authorities. The book will be of great use to men and women of the Tamil land.

RAMATHIRTHA PARAMAHAMSA VIJAYAM (Two Vols.) By R. Narayanasami Aiyer. Publishers Sri Sadhu Pathana Suguru Book Co., Madras.

The life and teachings of Swami Rama-Thirtha have profoundly influenced the ideals of Indian nationalism in the present generation. This book is a Tamil account of his life with translations of his important speeches and writings of Vedanta and nationalism. Both the volumes together cover over 1000 pages of well-written Tamil dealing with the manifold aspects of the Swami's noble and inspiring life. The book will assuredly find a welcome in every Tamil home.

S. V. C.

MALAYALAM

KUMARA-SAMBHAVAM (2 Vols.) POETICAL TRANSLATION OF THE SANSKRIT WORK: By Kavi Th. Kundoor Narayana Menon, B. A., published Sundara Iyer and Sons., Trichur.

The author holds a high place among contemporary writers and poets of Kerala and has, in his work, laid the Malayalam literature under a debt. To quote the words of another Malayalam scholar, Mr. Ulloor S. Parameswara whose charming foreword to this work is a pleasure to read Mr. Menon has raised the Malayalam literature to a level far higher than usual in beauty and fluency of diction may be said to exceed the original in some places. But, who have read and admired the poet's writings such as 'Komappan', 'Hanuman', would feel that in this work the poet has developed a heavy style not easily accessible to the student of Malayalam poetry. This book will make a notable addition to the store, not voluminous, of modern Malayalam literature.

THE SPINNING WHEEL

By NORAH RICHARDS

"It would be sceptical to doubt but that the future of mankind will be the fairer and the fuller for all the mingled pride and degradation, ambition and drudgery, borne by the Western peoples since the birth of modern science and the era of the Industrial Revolution,—but that the soul reaches its distant ends even through denial of the soul.For the sake of a higher unity than any ever before realized, except in the highest thoughts of men, half the world has broken itself into atoms and suffered all the pain of isolation from the knowledge of the everlasting arms. . . . This should not embitter us in the West against our age, it should rather provoke our sympathies as pain borne for the future, pain by which a day to come will yet benefit."—P. F. RICHARDS

IF I were asked to name the three things in India which had most impressed me by their beauty, I should say: The Persian well, the ox wagon, and the spinning wheel. It is not only the things themselves that create this effect—though each are beautiful with the intrinsic beauty of right construction—their association also plays a part in the aesthetic effect they create. The Persian well is part of the landscape and we associate with it ideas of coolness—the splash of water as it empties itself from the dripping vessels

in a constant flow towards the thirsty fields, the spreading trees that overshadow it, the dark restful mass silhouetted against the sunbaked land. All this has its effect on us, quite apart from the beautiful thing well is in itself. The ox wagon belongs to the road and in our mind's picture is usually sunlit and laden with produce, a pleasing sight but we are divided between pity and admiration of the noble creature under the yoke, as slowly it moves along, bearing a great burden. The spinning wheel is inseparable from the domestic interior of the courtyard. Around it is a halo of peace with Woman in the centre spinning in tranquillity. Outside ornamentation of these things is unnecessary; they are so beautiful in themselves. The well is never ornamented except by the driver and the patient driven creature that moves in a circle and by the occasional groups of peasants that love to linger about it. The ox wagon is sometimes studded with bells which no doubt is intended to enliven the monotony of the lives of the drivers by

of its polished surface in the sun. brass is not insistent enough to damage the effect of the whole—a rich mass of heavy work laden with produce, dignified of bullock, and colourful form of man. hang together, brass and all, in harmonious composition. The brass does not in the form of the wagon which is an air thing living in diffused light, but the spinning wheel is an interior thing living in light and shade and the only legitimation of it is that of the spinner herself. Sometimes brightened by the application of brilliant colours. Personally, I prefer the colour of plain wood,—the darker and more aged, the better. Picture to yourself a dark mass of a spinning wheel that has done much service, mellowed to lovely shades of brown and behind it a woman in coloured dress and gold or silver ornaments with a skin and glossy black hair. Would the colour value be lost if the spinning wheel was also highly coloured and covered with design? And would not the form value of the spinning wheel be lost if it was a dark mass of colour against colour? These three things are part of the very life of India and they represent agriculture, commerce, and home. They are suggestive of the pace that is associated with India. They are slow moving. You cannot hustle an ox, you cannot send the wheels of the machine well spinning at any rate but that blind-folded ox that moves slowly round and to the droning lagging music of the heavy wooden wheels. The spinning wheel must be hurried. With infinite patience the woman manipulates the raw cotton as she turns the thread. Whatever progress may have been for us, these three things will survive. A very summit of perfection in primitive inventions for creating the necessities of a simple life. The rural population of India will use them for many a generation to come and when we are being hustled into a pace that is not the pace of India, they stand for us as symbols of the slow pace. "Not so fast, not so fast," they will say. "Why hurry? What is it you seek so ardently that we cannot supply?" Seriously enough, I find that these three are applications of the wheel—one of the earliest of inventions. In the Persian the ox wagon and the spinning wheel, the application it is primitive; in other forms it is old-fashioned, simple, rude, and of wood. The Wheel cannot stop at

this. So great a boon to mankind must evolve from the rude to the refined, from the simple to the complex. In the process we appear to lose much of the simplicity and the purity of life. This is appearance only. We are in the process of *becoming* and mechanical invention is playing its part in the process. Who can doubt it? It is easy to level facile criticism at soul-stunting machinery as it appears to us today, it is not so easy to see what soul-expanding effect will be ours when we have become sufficiently civilized to know how to use machinery aright. True, the Machine is a giant, an ogre, and like the fabled ogre of our nursery tales, has to be stood up to and overcome by men of ordinary size. It is no use running away from it, that is merely putting off the day of reckoning. We cannot avoid the Machine. We live in a mechanical age, and daily, new mechanical wonders appear on the horizon. Nature is prodigious. She produces in superabundance and there is much waste of seed, fruit, insects, animals, and men. Man too is prodigious in mechanical invention and much that he invents will in time be thrown upon the scrap heap.

The people of the world can be placed roughly into three classes. The primitive, the civilizee, and the civilized. The primitive are the *unbecome*; the civilizee, the *becoming*; and the civilized are the *become*. So far, there are only civilized individuals and their followers. No country can yet be called civilized. The leaven of our Prophets and Seers must work in many more of us before civilization on a large scale can appear. We must allow civilization to civilize us and this can only be achieved by the mastery of civilization. It can never be achieved by running away from it. The civilized person must be so advanced in spirit that having the power to aggrandize himself and to dominate, he must refrain, if not to do so is anti-social. He should be willing to scrap machinery that produces trash and vulgarizes life, even though he may be making wealth by that which he destroys. A sifting process is necessary—a purification. The chaff and the wheat of mechanical production must be separated. The only justification of labour-saving machinery is that it really does save labour—for the emancipation of the labourer from toil, not for the material advantage of the owner of the machine. The emancipation of the labourer from toil would be the

commencement of civilization on a large scale.

One of the evils of machinery, under present conditions, is that it produces too easily, not for use but for profit—resulting in over-production, creating an inflated and unnatural consumption, forcing upon us many useless things; for much that is machine-made is meretricious. In the process of mastering the machine we must so train and discipline ourselves as to be able to resist the pressure put upon us to buy what we do not need. There is only one test of labour-saving machinery. Does it simplify life? Then it is good. Does it complicate life? Then it is bad. Edward Carpenter once remarked that when the sewing machine appeared, instead of lightening the labour of stitching by hand, it but encouraged the women to complicate their clothes by adding tucks, frills, and flounces. The obvious fact is that machinery can do both. It can simplify and it can complicate. If it simplifies, it is a blessing. If it complicates, it is a curse. The choice of curse or blessing rests with ourselves. Machinery connected with the unification or improvement of the world is a burden to be borne. Ships, trains, aeroplanes, cables, engineering, electricity—these, and more, demand the sacrifice of men bound to the Machine. The sacrifice is worth while. After all, who would wish for a bed of roses? This is the age of the Machine and it is futile to bury one's head in the sand like the ostrich and say we cannot see it. We must raise our heads and look upon our age unflinchingly, realizing it and accepting it, but working through it towards a simpler and therefore a fuller life.

I find the political significance of the spinning wheel very baffling. I cannot grasp it. Politics stand for power and to my thinking the spinning wheel as a symbol stands for the Simple Life. The Simple Life is not primitive life but cultural life and as such is utterly opposed to politics. Political government is outer rule, but cultural Government is inner rule; and that, I believe, is the original meaning of the word *swaraj*, individual self-rule. The pitch of the spinning wheel has been queered by being associated with politics and economics. In all reverence, I suggest that the Apostle of the *Charka* has had his own pitch queered by being drawn into political politics. His politics, I venture to think, are of the cultural order, and that is why he is possessed

with a burning passion for the *Charka*, a passion which persists in spite of every kind of just criticism, opposition, and of ridicule. The weakness of the cult of *charka* has been to take it too literally—literal application reduces it to an absurdity. Literally, it can only be applied to primitive life. A revival of spinning and weaving villages is to be desired. The literal application of the spinning wheel is mere reaction from complexity and economic subject. But to go forward through complexity to a simpler life, and to face economic problems with clear thought, not ignoring the Machine, benefiting in both cases by the complex period, is progress. The only political significance of the *charka* that I can see is that of non-government. When India is ready to *masse* to live the Simple Life, there will be no one to govern, for all will govern themselves. If India, as a nation, is on the Path of Return, she can dispense with politics and take to spinning metaphorically. That she can on that path remains to be proved.

The cry of the spinning wheel is a cry of protest against the Machine. This same cry is heard in other parts of the world, though the spinning wheel is not its symbol. Whether India can be so easily mechanised as countries in the West have been is doubtful. India has fewer material needs, and in the light of her semi-lost philosophy, there is bound to be resistance to material progress even if that resistance is not fully conscious. India's genius is more suited to a simple life than to a complex life, more suited to handicrafts than to machine-made goods, more suited to cottage industries than to factories. Nevertheless, the Machine can ease the toil, where it can help in the simplification of life and in production, it should fearlessly and gladly be used. Like civilization, the Machine is only harmful when we allow it to master us and rob us of our virtue, our vital force. Things only hurt us when we shrink from them. If we would avoid being stung by a nettle, we must grasp it, and there is nothing that puts one into such a glow of heat as playing bravely and vigorously with snow.

The Spinning Wheel is a challenge, but we dropped the word *spinning* and called it "The Wheel!" we should raise our voice to some purpose, for that cry would be an implicit appeal to the Machine to save us from deadening toil—its only justification where human life is concerned. The

our day—the wheel of the Machine—should ourselves complex barbarians, nor to drive
p us to civilize ourselves, not to make of us back to the primitive life.

TENDENCIES IN MODERN ITALIAN LITERATURE

By BENOY KUMAR SARKAR

I

Italian Risorgimento

FTER Dante and Machiavelli, the only great Italian name that is popular in India in literary circles is that of Mazzini. But although the politics of the age are well known, the spiritual background of the Society for which the heroes of the *Risorgimento* fought and fought with less has hardly as yet called forth from Indian admirers of Italian movements the attention it deserves.

Carducci and Manzoni

It may be remarked that English translations of great Italian authors of the nineteenth century are not as plentiful as one might expect. The attention of English translators has been bestowed principally on France. Victor Hugo, Duma, Balzac, Anatole France and others have nearly grown into English classics, Carducci, "the greatest since Dante," as Italians know him to be, and Manzoni, the protagonist of Italian romanticism, yet scarcely known outside of the specialists in Italian lore. Indian poverty in regard to Italy thus explains itself as a matter of course.

Verdi the Composer.

Great Britain and America, however, have been good in another direction. The English-American operas have served to naturalize the Italian composer, Verdi, in English-speaking lands. And to know Verdi is to be acquainted with a musical genius whose art was used to exert as powerful an influence on the mentality of the Italian masses as the Mazzinian gospel of duty in Young Italy.

But in India, unused as she is to European music, Verdi continues to remain as unknown as Carducci and Manzoni.

Alfieri the Dramatist of Liberty.

Like the national movements in other lands, the Italian *risorgimento* was accompanied by a dramatic revival. And the Schiller of the Italian stage was Alfieri, the poet of freedom and writer of historical dramas. Ancient Greece and Rome furnished him with the major themes. But whatever be the subject-matter, Alfieri was first and last a propagandist.

In those days, Italians used to sing the glories of the republicans of "Roman times". The revolt against Caesar was a popular theme and Alfieri's sense of propaganda made use of the subject in quite a successful manner.

A Maker of Modern Italy.

Propaganda and art do not match each other and so Alfieri's dramas possess today mainly an historical significance even in Italian estimation. But during the first half of the nineteenth century, the *Bruto Minore*, *Saul*, *Filippo* and other tragedies were the most powerful weapons calculated to spiritualize the peoples of Italy in their hatred against the barbarians, the foreign rulers. Alfieri will therefore always rank as a maker of modern Italy, one of the precursors of the triumvirate consisting of Mazzini, Garibaldi and Cavour.

Niccolini's Contributions to the Stage.

It was not possible for Italians to write freely on contemporary politics. The Austrian government as well as the governments of the Italian princes controlled the

productions on the stage. The authors were therefore compelled to fall back upon the classics or the medieval history of Italy itself.

A popular subject was the tirade against the tyranny of the Venetian oligarchs. European literary as well as historical tradition has always ascribed the worst excesses and inhuman cruelties to the Council of Ten at Venice. But when the dramatist Niccolini produced his *Jesurini* on a Venetian theme, it did not take the audience long to understand the moral. Niccolini has been honoured by the government of New Italy with a grave in Santa Croce by the tombs of Dante and Machiavelli.

II

Italy in English Literature

It is doubtful if in India, Italy and Italian literature are known at all except in so far as they have influenced the English men of letters. Italy's influence upon the literature and fine arts of England from the days of Petrarcha down to Dante Gabriel Rossetti and the pre-Raphaelites is a matter of history which every student is expected to master.

To the same category also belong the incidents connected with the aesthetic complex described as Byron in Italy. Nor is it easy to discriminate as to whether Italy has become a household word among the readers of English poetry and drama through Shakespeare's stories or Robert Browning's artistic studies. All this is classic

Romantic and Real Italy.

One feels as if Italy has appealed to the English mind exclusively as a source of romantic inspiration and idealism almost in the same manner as India touches the sensibilities of the Europeans and Americans: It is therefore with a tremendous shock that one comes across the following lines of D. H. Lawrence in regard to Venice:—

"Abhorrent, green, slippery city
Whose Doges were old and had
Ancient eyes.

This is the rude awakening of an artistic mind to the actualities of Italian life. One recalls the vicissitudes in America's reactions to Japan. For about a quarter of a century, Americans used to love Japan as the land of cherryblossoms, chrysanthemums and naples. But since the event of 1905, the same little islands of the Pacific have been

getting their proper worth in the prosaic transvaluation of the world's values.

A Change in Orientation.

While calling a "spade a spade," Lawrence has happened to be too sincere. In his rigorous imagination, Italy is but a land of sepulchres. While other poets have sung of Italy's oranges, figs, grapes and pomegranates, to Lawrence the fit emblem of Italy is the Cypress of Florence. None but a cruel *Realpolitiker* in the realm of poetry could have written —

Vicious dark cypresses
Vicious, you supple, breeding,
Softly swaying pillars of dark flame
Monumental to a dead, dead race
Entalmed in you."

Italy is thus but another Egypt. The unsentimental orientation to Italy among English writers is not without its practical counterpart. For, the British statesmen and captains of commerce and industry have learned how to adapt themselves to the "new Italy" in all problems of international intercourse. Not by the glories of the dead past but by the possibilities of the immediate future can Italy inspire England to-day.

III.

Dramatic Forms in Italy.

A new form of the drama has made its appearance in Italy. Only two characters are seen on the stage, the rest to be known and inferred from the conversation between these two persons. The vogue has been initiated by Niccodemi in his *Alba*. Niccodemi is by far the most popular playwright but his new technique, although it does not fail to introduce the audience to the most complicated developments in human sentiments and social situations, has given rise to much adverse criticism.

Niccodemi Personalities.

Niccodemi is one of those dramatists who still hold to the art of producing real human types and not mere Ibsenian abstractions and Maeterlinckian symbolisms. Contemporary Italian society with its objective personalities and concrete intrigues is depicted by him in a brilliant style. As a rule, the leading role is played by bourgeois or middle class and aristocratic personages in the Niccodemian plays.

Pirandello's Symbolism and Satire.

Symbolistic creations have also been in favour among the Italian masters. Dramas modelled on Ibsen's *Ghosts*, for instance, are not unknown. Pirandello, the Sicilian author, has described a family in ruin caused by an incurable disease.

Pirandello's reputation is, however, not that of an imitator or an author of adaptation. He is a dramatist and satirist of the first rate. The mastery with which he employs sarcasm and creates absurd and almost impossible situations is a marvellous item in the world's dramatic art. And yet as a rule Pirandello's characters are not individual personalities that one comes across in the cities and villages of Italy but abstract generalizations of human attributes.

Historical Dramas

Historical drama has never been without a votary since Alfieri and Niccolini wrote for the audience of the Risorgimento epoch. The Risorgimento itself is the theme of a number of plays by Tumiati. In his *Tessitore*, the protagonist is Cavour who is described as the diplomat successful in winning over France to the cause of Piedmont against Austria. Like didactic poetry, patriotic drama can hardly satisfy the criteria of art. Tumiati's efforts have not been crowned with much success.

Benelli's Renaissance Plays

But another playwright in the historical field, Benelli, has displayed his ability as master stagecraft in an exceptional manner. His psychological studies on the men and manners of the Middle Ages and the Renaissance are appreciated by the Italians as significant contributions to dramatic literature. As a dramatist in history, it may be noted, *en passant*, Benelli tries to be a faithful antiquarian.

Real historical personalities have been endowed with flesh and blood in the dialogues of Benelli's plays. Lorenzo de' Medici, among others, functions as one of the most living *matris personae*. These characters, although familiar to students of history, appear as fresh artistic Benellian creations and yet from true perspectives. Some of the characters, it may be expected, are of course unhistorical, but they are fitted in with the milieu of the age as well as with the local values.

IV

Diversities in Italy.

When somebody begins to know Italy a little bit intensively, it appears that the land is very diverse in landscape, folk-manners, dialects and what not. Lombardy, Venice, Umbria, Florence, Sicily, Naples, Liguria, each is almost a world in itself in French and German estimation, and Italians themselves do not deny it.

Tuscany's Atmosphere

Tuscany, the land of Dante, continues to occupy a prominent place in modern Italian literature. Literary critics of Italy consider the language and very atmosphere of Tuscany to be the natural elements in which arts and letters flourish as a matter of course. Tuscan style, it is said, is clear, simple and perspicuous and although the impression conveyed is that of a superficial treatment, the substance is deep indeed.

Cicognani's Short Stories

Simple stories of Florentine folk-life constitute the forte of Cicognani. He is interested in the middle class families and the lower strata of Tuscan society. Cicognani is a lawyer of Florence and has much to do with the poorer men and women of the city. As such, the romance of depressed and submerged classes has whetted the literary appetite of this author, realistic as he is.

The Florence of the Poor

What is the Florence of Cicognani? In his stories we see a city of old medieval palaces, dilapidated, unrepaired and almost uninhabitable, where to-day the families of petty clerks live or perhaps the descendants of whilom aristocrats. Cicognani's Florence is, further, the city of lanes not often more than a yard wide, the narrow passages between the houses of the destitute and poverty-stricken persons. He exhibits the dirty worn-out rags hanging over the passages on both sides and the brilliant eyes of the cats running about in the dark entrances to the houses.

V

D'Annunzio

The most famous representative of Italian letters abroad is at the present moment

undoubtedly D'Annunzio. Perhaps he owes his reputation to a considerable extent to the aggressive part he attempted to play in the political life of post-war Italy, especially in connection with Fiume. But it is curious that he has recently bidden adieu to public life and proposes to devote the rest of his active days to the pursuit of art in the villa at Gardone on the romantic lake of Garda in Trentino.

Adventurer without a Venture

D'Annunzio's literary work is many-sided. He is known in Italy as dramatist, story-writer and lyricist. Something like a miscellaneous volume of autobiographical reminiscences and comments under the title of *Venturiero senza Ventura* (Adventurer without a Venture) has just been issued by the author in order to furnish his admirers with some specimens of his "best prose, the richest and most fertile in quality." The book, as a collection of writings from 1896 to 1907, serves, at any rate, to open up D'Annunzio's youthful days the period

which witnessed the birth of his greatest poetical works.

Parables Reinterpreted.

One of the stories in this miscellany deals with the Biblical parable of the prodigal son. But the interpretation is non-Biblical. One almost remembers Anatole France's handling of the story in *Judas the procurator*. D'Annunzio's prodigal son is not a vagabond living the life of riotous Epicures but an artist and admirer of classic beauties, a "Bohemian" in the better sense of the term. The author has sought to bring the culture of ancient Greece into relief by placing it in the perspective of Jewish life and institutions, inferior as they are in his estimation. The prodigal son of D'Annunzio, as a student of the "higher values," does not therefore repent but is on the other hand conscious that he is teaching his parents things that they know not. Two other parables, the one of Lazarus and the Virgins, are dealt with in the same "modern" manner.

AT NANNOOR

By JEHANGIR J VAKIL

Rajakin Rami,
I dip five hundred years
In the past, and see—
As thro' a veil of tears,
As thro' bright sheets of light,—
A village lass,
A washerwoman washing white
The soul of Chandidas.

[NOTE. Nannoor, a village in Burdhum, Bengal, is believed to have been the home of Chandidas, the lyric poet, whose beloved was a *Rajakin* or washerwoman named Rami.]

INDIAN PERIODICALS

Indian Art and Atmosphere

Sri C. P. Ramaswami Aiyar K. C. I. E., writing in the *Daily Express* annual for 1925 on Indian Art and Atmosphere, says,

It has been recently asserted and thereafter much debated that Indians cannot, in the nature of things, produce good poetry in the English language. There is some truth in such statements though, like many another, it is only a half-truth. Is it not indeed obvious that all art must, of its essence, be individual, be, in other words, the expression not only of mind and soul but of atmosphere? Not only pedantic, therefore, but supremely silly are the efforts of those who sing of the primrose and of the nightingale never having seen the flower in bloom nor heard the bird sing. If anything may be said to be truly "a heritage" it is art. The "remnant" shop is never a thing of beauty but the vendor of reminiscent or second-hand literature is an "old clothes-man" of the worst variety. Not only so, but exponents of such literature or painting cannot even attain respectable mediocrity because their innate tendencies run absolutely counter to their half-acquired artistry. Especially is this the case with Indian art whose origins are so thoroughly differentiated from Western tradition. Until the other day, the rules laid down by Agastya and followed by countless generations of Silpis for making images in bronze were either denied or looked upon as productive of bizarre forms, and only within the last decade has the inner meaning been understood, even by the Indian student, of the tremendous cosmic energy embodied in the Nataraja at Chidambaram, the supreme repose of the Dhyani Buddha and the rapt adoration of Uma. It is just being perceived that the long tradition of the Vignaha, whether it be that of the Lord of the Universe in rhythmic dance or of the flute-player Krishna, has its own place in the history of human endeavour and its special significance as a symbol of emotion and faith. We owe it largely to Gangoly that we have been able to realise the comprehensiveness and the eclecticism of that craft.

Historically it is also proved that in India great sculpture and great architecture have been the resultants of quickened religious enthusiasm. Art for art's sake has never brought about transcendental results at all events, in this land. Elaborate rules may be laid down and faithfully followed but where there is no clan aroused by deep feeling, they will, at every turn, be a hindrance. Within those rules the Indian artist, if he is touched with the divine fire, does not perchance produce naturalistic facts but he becomes a revealer of idealistic conceptions. The new Bengal school of painting so much in marked contrast to the lacquered prettiness of Ravi Varma is an example which lies to hand. The Tagore brothers had to get rid of the traditions of Western painting, and it was only when the obsession not only of the picture galleries of Europe but of Japan was eliminated that the Indian painter

came by his own. The characteristics of the Bengal School, it will be admitted, are its delicacy and its quiet suggestiveness of the infinite. Perhaps the school has not produced vigour or movement and as in Indian poetry and Indian epic, so also in Indian painting, the personality of the artist is not so much in evidence as in the case of the great European masters. You do not get a Velasquez, a Titian or a Rembrandt but in the works of men like Nandalal Bose and Surendranath Kar and Haldar, the feeling abides that the artist has essayed not to reproduce Nature but to escape from symbols and even technique, this process being another phase of the same spirit that created the Upanishads and marking the essential difference between Turner and Constable and the contours of the Indian landscape portrayed by the Mughal and Rajput artists. Indeed, the ideal of the Indian school of painting is that enshrined in the assertion of the Svetasvatara Upanishad, "The One who is beyond all colour and shape by means of his Sakti colours and shapes the whole Universe and to Him we bow." It has been aptly remarked that it is an appeal from the seen to the unseen. In saying this, I am not forgetting that Europe has many instances produced the same effect and one need not go further than Leonardo da Vinci's "Mona Lisa" for an example.

Migration of Indian Culture

To the same number of the *Daily Express* Mr O. C. Gangoly contributes an interesting article on the above subject. He opens his article as following:

Some of the most fascinating pages of Indian history are those furnished by the narration of the story how the continental culture of India overflowed its geographical boundaries and poured in diverse and fruitifying currents over many parts of Eastern Asia, in order to establish rich colonies of Indian thought which very soon developed into Greater India beyond the seas. It is very commonly believed that Indians sought and found refuge for their outgoing colonies under the stress of religious persecution in the main land and that it was the impact of Muhammadan culture, which forced persecuted Hinduism or Buddhism to seek protection in the distant countries across the seas. This popular misconception and misreading of Indian history has received a very useful corrective in the valuable data of solid historical facts which have been gradually revealed by the researches of scholars. It has now been definitely established that India sent out her colonies of Aryan thought long before the advent of Islam in India and that Aryan adventurers crossed the seas, not under the stress of any domination or political force but out of the abundance of their own energies and with the laudable object of sharing the fruits of Aryan culture.

with the primitive races of the Malay Peninsula, Indo-China, Siam and the islands of the Indian Archipelago. The currents of Aryan thought and culture have flowed into Eastern Asia through diverse channels, the marks of which are now very difficult to retrace. There is a very persistent tradition that one of the earliest colonies to go out to the East originated in Gujarat, but it is impossible to substantiate this, by actual historical evidence. On the other hand, the evidences hitherto accumulated go to show that South Eastern Asia was colonised by emigrants hailing from the banks of the Krishna, the Godavari and the Kaveri, that is to say, from the coasts of Orissa (Kalinga) and Southern India. The people of the South have played a great part in the development of Indian civilisation beyond the seas. The great Tamil races of the South have sent out successive waves of new colonies at different stages of their history to the different parts of Indonesia. The history of this colonisation is an interesting volume of many chapters and pages.

Our Health

Dr. Muthu, writing in the Annual Supplement to the *Swarajya*, says

It can be laid down as an axiomatic truth that the security of State is founded upon its happy citizens living healthy lives in decent homes and congenial surroundings that only strong and vigorous nations inherit the earth and possess the land apart from moral and spiritual qualifications. I contend that only the race which is physically fit and efficient is capable of enjoying the blessings of liberty and of civilisation and handing down their heritage to succeeding generations. Health is wealth. In these days of economic stress and fierce industrial competition only that State which has the greatest number of healthy and capable workers rise to the top commands the international affairs and successfully competes in the markets of the world.

Where do we stand to-day? Looking from this point of view where do we Indians stand to-day? We as communities struggling to be a nation are handicapped and disabled at almost every turn. Let us face some facts. There is no country in the world where poverty, insanitation, sickness and death are so rampant as in India. There is no country in the world where plague, cholera, small-pox, malaria and other fevers claim their victims in millions as in India. Add to these tuberculosis which is becoming a fearful menace causing a great havoc in every part of India—especially among young manhood and womanhood. Our infants die in terribly large proportion. So much so that there is no country in the world where infant mortality is so high as in India. Thousands of our young men and women have no strength or stamina to fight the battles of life and fade away from such disease as tuberculosis in the very flower of their lives. Our middle-aged men, just when they are becoming useful to their country, are cut off before their time like the fruit blown before the autumn wind. Why? The very foundation is poor. The child is born weak from a weak mother and its pulse of life runs feeble and

continues to do so all its existence. Now, medical experts are beginning to realise that social economic and industrial facts take a very important part in the incidence and mortality of tuberculosis. Medical opinion is slowly but surely coming to see what I pointed out years ago that the soil is more important than the seed. If the soil is rich and the resisting power good, no microbe or infection can hurt us. It is man that creates the conditions of disease within himself and the soil thus prepared blossoms into disease. Poverty, insanitation, on the other hand, social customs and habits that have grown with ages have prepared the soil in India for the growth of consumption. Therefore, it is the solemn duty of every father and mother to do everything in their power to help their children to build up a strong constitution. They may not have any money to leave their children but they can hand them over a vigorous health which is real wealth.

The Rise of the Negro

Mrs. Kamal Das gives us in the same paper an account of Negro life in America since its beginning. She sums up the present situation as follows

The Negroes in America do not enjoy equal rights for the reason that they are discriminated against in the Christian Churches, educational institutions and public places. In the south they may not even ride in public vehicles that are used by the Whites. They are under great disadvantages because they are, as yet, an oppressed minority with no dominant power, and strength. In spite of the disadvantages under which the Negroes suffer within fifty years from their slave days they have progressed with astonishing rapidity. To-day, 70 per cent of the Negroes in the United States can read and write. They are doing their best to spread education among their people. Schools, colleges, and Universities supported by the Negroes are increasing. No longer are they landless but are becoming agriculturists, mechanists, skilled workmen and professional men as well. The future progress of the Negroes in America is bound to be greater in the coming years than it has been in the past because it is only the children of the first generation of free Negroes who are getting into Universities and colleges and making their lives a success and they will exert a tremendous influence to raise the standard of Negro life, and they will rouse the Negro people to work for their national regeneration. To-day there are among the Negroes in America first rate scholars in every field of human activity—Poets, Scientists, Doctors, Lawyers and Engineers. Their number is on the increase.

American Love

Not the proverbial cross-ocean variety, but the universal serious sort is the subject of an article in *Swarajya* from the pen of an able man on the spot, Dr. Sudhindra Bose.

Dr. Bose has been specially impressed by the philosophy of love as found in college boys. He gives us bits of it from a college magazine.

"Don't try to make a woman fall in love with you. If she's going to she will any way. Don't try to interest her, and she will find you perfectly fascinating. Be just as mediocre as you can, and she will exalt you to unmeasured heights.

Never agree with a woman—not even if you are forced to desert every principle you hold most dear. Woman adores man when he dares to contradict her. She loves to imagine herself weak and helpless to fancy man big, strong, and capable, firm as a rock.

"Never believe anything she tells you. If she declares she adores football heroes, give up athletics altogether and spend your time lounging about in lavender pyjamas and a pink quilted dressing room not forgetting a heavy oriental scent and several gold-tipped cigarettes. If she tells you she hates sports, never appear in her presence in anything less virile and startling than a track suit, and football cleats. She will go into rapture over your very perversity.

Don't exhibit a grain of sense, or she will think you are intellectual and boring. In other words, be yourself, she will love you for your worthless, pointless existence.

"New Light" on Opium

To Meryn G. Cadwallader, a contributor to *The New Outlook*, an Anglo-Indian monthly, we owe the following discovery.

In India, the eating of opium does very little harm, there are two reasons. First, it is not widely used. Second, it is not smoked or eaten to excess. It is believed that the widespread harm that the drug does in China is due to the very short time it has been in use in that country as compared with India. It is also believed that a population after a few centuries becomes immune to such poisonous, though attractive, indulgences. Of the harm done to a population by the habitual use of opium there is little doubt, yet everyone who knows anything about medicine and the wise use of drugs, speaks of opium with reverence, nay, even with affection.

Danger for Islam

Khalid Sheldrake writes in the *Islamic World*.

I was talking one day last week to a prominent Christian when he informed me that a great new offensive movement was being prepared by Christianity against Islam. He said that the principal headquarters were in America but the other Christian bodies were co-operating. "Soon," he said, "we shall see the attack in full force by means of newspaper articles, magazine stories and notes, plays, films, new periodicals, the issue of a vast amount of anti-Islamic literature backed by all the vast resources of the missionary propagandist machinery.

It is easy to see why this is being undertaken. Islam is gaining ground everywhere. The missionaries are now genuinely alarmed. Africa bids fair to become entirely Islamic; news filters in fairly slowly from Russia; but the *Islamic News Service* is informed that the Muslims there are increasing wonderfully. In China, there are now 62,000,000 Muslims. Java and the other Islands are almost entirely Muslim. Australia has many mosques and a number of Australians have adopted Islam. Turkey has risen from the ashes. In South America, there are many thousands of Muslims, especially in the Argentine Republic and Brazil. In the United States of North America, many people are coming to Islam, and in Europe, we find Muslims in many countries. The vigorous propaganda from Woking in England is felt on all sides, and the number of the British Muslims increase weekly. And yet the country is in need of more Islamic missions to strengthen the Voice of Islam. Can you not imagine the state of mind of the clergy who see before them almost empty churches, abroad in the mission field little or no success? So this vast scheme is being worked out to try to combat the success of Islam in all parts of the world. There is one thing that is necessary. It is that we should be fully prepared.

How Indian Muslims look at New Turkey

In the same journal Mustafa Khan writes on "Turkey in Transition" and condemns the policy of westernisation followed by Kamal Pasha. We are told that Turkey being no longer the seat of the *Khilafat* "cannot enjoy the spiritual homage of the Muslim World" any more. Not only that. Mr. Khan also says.—

But the most deplorable thing of all this is that the events which are taking place in the new Turkey under the *regime* of Kamal Pasha are assuming a grave attitude which is likely to deprive her even of that commonplace sympathy which the Muslims of the world are expected to have with a Muslim State. The Muslims of India, for instance, who were perhaps the foremost in adoring the Turkish *Khilafat* and who were even ready to accept Kamal as *Khalifa*; if he had recognised the institution of *Khilafat*, are now asking with great anxiety: "Is Turkey turning her back on Islam and adopting western ideals. Is she casting her Islamic costume bit by bit, and Europeanising herself?"

It seems that Kamal and his colleagues are determined to adopt western ways without putting them to the test of reason. They seem to think that every thing that comes from the west is good. Surely it is a sort of mental slavery, condemned by Islam. The Holy Prophet is reported to have said that "wisdom is a lost property of a believer who should get it wherever he finds it." But at the same time, Islam forbids us from blind following. The Modern Turk, however, appears to follow blindly in the foot-prints of western nationalism. He is indiscriminately adopting the ways of the western nations. In making the brimmed cap the national headgear, the Turk has

only copied the West. In laying restrictions on polygamy, he has again yielded to the influence of the western nations, and has not thought over the harmful consequences of this measure. His sole argument on this point pertains to the economical conditions. He says 'why should a man have two wives if he cannot support one, and for this reason every one wishing for a second wife is required to satisfy the court about his income or means of subsistence.' But if we are to follow this argument, the Turkish Law is imperfect. It should go further, and enact, that a man should remain single if he has not got sufficient means to support even one wife. And then the number of the children should also be restricted and birth control should be imposed. The young Turk has perhaps forgotten the elementary principles of economics. Any individual who wants to enhance his income must increase his expense. This will serve as incentive for more earning. Therefore, economically a second marriage is beneficial because it contributes to the earning capacity of the man. Again, the sacred tie, which binds the husband and the wife should not be only based upon mercenary considerations.

According to this principle of economics, polygamous countries should be the most prosperous in the world. Are they?

Muslim Criticism of Christianity

In the same journal, M. K. Andrew criticises Christianity in none too sympathetic terms. Says he:

The dogmatic Christianity of the Church cannot be a true religion from God, because its very teachings imply a suggestion of sin to the pure innocent minds of the children. To preach Christianity among children means to induce them to commit sin, of which they are so far unconscious. We cannot say to a child "You are sinful and bond slave to Satan, because you have come out of your mother who conceived you in sin." These words are sure to upset the simple mind of a child. Hearing these, he cannot possibly have any idea of self-respect or any veneration for his mother.

Muhammadanism, says the writer, takes a higher view of human nature and believes in the innocence of childhood. The writer supports his view by apt quotations and gives ex. to say:

Now, in comparison with that, let us take the case of Jesus. In the first place, he did not marry, nor did he beget any children. Therefore, he had no opportunity of experiencing the filial love. The life of Jesus is absolutely devoid of pathos, and sentiments connected with the family hearth. His mother was the only nearest relative with whom Jesus had to deal, and his treatment of her as reported in the New Testament is not commendable. He is said to have addressed his mother with these words:—

"Woman! who art thou, what have I to do with thee." This mode of speech is surely far from being polite and civil. I do not know how Jesus

would have treated his children, had he got any. But from his treatment of his mother he seems to be a man of very peevish and irritable nature.

Religion of the Future

Sh. Muhammad Din Jan discusses the "Religion of the Future" in the same journal and says:

The human race cannot remain without a deity. This postulate has come to be recognized through a general practice of long ages obtaining amongst peoples of all colours and hues that inhabit our globe. With the advance of reason, the form of deity or the mode of worship may improve but the religious sentiment yields ground in this respect very reluctantly. No wonder, therefore, that we find even the twentieth-century Hindu worshipping his stone-god side by side with the Hottentot and offering rice and fruit to the round pebble which may have been picked by one of his forebears from the bed of any hill-stream and placed on the altar to receive the homage of children and children's children who may be disposed to seek blessing from the *Channamit* (the water with which a votary has washed the imaginary feet of his pebble-god) at his chance acquisition. No wonder that the melodious chant of the holy hymns is still rising from every cloister more regularly than the Zulu's extatic dance around his gods of wood and stone. These were, once perhaps, expressions of a yearning heart which goes out spontaneously to its imperfect conception of the deity.

He goes on to describe how Reason has progressively asserted itself in human life and finally says:

The modern man has fully realized that he has been given life to live and the Deity gave him limbs to work with and not to be dried up. He is not an idle dreamer running after ideals which he knows for a certainty cannot be attained. His need is a practical code of life which should raise him spiritually as well as materially at once, helping him on in this life and the life to come. Neither Hinduism nor Buddhism nor yet Christianity supply it. They break short at a few ideals unworkable and unattainable. This does not suit him. He must, therefore, reject them to-morrow, if not to-day. Sooner or later his choice must fall on Islam when he will blushing admit his error of deliberately remaining ignorant of it and regret the lost time.

Greater India

The *Calcutta Review* publishes a monograph on the above by Dr. Kalidas Nag M. A. D. Lit. (Paris). Dr. Nag deals with the many aspects of the history of the India which dazzled the imagination of the world of pre-Christian days and draws general conclusions of paramount importance. As an answer

to those who love to dream of India as living in the heart of the world through millenniums and all the time separated from it culturally and in other ways, he says

The first fiction and unfortunately the most tenacious fiction of Indian History is the glaringly unhistorical hypothesis that India grew up in "splendid isolation." For the fabrication of this fiction we have to be thankful as much to the narrow outlook of late Hindu orthodoxy as to the erroneous picture of primitive Indian society drawn by the early school of occidental philologists. While acknowledging fully the value of the works of these scholars in the decipherment of the ancient texts, we cannot forget that the outlook of these new types of *Pundits* were generally limited by those very texts which engrossed their attention. Thus, frequently, too much emphasis was laid on particular aspects of Indian life as suggested by some special terms or words, and too little regard paid to the general historical evolution. Words are valuable as landmarks in the progress of society, but for that very reason they are but *static symbols* of the ever-changing and ever-expanding life. So, the picture of caste-ridden India, cut off from the rest of the world by the external barriers of the ocean and the Himalayas as well as by the internal prohibitions of a morbid all-excluding cult of purity, India ever chanting Vedic hymns or celebrating occult sacrifices, weaving transcendental philosophies or absurd reactionary principles of life,—this latter picture of India fades away as soon as we view it from the vantage ground of history.

Dr. Nag then tells us about a superior conception of World Empire than that found in the ancient, the mediaeval or the modern West.

World-empire may be a new ideal with the world but it is a dangerously old institution of antiquity. In spite of the unmistakable warning of an evil history as to the inevitable self-disintegration of such gigantic edifices resting on the precarious foundation of *force*, Greece under Alexander and Rome under her republican pro-consuls and imperial caesars attempted the dangerous experiment, met with usual tragic disaster and even in the very failure, left the fateful legacy of empire-building to all of their "Barbarian" successors who are struggling down to this day, with varying degrees of success and permanency, with the same impossible, antiquated experiment of antiquity of building a world-empire—a machinery of gain for a few at the sacrifice of the many based on the quicksand of selfishness and propelled by the inhuman energy of brute force!

With phenomenal originality, nay with divine inspiration, India under Asoka the Great (273-242 B.C.) suddenly developed an ideal of *Empire of Peace and Progress* for all. Within 250 years of the appearance of the great Buddha, India produced another historic personality, *Dharmasoka*, not only contradicted with an unparalleled historical sagacity, the entire politics of antiquity up to his age but also like a Spiritual Columbus, discovered a new world of constructive politics, which, un-

fortunately, remains as yet only an aspiration and a dream for humanity. Behind him stretches the dead run of ancient empires, before him unfolds tableau of lamentable duplication of the same selfish politics in our modern history; and in the centre lies the spiritual oasis of Asokan imperialism. It shines as a beacon light in the path of the political evolution of humanity, explaining the inevitable decay of old empires and putting to shame the retrospective laughter of the cynical imperialists of our modern age. Thus the empire of Asoka, with its new philosophy of conquest by Righteousness (*Dharma-vijaya*) and its new foundation of universal Well-being (*Kalyana*), stands as the central climacteric of human history—at once a fateful warning and a divine inspiration for humanity.

India of the times that Dr. Nag discusses was a source of inspiration to even the Greeks, for, we are told,

Down to the end of the reign of Asoka, the Hellenic people looked up to India as a powerful ally and a civilising power and thus the Greeks seldom aspired to impose a civilisation of their own. Historically also, this is the commencement of the period of steady decadence of hellas which rendered the nihilism of this epoch a dangerous solvent of the vicious Roman society. Both in art and literature the Greeks were betraying unmistakable signs of exhaustion and atavism. So, when Hellenism under Heliodorus and Menander made headway for the second time into the very heart of Hindustan, we find some of these Hellenic adventurers already devotees of Hindu faith. The famous Bhanagar Column (c. 150 B.C.) announces the conversion of a Greek ruler to Vaishnavism of the Bhagavata sect, while the Buddhist classic *Mihinda Panilo* (the Questions of Mihinda or Menander) stands as the proof of the assertion of Buddhist thought against Greek mind. This process continued also in the realm of art when the Greek converts to Buddhism, collaborating with their Hindu fellow-believers, developed the *Greco-Buddhist Art* which exerted such a profound influence on the art evolution of Central Asia.

And then the long and profoundly interesting chapter dealing with the spread of Indian culture in the Indian and Pacific Oceans which Dr. Nag fitly sums up as follows:

Thus listening to these profound hymns of the Polynesian Vedas amidst the vast expanse of the Pacific Ocean, we seem to catch the real secret of *India's success* in her career of internationalism. In spite of occasional lapses to militarism on the part of individual sovereigns the *Indian people*, as a whole, stuck substantially to the principle of *Peace and Progress*. They respected the individuality of the races and nations which came into contact with them, offering their best and evoking the best in others. Thus India managed to leave a record of collaboration in the realm of the Sublime and the Beautiful, quite remarkable in world history. The political conquerors and economic exploiters may have been there too, but they never played a dominant role in this grand drama of Creative Unity. That is why, when the

names of the great kings and emperors were forgotten, the people of these cultural colonies cherished with gratitude the memory of the service rendered by the innumerable Indian monks and teachers, artists and philanthropists—selfless workers for human progress and international amity.

Grievances I

The Telegraph Review says

It seems that the Department is suffering from old sores, and ^{Indians} seems to be quietly pocketing their due toes without even attempting to flud selves to heal them. There is, first of all, the *Recruitment*. It is incomprehensible how the authorities have kept the door to General Service open, for all practical purposes, to one community alone and closed for all else. There are about half a dozen Anglo-Indian Homes from where the Department obtains recruits for the General Service, and the pity of it is that these Homes are not even open to those Indians who have adopted European mode of life, but have unfortunately retained Indian names. There are two Indian Colleges, no doubt, for training in the line, but the only service the successful candidates can aspire to through them is Station Service. The General Service recruits are in the enjoyment of such higher salary and other facilities, whereas the Station Service hands have to be satisfied with practically half the salary the former enjoys.

We are rather reluctant to take upon ourselves the unpleasant task of dealing on communal distinctions in existence in the Service. We have already given our opinions on the subject, and have stated in plain language on what principles the union stands. We however, find that in the *Engineering branch* of the Service this communal distinction is a prominent feature and the predominance of one community is not by virtue of any extraordinary merit which it possesses, but because it happens to be that particular community. We shall have no cause of complaint if selection in the Engineering branch is made on merit, and not on complexion, and the door is made open to all.

Bishop Fisher on the South African Question

Bishop Frederick Fisher, who visited South Africa in order to obtain first-hand knowledge of the situation there, contributes a highly interesting article to *The National Christian Council Review* of January, 1926. We give below a gist of the same.

The continent of Africa presents one of the most perplexing racial situations in the modern world. The problem is not confined to any one section. Its major difficulties rest upon the conflict between a native-born population of more than 150 million Negroes, and a community of less than three million Caucasians who, with a highly developed modern commercial civilization, have

taken possession of the continent. The white controllers, whether political, commercial, or industrial, are determined to maintain absolute and universal white supremacy. How to do this, and at the same time allow for education and advancement among the black and brown people, is the unsolved problem.

The material resources of South Africa are in the hands of the white race. These possessions have made it possible for certain sections of that race to maintain a complete monopoly of raw materials and minerals. These resources have been developed through coloured labour. That labour has now come to the place where it realizes its own disadvantages and its own slavery. It has become vocal, and the question now is whether the one million and a half white people of the Union of South Africa will be able to continue to own and control all the resources of the country without gradually yielding at least a portion of the possessions and the control to the people whose labour has helped to produce the prosperity. And deeper than this is the fact that the land and minerals both originally belonged to the millions of people who originally inhabited the continent. The history by which white control was developed is not an unsullied page.

The racial character of the population in the Union of South Africa is approximately as follows: White, 1,519,000; Indians, 161,000; Blacks (Negroes of various tribes), 5,000,000; Coloured (the technical term used there for those of mixed blood), 700,000.

The distribution of the Indians is approximately as follows: Natal, 140,000; Transvaal, 12,000; Cape Province, 9,000. The Orange Free State is scarcely worth listing because an absolute exclusion law has kept the Indian population down to 400 residents. Most of the Indians in Natal are engaged in agricultural labour. There are, however, a few thousand engaged in skilled labour in mills and factories, as clerks in offices, as waiters in hotels, and as domestic servants. The more prominent and powerful personalities among the Indians are successful traders engaged in all kinds of trade—wholesale, import, retail. Some of them are extremely rich and live in palatial homes, possessing all the luxuries of modern life. Others are in very comfortable circumstances and carry on successful retail trade in the cities, in the small towns, and in the rural districts. This situation, with slight variations, prevails in other provinces.

The successful Indian trader is undoubtedly the cause of the present agitation. The native African prefers to trade with the Indian. The European, therefore finds great difficulty in competing. The Indian is willing to spend more time in bargaining than is the European. The African, along with the Oriental, is fond of spending time over his purchases and therefore the Indian is much better equipped to carry on successful trade than is the European. The poor European in most cases, as well as the native African, can secure better bargains through Indian traders and shopkeepers. The Indian is willing to give long credit and easy terms of payment, and seldom, if ever, takes the debtor to court. This means that the poor European trades with the Indian in preference to his fellow-European. Strangely, however, this very European, who secures his goods at a cheaper price and on better terms from the Indian, becomes greatly influenced by politicians when the racial issue is raised at election time. Many poor Europeans told me that

they feared they could not exist without the Indian shops, but that when the racial issue was at stake, public opinion practically compelled them to cast their votes for the white policy.

It would appear, therefore, that the problem is not altogether one of economic competition, but that race prejudice lies at its root. The Indian is able to sell his goods at a cheaper price, partly because of the fact that he does not spend so much money upon his own living. The European constantly refers to this fact as evidence of a lower standard of living. Very frequently the remark is made that the Indian is able to live 'on the smell of an oil rag'. But other elements enter into this question of the standard of living. The Indians are debarred from residing in the expensive hotels, and from dining in the good restaurants of the city. They are debarred from theatres and other amusements. This naturally means that the Indian is forced to patronize the cheaper and less desirable places of the city. His inhibitions compel him to practise economies which are as distasteful to him as to any other self-respecting citizen.

There is a strange jealousy on the part of the whites with reference to the prosperity of the browns.

Still another fact is that the Indians do not drink. The liquor bill of the white South African citizen is colossal. One wonders how European society can long continue to exist with such high liquor bills. Gambling at the races and elsewhere, excessive sports, luxuries, inflated white wages, and other extravagances enter into the high cost of living among the whites, and the relatively lower cost of living among the browns. Any stranger from a foreign country would be surprised at the comparative luxury in which the white people of South Africa desire to live. There are here and there dreadful slums where the poor whites congregate, but for the most part, the whites expect to have a standard of living which is far beyond that which prevails in their own home countries.

One of the reasons most often given for the white attitude toward the Indian is his alleged low standard of living.

But the reasons for this low standard of living must not be overlooked.

First, the ghetto-system, under which the Indians are segregated in a small section of the city and not allowed to live in the better sections reserved for the Europeans. Most of the hill-sides and lovely views are restricted residential sub-divisions. No Indian need apply for land there. Wherever new suburban sub-divisions are being developed in cities such as Durban, the real estate sign-boards read, 'for Europeans only'. Furthermore the deeds which are granted for residences in the good sections have a non-Asiatic clause, making it illegal for the owner to sell at any time to an Asiatic. Naturally the Indian is segregated in a territory which becomes a ghetto and where the worst living conditions prevail.

Another reason for the low standard of living is the meagre wage which is paid to the agricultural labourer. About the best that he can earn is £2-10 per month. What kind of high standard of living can be maintained on this wage? The barracks, or living quarters, provided by the plantations and mills for their labourers are in most cases a disgrace. The only respectable thing about them is the whitewash on the outside.

The humiliations endured by the Indian communities are difficult of explanation. If the discriminations were social only, then the observer could find parallels in other countries. But where the restrictions are social, economic, domestic, political, racial and religious, one is compelled to look to ancient times for parallels. Indians must ride on the three rear seats only of the trains, they are debarred from certain public libraries, they are refused entrance to first-class hotels, dining-rooms, clubs, Christian associations, and even churches. They are universally called coolies. An official textbook in geography for certain of the white schools, shows the picture of a Bengalee gentleman with the caption 'a typical Indian coolie.' An Indian graduate of Cambridge or Oxford or any Indian University will be pointed out by ignorant white children or adults as a "coolie." It is not culture which is taken as the standard, but race, and race alone.

All Indian business men are required to obtain a trade licence, which is given by a white official at his own discretion, and which must be applied for and renewed periodically. All Indians wishing to travel for commercial or social purposes from one Province of the Union to another, must obtain a passport ticket which is always limited as to time, the maximum being two or three weeks. This humiliation partakes of the same nature as the indignity that is heaped upon the native African, who, since the white man has come into his country to control him, has been obliged to wear continuously a pass on his person, giving his registered number and showing that he has paid his tax. It is as though the whole black population were convicts at large. Nothing in modern times is at all comparable to it save the infamous 'yellow ticket' of Czarist Russia.

In industry, the 'colour bar' reserves all remunerative labour to the white worker, and the colour of his skin determines whether a man may receive twenty-five shillings a shift or two shillings and his food. Just consider to what lengths an unblushing racial arrogance can go, when in the Transvaal, half the tax of a native African is remitted if he has worked three months for a white man!

Of course, the white man forgets the circumstances which brought the Indians to Natal. In the early days, the British sugar planters found that the Bantu was not a successful agriculturist. Therefore, the early planters looked to the great country of India for their agricultural labourers. Agents were sent to Indian villages, and labour was recruited. Individuals and families came.

There is no greater cultivator of the land in the world than the Indian. There is no agriculturalist so patient. There is no agriculturalist more industrious and steady. Men, women and children worked long hours. The contracts that they had signed stated that, if they successfully completed one or two terms, they were to be allowed to purchase plots of land and settle as permanent citizens of the new country. They successfully completed one term, two terms, three terms. They saved their little earnings, and purchased little sections of land on which they planted sugar-cane and vegetables. They prospered until after a while they or their native-born sons gained control of the vegetable markets of Durban and other towns.

Then came bitter opposition. The newly proposed anti-Asiatic Bill intends to take away this well-earned land which the Indians have acquired. A strip thirty miles back from the sea is to be confiscated. Let him who has a conscience answer whether this is justice or perjury. 'Scraps of paper' has become a favourite expression of the Anglo-Saxon race of late and perhaps it has got so thoroughly into our consciousness that we propose to make our own solemn contracts nothing but 'scraps of paper'. But let it not be forgotten that, where nominal Christians break contracts of this character, and are supported by Government legislation, in parliaments opened by Christian prayer they will have no answer to the conscience of Hindus and Muhammadans for their actions, and will stand condemned at the bar of enlightened public opinion.

Meantime how did the Indian trader get to South Africa? It was on this wise. The thousands of Indian families who had migrated to the new country found themselves without ghee, with out Indian sweetmeats, spices, curries, and rice. They found themselves without the little Oriental trinkets and jewels that they loved. They found themselves without the lovely coloured silks to which they had been accustomed. Nothing but plain Anglo-Saxon cloth was available. Therefore, certain traders began to import for the Indian communities the things that they loved. This little trade with the growth of the population, grew until it became a thing of power.

Meantime Indians began to find that they were successful intermediaries between European wholesalers and the African communities. They began to find that they were able to carry forward an ever enlarging commercial enterprise. Therefore, just as people of all nationalities follow the stream of successful commerce, so Indian traders grew year by year in numbers and in power. The proposal to deprive the whole Indian community, and to deny it the rights of citizenship and trade, becomes all the more difficult when one remembers that, approximately, two-thirds of the present Indian population of the Union of South Africa is native-born, some families going back as far as three generations of native-born residence in South Africa. Thousands of these Indians have never seen India, and one might just as well talk of repatriating the third generation Americans sending them back to England, Ireland, Scotland, France or Germany, as to talk about repatriating third generation Indians in South Africa.

White South Africans quite freely express their approval of the anti-Asiatic bill, and the policy of segregation, on the ground of their fear of intermarriage. This is always the final plea of the racial jingoist.

I will not pursue this subject at great length but will frankly state that in the country where segregation has been tried with unprecedented thoroughness (South Africa), the largest percentage of mixtures prevails. Is it not true that in the countries where the white race has the least respect for the coloured, illicit relationships are most frequent? The reason is that if a man respects a woman, his inherent attitude towards her is one of chivalry, whilst if she is to him a mere human inferior, it is easy for him to descend to an unethical relationship. The only safety of the several races with respect to miscegenation is that every race

be raised to the highest possible cultural standard so that there will be mutual respect, understanding and freedom.

The proposed anti-Asiatic Bill is not a solution but an irritant. If adopted, it will accomplish no purpose, other than to aggravate the Indian population through persecution, to deepen its sense of martyrdom and to raise up friends for the Indian community throughout the world. I sincerely trust therefore that true statesmanship will prevail, and that the Union Parliament will recognize the impracticability and unwisdom of the present proposal.

Bodh-Gaya Controversy

The January number of the *Maha Bodhi* contains the report of the committee on the Hindu-Buddhist controversy regarding the possession of the Temple at Gaya. The committee after making a thorough examination of the case in its historical, political and religious aspects, concludes—

The whole history of the Temple and the judgments of courts leave no doubt that the Temple was *ab initio* a Buddhist shrine and has remained so throughout. Our own observation of its present condition confirms the view that the shrine is in fact Buddhist. All the images that we could see are Buddhist and even those which have been given Hindu names are by their very appearance Buddhist e.g. what are shown as the images of Pancha Pandava and Taradevi are nothing else but images of Bodhisatvas and Buddhas and as found by the court, the temple has never been converted into a Hindu Temple. On the other hand there is absolutely no evidence that the temple was built by the Hindus or that it has ever been repaired by the Hindus. Whenever it has stood in need of repairs, the repairs and restorations have been executed by the Buddhists including those of Burma. The Buddhists have always enjoyed the right of worship there. There is clear evidence (*vide* Janibigha Inscription, J. B. & O. R. S. J., p. 272) to show that till the 13th century Buddhist Bhiksus were in actual possession of it.

The occupation by the Mahanth of the great temple at Buddha Gaya is to be attributed to a peaceful friendly assumption of the guardianship of the temple—more by mere chance as a squatter than as an act of deliberate volition and certainly not as a hostile occupation by a man of one proselytising faith of the sacred place of another faith for forcible conversion to the former's own use. In fact, the process of Hinduising it in that peaceful slow but nonetheless effective manner so characteristic of the Hindu faith and practice which has assimilated so many cultures, faiths and reformers to itself is not yet complete and as held by the courts in the judgments quoted above neither the temple has become a Hindu temple pure and simple, nor has the Hindu worship carried on by the Mahanth's men become the exclusive worship in it. If anything, both continue to be predominantly Buddhist up to this day.

We would therefore recommend that (a) both Hindus and Buddhists should be assured fullest

liberty of worship according to their own methods. (b) A committee of five Buddhists and five Hindus should be formed and the management and control of the temple and of the worship in it should be entrusted to this committee.

Besides these ten, the Government also may be represented on the committee by the Hindu Minister for the time being. We consider it premature to go further into the question of the composition of this committee except saying that the Mahanatha of Bodhi-Gaya should always be a member of it.

(c) To disarm all suspicion and misapprehension the properties of the Saivite Math should be altogether excluded from the jurisdiction of this committee.

An arrangement like this ought to be satisfactory to all parties. The Hindus ought not to be excluded from worship, if they wish to perform any, of the image and they should certainly not be interfered with in any way in offering Pindas where they have been doing it. The Buddhists who have always worshipped the image will have their rights secured and placed above the caprice of a single individual of a different faith. The Government may also have its interests guarded against any foreign influences and international complications. The Mahanath may also have his suspicion regarding the property of the Saivite Math laid at rest by excluding it from the jurisdiction of the Committee.

A Widow Relief Bill

The same journal gives us the following information

In Cochin State, a Draft has been published for an "Old Age Widow Relief Bill" (a most awkward name). The mover of the Bill stated that it would not only prevent beggary but would also enable all living in Cochin State to live happy and contented lives. The provision of old age pensions has been an unquestioned improvement in the lot of poor, old people in other countries. One expects Cochin State to be the leader now in all things connected with the lot of women. The laws of inheritance are very uneven and unequal in different parts of India, and it will be a happy day for many widows when the Government gives them pensions and maintenance allowance

for each of their children, a procedure which has become the law now in many other countries

Primary Education

The same journal also tells us .

The Annual Report of the Nari Sikha Samiti of Calcutta (Women's Educational Society) shows a fine record of activity along educational lines

Lady Abala Bose

through the provision of many schools for girls, a Widow's Home for vocational training and wage-earning by hand-crafts, for which Lady Abala Bose informs us the Government has just allocated a grant of Rs. 300 per month. The Report points out the line of development which all social workers find to be also their experience. It says .

"As the bulk of the nation live in villages, and girls and women form the major portion of our rural population, any work for the improvement of

our womenfolk must, to be of use to the largest number, be carried on in villages mainly, more so because the villagers left to themselves can hardly take up any good cause for want of the necessary knowledge, funds and facilities.

The experience gained during these years has convinced the Samiti that its slender resources can do much good, and to a larger number of girls and women, if it extends its activities more and more to rural areas. And this work can best be achieved through Girls' Schools, lantern lectures, circulating libraries, home industry classes, and meetings of mothers. The Council of the Samiti earnestly appeals for the active sympathy and hearty co-operation of the generous public in order to be able to carry on this noble work."

The Imperial Library is a Lending Library

Many people are under the impression that the Imperial Library is a bureaucratic institution of some sort and not a library in the ordinary sense of the term, meaning a library from which people can borrow books and so on. To such people the following quotation from an article by Mr J A Chapman (who is in charge of the Imperial Library) which appeared in the *Statesman* will prove of interest.

The greatest difficulty we have experienced has been to make known that the Imperial Library is not for Government and departmental use only but is for the public also, further, and this is of still greater importance, that it is a Lending Library and is prepared to send its books to approved persons, anywhere in India or Burma. There are scholars all over India and Burma who do not know this. It is not only scholars to whom the books may be sent, in practice anyone who applies for the loan of book is approved.

A Champion for Indian Women

The *Stri-Dharma* says

Lady Chatterjee, wife of the High Commissioner for India, is writing in the English papers in support of reforms for the Indian working women. She upholds all the legislative activities of Mr. N. M. Joshi for the betterment of the labouring classes. She calls attention to the present unsatisfactory inspection of factories and mines, half of the latter not being inspected at all though there are 80,000 women working in them. She supports the passage of the Maternity Benefits Bill and urges the establishment of an industrial health service. She also wants a Truck Act which will protect the workers from being fined by the deduction of wages sometimes for double the length of absence. Of course she promotes the child welfare movement which is even more necessary in India than in England. What is primarily required, she says, is recognition of the fact that

the worker in a factory is a human being, and that his and her health and happiness are as important to society as the prosperity of the industry. We agree entirely with her and hope her words and influence will do much to improve the conditions of the millions of women in the factories of this vast land.

Sir Valentine Chirol on the New Viceroy

The *Indian Review* contains an article on the New Viceroy from the pen of Sir Valentine Chirol. We quote from it below.

An English gentleman in the highest sense of the term, Mr. Wood stands for all that is best in British public life. Untouched by the faintest breath of political intrigue, he has never sought the limelight from which as Viceroy it will be difficult for him altogether to escape. He has none of the parvenu's love of pomp and circumstance nor the lawyer's facility for glib phrases which so often disguise the lack of courage required for coming to decisions and shouldering responsibility. He is universally credited with just those qualities of character which patriotic Indians like Gokhale used to recognise as typical of the best representatives of the British race in India, and his straightforward sense of duty is part of a simple religious faith—the same earnest Christian faith which inspired the love of India in some of the greatest British administrators who were his grandfather's contemporaries and collaborators and were not ashamed of believing that the governance of India was a great and pious trust committed to them by Providence. This is surely no mean title to the confidence of the people of India who pride themselves on being more spiritually minded than the modern nations of the Western world and the restoration of Indian confidence in the sincerity of British statesmanship is perhaps the task supreme beyond all others in the India of to-day. If the new Viceroy can achieve that task, his selection for the most distinguished but also the most difficult position in this far-flung Empire of ours will be a boon for India and for England.

Sir Valentine has most probably painted the New Viceroy in right colours, but he has set him a task to perform which the Viceroy-elect will have to fight not only Indian pigheadedness in not having any faith in the British but also the spirit of British Imperialism. It will be a boon to the world if he can do the latter successfully.

Officers of Civil and Postal Accounts Offices

The *Accounts Comrade*, a quarterly run by the Civil and Postal Accounts Offices Association says:

There can be no two opinions that our official status is practically nothing above that of a work-

shop coolly with the exception that while the latter earns his livelihood by means of purely physical labour, the former does so by the virtue of mental labour. In beholding the scene when we emerge out of the four walls of our offices after the office hours are over, one can easily realize the truth of the aforesaid statement.

Then it goes on to describe how these officers find it impossible to live decently on the pay they get. Their whole life is drab and devoid of 'carefreeness' and comfort

Social Survey of a Chinese Village

We take the following account from the *Monthly Labour Review*

A study of social conditions in Sung-Ka-Hong, a small Chinese village about 7 miles from Shanghai, was made in the fall of 1923 by students of Shanghai College. While in the United States social surveys are frequently made as a preliminary to devising plans for civic betterment, this is said to be the first one made in China. The study covered the following points: Family and religious life, town government, housing, health and sanitation, industry, agriculture, and trade, recreation, and education.

The village which was chosen for the survey is a small one of about 360 inhabitants, and although it is situated within a few miles of such a center of trade and industry as Shanghai, the life of the people and the organization of the village are much the same as they were a hundred years ago. In view of the rapid development of the country about Shanghai, however, and the fact that the village is now only a little more than a mile from the present industrial region, which is rapidly pushing toward it, it is to be expected that the inhabitants will soon be obliged to give up their agricultural pursuits and take part in the industry and trade of the region. The industry of the village was originally entirely agricultural, but now only about a third of the population are farmers while there are a number of small shops and workshops. The people in general are poor and less than half the families own farm lands.

The principal agricultural products of the village are rice, wheat, cotton, and beans. Owing to the natural fertility of the soil, the crops require comparatively little labor, the men working hard only in the planting and harvesting of each crop, while most of the weeding and cultivating of the soil is done by women.

Wages vary according to the season. During the summer and in the fall, the pay is 50 cents, Mexican, (one Mexican $\frac{1}{2}$ American) per day, with no food provided, and \$6 per month with food, and 38 cents per day without food and \$4 per month with food during the rest of the year.

In nearly every house, there are more or less primitive industrial processes carried out such as spinning, weaving, pounding grain in stone mills, etc. On the other hand, some more modern types of machinery have been introduced

such as cotton gins and rice-polishing machines. Most of the clothes and shoes worn by the residents are home-made.

There are 21 workshops in the village, the wages of carpenters, masons, and tailors being 50 cents per day without food and 25 to 30 cents per day with food. Bamboo workers received 40 cents per day if no food was furnished and 20 cents with food. There were only 6 factory workers, all women residing in the village. Their place of employment was a cotton mill 3 miles away which could only be reached by walking, and their working hours were 12 per day. Their wages ranged from 20 to 50 cent per day.

There were 47 small shops in the village which carried on the retail trade of the village and the surrounding country. The earnings of these shops were uniformly small, owing to the small amount of business done and had debts. These shops are generally located in the front rooms of houses and are looked after by the aged or infirm members of the family.

The means for recreation in the village were almost entirely lacking as there was no public playground and no prospect of securing one except in connection with a newly established school. Such villages as the one studied are almost completely shut off from the outside world because of bad roads and lack of conveyances and there is a general lack of association with their neighbors among the inhabitants, particularly on the part of the women as they never go to the tea houses which are the chief meeting places of the men.

A school established in 1921 by a club in Shanghai College has taken the place of the old-type school formerly maintained. In 1923, a new schoolhouse was built by one of the citizens. At the time the survey was made, there were 60 pupils in the school, of whom 8 were girls. The school has so far been very little used for social purposes but it holds about the only possibility for development of social and recreational facilities at present among the residents of the village.

The Karnataka View of the Congress

The Karnataka and Indian Review of Reviews, edited by D. V. Gundappa, is "an independent organ for the people of Indian States and a register of the progress of Indian Nationalism". Considering that it contains less than twenty pages of reading matter, it is titled a bit extravagantly. No less extravagant are some of its opinions as can be seen from the following.

If its past had been not so illustrious and its work not so fraught with the destinies of the nation we could have afforded to laugh over the last session of the Indian National Congress as an elaborate hoax. No wanting in leadership was its presidential address and so complacently purblind were its proceedings, as against the tremulous expectation with which its decision was being looked forward to. A woman, a Bengali, a poet—the president (Mrs. Sarojini Naidu) could do no more than present a flamboyant paraphrase of the axioms of Indian politics.

What does *The Karnataka etc etc* propose to do with Mrs. Naidu for her threefold crime of being "a woman, a Bengali and a poet" ?

Religion in East Africa

The *Vedic Magazine* publishes an interesting article by Pandit Chamupati on the above. We give quotations from it below.

The natives of East Africa, though dubbed "Heathens" by Christian writers, are not without their own conception of God, to whom they think man is responsible for his good and bad deeds. The theory of evolution, which traces a gradation in the ideas of divinity, cherished by various sections of mankind, so that to primitive races it assigns very crude superstitions, from which, by a process of gradual development some sort of pantheon, according to it, takes shape, to merge finally into pure monothism, is entirely upset by a cursory observation of the simple form of religion professed by the East African Negro. He has neither idols, nor sacred places, nor therefore any temples of worship. His God whom he calls

"Mungu" is an abstract divinity. He relates no mythic tales of His earthly or heavenly life. Call to account an African servant for some fault in serving you, and he will at once answer, "Mungu" knows. Threaten to dismiss him, he will instantly reply, his trust is in "Mungu." Fine him, he will take it stoically, and say you are not cutting his hands -- these are the gift of "Mungu," and yet can earn him his bread. Such complete resignation is peculiar to this "barbarous" believer in "Mungu."

The East African has no system of worship. His innate trust in an omnipotent, omnipresent providence steels his heart against any mishap. His wants are few, incredibly few. His cattle are his main wealth. He eats of the abundant products, which mother Earth ungrudgingly supplies him. He wanders about in a state of nature and only on market days hangs a piece of leather or a bunch of grass to hide his "nakedness." He has no elaborate home and knows little of the sins of society. Any Negro may share with him the piece of bread which his labour has fetched him. With your black-skinned mental another Negro will come to sleep and if you ask what relation the intruder is to your servant the latter will unhesitatingly say, he is his brother.

FOREIGN PERIODICALS

A View of the Chinese Renaissance

Ph de Vargas discusses "the Religious Problem in the Chinese Renaissance" in the January number of the *International Review of Missions*. In his discussion he appears to take into account only the ultra-modern youth of China, victims of a type of Western Education which receives everything with a "rationalistic" sneer excepting a hard blow between the eyes, and draws conclusions with an All-China significance. He says in the beginning

China's primitive organizations could not resist the impact of western industrialism in its youthful aggressiveness supported by the huge power of modern states and by their military forces. For a time China refused to see in this defeat anything essentially different from former military defeats sustained at the hands of barbarians. Then inferiority in certain material features was recognized and western armaments and railways were adopted. Later again was seen the necessity of adopting some of the methods of the new civilization in education, industry and government. Finally, when these partial revolutions proved ineffective, China decided to open wide doors to modern culture as a whole, accepting not only its industrial

products and its technique, but also its thought and its spirit. This fundamental change of attitude took place about the period of 1915 to 1919. It has given rise to what the Chinese call the New Civilization Movement, or the New Thought Movement, often referred to by foreigners as the Chinese Renaissance, the creative movement by which China having appropriated the new culture which has come from the West, is applying its principles to the renovation of Chinese cultural life, which is to become an integral but independent and original part in the vast unity of to-morrow's world-wide civilization.

Then we are told that "China" at present values nothing higher, than material progress, scientific learning, political freedom and patriotic fervour, the hitherto established religions of "China" are tottering on the brink of non-existence and whatever savours of the non-scientific and impractical is anathema to "China". For example.

A large number of Chinese had studied in universities abroad. They found that in many a lecture-room Christianity was never mentioned except as a negligible, obsolete institution. They heard science taught as if it were the sole foundation of modern culture. Most of them do not seem to have come in contact with the newer and broader currents of thought in Europe and America.

Having taken with them from China a strong prejudice against the foreign religion, they did not trouble to seek out Christianity where it is living and strong. On their return home those men became very influential, many joined the staff of the National University in Peking, or of other progressive universities. Some of them, notably returned students from France stood for aggressive atheism. The great majority taught the greatness of science, the absoluteness of the truth which it reveals and the duty of building the whole of human life on the basis of science alone.

And

Tagore's visit to China in April and May, 1924 was of great interest from the religious point of view. His poetical pantheism roused no sympathy in spite of his literary prestige, and although he came as the representative of one part of Asia to another, his reception was extremely cold, and amounted in fact to a deliberate rejection. The enthusiasm of Young China for material civilization of the western type rose up in arms against Tagore's deal of a primitive oriental culture, of detachment from material goods and of a contemplative life. All compliments addressed to Tagore were strictly limited to his poetic work, and he was bitterly attacked as a teacher of sentimental dreams and of cowardly laziness in numerous newspaper and magazine articles, and in leaflets which were distributed in the very halls where he was lecturing. On this occasion the Chinese conclusively demonstrated that they have not that mystic temperament which some western writers insistently ascribe to them.

But, we are told, there is hope for Christianity in China

The Chinese trouble

The following account of the trouble in China, by P. W. Kuo, Ph. D in *The International Review of Missions* would be found interesting.

What is the cause of the recent uprising in China? The Shanghai tragedy of May 30, now well known to the world, was of course the immediate cause of that uprising, the spark, as it were, which set the whole nation into conflagration. The killing and wounding of a large number of unarmed Chinese students and labourers in sympathy with a strike to improve labour conditions in a Japanese cotton mill, by the order of a British police officer of the Municipal Council, under the circumstances as revealed by the Mixed Court proceedings and eye-witnesses, is now generally admitted to be indefensible. Is it any wonder that his deplorable act should have filled the Chinese nation with horror and righteous indignation and that her people have been demanding in the name of justice and fair play, that the wrong-doers should be punished and the wrongs righted? Indeed, many of the missionaries and other foreign residents in China, convinced of the terrible nature of the wrong thus perpetrated on defenceless people, did

not hesitate to voice their feeling of injustice in public statements.

While this unfortunate act of the Shanghai, municipal police was itself sufficiently serious to call forth national resentment, it was further intensified by the long-standing discontent with the Municipal Council of Shanghai. The persistent refusal to allow Chinese representation, the illegal seizure and control of the Mixed Court in Shanghai, the unlawful construction of roads beyond the boundaries of the settlement and the curtailment of the freedom of speech, of assembly and of publication, these represent a few of the old grievances which in a way had prepared the ground for the outbursts of popular feeling.

Had justice been meted out promptly after the unfortunate incident and had a sympathetic attitude, instead of harsh measures, been taken by the Municipal Council toward the Chinese protest, the case would not have become as serious as it did. It is true that after the tragedy the diplomatic body in Peking lost no time in appointing a commission to investigate the trouble with a view to locate its responsibility. However, the report of this commission has never been made public. From a summary of it, which leaked out and found its way into the press of Tokyo and Paris, one can see clearly that there was not much question as to wherein lay the responsibility. But the prestige of the Municipal Council was at stake and 'to save face' is evidently considered to be important by foreigners as well as by Chinese. As a result, the negotiations for the settlement of the Shanghai trouble came to a deadlock. Meanwhile, the Powers concerned, proposed to re-investigate the Shanghai incident through a judicial enquiry. This proposal, however, was not looked upon with favour by China for the necessary enquiry into the Shanghai affair had already been conducted and was based largely upon the proceedings of Shanghai Mixed Court which are judicial in character. Moreover, it was believed that the setting up of this proposed judicial enquiry was merely a means of counteracting the adverse findings of the previous commission through too great a regard for the susceptibility of the Municipal Council. But, in spite of the opposition of the Chinese government and people, the proposed judicial enquiry is being held without the participation of the Chinese, its usefulness and value are questionable. In the meantime, the long-delayed Shanghai case remains unsettled.

Believing that the mere settlement of the particular incident and the improvement of the local situation will not prevent the recurrence of similar incident nor place the relation of the Chinese people and foreign residents on a more stable and satisfactory basis, China is also seeking a more fundamental solution, namely, the revision of the existing treaties between China and the Treaty Powers. These existing treaties were made long ago, mostly as a price of defeat and under circumstances which did not permit free discussion. They were contracted not on a basis of equality, hence they are known as 'unequal treaties'. Under them the foreign nations enjoy certain privileges and rights, which infringe upon China's integrity, restrict the exercise of her sovereignty and obstruct her fullest development. The Chinese people believe that the time has come for a fundamental revision of these treaties, for most of

the conditions obtaining when these treaties were negotiated do not exist now. The standard of general enlightenment in China is considerably higher now than in former days. Educated people to-day cherish with no less fervour than do the people of the West the fundamental principles of liberty, of equality and of self-determination as well as other ideas of modern democracy. They are more and more coming to understand the meaning of the numerous treaties by which China is bound and her freedom of action restricted. At the time China entered the Great War with the Allies, she was encouraged to hope for a definite improvement of her international status. Great therefore was the disappointment of the Chinese people when, after the Great War for a common cause had been won, China's own international status remained practically unimproved. These are some of China's contentions.

Buy British Goods

This is by no means our advice to our readers. The British Empire League some time ago organised a meeting to propagate the above attitude in all members of the Empire. In this meeting, the Lord Mayor of London presided and many distinguished speakers spoke. The *British Empire View* publishes a detailed account of the proceedings and we gather our knowledge from this source.

After the Lord Mayor had gone through the preliminaries, the Right Hon. Sir Philip Cunliffe-Lister K.B.E., M.P., president of the Board of Trade, talked for a while on his "abiding faith in the quality of British goods, the skill of British workmanship and the initiative and enterprise of British industry." He supported the Lord Mayor in his view that "in the development of the inter-Imperial trade, there are advantages, immediate advantages, and growing advantages" to the whole Empire.

Then Major the Hon. W. G. A. Ormsby-Gore got up and with true soldierly tactlessness gave out the secret of this love of inter-Imperial trade. He said:

You cannot get further developments of the great Dominions, and an increasing flow of Britons to follow the lead of the other Britons already there unless you can do something more to assure those of our kith and kin who do go out to open up new lands that they will find a market for their produce. Now there is another thing that I want to say. The world to-day, and Great Britain in particular, is suffering from the fact that the relation of primary production to manufacturing production is unequal. During the war and since the war, the capacity of the industrial countries to manufacture has enormously increased, but, with the exception of the United States of

America, the corresponding increase in primary production—that is of raw materials and foodstuffs—has not advanced to the same degree. Consequently it is to the interest of the whole Empire, and Great Britain in particular, that primary production should be stimulated throughout the world and particularly inside the British Empire, where the greatest opportunities lie.

Sir Vansittart Bowater, Bart., M. P., ended up by giving away a family secret. He mourned the fact that people very often bought foreign goods unconsciously and gave the following instance:

My daughter came home last night after buying what most ladies buy now-a-days—a pair of silk stockings. After she had got out of the shop she found on the label much to her disgust, "Made in Germany." She would not have purchased them at half the price had she known their origin. Let us advocate it, and let it go out to the world at large that we Britishers want to support our own Colonies, Dominions, and Dependencies.

And, let us add, *vice versa*, which is more to the point.

The Hon. Sir John A. Cockburn K.C.M.G., told the audience that:

Some years ago the attempt was made in this direction by insisting that all goods from Germany should be marked "Made in Germany" but that was found to be an advertisement for Germany instead of for our selves and we do not want to advertise others, we want to advertise our own goods.

This information hardly rhymed well with Sir Vansittart's assertion that in England one finds "the very best workmen in the world;" for one would hardly expect the mark, "Made in Germany," to serve as an advertisement of German goods in England, had the goods been inferior to things made in England.

British Self-Depreciation

To those who have heard the British talk in India, the following quotation from the *British Empire Review* will prove enlightening.

The British people have never been given to self-praise nor is such a mood desirable. It has been more inclined to self-depreciation. This quality has, it may be, been more marked in recent years, and its harmful effects are becoming more apparent. More than a generation ago Herbert Spencer—writing on Sociology—when dealing with the ill effects caused by the bias of patriotism or undue self-estimation, took pains at the same time to pass judgment on the perverting effects of antipatriotism, or undue self-depreciation. "In no people more than our own," he said, "has under-valuation of ourselves become a fashion: it seems to imply a wide knowledge of what is foreign, and brings a reputation for culture." The one habit is to be deprecated.

as much as the other. Most of us in our generation must have met with numerous instances of the latter habit, which may, and indeed does, co-exist with an 'undue valuation of material prosperity.'"

India Wastes Money on Cheap Jewellery

We take the following from the *Industrial and Trade Review for Asia*

According to a Prague journal, large orders have recently been booked from British India for about 250 tons of cheap glass jewellery, which in Europe is known as "Gablonsz Ware." Indian orders this year are estimated up to the present month at 2000 tons valued at nearly 40 million Czech Crowns, i.e. at about a quarter a million pounds sterling. This means an increase of exports in this commodity to British India by 50 per cent. as compared with the same period of 1924. The report states that India has thus advanced to the first place among customers of the cheap glass jewellery of Czechoslovakia, instead of the United States of America to which country exports have declined to 50 per cent and are estimated at only 22 million Czech Crowns for the first seven months of this year. The figures given above have reference only to glass jewellery, chiefly bangles, and do not include Indian imports of other necessary cheap glass goods.

When we add to this the imports of cheap metal jewellery from Pforzheim and the cheap fancy goods from various other German towns, we find that a tremendous price is paid every year by India for the most useless articles that can possibly be imported. It is a serious reflection upon the standards of life and taste of the Indian population of both sexes, as well as upon the morality of the commercial classes engaged in this kind of trade. The use of jewellery in any country is a relic of barbarism; but in India it was at least true that gold and silver jewellery represented a form of savings although constituting dead capital. The fact that this jewellery is being now increasingly replaced by glass goods ought to give us food for reflection. For we do not find that the demand for glass jewellery has led to the development of the Indian glass industry, nor that the gold and silver are being increasingly employed as organised industrial capital. It is our contention that this item of India's foreign trade represents a distinct impoverishment of the Indian people, and we recommend the subject to our economists for detailed investigation from the standpoint of national economy.

Away from Civilization

The *Living Age* gives a translation of an article in the *Neues Wiener Tagblatt* which relates the experience of a man who got disgusted with civilization of city-life and took to the forest for a change. We quote a portion

It is worth recording, however, that I never could have lived under such primitive conditions

for so many weeks—all I took with me was an old blanket, a knife, three dishes, some matches, and a little salt—if I had not had my dog Lutz. He was not only a devoted companion, but an indispensable aid in hunting. He took to wild life better than I did, and really was my teacher. I had plenty to eat—fruits and vegetables from the neighboring farms, fish and shellfish from a brook, and now and then a bit of game that I owed more to good luck than to my skill as a Nimrod.

You ask me, whether the experience was worth while I have pondered a long time what I could reply with a clear conscience, that would be satisfactory and helpful. As long as I lived in the woods I was almost perfectly happy. Life there had a different rhythm. Everything was so simple and understandable, toil, effort, rest, fear, victory. I had time to think and to dream. The sunshine that warmed my ill-clad body was luxury. No one asked me for tips. I swam races with my dog unconcerned over bathing suits and bath-house fees. I was never too late, I had no duties, my few needs were easily supplied. After I had become accustomed to the life, my feeling of perfect physical health, which I had seldom before experienced, was a source of positive pleasure. Hunger and eating, exertion and repose, had a keen zest they never had had before. And my dog enjoyed the life immensely.

One day a gentleman surprised us, to whom I had to explain our unusual appearance and the reason we were there. He was a good, clever man, who really wanted to help me. But it was quite impossible to make him understand that the best help he could give us was to let us alone. He had to tell the newspapers about us, and our idol was at an end. Reporters came out and insisted on taking our photographs. A publisher wanted me to write him a novel, even going so far as to bring out paper and writing-materials for the purpose. Charitable old ladies who read about us in the newspapers started a regular hunt after us. I might have easily made quite a reputation as a health apostle if I had any gift for acting. At last I was forced to flee again this time back to the city. Anyway, autumn was approaching and cold winds began to blow across the stubble. A foretaste of winter for which we were not prepared, was in the air.

Thanks in Anticipation, but ..

The following is taken from the *Abhari*

At a meeting of the National Temperance Federation, held in Manchester on October 20, Mr. Joseph Malins, J. P., in the chair, the following resolution on prohibition in India was unanimously passed:

The National Temperance Federation notes with satisfaction recent public manifestations in India in favour of the suppression of the liquor traffic, particularly the resolution passed by the Indian Legislative Assembly to the effect that the ultimate policy of the Government should be the prohibition of the production, manufacture, sale, and import of intoxicating liquors.

The Federation also welcomes the declaration of the Bombay Government that the extinction of the drink and drug traffic is the goal of their excise

policy, gives its hearty support to the Prohibition Bill introduced in the Bombay Legislative Council this year by Mr. R. G. Pradhan M. L. C., and urges the Government of India and the local Governments to provide facilities for the passage of similar legislation applicable to all parts of the country.

His Excellency the Governor of Bombay has informed Mr. R. G. Pradhan, M. L. C., that he cannot allow the introduction into the Legislative Council of the Local Option Bill of which Mr. Pradhan had given notice. The sanction of the Government of India Act before any measure affecting the public revenues can be brought up for discussion in the Council. The decision is disappointing. The measure undoubtedly has behind it the support of a great many of the legislators, and the leaders of public opinion in different political parties have indicated their sympathy with its purpose. Further particulars of the situation in Bombay are given elsewhere. We note that Mr. Pradhan, undaunted by the unjustified rebuff he has received from the Governor, has moved for the appointment of a committee of the Legislative Council to examine the question of Prohibition in its financial aspects, and that this motion has been accepted. We have no doubt it will be shown that Prohibition is likely to be financially profitable as well as morally beneficial.

Prohibition Results in the U S A

The same journal also informs us

A committee of the Judiciary House of Representatives of the United States was requested last year to report on the proposed modification of the Prohibition Law to permit the manufacture, sale, and use of 2.75 per cent. beverages, instead of the one-half of 1 per cent. alcoholic strength permitted under the present law. The liquor interests of America are perfectly aware that there is not the remotest chance of rescinding the 18th Amendment. It was passed by a two-thirds majority vote of Congress and ratified by 46 out of the 48 State Legislatures—a greater majority than any amendment that had ever preceded it. In any challenge of the Prohibition Law, it will only need the support of thirteen State Legislatures to prevent repeal.

But what the "Wets" can do is to attack the standard fixed by the present law so as to increase the alcoholic content of beverages. Why was one-half of 1 per cent. fixed? Because it was a safe standard, sufficiently low to prevent the development of the alcoholic appetite. Why do the liquor interests want the higher standard? Because they want to legalise the sale of beverages which are intoxicating especially beer, and bring back the breweries, the saloon, and 90 per cent. of the evils of alcoholism which the 18th Amendment was passed to prevent. The American people are not likely to be caught napping. The day of the drink poison beverage for them is over. It is down and out.

In the discussions over this matter before the above-mentioned judicial body, much evidence was given on the general results of four years of Prohibition. And it is well to see just what this

"dismal failure" of Prohibition really means. Let us first of all deal with statistical information.

There have been 500,000 fewer arrests for drunkenness in a single "dry" year. On July 1, 1922, the ratio of the criminal population of the United States had decreased from 143 to 137, and that signified 1,960 prisons without any prisoners!

The national death-rate, which has been affected by Prohibition and other agencies connected with public health, helped by Prohibition, has been reduced to an equivalent that signifies the saving of 873,000 lives in the four years of Prohibition. The reduction of the number of institutes devoted solely to the treatment of alcoholic cases has been from 275 to 27.

The per capita wealth of the 100 million inhabitants of the United States has increased from 1,970 dollars in 1912 to 2,918 dollars in 1922, which a vice-president of one of the national banks of New York reckons as equivalent to saying the total addition to the wealth of the nation last year was twelve billion dollars.

The total savings deposits amount to 18,000,000,000 dollars, or one-seventh of the amount of the national interest-bearing debt. The economic gains to which Prohibition has made an indispensable contribution are almost beyond computation. The public debt has been reduced by 400,000,000 dollars, since peace was declared, and is being paid off at the rate of 2,000,000 dollars per day. The churches have been the gainer from the new social policy. Over 200,000,000 dollars were spent last year in new church buildings. America owns 15 million motor vehicles.

These figures appear to be exaggerations until one realises that the drink bill of America for the last "wet" year was estimated at 2,500,000,000 dollars.

No Sympathy for the Bejewelled Rich

Chester T. Crowell contributes an amusing article to the *New Republic* on the unnecessary nature of affording police protection to those who go about in jewellery. He says

According to the newspaper headlines Mr. and Mrs. Somebody-or-other were returning home from an after-theatre party when a highwayman confronted them and relieved the lady of jewelry valued at \$10,000—or perhaps it was \$100,000. I am not certain. Anyway the police were summoned. And that struck me as amusing. In such cases, it always does. Everyone, I surmise, has his pet insanity and mine happens to be that I do not understand why the police should protect jewellery. By what process of reasoning, I wonder, does the human race classify jewelry as property. If it has any useful function, I have never heard of it. On the contrary, it has always seemed to me that the primary purpose of jewelry is to excite cupidity as though the possessor of it would say: "Look you, sirs, I have here certain little glittering trinkets which you might grab and carry off in a thimble if you were able first to overcome my opposition. They would fetch in the market some thousands of dollars. I am already fed and clothed and housed, otherwise I could not afford to disport myself adorned with these indigestible

trinkets, so the challenge, I offer, is a jolly sporting proposition. I am in robust health and I don't believe that you can take these things away from me. But if you succeed, I shall not starve. First come, first served."

If it is worn in that spirit, I can understand jewelry quite clearly: more especially when the man in the case drapes it over the lady of his choice. A healthy male has no great objection to fighting, with or without cause, and if he can stir up a fight in which he is absolutely assured in advance of the role of champion and defender of his lady, the enterprise can scarcely fail to yield profit and pleasure no matter whether he emerges victorious or defeated. But to go swaggering about with jewelry that one is not prepared to defend, and then to yell for the police when attacked, strikes me as ridiculous. No less so, indeed, than if Jack Dempsey were to complain tearfully that Harry Wills had taken his boxing gloves away from him.

If jewelry were denied the status of property, as I think should be done, then special provision would have to be made for owners of it who had passed beyond the prime age for fighting. Briefly they ought to be allowed to employ their own retinues of guards, gunmen and retainers. This arrangement, I believe, would give the owners of jewelry great pleasure. The purpose of the stuff must be display, since it has no practical value yet many persons, like myself, cannot tell paste from pearls, and scarcely notice either, which is not entirely fair to the owners. But jewels if were usually accompanied by eight or ten men of the size and build of New York traffic cops, attired preferably in scarlet and green livery, I should rarely fail to observe that a very wealthy man (or his lady) was passing in my vicinity. In all probability, I should turn to gaze upon him and the realization of his power could scarcely be avoided. Frankly, I should enjoy such spectacles and I believe there are plenty of men eager to provide them.

My objection is not to the jewelry itself but to classification with groceries and real estate, which seems to me unreasonable. I might even go so far as to allow the police to protect jewelry shops since the proprietors are business men supplying merchandise that is obviously in wide demand, but the man who constitutes himself a barrier of his stuff upon the highways ought to do so at his own risk because he cannot possibly prove that the loss of it does him any real damage. And if it doesn't damage him consider, how much less it damages me, yet I have to pay my part of the cost of his vanity.

Turkey and Mosul

The *Literary Digest* supplies us with much information on the above question. Portions such as the following would be found interesting:

Turkish Atrocities in Mosul—deportations, pillage, rapine and cruelties to Christians and Kurds—put Turkey in wholly to the bad at Geneva where the Council of the League of Nations decided

to award Mosul to the kingdom of Irak under British mandate. So correspondents wire to American newspapers, quoting the report of an investigating committee headed by General Laidoner of Esthonia. The report estimates that 3,000 Catholic Chaldeans have been deported from the frontier.

General Laidoner's report, made public at the same time as the Council's award, no doubt served an important political purpose, according to the Brooklyn *Eagle*, which asserts that "there is no better justification for awarding the disputed territory to Great Britain than direct proof that the Turks would mal-administer it." The *Eagle* proceeds:

"Atrocities did occur. That much may be taken for granted, even tho the evidence comes from prejudiced sources. They occurred in connection with the expulsion of several thousand villagers whom the Turks call Nestorians, who rebelled against Turkish authority, and whom the League investigators call Catholic Chaldeans, who served the Kurdish chiefs as slaves. Whenever a population is expelled, there is bound to be cruelty and suffering, yet the Christian Powers were the first to authorize such expulsion when they signed the Treaty of Lausanne. By this Treaty the Turks were permitted to drive all the Greeks out of Asia Minor. Expelling an antagonistic race from Mosul territory was a logical second step.

Great Britain's thirst for oil, however, is the deciding factor in this case, from the anti-League point of view of the Chicago *Tribune*, which declares that we owe something to Turkey for making the League and World Court "uncurl from the serenity of altruism and reveal real purposes," the present purpose being "to assure Great Britain the possession of the Mosul oil-fields." We read:

"The League, with the indulgence of the Court, decides to mass its military strength for oil.

"Force is to decide the possession of wealth, just as it has done heretofore. It's useless to have any objection to that. If objection prevailed against it in Irak it would prevail against it everywhere the white man is found exploiting the lands of other people whom he has been able to subdue. Why protest in the case of Mosul oil?"

"What we dislike is the pietistic claptrap which invests this old procedure with the aureole of altruism and human good. This semi-deluded country of the United States seems about to go down before a wave of moralistic humbug, a ballyhoo of auto-intoxicated sentimentals and dogooders who have Baal all dressed up as Santa Claus and are about to wheel his image before the people.

"Great Britain will get the oil, and it may have to divvy up with some of the other claimants. The others will get something as the *quid pro quo*. A mandate will remain soft pickings, but the demented farce is to force the United States Senators to dress in white robes, take palm-leaves in their hands, and lead the American people into the World Court as an ante-chamber to the League of Nations, with the idea that they are promoting fair dealing in the affairs of men."

The New York *World* says:

League authorities have no illusions regarding the British motives for an interest in the region. England is not spending \$20,000,000 a year upon

administration without the hope of a profit—in cotton, in grain, above all, in oil. But however selfish their objects, the British are unquestionably offering the Arab inhabitants great benefits. They have reformed the judicial system and land registry system, reorganized education, encouraged scientific agriculture, established hospitals, checked epidemics, and built more than 700 miles of railway."

The following bit also will be of interest.

The following view of "a Turkish spokesman" at Geneva on the published account of the award is cabled to the American press:

"If what we read about Mosul is true, it means that Turkey gets worse treatment and less Mosul than she received under the Treaty of Sevres; in other words, we have gone backward and the Turkish Government and people can scarcely be pleased. The word is now up to Angora."

"By the sworn act of our National Assembly, we are ready to waive our rights to Syria, Damascus and what has been known as Irak, but we cling to Mosul as a natural and necessary part of the new Turkey."

"Even the League of Nations Commission of Investigation, on which the Council bases its decision, recognized that Mosul is judicially ours, and remains ours until we renounce it."

Art in Japan

The *Japan Magazine* gives the following:

That certain artists, leaders in painting in Japan have come to take more interest in Japanese than in foreign pictures, their speciality, and also the fact that some musicians will translate popular Western pieces, to make them easier to be understood by the public, is meeting with approval in various directions is interesting says the *Tokyo Nichi-Nichi* in its editorial of October 25th.

European and American worship still run high here, even those who speak proudly of Japan ranking with the three or five greatest countries in the world in consequence of the World War, showing at the same time their fear and admiration of Europe and America. This is not quite unreasonable, for while Japan is not so inferior in her military art to European and American countries, yet she cannot be independent of all thought and all sorts of civilization, and habitually follows Europe and America in every kind of institution, everything in Europe and America being indiscriminately looked upon as more advanced than that in Japan. This Western admiration seems to have been most apparent among artists in Western painting and music.

These two arts cannot, from their nature, stand quite aloof from Europe and America and in fact, foreign painting and foreign vocal music here have hitherto showed nothing independent and original, while other Japanese traditional arts and literature, which have been deeply under the influence of European and American civilization, have recently shown more or less independence of Western influence or have shown some noteworthy originality, while following Western types. Even the

above two arts have come to show, however, the above-mentioned tendencies.

Whether these tendencies are truly gratifying from the viewpoint of pure art, the paper cannot say definitely as an outsider. A new trial is a new stimulus in whatever case. Especially, the above tendencies are an outcome of self-inspection and self-criticism of art and is a new movement from self-awakening, grounded consciously or unconsciously on the traditional spirit of the nation.

Vanishing Pleasantness of European Life

La Revue Bleue paints a picture of European life of to-day which should have a salutary effect on believers in thorough Westernization. It begins as follows:

"Butter has gone up again."

"We are no longer able to keep an apartment or to employ a servant."

"Well, as for me, I haven't been at a theatre for so long that I don't know what it seems like."

"Umph! What do you want? Those are things for the nouveaux riches."

"Say, I've seen eggs for ten centimes apiece."

"And to think it is the same everywhere."

"Ah, that detestable war!"

We live in a chorus of these lamentations. Some dwell on the comfort and happiness of the good old times before 1914. Others condemn our present manners and declaim bitterly against our unscrupulous profiteers. Many deplore the frivolity, the lack of seriousness, of the new generation its indifference to solid attainments and skill and scholarship, its devotion to pleasure. Good people are distressed over the decadence of our morals and manners. They say that courtesy, modesty, respect for authority, have vanished, that the young folks of to-day are wayward, abnormal, and more or less degenerate.

And sums up:

"The present world has mistaken the purpose of life, which is not conquest, for that is invariably ephemeral, which is not material pleasures, for they are equally evanescent; but is a state of moral equilibrium and perfection. The ills of our sadly afflicted and nerve-racked race can be healed only by a doctrine of renunciation."

This is what that prophet of a future age will say. Will he fortify his doctrine by religion, by pure reason, by aesthetic ideals, or by hygienic necessity? That is a secret that only the future will reveal.

Anglo-Saxon vs. French Manners

Marcel Pilon bemoans what he calls the Anglo-Americanization of French in *L'Éclair de Paris*. We quote some of his grievance:

There was a time when we French justly enjoyed the reputation of being an intellectual people. History records the numerous salons where they delighted in conversing wittily and eloquently.

upon art, literature, and similar themes. Every social gathering became a joust of bon mots and good-natured banter. We likewise cultivated our physiques, but not at the cost of our brains. But the Anglo-Saxons appeared and imposed their sports upon us. From that date we lost the art of entertaining conversation, of good cooking, of gaiety, and of appreciating wine—for laughter and wine are brothers. Sport killed these things.

We are not temperamentally fitted for cocktails, dancing, and jazz. We like to do things on their proper occasions, and not to dance between two courses at luncheon or dinner. These are exotic manners, offensive to our tastes and habits.

Your Anglo-Saxon is self-centred and self-sufficient. He loves his ease and cultivates his hobbies. He carries the latter with him instead of leaving them behind him at his frontier. They cling to him like his clothes. Without them life would not be life to him. He assumes that he is at home wherever he may be. He does not accommodate himself to foreign ways, but forces foreigners to adopt his own.

Thus it is that a whole series of alien habits has been thrust upon us and has upset our whole scheme of life. We used to take luncheon at midday and dine at seven o'clock. The Anglo-Americans come and, being in the habit of having meals at slightly later hours, they persuade us that it is not chic to eat at the time that we formerly did, and so we now take luncheon at one o'clock and din at eight—unless it be at nine.

Thirty years ago, when a Frenchman or a French woman felt hungry in the afternoon, he or she entered a pastry shop, drank a small glass of port, Alicante, or Frontignan, and ate two or three little pastries. That was good form. But it was French, and not Anglo-American.

The English and the Americans show that Danton was mistaken. They always carry a little of their fatherland around on their boots. They prefer tea, their national drink, to our liqueurs, and cake, toast, and muffins to our *gateaux*. So they impose those things upon us, and under their influence our good old French fashions are becoming Anglo-Saxon. We no longer meet socially in the afternoon without the conventional cup of tea.

It is the same with our sports. Our national games have given way to boxing, football, and golf, and these have brought with them their own codes of conduct, their habits of life, to modify our national character. The young people of to-day bear no resemblance whatever to the young people of our own youth, and as we are instinctively *judatores temporis acti*, we regard the transformation as by no means fortunate.

These violent and brutal sports have robbed our race of its most characteristic and excellent qualities—courtesy and amiability. Those were distinctly French virtues, precious qualities for which we were universally envied, and which we owed to our Latin heritage. We should not forget that we Frenchmen naturally crave sentimental emotions. We must be vibrant, thrilled, immersed in some hobby or love. In this realm of the emotions, above all, Anglo-American influence has not been happy, especially as it has affected our young women. It has brought us hobbled hair, masculine manners, and flirting—something that rarely leads to matrimony, and still more rarely to happy matrimony. Anglo-Saxon flirting may be all right in England and

America, but it is all wrong in France. Moreover, across the Channel and on the other side of the Atlantic laws and social customs protect the flirting girl, but our moral and social codes make no provision for her.

As an Englishman Saw Fascism in Action

Ever since Mussolini boldly rebuked Mr. Baldwin for having, in an uncalled-for fashion, said things against Mussolini and Fascism, Englishmen of the conservative variety have lost all love for the Fascisti. The following account by an Englishman in the *Manchester Guardian* will go to prove this. The introductory editorial comments are also noteworthy.

[A land with a censored press, such as Italy is to-day, must content itself with being reported by its critics. The anonymous author of the following article probably speaks with bias, but with a closer approximation to truth than official recorders of Italy's current history. In justice to Mussolini's Government, it should be said, however, that the Prefect of Florence, who was reputed to be one of the best in the kingdom, was instantly dismissed after the murders, together with the Chief of Police and some Fascist leaders.]

The writer describes the Florence affair and explains it as follows:

It is no accident that the victims of last weekend's Fascist orgy belong entirely to the class that meets regularly in the Brazenose or constitutional Club in Manchester or any West End Club of a similar sort. No one who reads the Fascist press can fail to perceive that in the Fascist philosophy the enemy is not so much the Communist for whom there is indeed shown a sort of respect as being, so to speak, the other side of the same medal, but the Liberal, the intellectual, or, more broadly, the believer in ordinary political methods.

Herein, indeed, lies the origin of the whole affair. Politics is the ultimate, the unpardonable crime in present-day Fascist Italy. 'Thou shalt have no other gods but me' is the frank doctrine of a Farinacci (or shall we say, for politeness' sake, of his prisoner Mussolini?), and spies have of late reported to Fascist headquarters that the Freemasons, in Latin Europe traditionally a Liberal body, had in their lodge gatherings been guilty of 'talking politics,' of exchanging ideas among themselves, as men belonging to the responsible classes, about the present and future of their common country. Thereupon, some weeks ago, persecution of the usual type—menaces, castor oil, beatings—began.

On Saturday night, a Fascist condottiere, the Cavaliere Luporini, accompanied by his fellow Fascist, Signor Gambacciani, descended upon a certain Signor Bandinelli, a sexagenarian professional man, at his house, for the purpose of extorting a list of the Freemasons of the city. When the old man showed some reluctance, the Cavaliere, as in Fascist duty bound, smashed in his face. Fascism

of course, permits of no redress, so that it is perhaps intelligible, though no doubt inexcusable, that a guest who was present lost control of himself, drew a revolver, shot the Cavaliere dead and wounded his companion. Whatever his fault, he paid for it afterward by being beaten to death. Reprisals—not, be it noted, against Communists or Socialists or workmen or people of the lower sort—were then let loose, of course with the consent of the equally terrorized police and civic authorities. Stores and shops and offices belonging to dangerous Liberals were systematically sacked and looted. Private apartments of other people of the same detested respectability were similarly treated. Prominent lawyers and former deputies were murdered in cold blood, among them Signor Pilati formerly a moderate Socialist deputy, and Dr. Consolo, a leading Liberal lawyer.

And comments

Fascism is what the biologists call a throwback to the days when Guelph and Ghibelline ruthlessly fought for supremacy, when the faction of the Palazzo Medici recruited the mob against the Palazzo Vecchio. Faction is triumphant as in renaissance times and as in those times, the supreme faction sets itself to exterminate the others.

And prophesies

In a few days, Mussolini will greet Chicherin with a real cordiality that Jayson Hicks could not feign. Yet the chief Fascist paper in Florence—there are, of course, 10 others here—is bitterly, ferociously anti-English.

Let our British Fascists wherever they may be and if they really exist, think it out.

French Financial Crisis

The Literary Digest presents the French financial situation in a very lucid form. We are told:

A France staring "bleakly at her own bankruptcy" is envisaged by a rather extreme newspaper writer who has been watching the downfall of the franc and the passing of Premiers and the vain struggle of Finance Ministers to cope with the fiscal problems of the Republic. As a Paris correspondent of *The Wall Street Journal* sums it all up: "Politically the situation is nonsensical. Financially it is critical. Therefore the outlook is unhappy." France already staggering under the burden of reconstruction must so the *Boston Transcript* notes, choose between inflation with all that it implies, or a levy on capital, or a tremendous increase in direct taxation. And no political group in her Parliament is strong enough to put through its own program, or willing to submerge its own views to work out a compromise plan. France has had five revolutions in little more than a century, yet to-day, says William Bird, in a Consolidated Press dispatch from Paris, the nation "faces perhaps its most severe crisis in modern history." Yet there is no suffering, no unemployment, business is proceeding normally, and there is not the slightest sign of disorder." Nevertheless, statesmen, bankers, merchants,

industrial leaders "meet hourly in frantic conferences, each questioning the other in the hope of finding a miraculous outlet from the threatening disaster." As this writer frankly states it:

"France's floating debt amounts to sixty billion paper francs (about \$2,400,000,000). If redemption is demanded, it means that the Treasury must pay out an average of 200,000,000 francs (about \$8,000,000) daily for a year. And to meet this threatened demand for payment, there are available 400,000,000 francs (about \$16,000,000)—just enough for two days."

This tremendous debt is due to the fact that

"Instead of printing money to meet the deficits in her budget, she has printed bonds and short-term notes. In order to refund such issues as have fallen due and raise new money for additional deficits, it has been necessary for the French Treasury to offer increasingly attractive terms in the way of interest rates and premiums until to-day the country has a hopelessly top-heavy internal debt structure."

"The total French internal debt amounts to about 300,000,000,000 francs. The Government is forced in the current year to provide for the re-funding of 21,000,000,000 francs in three-year, six year and ten-year bonds which have fallen or are about to fall due. The scheme devised for meeting such of these obligations as have already matured was only a partial success, and a partial success is tantamount to failure."

In order to regain her financial feet

France must reduce her public debt, and, insists *The Nation* (New York), "if she is to do that, it will have to be by sacrifices on the part of her men of wealth. The Left parties justly demand that men of wealth be forced to make sacrifices. If they refuse, if they use the Conservative Senate as a fortress from which to fight any effort to make them sacrifice, they will only be calling on the deluge. No country is revolution-proof when its rich men refuse to heed the warning on the wall."

In France, there are three general rival programs of financial reform, writes C. R. Haigrore from Paris to *The Wall Street Journal*: the Socialist plan of a capital levy, the Cullaux plan for super-taxes on income and certain kinds of property and the establishment of a special fund to take care of the floating debt, and the Conservative scheme for rigid economy, broader taxation, and the turning over of State monopolies to private hands. A government lottery bond is also proposed.

But

"The private view of the best-posted people is that there is really but one solution—and that is a practical repudiation by France of her entire internal debt. In effect, that is what Germany did and if there is eventually any other way out for France, no one can see it. The things, other than repudiation, which would put her on her feet seem to be politically impossible."

Germany does not like Locarno

The German Press appears to be very much against the peace of Locarno as can be gathered from the following quotation from the *Literary Digest*:

The peace of Locarno holds no illusions for the German Nationalists, it appears. Yet it is admitted in Berlin press dispatches that the German Cabinet realize that refusal to sign the Locarno treaties would mean a political defeat of the first order and that is why they will be ratified, because if they were not, the Nationalist would come back into power with a force they have not yielded since the revolution. The German Nationalist press, below quoted, has objections to the Locarno agreements that may be summarized as follows: Instead of forming the basis of a real peace, these treaties may prove to be one step further toward "the subjugation of Germany to the Allies." Some of these newspapers criticize the results of Locarno with moderation and caution, but others go to the limit of indignation and anger. Thus the *Deutsche Tagblatt* speaks of the "dignity of Locarno," and of the "Third Versailles," while the *Deutsche Zeitung* expresses itself as follows:

"In cold blood and a lightmindedness unparalleled in history, we have written ourselves down, and so we have bought complete dependence upon the political will of the Allied Powers. The only hope is that at the very last moment it will be possible to prevent Germany from entering the League of Nations, for without such entry the Locarno treaties cannot become valid."

The *Deutsche Allgemeine Zeitung* explains Nationalist hostility to the Locarno treaties in these words:

"It is essential to note that France has not renounced her treaties with Poland and Czechoslovakia, which were directed against Germany, in spite of the fact that in the near future Germany will become a member of the League of Nations. We fail to understand how it is tolerable that military alliances directed against other members, should exist within the League of Nations when the League of Nations is supposed at the same time to be the League of Peace."

Protestantism in Danger

Says the *Literary Digest*

Protestantism in continental Europe is reported in a desperate battle for its life, with the outlook so ominous as to raise the question whether it is not on the point of death. It has been reported from time to time, sometimes with almost despairing insistence, that the churches of Luther and Calvin were in serious plight, but it is now impress on us that they have reached the point where only prompt and efficient leadership can save them from being mere relics of history.

In Transylvania, where all churches derived revenue from the State, it has been cut off from government help. Elsewhere the people, overburdened by taxes and the task of eking out a sheer existence, are unable to contribute to the Church's support.

"Actual demolition of church buildings has been a grave loss in many regions. French churches were not the only ones to suffer from shellfire. In East Prussia the Russian and German troops together destroyed 117 churches, most of which are not yet rebuilt. In Latvia, one-fourth of the church buildings were ruined. One sees broken altars and ruined churches across the entire eastern front. One hundred and five Evangelical churches and twenty-three schools were destroyed in Poland. Nearly all the church buildings in eastern and middle Galicia were wholly demolished or badly damaged, including serious harm to the important Evangelical institutions at Stanislaw. In Roumania, wherever the battle line swayed back and forth, one finds the wreck of chapels in which centered the religious aspirations of generations of believers. Scores of churches were destroyed in Russia when Red and White forces grappled for the wreck of the Russian Empire. Serbia and Bulgaria each has its quota of ruined church buildings, mute testimony of the passage of the Four Horsemen who knew no respect for faith or creed."

British Interests in China

The *Public Opinion* quotes the following—

"The time has come when the Government ought to appoint some outstanding personage a man of world-wide repute whose very name would commend him to the Chinese authorities, to go to the Far East and take charge of British affairs. If the darkness of China is to be dispelled the illumination of great personality is needed."

—DAILY EXPRESS

And says in the words of the *Daily News*:

A BITTER REALITY TO LANCASHIRE

"It is, of course, profound British interest to assist in the creation of a peaceful prosperous and contented China. The battles of the Chinese generals may appear barbarously remote to the average British citizen. They are a bitter reality to the manufacturers and operatives of the Lancashire cotton industry."

Sir Oliver Lodge on Evolution

The following is taken from the *Public Opinion*

Sir Oliver Lodge recently delivered three addresses on "The Evolution of Man," and in his final discourse, reported in the *Christian World Pulpit*, the eminent scientist expounded some great truths of especial interest in this New Year week's issue.

"Humanity is in the morning of the times; the human race is still in its infancy," said Sir Oliver Lodge, "and in spite of the imagination of the leaders and geniuses of the race, and in spite of their great achievements, we have still much to learn."

The growth of the human soul, like the growth of the human body, must be a slow, laborious

process taking great tracts of time. Here and there a genius arises and towers above his fellows; the higher he rises the more convinced he is of his imperfections. But the great bulk of humanity is far below that level.

As Browning says near the end of that great poem 'Paracelsus':

*Man is not Man as yet,
Nor shall I deem his object served his end
Attained, his genuine strength put fairly forth.
While only here and there a star dwells
The darkness, here and there a towering mind
Overlooks its mortal fellows when the host
Is out at once to the despair of night.
When all mankind at once is perfected
Equal in full blown powers—then, not till then,
I say, begins man's general infancy."*

What Japan owes to India

J. Takakusu discusses the debt of Japan to India in the *Young East* and among other things mentions the introduction of cotton into Japan from India. It came about as follows:

Now it is an exceedingly interesting fact that cotton was one of the media by which intercourse between Japan and India was opened in ancient times, it being recorded in authentic Japanese history that cotton seeds were first introduced into this country from India. In July, 799, a foreigner was washed ashore in a little boat somewhere on the southern coast of Mikawa province, Japan. He had nothing to cover his body except a mino, or straw rain-coat, and a pair of short drawers. Over his left shoulder he had a piece of blue cloth, very much like a Buddhist's cassock. He looked about twenty years of age, stood 5 ft. 5 in. and had ears with ear-lobes over 3 in. in length. His speech was quite unintelligible, and there was no telling to what nationality he belonged, though a Chinaman, who happened to see him, asserted that he was from Quen-lun, a Malay country lying south to Champa. Later on, however, when the outlandish man learned to express himself in the Japanese language, he confessed himself to be a man from Ten-jiku, as India was then called in Japan. He used constantly to play on his one-stringed harp, and his songs sounded extremely pathetic. Among his effects was found something like grass-seeds, which prove to be no other than some seeds of the cotton-plant. The Indian was allowed, at his own request, to live at the Kawara-dera temple. There he disposed of his possessions, and built himself a house at the western end of the Imperial capital, Nara, where he began helping others by giving accommodations to travellers and wayfarers. Afterwards he removed to the Kokubun-ji temple in Omi province. This account appears in the 8th volume of the *Nihon-ko-ki* (one of the official histories).

Mr. Baldwin Claims too Much

Harold J. Laski, referring to Mr. Baldwin's claims to have achieved wonders in Locarno and in India, says in the *New Republic*:

No one can doubt that Locarno is a real success. It has definitely put a term to the war-atmosphere; and the resounding ovation which greeted the German Ambassador at the Guildhall Banquet may be taken as the starting-point of a new temper in European diplomacy. But we must not credit Mr. Chamberlain with too much. Against his success at Locarno must be put his abysmal failure at Geneva. Against his attitude to Germany must be put his elaborate offensiveness to Russia. He has done nothing to ease the situation in China. His careful aloofness in the Riffi war has deprived the native tribes even of access to necessary medical supplies. He has made one great gesture by learning from the methods of Mr. MacDonald. We must wait to see what fruits he has the skill to gather from the seeds he has sown. We must, above all, be certain that his cultivation of Germany is not a move toward that bloc of the Christian West against the Soviet East, of which Mr. Ormsby-Gore, the under-secretary for the Colonies, spoke so ardently a few days ago.

It is difficult to know from what Mr. Baldwin drew his satisfaction about India. He has appointed a new Viceroy who has considerable private charm, but no starting public merit. The new speaker of the Indian legislature has adopted the attitude of neutrality in his functions which his office demands. But the twelve months' secretaryship of Lord Birkenhead has been completely barren so far as new ideas are concerned; and the Swaraj party has announced that unless the government moves toward further autonomy, obstructionist tactics will be resumed. No one can claim for the labour government that it showed any real imagination about India. But certainly it was not, like Mr. Baldwin, optimistic on such tenuous grounds.

Future of Religion

Discussing the above in *The World Tomorrow*, Harry F. Ward says:

Perhaps the one fact that means more for the future of religion than anything else in the life of our time, is the appearance of an ethical emphasis in some form or other in all of the great world religions. A concern with social conduct, a demand for change in man's attitudes and relations with his fellows, is the sign of new life in all the great faiths of the world. What Gandhi has done in this direction from the background of Hinduism has been felt throughout the civilized world.

Not long since the Panchen Lama from Tibet came down to Peking. He is a great figure in the Buddhist world. While there, he declared that his religion must work with all others to help mankind get rid of the evil of war. Only a few months before, the official head of the Mohammedan religion had declared the same thing and had coupled with the question of war the kindred

great problem of property. In a joint concern to deliver man from the consequences of war from the evils of possession and the acquisitive spirit, Christians and Communists are on the same ground, no matter how they separate on the question of methods.

Here, then, is a common element running through all religion and irreligion, and growing constantly in vitality. It is the conviction that if life is to be worth living, it must be lived in a certain way: it must be a process of development and a process of sharing. It must have freedom and justice and fellowship.

Toru Dutt

Maris Johns writes in the *Bharat* a journal run by the Indian students of Oxford.

From time to time the literature of England has been enriched by the work of people of other races, and not the least interesting of these contributions is the work of an Indian girl, Toru Dutt, a member of a brilliant Bengali Christian family. Toru was born in Calcutta on March 4th, 1856, and died on August 30th, 1877. Thus her life was

but a span of twenty-one years; yet, how crowded it was with literary achievements, a brief examination of her work will show.

The poetry she wrote was of a high lyrical quality, and assures her a lasting place in our literature. Perhaps her best known work is *A Sheaf Gleaned in French Fields* a volume of translations into English from various French poets such as Victor Hugo, A. de Lamartine, Leconte de Lisle, Baudelaire, and Barbier. Copious notes, give a fearless exposition of the author's opinions, and reveal a keenly critical judgment. The work as a whole not only shows a complete mastery of two alien languages (English and French), but astonishes us by the wealth of poetical imagery that one so young has discovered.

What more of nerve and vigour could be found in alien poetry than these lines from Auguste Barbier's *La Cuvale*?

"O lank-haired Corsican! how grand was France
In the fair summer month of Messidor!
A wild steed with the lightnings in her glance,—
Free—free, she owned nor king nor conqueror,
Though tamest and beheldst her attitude,
Her restless croup and supple empty back;
One spring! And then away—O Centaur rude,
Thy spur she feels—choose, choose at will
thy track."

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally, no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor, *The Modern Review*.]

A Universal Language for India

In the *Modern Review* for January, 1926, Mr. Madhu Sudan S. Gokhale has discussed the problem of a universal language for India and recommended Bengali as a suitable language for the purpose, as he thinks it satisfies the tests he would apply to a language claiming to become universal. Nothing could please a Bengalee more than to think that his language should have such a high distinction, because he knows no other language in India, has better claims to survival than Bengalee with its rich, varied, and living literature. But Mr. Gokhale does not seem to have taken into account all the elements involved in the question. From my experience of teaching Bengali to non-Bengalees, I would like to refer to one or two points that I find to have been overlooked by him.

Mr. Gokhale desires that Bengali should be written in the Devanagari script in order to avoid the difficulty of deciphering. Supposing this was done, it would at best enable the non-Bengalees

to understand the written Bengali. But what about the spoken language? The Bengali letters do not possess the same sound values as the Devanagari letters. Again, Bengali phonetics is of a very complex nature, the like of which can rarely be found anywhere else in India. A Marathi, for example, may learn Bengali at home through the Devanagari script, but when he will speak Bengali with the Marathi sound values attached to the letters, he will be as perfectly unintelligible to a Bengali as a Bengali speaking the language in his own way will be to him. Will the non-Bengalees be ready to accept Bengali phonetics too with the Bengali language or will they choose to pronounce Bengali in their own way, requiring the Bengalees to change their pronunciation also? For example, is Mr. Gokhale ready to pronounce *বদ* somewhat (but not exactly) like *poddo*, *বদু* like *omullo*, *বজ* like *joggo*, *দেব* and *দেবী* with two different values for *ব* (one as in Marathi, another like *in*

English cab) कावा as in Marathi, but जीवार with the silent?

Another difficulty is that the written Bengali considerably differs from the spoken, principally in pronunciation and secondarily in vocabulary कावाय बाइल would in the standard speech be reduced to कावा बाइल. This means, the non-Bengalee has to learn not only the written, but also the spoken form of the language.

It would be very charitable to describe the Bengali language as homogeneous. In the matter of pronunciation some of the Eastern dialects (e.g. those of Chittagong and Mymensing) have hardly a better chance of being understood by a Calcutta man than Marathi spoken to him for the first time. And it takes an unduly long time for an Eastern Bengali man to be able to speak the Calcutta dialect without disclosing within the first ten minutes of his talk that he does not belong to Calcutta. The vocabulary of East Bengal also considerably differs from that of the West. There are many Prakrit words in it which it has in common with Hindi, Gujarathi and Marathi, but which are not to be found in the Calcutta dialect. For example, the basic verb for the barking of a dog in the Sylhet district is रुक (e.g. कुत्ताय रुके, the dog barks) it is the same in Hindi, Gujarati and Marathi, but it is not found in western Bengali. Standard Bengalee, therefore represents a fraction of the spoken language of the province though we may hope it will one day be universal in Bengal.

To make Bengali a universal language, would, in the right sense, mean acceptance of the Bengali written language, the Bengali spoken language, and the Bengali system of pronunciation, if not of the script also. But Mr. Gokhale would like to substitute the script by Devanagari. Leaving aside the difficulties in printing, typing, telegraphic communication, to which it has in common with Bengali, the Devanagari is very slow to write.

That is why the Marathas invented the *Modi* script for writing. If the script is changed at all the Bengalees would naturally desire to substitute it by one that is decidedly superior to it and supplies the demands of modern times, like, say, the Roman script.

The Maratha Recovery after Panipat

In the last portion of the article, "The Maratha Recovery after Panipat" by Prof. Sarkar (Nov. number), there appears the following statement:—

"On the subject of the murder of the Peshwa, Nanyenrao, Sirdesai elaborates the view, now accepted in Maratha circles that Raghunathrao and Anandibai did not instigate 'no crime.'"

This statement is rather incorrect, and misleading. After discussing the various theories about Peshwa's murder, Sirdesai has come to the conclusion that at least Anandibai (not Raghunathrao) must have had no hand in the crime. He pleads for her that in the absence of any documentary evidence showing her guilt, she should be given the benefit of the doubt (page 348). The statements made by Duff, Kincaid and Parasnis, in their histories that Anandibai changed the order of 'arrest' into that of murder, and instigated Raghoba to murder his nephew, Sirdesai dismisses as unbelievable because these authors adduce no evidence in support of their statements. Sirdesai, however, nowhere absolves Raghunathrao from the guilt.

But one fails to understand why Sirdesai did not refer to Major Basu's suggestion that Mr. Moynsten, the English envoy at the Peshwa's court, must have instigated Raghoba to murder Nanyenrao (Rise of the Christian Power in India, Vol. II, page 40). It is suggested that he must not have referred to it as Basu gives no documentary evidence in support of it. But there would have been no harm in referring to Basu's suggestion and then dismissing it as unbelievable as he did those of Duff and Kincaid.

FIELDS IN RAINS

When the clouds loom over the skies
I look into my emerald fields
In childish delight!

The passing showers weave a peatly net.
Through it glimmers the daylight grey and soft.

The fields beam afresh in living green.
Specks of dust are washed in silvery rain.
The air savours of the grassy scent.
How picturesque the cranes
Flying against the smoky sky,

Like a garland of emancipated souls
Winging their way heavenward
Having broken the mortal bonds of form and life

In every rain-drop
A sweet tongue sings a song.
Lo! the music of the showers
Awaken in my heart
The long-forgotten dreams
Of my playful childhood!

D. RAMI REDDY

Contrasting shades were achieved by superimposing number of symbols to make lines of the heaviness required

Persia's Bloodless Revolution

Another Mussolini is seen by certain elements in Persia in the assumption of the Shah's throne by Reza Khan Pahlevi, premier and former Minister of War, after the National Assembly had adopted a resolution deposing the youthful Shah and the Pahlavi dynasty by a vote of 80 to 5. Thus a private soldier in a Cossack regiment garrisoned in Persia becomes a dictator of an empire which for centuries has been one of the most exclusive monarchies on earth.

28-11

The Shah himself is to blame for the present situation.

Two years ago he left Persia to regale himself with the delights of Paris. There he has given himself over to wine, women, and song, spending lavishly of the money that has been wrung from the Persian people. His deposition came in direct response to public opinion, and out of it may come a better and more popular government. "Nowhere in America will there be much sympathy for Shah Ahmed Mirza, who has been playing ducks and drakes with his big income in European gambling places

The Ex-shah of Persia, who, at the age of 16, became Persia's ruler, the "King of Kings." He is now under thirty, and lives in Paris.

The new ruler, Reza Khan who rose from the ranks of the army, in which he served for years as a private, to Commander-in-Chief.

The youthful ruler's losses, according to the New York *Herald Tribune*, have been estimated at \$3,000,000. His parties on his private yacht have cost him another million, it is said. Under the new regime, he is to receive a pension—and his jewels, valued at \$100,000,000, we are told.

"Before the World War Persia had come under the joint control of Great Britain and Russia, but the latter's hold slipped because of its own upheaval. Reza Khan saw his opportunity. His rise to power was rapid, and for years he has been the Mussolini of Persia."

"In contemporary Persia, covering more than 600,000 miles, there are at the most only about 100 miles of railway tracks. Thirteen years ago there was in the country only a single automobile.

"Reza Khan Pahlevi, who now is the virtual dictator of the land of the Shahs, is of a very humble origin, both as regards his ancestry and

education. His father was a farmer, which means that Reza Khan could not obtain in his childhood that elementary education which is comprised in the three Rs. He has been virtual dictator since February, 1921. Like Mussolini, Reza Khan has retained the Parliament in order that it may approve his will according to the formalities of a constitutional regime.

"It is rather difficult to compare Reza Khan with any of the dictators who have made themselves the rulers of several European countries. Both Lenin and Mussolini had sworn allegiance to causes which have served as the cloaks of their assumption of power. Reza Khan professes no adherence either to the tenets of internationalism or to those of nationalism. Altho there is some superficial resemblance between him and Spain's dictator, Primo de Rivera, their aspirations, as indicated in their utterances, are far from having the same objective. Reza Khan is fighting for the unification of his country, because the expansive power of his ruling ambition demands the widening of his field of action.

"Reza Khan has an army such as Persia has not had for a long time. It consists of 40,000 soldiers who, altho they are not models of military efficiency, are a great deal ahead of the military formations of the past. Reza pays them regularly, feeds and clothes them, thereby assuring for himself their loyalty and fitness for military action. His personal courage, which is extraordinary, has helped him in retaining his hold over the troops.

"The inhabitants of the country have attributed the greatest importance to Reza Khan's army. They have not seemed to be aware that the international situation has been greatly favoring the dictator's scheme of unification and of centralized sovereignty. Soviet Russia had renounced her claims to Persian concessions and privileges. Britain, too, the cause of perennial jealousy having been thus eliminated, felt no inducement to continue a policy of infringing upon Persia's sovereignty. The United States, too, had declared its insistence upon the policy of the open door, which was an additional reason for the course which England took.

"Since Reza Khan became dictator he has had the titles and ranks in the Army abolished, introduced several reforms to simplify the weights and measures, furthered the cause of sanitation, public charity and education, and has been doing everything in his power to initiate a system of orderly accounting in the State finances."

"Reza Khan may be an autocrat and virtual

dictator, but he is likely to leave behind him a Persian republic as the fruit of his labors."

Listening with The Fingers

A new method, which is akin to radio transmission in its effects, has been adopted to assist the deaf in hearing. Marie Tilson, a deaf inmate of the Central Institute of St. Louis, is shown listening to the young woman with the megaphone through her fingertips, which are placed on a drum which is stretched over the mouth of the megaphone. Miss Tilson cannot hear with her ears and so she listens with her fingers; the vibrations of the young woman's voice being transmitted to the child's brain via her hands.

The Modern Maid Marian

Archery and fencing, two ancient forms of killing, have come down to modern times, shorn their deadliness and some of their glamour as sports—and sports of interest to the gentler sex, at that. When duelling went out of favor as an institution of "honor," fencing was retained to give poise and quickness of eye to young men of society.

Today there are women's fencing clubs in large American cities, where many wealthy women have taken up fencing as their favorite sport. The deadly arrow of our own Indians exists only in museum, the bow and arrow approved by archery associations is bought at the sporting goods store as athletic equipment. But in these modern days you must have a target from the sport goods section, too, instead of an enemy's heart as aim.

Recently, archery—there's room for only the sport in our page—has been growing in popularity.

Half of the two thousand women archers in United States are in colleges, and in the past year or so not only most of the women's colleges but the women in a number of State universities as have become enthusiastic over archery. One

A line-up of Mt. Holyoke girls with the bull's-eye the one objective

son why physical instructors are pushing it is that it is an attractive sport which can be offered to girls not quite physically up to the strenuousness of basketball and hockey. There is, of course, no such physical strain as is involved in these forms of team play, though greater nervous strain, while there is good exercise for the upper-arm muscles, the shoulders and the muscles across the back, training in poise and grace; in coordination of eye, brain and aim, and the interest of competition.

Besides, there is the appeal to the imagination of sharing in a sport to which William Tell, Hiawatha, Robin Hood and Maid Marian, stories of dark forests and desperate adventure, of the archers of Azincourt and Poitiers, contribute their flavor of association. It is an appeal that the spectator feels, too—when he sees a line of young women, observing strict rules of position, a quiver at each belt on the right, bows well drawn, each ready to loose the arrow to speed to its mark. It is a picture full of grace and charm in its own right as well as in its romantic suggestion.

Puzzle Picture Tests Police Memory and Vision

To test the quickness of perception, accuracy and memory of candidates for police departments, the bureau of public personnel administration at Washington has prepared pictures showing a collision of a street car and an automobile. The would-be policeman is allowed to study the

print for three minutes and may take any notes that he wishes. At the end of the time, he is asked questions about the things he saw, such as, "On what street was the auto being driven?" "What was the number on the street car?" "What shows reckless driving on the part of the chauffeur?" The queries, ten in all, must be answered in fifteen minutes, and the applicant is graded according to the replies. The test has been found useful in that it indicates if the candidate is naturally alert and precise or is unlikely to notice the significant facts of such an accident. Another observation problem consists in allowing the competitor a three-second glance at an automobile license plate, the average time an officer or a pedestrian has to look at a tax under ordinary traffic conditions. He then attempts to write down the number correctly. In tests for automobile

drivers, ten photographs illustrating dangerous or objectionable situations are shown the candidates, and they are asked to tell the hazardous feature in each.

Javanese Dances

By J. V. H. LABBERTON

From Java-Dwipam arrived in Madras recently a group of Javanese dancers and the Javanese orchestra (*gamelan*). They gave performances

After Studying This Picture for Three Minutes, Police Candidates Are Asked Ten Questions about What They Saw, to Test Their Quickness, Accuracy and Memory.

Javanese Dancer as Arjuna

A Javanese Dancer in the Role of A Woman

Javanese Dancer as Abhimanyu

at the Jubilee Convention of the Theosophical Society, and will do so throughout India, if desired.

The Wayang Wong is, from the standpoint of Art, a most beautiful expression of the human in dancing. There is not in the whole world other trace, except perhaps the old Bulgarian, capable of expressing themselves so beautifully the dance as the Javanese artists. These artistic dancers have an unimaginable grace. Artistic souls, who feel for line and color, will be delighted with the fine distinguished movements of dancers whose power of imagination puts in another world. This power explains why self-controlled movements are so delicate and They dance a romance out of the great the Mahabharata War, called in Java the Bhagavad Gita. The more delicate and refined type of

ing is allotted to the Pandavas in the Drama, each one of whom has his own dance. For instance, Arjuna dances quite differently from Bhima, who is always the *kshatriya*. The Kaurava dance is again quite different, more wild, always aggressive, while the Danawas' dance is a savage dance, always attacking. Accompanying Arjuna, there are always three figures—clowns: these represent, in fact the powers of good, who help him to gain victory over his enemies.

In Java, there are several types of dancing. The dances of women are called *nayuban* and these are for the common people, except the *Srimpi*—which are danced by the little Princesses of the *Kraton* Palace. The *Srimpi* is the Symbolical Dance of the nine Gopis before Shri Krishna and may only be given when the King is present. The little princesses may have no other one in thought during the dance than only the King, who represents Shri Krishna.

The art of dancing the *Bharata Yuda* is practised only by the young nobles and is called *lekso*. Three years' strenuous training is necessary to master the canons of this art. Most of the Princes of the country are perfect dancers.

The *Wayang Purva* is something very different. *Wayang* means shadow and *purva* means old. It is a kind of puppet show. The puppets are made of leather and are painted in gold and different colors. Their appearance is very strange, with only a touch of resemblance to humanity. They are moved by the hands of the story-teller and the shadows of the dancing figures are cast on a white screen. The lamp behind the screen is in the form of a copper *Garuda*, the vehicle of Vishnu, oil ago. The *Wayang Purva*, the shadow, is burnt in it with a cotton string for the wick. The strange, unhuman figures, like the *Wayang Wong*, the human shadow-dancers before mentioned represent the Pandavas and Kauravas from the *Mahabharata* of 5000 years puppet-play, is supposed to continue for not less than 12 hours.

There is only one man who at once moves the puppets, talks, and sings the story of human life while the orchestra follows the theme with its melodies of human joy and sorrow.

Russian Crown Jewels

A Russian Crown Jewel

"Russian Crown Jewels, around whose fate and alleged misuse by Bolsheviks so much Allied imagination had centred, now appear to be safely in the hands of the Russian Government. These form one of the most magnificent collections of jewellery in the world."

The Damascus Massacre

The screaming and bursting shells that scattered the streets of Damascus with the blood of innocent men, women and children sent a thrill of horror through the civilized world—a horror not lessened by the fact that the shells were fired from the guns of a Christian nation. And the work of the artillery was supplemented by bombing airplanes and by tanks that spit machine-gun fire as they lumbered through the historic streets of what is said to be the world's oldest inhabited city. The exhibition of "frightfulness" began on Sunday night, October 18—two days after the initiating of the European security pacts at Locarno—and continued until late Tuesday afternoon. An eyewitness quoted in an Associated Press dispatch describes the period of the bombardment as one "unforgettable horror" tells of hundreds of dead bodies lying in streets, and estimates that "at least 2,000 were buried in the debris of the wrecked buildings of Damascus."

In the United States editorial writers discuss this event under such uncompromising headings: "Murder in Damascus," "Butchery in Damascus," "French Butchers in Syria." "In one brief rain of bullets France has done more harm than a thousand peace pacts and missionaries can repair in a hundred years," thinks the *Richmond Times Dispatch*. "While we still mourn with the French over the shelling of the cathedral at Reims, Damascus is smoking ruins," remarks the *St. Louis Dispatch*, which reminds us that "Damascus is the Mohammedan what Reims is to the Christian." The same paper notes further that "while the hand of France was signing the Locarno agreement and intervening, as a member of the League of Nations, in the Greece-Bulgarian squabble, its hand was committing ruthless butchery in Syria." "Nothing can really excuse the occurrence," says

A Russian Crown Jewel

Where French Shells and Bombs wrought havoc for two days—
 Damascus, described as "the heart of the Mohammedan World," was a seat of culture 1,000 years before the Parian laid the foundations of the city now known as Paris. It was old before any one dreamed of Athens. It was once besieged and conquered by King David, and in comparatively modern times was the home of St. Paul.

the *Detroit Free Press*, which adds "At best, the whole imbroglio was the result of stupid blundering by the French authorities; at worst, it was a piece of ruthless vandalism which will leave the Orientals extremely skeptical about the superiority of French culture over their own." "The ghastly joke is that all this is done in the name of civilization," explains the *St. Paul Pioneer Press*, which reminds us that France holds a mandate from the League of Nations for the just administration of Syria. "There will be little to be said for the mandate system," it declares, "if the situation in Syria goes on uncorrected and unrebuked." The international reverberations of the Damascus incident will be serious, predicts the *Baltimore Sun*. "Will Western nations learn in time to save their own hides, that in dealing with the non-white populations, who make up nearly three-fourths of the inhabitants of the earth, sympathy and effort at understanding go toward peaceful cooperation, while rough-shod violence serves only to advance an inevitable day of reckoning?" asks the *Boston Globe*.

The *Cleveland Plain Dealer* remarks ironically that it is becoming ever more difficult for France to find any other Power to impress the "backward peoples with the great blessings incidental to European overlordship." And in the *Philadelphia Evening Bulletin* we read:

"France's great blunder at Damascus has shocked the world by irreparable damage done to precious historical monuments of one of the most ancient and picturesque of cities, a city that was old when Abraham dwelt in tents in Palestine. It has roused the Moslem population to fury and made mandate administration everywhere harder for the Western powers."

"It has brought what threatens to be a long and futile war on France, imposing new sacrifices of men and money on a country already wearied by the prolonged struggle in the Rif."

London's chief grievance is the additional trouble aspects in mandated Palestine and Transjordan as a reason of rekindled Arab rage against the West and the Christian. The British mind is affected in the sharp language of the *London Times*, which brands the French tactics which led to the

Damascus rising as a 'grotesque imitation of the barbarities of primitive peoples.'

"The action thus denounced was the parading through the city on the backs of camels of the bodies of twenty-four slain bandits. The French justification for the bombardment of an open town that followed was that the manner in which the houses of Damascus are huddled together in the immemorial style of the Orient gave such perfect cover to snipers at the French that their destruction on a large scale was a military necessity. The French military administration in this case is charged with the fault, so often laid to the Germans, of letting purely military considerations overrule all considerations of humanity."

In an Associated Press dispatch from Cairo, we read:

"A traveler who has just arrived here from Damascus says that at 4 P. M., October 18, Hassan El Karreth, chief of a native band, penetrated into the Chagour quarter of Damascus with his followers, crying,

"Rise up! Your brothers, the Druses are here!"

"The band then attacked a police post where they shot a French officer. The inhabitants of the quarter armed themselves and joined the insurgents, the traveler said, and then all advanced toward the Medan quarter, the inhabitants of which ranged themselves against Hassan El Karreth's men."

"The traveler relates that at this hour many Frenchmen were working with Armenians in the Medan quarter. They were savagely attacked by insurgents, who caught them between two fires. Here one hundred men died fighting."

"Suddenly an airplane appeared over the scene and dropped bombs on the crowds massed in the Armenian quarter to disperse them. The angry crowds fired back, but without hitting the airplane."

"Tanks and armored cars arrived. A number of airplanes joined in, all uniting in spreading death among the rebels. The latter fled in all directions."

"The insurgents, however, did not cease their firing on public and military buildings. They barricaded the streets and set fire to certain quarters. Artillery in the citadel began shelling the rebel district, the French making it known that the bom-

bombardment would continue until the insurgents ceased firing.

"The bombardment lasted from Sunday night until Tuesday. Shells destroyed the Medan and Chagour quarters, while parts of the Hamideh Bazaar, El Bouzouie and El Komeira were burned. A palace, considered one of the finest monuments in the East, was greatly damaged.

"The traveler describes the period of this bombardment as days and nights of 'unforgettable horror.'

He says, it is difficult to show how many persons were killed or wounded but that hundreds were lying in the streets, and that he believes at least 2,000 were buried in the debris of buildings wrecked by the bombardment.

"Apparently the Christians escaped effects of the fighting. The French sent 2,000 soldiers into the Christian quarters, but the insurgents made no direct attack on these.

Blamed for the Damascus Massacre
Maj-Gen. Maurice Paul Emmanuel Sarrail, the
French High Commissioner for Syria, has
been recalled to France "to make a
report on his administration".

"Tuesday afternoon, this traveler says, leading native residents of Damascus went to General Sarrail, French high commissioner, and undertook to fulfil all requirements laid down by the French. Martial law has been declared in Damascus according to this account, and all persons found in the possession of arms are executed."

French witnesses from Damascus are quoted as saying that the greater part of the damage done to the city was due to vandalism by the rebels. They also argue that the shelling of Damascus "saved Syria from much more serious trouble." However

this may be, dispatches report that the country around Damascus is "seething" and that guerrilla warfare is spreading throughout Syria.

The French losses in the Damascus trouble are reported as only ten killed and fifty wounded: but in an Associated Press dispatch from Paris we read:

"France has lost more than 17,000 men and has spent more than 3,000,000,000 francs in Morocco and Syria since she took over the protectorate of Morocco and assumed the League of Nations mandate over Syria. In Morocco 2,176 men were killed, and 8,297 wounded, and in Syria 6,626 were killed, wounded or are missing. The cost in Morocco had been 950,000,000 francs and in Syria more than 2,000,000,000 francs."

France, the correspondents tell us, is more appalled and shocked than any other nation at the developments in Syria. The *Depeche de Toulouse* calls the whole affair "a veritable nightmare."

"The apparent failure of General Sarrail, military Governor of France's Syrian mandate, to understand the Syrian situation and particularly the delicate psychological difficulties of ruling a people who possess the age-old tradition of independence, has brought about a grave menace to France's Oriental prestige.

"An increasing number of persons, for various motives, wish France to abandon the Syrian mandate. The Socialists wish to abandon it on principle but hesitate to say so directly, because Sarrail, who caused the immediate failure in Syria, is a radical anti-Catholic, and closely allied to the Socialists.

"The average Frenchman, seeing the country faced with a prolonged struggle to regain what Sarrail has lost, asks whether it is worth the price in lives and money. Others, believing France would declare herself a second-class Power by throwing up Syria in the face of difficulties, insist that France must retain the mandate and try to regain her lost prestige."

General Sarrail has been recalled to France "to make a report on his administration and the conduct of military operations in Syria."

Sarrail was a political appointee. He had been in command of the Saloniki Armies in the war, but was relieved of his command in December 1917, when Clemenceau became Prime Minister. He continued without a command until the end of the war, when he was retired for age.

"Upon his arrival in Syria, it is said, General Sarrail began to upset all the peaceful relations which his predecessor had established.

"Of all the troubles he has been encountered General Sarrail has reported little to Government."

But in any case, as some observers point out, the final responsibility for what happens in Syria rests not with General Sarrail, or even with France, but with the League of Nations, under which France holds her mandate.

"Syria is not a French colony. Its status resembles that of Iraq under the British and in such instances, if occasion requires, the League is in position to impose checks on administrative abuses."

"If an unfortified community like Damascus is bombarded as a 'punitive example,' what under the rule of a great Power, acting for the League of Nations, is safe?"

Our Frontispiece

Asoka was known as Chandasoka in his youth, and when conquering Kalinga, he was responsible for much bloodshed and inhuman cruelty. Later in his life he came under the influence of a Buddhist mendicant named Upagupta who slowly turned the mind of the king from the path of irreligion to that of one of the greatest helpers of a religious movement in the history of the world. His highly pious life on the throne as one of the greatest benefactors of the human race earned him latterly the title of Dharmasoka and the favourite of the gods' Our frontispiece shows Upagupta in one of his visits to the king's palace in the act of inculcating some moral and religious lesson on the king to which the latter listens with inward chagrin but outward submission.

Degeneration of English Public Life

The Mirrors of Downing Street, first issued in October, 1920, by an anonymous writer who appears to have intimate personal knowledge of all the members of the Cabinet, has already gone through eighteen editions, and it became famous in a day. It contains some reflections on English public life which should be borne in mind by our politicians. The reference is to the popular edition of October, 1922 (Mills and Boon, London)

"More and more, I think, gentlemen will stand aloof from politics,—I mean, gentlemen who have received in their blood and in their training those notions of graciousness, sweetness, and nobleness which flow from centuries of piety and learning. Only here and there will such a man accept the odious conditions of our public life, inspired by a sense of duty, and prepared to endure the intolerable ugliness and dishonesty of politics for the sake of a cause which moves him with all the force of a great affection. But, on the whole, it is probable that the political fortunes of this great and beautiful country are committed for many years to hands which are not merely over-rough for so precious a charge, but not nearly keen enough for the sacredness of the English case." (pp. 33-34)

Again, we find it said :—

"But until our politics are of a higher order, we can hardly expect the best minds in the nation to feel any attraction to a political career. More and more the professional politician, the narrow man,

the man of the loud voice and the one idea, the man who has few instincts of honesty in his mind and no movement of high and disinterested patriotism in his soul, will press himself upon the attention of democracy, and, by intimidating his leader and browbeating his opponents, force his way onward to office." (p. 136)

Later on, the author asks —

"Is it not true that since the dawn of the present century the spirit of our political life has lost something of the cleanness, much of the dignity, and all of the grandeur which attracted great men in the Victorian era? Thirty years ago the nation was shocked by the opinions of Charles Bradlaugh. Yesterday a common swindler, Horatio Bottomley, if his own story is to be credited, was on easy social terms with the Lord Chancellor of England. We have lowered the standards of public life. Constituencies do not choose as their representatives men of education and character; they accept almost any adventurer sent down to them by the Party caucus. They are easily gulled because they are not vitally conscious of moral responsibility. This loss of the sense of independence, of responsibility, of self-respect, is a greater national loss than any loss of life and treasure incurred in the war. It means that English character has surrendered one of the main qualities which distinguished it so honourably in past years. It has become subservient, passive, unimaginative, fatalistic. It is no longer deeply conscious of moral responsibility. It is no longer vitally alert in the matter of its national duty." (pp. 144-5)

The reader may not agree with the glorification of English public in the past which forms the background of the present picture. But no nation ever could become great without holding some such high ideal before its mind's eye, however imaginative and untrue to facts it may be. And who can deny that public life in England has, in the past, produced some great figures? Without them, England would not have occupied the place it does in world-politics to-day. What is more to our purpose is to take to heart the warning conveyed by the writer in the above extracts, so that our budding political life may not be tainted by the vices which he deplures, and what he says of the mighty British nation may not be true of our puny efforts at self-government. "Politics in our country", he says, "tend more and more in the American direction. The big men are outside. Politics are little more than a platform for a pugilistic kind of rhetoric" (pp. 134-35). It would be a fatal folly to say, as some do, that what is good enough for

America, where the best men are out of politics, and is going to be good enough for England also, ought to be good enough for India. Most emphatically no for the public life of England and America was built up by men of a far different stamp, by their Pyma and Hampdens, Washingtons and Abraham Lincoln, who did make some distinction between right and wrong, and it is men of this stamp that we need in India. We must build up a tradition of cleanliness in our public life, and while striving manfully against unrighteousness everywhere and under all kinds of disguise, we should never permit our politicians to forget, in their own public life and conduct, the maxim that righteousness exalts a nation. Facile is the descent to Avernus, and once we allow them to choose the easy path of temporary success at the cost of the permanent interests of the nation, to retrace our steps will become next to impossible.

How the Marquess Wellesley Ensnared the Peishwa

In no work on British Indian history written by Indians or Englishmen, mention has been made of the manner in which the "heathen" Peishwa Baji Rao was ensnared in the Subsidiary Alliance by the Christian Marquis Wellesley. It is easy to understand why Englishmen should try to suppress mention of it, because it does not enhance their reputation for justice or fair play. Sir Frederick Lely in his pamphlet on "History as taught in India" writes (p. 16);—

"We now arrive at the Mahratta raj, which is closely coupled with the earlier days of the British. However fairly told, there is much for the English to be ashamed of in this period."

Ensnaring the Peishwa was one of the foulest and darkest deeds of Lord Wellesley in India. In "Rise of the Christian Power in India" (Vol. II, pp 424-498) has been described how the Britishers succeeded in placing the yoke of the Subsidiary Alliance on the neck of the Peishwa. The following extracts from a publication with the following title—page,

"The history of Nana Sahib's claims against the East India Company, with extracts from the Hindu sacred writings relative to the law of Adoption, the will of the Ex-Peishwa, Badjee Rao, &c., compiled from original documents in the possession of the gentleman deputed to England to advocate Nana Sahib's case:

"I will a round unvarnished tale deliver."
Othello

LONDON:

Printed and published by C. H. Biddle, 26, New Castle Street, Strand.

throws additional light on the subject:—

"When in the zenith of his power, he (Badjee Rao) was one of those Princes whose aid was evoked by the East India Company to crush the formidable Tippoo Sahib, but after the overthrow and death of that potentate, the Peishwa's rich territories excited their cupidity, and one occasion was soon found for interference in his affairs. The East India Company dispossessed the Nabob of Surat, who was tributary to Badjee Rao, and the latter would not forego his right to the tribute in their favour. They therefore incited Jaswant Rao commonly known as Holkar, another Mahratta Chief, to attack him. In the first campaign, which took place in 1801, Badjee Rao was successful, but in the second defeated and forced to fly."

Jaswant Rao Holkar was made their cat's paw by the British to gain their object and was then unceremoniously thrown overboard. He realized the perfidious nature of his friends, which made him so embittered against them, that he killed all men of that creed then in his employ. He had also the satisfaction of wreaking vengeance on them when he defeated them by out-manoeuvring and out-generalling their military commanders and keeping them at bay for a considerable length of time.

Policy of Divide and Rule

Nearly four decades before the outbreak of the Indian Mutiny, a British officer, subscribing himself as "Carnaticus" wrote in the *Asiatic Journal* for May 1821:—

"*Divide et impera* should be the motto for our Indian administration, whether political, civil or military."

Although such was the policy of the authorities of those days in their Government of India, yet they did not proclaim it openly. The Indian Mutiny made many of them do so. It was not only the irresponsible British journalists, some of whom did not feel ashamed to write that "our true policy in governing India should be to play a race against race, creed against creed and caste against caste," but many responsible members of the bureaucracy did not hesitate to proclaim such a policy. Thus one Lieut Colonel John Coke, holding the very responsible office of commandant at Moradabad wrote;—

"Our endeavour should be to uphold in force the (for us fortunate) separation which ex-

between the different religions and races, not to endeavour to amalgamate them. '*Divide et impera*' should be the principle of Indian Government." *

Lord Elphinstone, Governor of Bombay, in a minute, dated 14th May, 1859, wrote:—

"*Divide et impera* was the old Roman motto, and it should be ours." †

It is not necessary to multiply other instances.

For the consolidation of their power in India, Britishers then made use of the policy of "Divide and Rule".

The Imperialism of a Republic

Years ago the United States of America solemnly promised that the Philippines would be made independent as soon as the Filipinos proved themselves capable of maintaining a stable government without the aid and guidance of America. But for years past the American have been adopting various devices to put back the day of Philippine independence farther and farther, proving that the morals and methods of imperialism are practically the same everywhere, whether it be the imperialism of an autocracy, or of a limited monarchy, or of a republic.

The *Japan Weekly Chronicle* tells its readers how

The Filipinos are being taught the true meaning of "self-determination" and a "world safe for democracy." The Governor-General, General Leonard Wood, has vetoed the Bill passed by the Filipino Legislature for a plebiscite to be taken on the question whether the Islands should remain under American rule or claim independence. There are some Americans who claim that the agitation for independence is conducted simply by a few professional politicians and that the people in general are quite content under American rule. If a plebiscite were taken and the people declared by a decisive majority that they preferred to govern themselves as best they might rather than continue to enjoy the beneficence of American tutelage, that argument would be gone. The Americans would then be reduced to taking the same stand as other imperialist nations—that the subject people did not know what was good for them and must be taught—by methods of peace, if possible; if not, then by force. The proposal to take a plebiscite has been denounced as a devilish scheme devised by Mr.

Charles Edward Russell, who used to be considered somewhat of a radical but whom most Socialists would now count alongside the Arthur Hendersons and Clyneses of England. Mr. Russell wrote a biography of Rizal, the hero of the Philippines, who was martyred by the Spaniards just before the Americans captured Manila. In that book he painted such a rosy picture of the freedom that America would bring to the Islands that he is bound to make some effort to see that the promises of liberty are carried out, with the alternative of being regarded as a deceiver or a fool.

In connection with the question of Filipino self-rule, *The Guardian* of Calcutta quotes

Champourcin, who devotes two lengthy columns of a leading daily newspaper of Madrid to discuss the requirements which a Colony should fulfil in order to qualify for responsible self-government. "Various definitions of a stable government have been advanced by statesmen of the United States of America," says the above-mentioned Filipino writer. At first "stable government" meant for American statesmen one which was duly elected by the people, capable of preserving internal order and peace, and of fulfilling international agreements. But then definition did not suit the imperialistic tendencies of America and a new one was coined. "A stable government," so runs the new definition, "implies civic consciousness, tribunals ready to administer justice impartially to all, low and high, rich and poor, resources to withstand external aggression, organisation to maintain the integrity of the country, sufficient supply of hospitals, social organisation sufficiently developed to attend to the needs of all, an effective system of public sanitation and hygiene, a common language." Obviously the Filipinos do not fulfil all these requirements, therefore, *in the interest of the Filipinos themselves*, let self-government be delayed *ad kalendas graecas*.

But are there many countries in the world which fulfil all these requirements," asks Sr. Champourcin. "The demand for a common language will at once reduce Switzerland to a dependency. English is scarcely understood by the French element in Quebec, nor apparently has Belgium a sufficiently strong organisation to withstand a foreign aggression." Space does not allow to give in full the lengthy criticism of Sr. Champourcin, but what we have quoted is enough to show how artificial and conventional is the definition advanced by American statesmen in support of continuing their stay in the Philippines.

British Altruism and Mosul Oil

The divergence of views between Britain and Turkey over Mosul, observes the *Japan Weekly Chronicle*, is about as wide as it could be.

As Mr Chamberlain says, there is no common ground for conversations. The British Government takes its stand on the contention that the decision of the League, granting the territory to Britain under "mandate," must be absolute. The Turks

* Papers connected with the re-organization of the Army in India, presented to both Houses of Parliament by command of Her Majesty, 1859: 279.

† P. 70 of the report of the Commissioners appointed to inquire into the organization of the Indian Army, 1859.

say they have never recognised the right of the League to deal with a territory which was captured during the war. They regard the League as simply carrying on the work of the Allied conquerors, and without much regard for the "Fourteen Points" Russia heartily backs the Turks in this view, and numerous British liberals support the opinion that Britain is in Mosul, not because she recognises any "sacred trust" for the welfare of the native people, but simply because she wants the oil. If the League were truly representative of world opinion, its decision would have to be accepted without question. Unfortunately, the matter is not so simple. Both sides are circulating atrocity stories (which should be taken with the usual necessary discount) and peace is under a cloud in the Near East.

Indian and Non-Indian Executive Engineers.

Replying to a question put in the Legislative Assembly by Mr. Surfaraz Hussain Khan, Sir B. N. Mitra said that out of 382 Executive Engineers all over India 131 were Indians. There is no reason why all Executive Engineers in India should not be Indians. We do not say that all non-Indian Executive Engineers should be cashiered at once and Indians appointed in their place. What we do say is that all fresh appointments to the posts of such engineers should go invariably to Indians and that non-Indian Executive Engineers should be retired as early as the rules will allow without injustice to them.

"The Crime of Caste."

Mahatma Gandhi introduces his narration of "an extraordinary case" by observing that "in South Africa it is the crime of colour and race for which we are being punished", whilst "in India we Hindus punish our co-religionists for the crime of caste." He goes on to add

The fifth caste man—the Panchama—is the greatest offender, deserving the punishment of untouchability, unapproachability, invisibility and what not

Then follows his narration of the case

An extraordinary case that was tried in a Madras presidency court brings vividly to light the sad plight of our suppressed countrymen. A simple cleanly-dressed Panchama entered a temple in a perfectly devotional spirit without the slightest intention of hurting anybody's feeling or insulting any religion. He had been in the habit of paying his respects at this temple every year, though he did not enter it. But last year, in his ecstatic mood, he forgot himself and entered the temple. The

priest in charge could not distinguish him from the others and therefore accepted his offering, but when he regained self-possession, he was terrified to find himself in a prohibited place and ran away from the temple. But some who knew him caught him and handed him to the police. The temple authorities, when they discovered the crime, had the temple duly purified. Then followed a trial. A Hindu Magistrate convicted him and imposed a fine of Rs. 75 or one month's rigorous imprisonment for insulting his own religion. An appeal was filed. There was an elaborate argument over it. Judgment had to be reserved! And when conviction was set aside, it was not because the court held that the poor Panchama had a right to enter the temple, but because the prosecution in the lower court had forgotten to prove the insult. This is no triumph of justice or truth or religion or morality.

The only consolation to be derived from the successful appeal is that the Panchama will not have to suffer imprisonment for having in his zeal for worship forgotten that he was a prohibited entrant. If however he or his fellow-Panchama again dare to enter the temple, it is highly probable that they would be severely punished if they are not lynched by those who look down upon them with contempt.

Some of the other observations of the Mahatma on this case require to be reproduced. He says with great justice:—

It is a curious situation. We resent, and properly, the treatment meted out to our countrymen in South Africa. We are impatient to establish Swaraj. But we Hindus refuse to see the incongruity in treating a fifth of our own co-religionists as worse than dogs. For dogs are not untouchables. Some of us now-a-days even keep them as drawing room pets.

What place shall the 'untouchables' occupy in our scheme of Swaraj? If they are to be free from all special restraints and disabilities under Swaraj, why can we not declare their freedom now? And if we are powerless to-day, shall we be less powerless under Swaraj?

We may shut our eyes and stuff our ears to these questions. But they are of the highest importance to the Panchamas. Surely, judgment will be pronounced against Hinduism, if we as a body do not rise as one man against this social and religious atrocity.

Much has no doubt been done to remove the evil. But it is all too little so long as criminal prosecutions for temple entry are possible and so long as the suppressed classes continue to be denied the right of entering temples, using public wells, and sending their children freely to national schools. We must yield to them the same rights as we would have the Europeans concede to our countrymen in South Africa.

As, for at least the last forty years, we have been in opinion and practice against caste, of which untouchability is only the worst symptom and outcome, it is needless to say that we wholeheartedly support what Gandhi says. At the same time, we must observe justice to our countrymen that things are not

as bad all over Hindu India as they are in the Madras Presidency; that though Hindus form the bulk of India's population, all Indians are not Hindus; that, speaking generally, Indian Musalmans, Indian Christians, and other non-Hindu Indians do not practise untouchability; and that, therefore, South Africa and other similar countries are not entitled to discriminate against and exclude all Indians simply because in some regions of India, not forming its major portion, caste Hindus (and even they with the exception of an important minority) discriminate against the Panchamas in quite an inhuman and diabolical manner.

We do not at all want to extenuate our faults; but we must say that Negroes in America are in some respects treated worse than our Panchamas, but South African whites do not for that reason discriminate against American whites as they do against Indians.

Even as regards the Madras Presidency, and with particular reference to the case in question, Mahatma observes:—

But this case is not without its relieving features. The quashing of the conviction is no doubt some consolation. But the best consolation lies in the fact of so many *Savarna* Hindus actively interesting themselves in the poor Panchama's behalf. The appeal would not have been noted, if some one had not gone to the accused's assistance. Not the least interesting feature of the case was the fact of C. Rajagopalachari arguing the appeal,—a fit application in my opinion of the principle of non-cooperation. Being in the court, when he got the opportunity, he would have been like a Pharisee if he had sat there stiff, gloating over the sanctimonious satisfaction of non-cooperating whilst the accused could have been discharged by his intervention. The Panchama knew nothing of non-cooperation. He had appealed to avoid payment of fine or imprisonment. It is to be wished that every educated Hindu will constitute himself the untouchable's friend and regard it his duty to free him from the tyranny of custom masquerading under the name of religion. Not the entry of a Panchama into a temple but the brand of prohibition against him is an insult to religion and humanity.

The Cause of Indians and Native Africans in South Africa

In *Young India*, Mr. M. K. Gandhi quotes the following passage from a letter written by Mr. C. F. Andrews:—

Mrs. Sarojini Naidu's visit has done one thing which I bless her every day. She has finally united the native cause with that of the Indian one cause. She made an immense impression on the native and on the coloured people and

everywhere I find that this unity has been strengthened by her visit. The very publicity which attended her immensely attracted them and added to her popularity, but it was her genuine feeling of love for them that made them look to her almost as to a queen. She has also left a healthy spirit behind among the Indian leaders themselves. They are not likely now to separate their cause from that of the natives at all. That danger is practically over at least as far as South Africa is concerned. But I am by no means sure yet about East Africa."

Dr. Abdur Rahman, the leader of the South African Indian Deputation, publicly declared the other day to a representative of *The Indian Daily Mail* that he would always make common cause with the native Africans in South Africa and other coloured races. This is as it should be.

Refusal of Licences to Indians in the Transvaal

The Transvaal British Indian Association, Johannesburg, has sent the following cable to the Viceroy, Mahatma Gandhi and Mrs. Sarojini Naidu —

Under the General Dealer's Control Ordinance, licences to Asiatics in the Transvaal are being refused on a wholesale scale. At Balfour, where the Indian interest involves about £40,000, the Municipal Council have deliberately decided not to issue a single licence to an Asiatic and all Asiatic applications for renewals, there and in several places, have been refused. The boards mainly consist of interested parties. The long-standing Asiatic lawful traders are being forced to relinquish their businesses and have no other option but to face ruination. The Indian community is bewildered at the action of the local authorities and prays relief, and, if possible, Government intervention.—A. P. I.

All over India, all Indians, irrespective of religious belief, race, caste and political party, are indignant at the treatment which their countrymen have been receiving in South Africa, and at the prospect of the worse treatment, if possible, which they are likely to receive after the passage of the new Anti-Asiatic Bill.

The South African Question

Though it is not true that the Government of India has done nothing to get the grievances of the Indians in South Africa redressed, it is unquestionably true that it has not taken up a sufficiently firm and self-respecting attitude on the question. If

Indians had been Christian white men, the attitude of the Government of India would have been different—though, perhaps, in that case there would not have been any South African Indian problem at all. As regards the sense of self-respect of the Government of India, it does not appear that it possesses a great deal. The British rulers of India are undoubtedly self-respecting as Britishers. But as they do not in any way identify themselves with the people they govern, they do not feel insulted and humiliated when indignities are heaped on the latter. Even as a Government, the Government of India does not seem to feel humiliated at its Deputation to South Africa not having been officially recognised by the latter. If such a thing had happened between two independent countries, it might have been treated as a *casus belli*. We do not thereby mean to imply that the Government of India should forthwith send a warlike expedition to South Africa,—that would be a supremely absurd suggestion. We only want to draw attention to the impudence, arrogance and meanness of the South African Government and to the low opinion which it has of the Government of India. Indian public opinion was opposed to the sending of the deputation. It was disregarded. The nemesis has not been long in coming.

As to what Indians can do and ask their Government also to do, in addition to making representations to the South African Government, the general idea is that some retaliatory steps should be taken. We are personally not in favour of using the word retaliation or of doing anything which would be prompted by the idea underlying that word. Not that we have risen above all hatred and anger. But whatever our own moral and spiritual level may be, we perceive intellectually that to act under the influence of hatred, anger or vengeful feelings causes moral and spiritual injury to those who so act, and, moreover, what is done under such impulses may not be quite the wisest and most effective thing to do.

But apart from such considerations, we have to ascertain whether any retaliatory steps which we may take would be felt by the South African whites. The number of Indians in South Africa is far larger than the number of South Africans in India. And they have the power to persecute and harass our countrymen there; but we have not got such power to harass any body.

We do not mean to say that we should sit with folded hands. That is not what we mean. We should certainly do what all self-respecting men would naturally do under the circumstances. If "A" would not allow "B" to have certain neighbourly facilities in the former's domicile and estates, "B" cannot with any self-respect allow "A" to have the same facilities in "B"'s domicile and estates. Neighbourliness implies reciprocity. If you do not allow me to enter your grounds and sit and chat in your drawing-room as an equal, I cannot allow you to enter my grounds or drawing-room without writing myself down as a sub-human slave. Therefore, whatever the number of South African whites in India and whatever their occupations, they should not have any of those rights and facilities here of which our countrymen are deprived in South Africa. And in addition, as it is being made impossible for our countrymen to trade in South Africa, South Africa and South Africans ought also to be deprived of the advantage of trading with and in India, and all steps taken with the object of putting a stop to or reducing South Africa's commerce with India would be in order.

We may be told that this is in effect retaliation, though that word may not be used. In reply, we have to say only this, that beyond maintaining our self-respect by taking certain steps without intending to punish the South Africans thereby, we do not want to do (and would not do even if we had the power) anything to injure the South Africans from a feeling of revenge.

Some would say that even the proposal to do merely that which self-respect would dictate would exasperate the South Africans and impell them to be more cruel to our countrymen there, and that therefore humble representations and appeals to their reason and conscience should be the only step which we should take. We think differently. The South Africans have been doing their worst, without our or the South African Indians' doing anything provoking. But supposing it were true that any self-respecting attitude on our part would impell them to be more unjust and inhuman, it would not even then, have been proper for us to adopt a servile and cowardly attitude. We do not think our South African sisters and brethren themselves would like us to be servile and cowardly for their sake.

Whilst our countrymen in South Africa

far from enjoying equal citizenship with the white men there are going to be deprived even of the means of subsistence and treated as subhuman, here in India any South African white, like other whites from other parts of the world, assumes superior airs and has certain special privileges which we ourselves do not enjoy. This fact is peculiarly galling to our sense of self-respect. Let us, therefore, be self-respecting at any cost.

Since writing the above, we have read in the *Amrita Bazar Patrika* that Dr. Abdur Rahaman does not at present wish any such steps to be taken as have been mentioned above. Apparently he draws a distinction between the European public in South Africa and the South African Government. It seems the entire white public is not behind the back of the South African Government. But, thinks Dr. Abdur Rahman, if India practised reciprocity, the white public in South Africa would all back up the Government and even the lives of the Indians would be in jeopardy. Under the circumstances, we should hesitate to appear "heroic" at a safe distance from the scene of action.

Indian Science Congress

The thirteenth annual meeting of the Indian Science Congress held under the auspices of the Asiatic Society of Bengal, assembled this year at Bombay on the 4th January. After His Excellency the Governor of Bombay had opened the proceedings, Mr. Albert Howard, Director, Institute of Plant Industry, Indore, and Agricultural Adviser to the Central India States, delivered his presidential address on "Agriculture and Science," which was very informing and interesting. He was sanguine as to the possibilities of the application of science to agriculture in India, but he did not seek to ignore or minimise the difficulties to be overcome; nor did he expect or hold out any hopes of brilliant results at an early date. Quite noteworthy were his views on the effects of irrigation on the soil and on the crops raised, on which subjects he said among other things:—

When we carefully compare the growth of the same crop under canal irrigation and under normal rainfall, interesting differences can at once be detected. The irrigated crop as a rule does not appear to be quite at home. Ripening is frequently delayed and the quality of the produce is apt to

be irregular and inferior. Further, the standard of cultivation under a canal tends to deteriorate. After a few years, the producing power of the soil falls off, patches of alkali land often appear and grow in size and there is a tendency for the villages to become malarious. Compared with the best well-irrigated regions or with localities where the crops are grown on the natural rainfall, the well-being of both plants and animals on the perennial canal leaves a good deal to be desired.

Where rice is grown to perfection there is little malaria, where the crop is cut off from the necessary inundation, malaria is rife. In all probability the same rule applies to dry crops like wheat. It may easily prove to be that the intense malaria which often follows in the wake of the canal in North West India is not altogether due to the mosquito but is a consequence of the lowering of the quality of the food grains grown under canal irrigation. The subject is one which calls for early investigation and it is hoped that McCarrison's interesting work on the influence of soil conditions on the nutritive value of the chief food grains of India will be continued and that the investigation will be widened to embrace the effect of the quality of wheat on resistance to diseases like malaria.

The second day of the session was occupied with sectional meetings, at the Royal Institute of Science, under their respective presidents, who delivered addresses on medical and veterinary research, mathematics and physics, chemistry, geology and psychology.

A very large number of papers was contributed to the various sections. The session was a successful one. We give below a summarised account of the proceedings of one section of the congress.

Mathematics and Physics Section of Science Congress.

The Mathematics and Physics section of the 13th Indian Science Congress met this year in Bombay at the Royal Institute of Science under the presidency of Prof. Meghnad Saha of the Allahabad University. The presidential address was "on the application of modern discoveries in physical science to astronomy", a subject in which the speaker himself has made very notable contributions. We give below a short abstract of the address.

The science of astronomy, which is as old as the days of the ancient dwellers on the banks of the Tigris and the Euphrates, may truly be said, to use the language of the German Poet Heine, the old the ever-young science; for every period of renaissance in mathematical and physical sciences has been marked by an outburst of activity in astronomy. The present times may truly be said to be an Augustan age of discovery in physical science. For within the last thirty

years, so many first-rate discoveries as those of X-rays, Radioactivity, the Quantum theory, Radiation, the electron theory of matter, and the last, though not the least, the theory of relativity, have entirely revolutionised our concepts of matter and the phenomenal world, yet astronomy has laid under contribution all these epoch-making discoveries.

The present era in astronomy may be said to have begun just sixty-five years ago with Kirchhoff's discovery of spectrum analysis. This has enabled astronomers to study the physical nature of the Sun, and those island universes which we call stars. A systematic survey of the stellar world was undertaken by the late Sir Norman Lockyer, who discovered a number of fundamental types. Prof. Pickering of the Harvard College Observatory and his assistants examined the spectra of about two hundred thousand stars and found that about 99 per cent of them were included within these fundamental types. Lockyer showed, as can be expected from the theory of evolution, that these types gradually merge into each other, but the chemical composition seemed to differ in the different types. For the earlier classes showed mostly non-metals, and the latter classes metals. Lockyer formulated on this basis his famous theory of "Inorganic Evolution" just 28 years ago. The substance of the theory was that what we call chemical elements are not simple, but they are evolved from simpler and earlier types, which he called 'proto forms'. His theory was not accepted, as it challenged the fundamental creed of the chemist and the physicist, namely, "the indivisibility of the atom". He was like the old Greek aeronaut, Daedalus, who in trying to reach the heavens with wings of wax had to end by falling into the sea.

The new phase in astronomy began with the theory of ionisation, which the speaker had the honour of inaugurating, and the new theory of evolution of worlds proposed by Prof. Eddington of Cambridge. According to the ionisation theory, which has been tested and accepted all over the world, the seemingly different spectra of stars is simply a heat phenomena. When matter is excessively heated, it is split up into electrons and a positive residue. The spectra of this positive residue are entirely different from the spectra of the ordinary atoms, and they appeared in the hotter stars alone. The ionisation theory has given a complete explanation of the difficulties confronting Lockyer, and placed his theory of evolution on a firmer basis. As a triumph of the ionisation theory may be cited the discovery of Rubidium and a few other elements in the spectrum of sun-spots. These elements, though quite plentiful on the earth, are quite absent from the solar spectrum. The speaker had shown by calculation that they were completely broken by heat, and hence leave no record in the solar spectrum. But spots, which appear from time to time on the solar surface, are regions of local cooling, and here the broken parts partly recombine. Prof. Russell of the Princeton University, has actually proved the correctness of this prediction in the Mount Wilson Solar Observatory.

The theory opens up a field of great interest and promise, namely, splitting up of atoms by heat. Not many laboratories in the world are provided with the necessary apparatus. The speaker has designed a furnace in his laboratory at Allahabad where atoms are being broken at a temperature

of 2500°C. It has been found, as predicted by the theory, that the alkali elements are broken up most easily. As an interesting side issue may be mentioned the use of Cesium-impregnated filaments for triode valves. Their introduction is due to Prof. Dr. Langmuir of the General Electric Co. of America, who finds that such filaments give the most copious supply of electrons.

The speaker then dwelt on Prof. Eddington's work on Stellar Evolution, and showed how mathematical studies have been successful in throwing light on very difficult problems of evolution. He referred to Dr. Adams' spectacular work on the spectrum of the dark companion of Sirius, the brightest star in the heavens. This is a very strange star, for astronomers had guessed from certain indirect evidence that the value of gravity on this star is a thousand times the value of gravity on this earth of ours. According to Einstein, the wave length of light on this star would be substantially different from its value in the laboratory, and Dr. Adams has actually found it to be so from a careful work on its spectrum. But the most extraordinary thing is not the confirmation of the theory of relativity, but of the fact that matter in this star is apparently fifty times more compressed than even gold. The speaker said that the star consisted of stripped atoms, that is to say, of atoms which have lost their outer rings of electrons as a result of heat. But how they can hold together within such a small compass is yet an enigma.

The concluding portion of the speech may be of some interest to those engaged in education. We may quote it in full.—

It is certainly very flattering to find that the number of original papers in this section has exceeded a hundred, and contributions have been received from all parts of India. It signifies that a creative impulse has come amongst the teachers of our subject, and this is replacing the old habit of pedantry and stage acting. It is generally thought that the importance of regarding creative work as the noblest ideal for a teacher was never recognised in this country, and that the idea has been imported from Europe. This is at best a half truth, for otherwise we could never have such positive sciences as medicine, astronomy, and mathematics. My revered teacher, Prof. Sir P. C. Ray, has unearthed for us the following remarkable passage from a writer of the ninth century (Dhunduknath in *Rasendra Chintamani*):—

अथोषं बहुविद्धा सुखादपश्यन्

माखेव, सितमज्जतं न तद्विखारि ।

वत्, क्वं वारचयनयती सुखां

प्रोढाया तदिह वदामि वीतघ्नम् ।

अथापयन्ति यदि दर्शयितुं क्षमन्ते ।

इतोऽहं कर्मसुरयो सुखसुत एव ।

विषयास एव वचयन्ति सुरीः पुरी व

अथैव, पुनस्तद्विषयार्थिनश्च भजन्ते ॥

"I have heard from the lips of many savants, I have seen many formulae given in scientific treatises I am not recording any thing which I have

not done myself. I am recording those fearlessly which I have carried out with my own hands. They alone are to be regarded as real teachers who can show by experiments what they teach.

"They alone are deserving pupils, who having learnt from their teachers can actually perform them and find something new. The rest are more stage-actors."

Unfortunately for India, this high ideal was wrecked by pedants, men who regarded worship of ancient scriptures as the highest ideal of scholarship. Europe was also drifting into the same mess, her scholars at one time used to regard the worship of the Bible, Plato Aristotle, as the highest consummation of scholarship. But she was rescued out of the abyss into which she was falling by the life-blood of Galileo, Bruno and Kepler.

In India, we have been trained to think that all scientific truths must come either from London, Paris or Berlin. The examples of Sir J. C. Bose, Sir P. C. Ray, and the late Mr. Ramanujan have shown that the Indian brain is quite equal to the European brain in the matter of creative work. Teachers are taking in large numbers to creative work, and the Sadler Commission has fortunately set a legal stamp on such works. It has recommended the organisation of teaching work on a basis which, if loyally adhered to, will foster the spirit of research and scholarship. But though many universities have been remodelled on the basis of these recommendations, it cannot be said that the menace from pedants, stage-actors and vested interests has entirely disappeared.

The papers read and contributed in the section were representative of almost all branches of physics. There were a number of papers by Prof. Raman and his students, particularly Dr. Ramanathan on molecular scattering. Bangalore came strong with a large number of papers by Prof. Catterson-Smith and his students on electro-technical subjects. Dr. Field's paper on correlation between upper air currents at Agra and weather condition six months afterwards excited much interest, as the method, when perfected, will enable the weather conditions to be foretold with some certainty. There were a number of papers in spectroscopy from Allahabad, Vizianagram and Bangalore. Prof. D. M. Bose read an interesting paper on the explanation of the magnetic properties of elements from the Bohr-Stoner theory of the structure of the atom. Dr. N. K. Sen attempted an explanation of the stability of the electron from the standpoint of the generalized Theory of Relativity. Dr. N. K. Bose suggested in his paper the application of the principle of rotar ships to biplanes, and remarked that this suggestion had actually been carried out in a new type of biplane brought out by Charles Gligorin of Vienna which attained a speed unequalled by any existing type. In pure mathematics, there were

a number of papers of great original merit by Mr. Bhimsen Rao and Mr. Venkatarama Ayvar. Mr. Bhimsen Rao is an undergraduate of the Madras University, and is a self-taught mathematician of no mean order.

Two experimental papers by Profs. P. N. Ghosh of Calcutta and Prof. A. T. Mukherjee and Kamala Prasad of Patna were highly appreciated.

The session was quite successful and indicated a great advance in the study of physical science in the country.

A Great Moslem Divine

The *Swarajya* of Madras says truly that in Maulana Abdul Bari the world of Islam has lost a great divine, and India a noble patriot.

As the head of the College of Theology at Faringi Mahal, and one of the foremost organisers of the Jamiat-ul-Ulema and as a staunch supporter of Mahatmaji in the inauguration of the non-co-operation movement, the late Maulana served his God and country with remarkable zeal and courage. The vastness of his learning and the sanctity of his personal life commanded the great esteem of Muslims of distant countries like Arabia and Egypt.

Dakshineswar Bomb Case

The accused in the Dakshineswar Bomb Case, tried under the Bengal Ordinance, have been convicted and sentenced, some to long terms of transportation and others to long terms of rigorous imprisonment. The expected has happened.

It is not impossible that the accused were not as innocent as new-born babes or as angels. But it is a legal maxim that until a man has been proved guilty after a fair trial according to the processes of the ordinary law, he ought to be held innocent. In this case, however, it cannot be said that the accused have had a *fair* trial according to the processes of the *ordinary* law; - it would not be wrong to say that the framers of the Ordinance were not consumed with a desire to give a fair trial to all who might come under its clutches.

It has been not only suggested that the agent provocateur had much to do with the genesis of the case, but many things were said by the defence counsel to make it a very well-grounded suspicion. That suspicion has not been dispelled.

What sort of fair trial the accused had will appear from the following passages from what the defence counsel said, as reported in *The Servant* :—

"Mr. Sen, the Defence Counsel, in the course of his arguments said that the concrete difficulty in this case was that the trial started without the names of the witnesses who would come to give evidence and the defence could not make any enquiry about them. In this case, the defence could not know before who was the witness of the day and therefore it was impossible for them to find out the antecedents of those witnesses. The cross-examination was therefore of a speculative character. The documents which were seized could never be delivered beforehand. As for instance, in the prosecution arguments some torn pieces of paper containing code words were mentioned. Actually those pieces of paper were placed before the Court. But it was not known that those papers contained code words. In that case, the defence could have cross-examined the search witness on that point. The gentleman who had picked up the torn papers was not examined. During the examination of the witness, no importance was given to those torn papers and the defence naturally could not anticipate anything."

"The defence also said that the hand-writing expert came at the last moment with one set of photographs of the original exhibits and it was difficult to cross-examine an expert witness without comparing the exhibits with the photographs."

itself to South African opinion. Even on the narrower issue of economic necessity, we believe, from the information now received by us, that the situation may be capable of adjustment in other ways.

He repeated his dissatisfaction at what he considered the poor response that Indian politicians had made to his and the Secretary of State's "appeals" for co-operation. These "appeals" were really veiled threats. If British statesmen or politicians expect all the leaders of all the political sections of a much injured people like the Indians to go down on their knees and cry ditto to whatever their rulers may say, they are expecting to have "the moon" in the hollow of their hands. That men who got returned to the legislative bodies by promising to their electors that their policy would be one of persistent and consistent obstruction have co-operated to the extent that they have done ought to have been utilized by British statesmen in order to comply with our wishes to some extent. But in their pride of power they have kept up an absolutely unbending attitude. "Co-operation", they think, is all to come from the Indian side.

The Viceroy's Speech in the Legislative Assembly

The speech made by the Viceroy in opening the winter session of the Legislative Assembly was quite in the line of his previous performances. His reference to the South African question was slightly better than his reply to the South African Indian Deputation led by Dr. Abdur Rahman, in that he dissented from the view of the South African Government that the question was purely a South African domestic one. Said he :—

The question has now to be dealt with in South Africa and it must be remembered that the Government and the Ministry of the Union are responsible to their electorate and that this legislation is regarded by them as domestic in its character. We have never doubted the right of South Africa to guide the course of their own domestic and economic legislation, but, in our view, there are far wider considerations involved in this legislation than local economic policy alone. In our opinion, they have an important bearing upon the Empire as a whole. The proposed measures are not, in our view, in accordance with those principles which bind the Empire together in community of sentiment and we hope that this aspect of the proposals may yet commend

Royal Commission on Agriculture

The Viceroy's speech contained the definite announcement that a Royal Commission on Agriculture had been decided upon, of which the purpose is,

Generally to examine and report on the present conditions of agriculture and rural economy in British India and to make recommendations for the improvement of agriculture and the promotion of the welfare and prosperity of the rural population and in particular to investigate

(a) The measures now being taken for the promotion of agricultural and veterinary research, experiment, demonstration and education, for the compilation of agricultural statistics, for the introduction of new or better crops and for improvement in agricultural practice, dairy farming and the breeding of stock;

(b) The existing methods of transport and marketing of agricultural produce and stock;

(c) The methods by which agricultural operations are financed and credit afforded to agriculturists; and

(d) The main factors affecting rural prosperity and the welfare of the agricultural population and to make recommendations.

It will not be within the scope of the Commission's duties to examine the existing system of land ownership and tenancy or of the assessment of land revenue and irrigation charges or the existing division of functions between the Government of India and the local Governments, but the

Commission shall be at liberty to suggest means whereby the activities of the Government of India may best be co-ordinated and to indicate the directions in which the Government of India may usefully supplement the activities of local Governments.

To the appointment of such a royal commission we have been all along opposed, and that for various reasons.

No royal commission appointed for India has yet done any good to India commensurate with the money (all Indian) spent and the noise made, and the one in question is not likely to be an exception.

Until Swaraj is attained, no Royal Commission can compel the Government of India to spend less for British Imperial purposes and more for the prosperity and progress of the people of India. Agricultural improvement would require a mint of money, which under the present system of government would not be forthcoming.

The personnel has not yet been determined but is likely to be predominantly British; but Britain is not among the countries of the world which have made the greatest efforts or progress in agriculture.

A pretentious Royal Commission serves to divert attention from two central facts of vital importance, namely, (1) that India's burning question at present is that of Swaraj or Indian initiative and control in all Indian matters internal and foreign, including agriculture; and (2) that agriculture alone, however developed and modernized, cannot make all classes of Indians prosperous. Old industries must be revived, with the help, where needed, of new and scientific methods, and new industries introduced. Agriculture is, no doubt, as it ought to be, the leading industry in India. But in the pre-British period, India was also famous as a manufacturing country. The concentration of attention on agriculture alone, to the exclusion of industries cannot solve the problem of India's poverty in general or even rural India's poverty in particular; because, until the disappearance or decay of the indigenous industries of India under British rule, rural India was devoted both to agriculture and manufacturing industries.

The British rulers and exploiters of India will naturally misconstrue the educated Indians' criticisms of the agricultural commission as due to selfishness and indifference to the lot of the rural population, forgetting that all educated Indians are neither city-bred or city-dwellers, and those among them who

are, are connected with the villages and villagers economically and by blood. But not minding the misconstructions of our opponents, let us state why even an agricultural commission appointed before the obtaining of Swaraj, even if it bears any fruit, is likely to be more advantageous to those foreign countries, principally British, which require our raw agricultural produce, than to ourselves. *The main object of any agricultural enquiry in India ought to be to study and investigate the nutritional situation and its agricultural basis. But a British-instituted and British-conducted enquiry is not likely to do that; it is more likely to lay disproportionate stress on those raw agricultural products which Britishers require for their own industrial and other purposes.* Those who wish to know what agricultural plants are of prime importance to India should study the German work reviewed in pp 37-38 of our last issue.

Another reason why we consider a royal commission on agriculture unnecessary is, as we have observed in some previous issues, that the principal causes of India's backwardness in agriculture are well known. The agricultural population of India is almost illiterate and, in proportion, ignorant. The other main causes are unhealthiness of the rural parts, the absence of schools for agriculturists and their children, the inadequacy of funds for research *to be conducted by and for Indians*, the indebtedness of the peasantry and their difficulty in obtaining cheap credit, very inadequate means of communication and transport, the smallness of holdings, repeated and extortionate enhancements of rents at successive settlements, unfavourable tenancy laws, the absence of the means of irrigation over wide tracts, the decay or disappearance of such village industries as supplied the villagers with a subsidiary means of income, etc.

The other causes may be quite easily ascertained by the provincial agricultural departments, if they are worth their salt. In fact, it is these departments which ought, if necessary, to be empowered and authorised to hold separate enquiries in their respective provinces; because agricultural conditions differ widely in different regions, and a single body like a Royal Commission cannot hold any detailed enquiries unless its proceedings are very greatly protracted. If it be thought that in addition to what the provincial agricultural departments can do, something more

is required, a committee, not a pompous, pretentious and very expensive Royal Commission, ought to have been appointed.

The terms of reference show what the Commission will not have the power to do. But what is excluded is of vital importance. The problem of India's agricultural poverty cannot be solved without a radical reform in the existing systems of land revenue assessment, of land ownership and tenancy, irrigation charges, etc. But it is these things which "it will not be within the scope of the Commission's duties to examine."

As pointed out by Pandit Motilal Nehru, the reference to the assistance and support which the Royal Commission is expected to give to the Ministers in charge of Agriculture in the administration of that department betrays the sinister intention to perpetuate the undesirable mongrel of dvarchy and "to put the agricultural population in such a condition of dependence upon the bureaucracy as to alienate them from the political class and deflect them from the pursuit of Swaraj to which they now pin their faith."

Thought-reading has always been a difficult job. But if the bureaucracy have any such intention as has been imputed to them by the Pandit, it is not at all a laudable purpose, and we are sure their object will in the long run be frustrated.

It has been suspected in some quarters that the object of the Commission is to make our peasantry sufficiently well-to-do to be able to purchase British manufactures in ever-increasing quantities. That is not a bad object. But whatever the object may be, if the labours of the Commission succeed in raising our peasantry from their present plight of abject indigence and indebtedness, we shall sincerely rejoice. Because, we are of them and they are of us, we are all of the same bone and flesh. Moreover, assuming that we the intelligentsia are utterly selfish, we must even in that case rejoice at the prospect of a prosperous rural population. For the more money they have, the more will they spend in education, purchase of books and papers, house building, medical treatment, travelling, and even in litigation, if you please! So the literate classes (assuming that they are sharply divided from the cultivators, which is not true) will share in the prosperity of the peasantry. And if a prosperous people be expected by the Lancashire mill-owners to purchase their goods, why, our own mill-owners and

khaddar-producers are not likely to remain asleep!

It has also been suspected that the Royal Commission is intended "to distract attention from the political issue," as the *Bombay Chronicle* puts it. That is partly its object no doubt, but it will not be fully gained. As for the design to "divide the country," that also exists. But supposing our peasantry become prosperous, they will be also literate in proportion, and furnish readers for our newspapers and hearers for our public speakers in increasing numbers. And as man does not live by bread alone, nor does he require only food and clothing and houses to be perfectly contented, we are confident the spark of divine discontent in the minds of our prosperous peasantry will be kept alive and even ultimately fanned into a flame of longing for freedom which will fuse all our different classes and sections into one undivided and indivisible nation.

The Claims of Indian Architecture

Readers of this Review will perhaps remember the article on the Revival of Indian Architecture contributed to the January number last year by Mr. Sriis Chandra Chatterji and also our comments in that connexion. Mr. Chatterji all this while has been trying to rouse public consciousness from its ignorance and apathy into a sense of intelligent interest in this essential aspect of our communal and civic life, and we are glad to find that his endeavours are meeting with response. Dr. Abanindranath Tagore, who has done so much to revive our national art, has been one of the first to appreciate the work of Mr. Chatterji, and in a letter to him which is extremely *apropos*, and which has been reproduced in several papers, has indicated the prospects as well as the difficulties. Mr. Chatterji, in this national work, has received promise of support from a number of leading engineers and builders. Besides several P. W. D. officials of long experience, the officiating Chief Engineer of the Corporation of Calcutta, Mr. S. C. Mitra, has given his approval, and he has made some definite proposals in a letter published in the *Calcutta Municipal Gazette* of December 5, 1925. Mr. Mitra's proposals are—

(1) The teaching of the History of Indian Architecture in Indian Engineering Colleges with

special reference to its adaptability to present-day needs and conditions.

(2) The establishment of an Advisory Board for the revival of Indian Architecture

(3) Co-operation of the Builders and Engineers, and

(4) The training of the public to a sense of the importance of Indian Architecture as a piece of national heritage.

Apparently Mr Mitra recommends items (2), (3), and (4) of his programme to our municipalities, especially to the Calcutta Corporation. The first item can be put into practice only by the Government, as engineering colleges and schools are mostly government institutions all over India. We fully concur in those constructive proposals made by Mr Mitra, and we urge the government to introduce as quickly as possible Indian Architecture as a major branch of study in engineering colleges and schools. The universities should also move in this matter. For, unless we have Indian engineers and overseers possessing a knowledge and appreciation of the national styles, we cannot expect persons responsible for the working of municipalities, whether in cities or in the *mufassal*—and they are mostly laymen—to do anything in the way of construction in the Indian style. In the matter of advisory boards and co-operation and training, the public, the municipalities should certainly take the lead. Mr Mitra also believes, from the plans and specifications shown to him by Mr Chatterji, that "it would be quite possible to build in the Indian style at least as cheaply as in the ordinary 'styleless' way; and, with a growing demand for it in the country, the cost would certainly be cheaper." Coming as it does from such a responsible authority as the chief engineer of Calcutta, and from similar highly placed engineers, the opinion should dispel the notion that to build a house with a distinctive *national* elevation would be prohibitively costly. A pioneer in this line, in seeking to revive our national architecture, has been Sir Jagadish Chunder Bose, whose science has not only unravelled the mystery of plant life but whose culture and whose national feeling has given Calcutta a beautiful building, the Bose Research Institute. Rabindranath Tagore's institution at Santiniketan also has utilised Indian *motifs* in some recent constructions; and we are glad to hear that Mr Chatterji's work in this line has also been fully appreciated there.

Siam-Denmark Pact. A Lesson for India.

"Copenhagen. A treaty of friendship, commerce and navigation, based on principles of reciprocity and the most-favoured nation, has been signed by the Danish Minister for Foreign Affairs and the Siamese Minister here."

This news item speaks a great deal for the progress of Siam in the field of international relations of an Asiatic country, trying to assert its full sovereignty. Siam is a member of the League of Nations and maintains "Legations" in all important countries of the world, except India; because India internationally is "a mere geographical expression" and has no independent Foreign Relation of her own. Siam would have certainly established a "Legation" in India also, if India was free and independent. There are thousands of Indians residing in Siam, who are engaged in business and various occupations. As things stand, the British Minister in Bangkok is expected to look after their interests. We hope the day is not far off when Indian interests in all foreign lands would be entrusted to the hand of Indian Diplomatic Officers, properly trained and chosen on the basis of merit.

The International Society for Women's Suffrage

The International Society for Women's Suffrage founded by Mrs. Carrie Chapman Catt of New York will hold a congress in Paris, the first time on French soil, beginning May 30, 1926.

The meeting will take place at the Sorbonne, with Mrs. Corbett Ashby of London, president of the society, in the chair. Delegates from 43 nations will attend.

We hope that representative Indian women from all parts of India will participate in this International Congress. There is ample time to arrange for India's participation. Let us hope that responsible women leaders of India will take proper steps so that progressive Indian womanhood may be fittingly represented. T. D.

Hamburg Builds Giant Diesel

MOTOR OF 15 000 HORSE POWER EXPECTED
TO BE WORLD'S LARGEST

Hamburg, the largest and most powerful Diesel motor in the world, is being built for the Hamburg Electricity Works.

It is a nine-cylinder motor with cylinders of approximately thirty-four inches bore and fifty-

nine inches stroke. The motor will deliver 15,000 horsepower, almost twice as much as the otherwise most powerful motor, now being constructed in England.

The above news item shows that Germany, although defeated in the battle-fields, is victorious in the field of scientific and industrial achievement and there is no power on earth that can keep a nation like Germany down eternally. Indian nationalists can learn a great lesson from Germany's efforts to recover her lost position. Political agitation on a world-scale is necessary for India to recover her complete national sovereignty, but ultimately the future of India fully depends upon regeneration of the nation through achievements in science, industry, art and literature. T D

American Militarism and Navalism

Mr Leland Olds, in an article published in the Federated Press Bulletin, makes the following comment on military expenditure of various nations, particularly the United States of America.

The Wall Street Journal in a statistical article shows that the United States spends a larger proportion of its budget on militarism than any of the leading countries of Europe. The article apparently marks an attempt to break down the popular prejudice against treating the debts of France and Italy leniently.

"Actually," says the journal, the European nations "are all spending less than the United States for defense, and many of them proportionately so. According to budget estimates, the United States will spend this year for account of war and navy departments a total of \$674,581,000 or about 21.7 per cent of total expenditures. This is a notable increase over previous two years. Military and naval costs in the 1924 fiscal year being 19.3 per cent and in 1923, 19.6 per cent."

In contrast with the United States, Great Britain is spending 13.1 per cent of her total expenditures for militarism and France 18.1 per cent. The comparative military expenditures and the proportion of the total 1925-26 budgets of 7 countries are

Military exp.	Amount	Pct. budget
United States	\$674,381,000	21.7
Great Britain	586,000,000	13.1
France.....	323,000,000	18.1
Italy	82,700,000	9.3
Holland.. ..	60,000,000	20.2
Belgium.....	36,000,000	9.4
Switzerland...	15,500,000	16.9

Great Britain spends more per capita on militarism than any of the countries listed. Her army and navy cost \$13.50 per inhabitant. The per capita cost of militarism in the other countries is France \$7.86; Italy \$2.14; Belgium \$4.68; Holland \$8.10; Switzerland \$3.95; and the United States \$6. But if the population of England's entire empire is taken, her expenditure per capita is materially reduced.

[But then the military expenditure of India and the other parts of the empire must also be taken into account. Ed. M. R.]

Germany and Austria have been practically disarmed so that their expenditures are negligible. *It is therefore probable that, taken as a whole, Europe is spending less for militarism both in proportion to total governmental costs and to population than the United States. The United States has the advantage of wide oceans as barriers.*

In the United States there is now going on systematic agitation to increase her military power, under the guise of perfecting national defense. American navalism is showing its true attitude in the naval demonstration in the Pacific, and the American politicians and Italismen are agitating to augment America's offensive power in the Pacific by increasing the fortifications and enlarging naval bases in the Hawaii.

America is trying to become "second to none" in her militarism and navalism. To-day the combined forces of the British and American navies surpass the strength of all other nations. British and American statesmen frankly say that an Anglo-American co-operation in world affairs would mean Anglo-Saxon world supremacy. America believes in co-operation with Great Britain; because it is to her advantage, particularly in relation to American-Japanese relations. But America is not inclined to act as a junior partner in the scheme of Anglo-Saxon world domination; she wishes to increase her power to such an extent that she will direct the policy. This cannot be done unless American military and naval strength be superior to that of Britain. America is going to do her best to increase her naval and military power. Some American radicals and a few liberals may shout against this policy, but their opposition is bound to be ineffective, because to-day the American people as a whole, particularly the American masses, feel the urge of nationalism and imperialism. The urge of nationalism and imperialism in a democracy always assumes much more vigorous aspects than it does in a country ruled autocratically. So the American militarism and navalism will make its influence felt increasingly across the oceans—the Pacific and the Atlantic.—

T. D.

[It may be observed incidentally that the alien British Government in India compels India to spend on an average *fifty per cent* of her revenues in fighting the British Empire's battles and preparations for such fighting. *This percentage is more than double the highest percentage shown in the table quoted above; and that high percentage is*

incurred by the world's richest country, whereas India is the poorest civilised country in the world. Ed., M. R.]

Soviet Russia Gains in Chinese Trade

A recent Riga despatch discloses the fact that Soviet Russia is gaining politically as well as economically through its Chinese policy. M. Karakhan, the Soviet Ambassador to Peking, stated during a discussion on the present situation in China that "the sympathy of Soviet Russia with China has already yielded tangible results in the shape of a considerable increase of trade, particularly with Canton. Now the Kwantung province received naphtha produce exclusively from Soviet Russia, and if present conditions continue Soviet Russia will permanently secure herself a new market."

No one can blame the Soviet leaders if they by their astute move of 'showing sympathy to China' can create a new market for Russian goods. It is good diplomacy and a paying one. It may be, the Indian statesmen will learn a lesson from the Soviet leaders' tactics. Indian statesmen should denounce the British aggressive policy in China and demand that no Indian should serve as a mercenary to enslave the Chinese. It may be suggested that India, under the present condition of her own political slavery, cannot effectively sympathise with China. This may be true, but the least Indian statesmen can do is to register Indian support to Chinese aspirations to rouse international public opinion in favor of China. Mahatma Gandhi and others took an active part in "Khilafatism;" and they can, very well, through the All-India National Congress Committee adopt a resolution which will give expression to the Indian attitude and sympathy towards China. India and China have much in common in world politics and steps should be taken to cement Indo-Chinese understanding to promote mutual interests.

T. D.

Training British and Indian Statesmen

Sir William Pyrell, after more than thirty-five years' experience in the British foreign office and the diplomatic service, was recently promoted to be Permanent Under-Secretary for Foreign Affairs. The training of British statesmen is a matter of no less importance than the training of Admirals and Generals

in the British navy and army. In fact, the efficiency of British statesmen in international politics has possibly played a greater role in winning World Empire for Britain than any other factor. British statesmen are trained; they do not fall from heaven, nor do they grow like mushrooms over night. They are trained from their very early youth; and the best example is Lord Balfour, who began his career as early as the days of the Congress of Berlin (1878) when he accompanied the British delegation there, as one of the minor officials, and in 1920-1921, he acted as the dominating figure in the Washington Conference on Limitation of Armaments.

In training British statesmen, India has played a part which has been as important as the exploitation of India's man power, raw materials, economic power and strategic position has been for the extension of the British Empire. During the days of the East India Company, the Board of Directors of this great corporation always played a dominating role, directly and indirectly, in the British cabinet and British Parliament, and today if we scan the list of British statesmen of any importance, we shall find that the names of some of them are associated with the India Office, Governorship of an Indian Province, Viceroyship of India, etc. Of course India pays for these men to be trained as efficient diplomats and statesmen.

We hear much about India assuming the position of an equal partner in the Empire; but, at the same time, we notice the conspiracy of silence about training Indians to assume the responsibility of efficient statesmen to handle India's foreign affairs. Mere book-knowledge can never make a man or woman a real expert in international relations, as mere committing to memory a chemistry text-book cannot produce a real scientist. Practical experience plays as important a part in the field of training a statesman, as research work in a laboratory is necessary for a chemist.

The crying need for India's successful self-assertion as a nation is to increase her national efficiency in every field of human activities. In the field of International diplomacy and statesmanship, India cannot play her part unless her children are given the opportunity to gain efficiency through study as well as experience. It may be said that the British authorities are not anxious to allow the Indians to secure efficiency in international relations. But to be fair, none

should accuse the British officials alone, though the largest share of the blame is theirs; because Indian leaders, so far, to the best of our knowledge, have not made any effective demand for equal opportunity for Indians to serve in the Indian diplomatic service. In this connection, it will not be out of place to point out that even the All-India National Congress has not taken any special interest in training men to take the responsibility of carrying out the work of nation-building. To be sure, the Congress has spent lakhs for "Charka," but possibly not a rupee has been spent to train men or women to acquire international experience in politics. We howl against British despotism. Indeed, any protest against wrong is a very good sign; but do we take the initiative in starting things of vital importance in the field of nation-building and assertion of national freedom? We often lack the vision and at other times dare not take a bold path of constructive statesmanship. Has not the time come when Indian statesmen should take steps towards training future statesmen of India, by making it possible for them to acquire diplomatic education and experience? The first requisite for this is to have a clear understanding of "India's position in world politics" and also the realization of the fact that India can never have real freedom unless she controls her own foreign affairs. It pains us immensely to see that most precious time of the Congress leaders, and much of the national funds are wasted on debating such schemes as "jarn franchise", "charka as the central point of village reconstruction", while questions of increasing national efficiency in international affairs are often opposed by reputed Indian nationalists.

We have much to learn from Great Britain; and one of the things is "training of statesmen"; and the sooner Indian statesmen recognize this fact and make demands for adequate opportunity, the easier will be the road to success.

T. D.

An American Woman to as Act "Consul"

Washington. Miss Pattie H. Field of Colorado has won the distinction of being the first American woman to be named for a Consul's post when she was nominated as United States Consul at Amsterdam.

We welcome this piece of news as an index of further progress of "Equal Rights"

between men and women in America. During the last ten years, the women in the western world have achieved considerable success in effecting emancipation in the field of politics and economics. This success has touched the imagination of the women of the East particularly in Japan (the Far East) and in Turkey (the Near East). The latest news from Turkey indicates that the Turkish people in general as well as the Turkish nationalist leaders have made up their mind to ignore all opposition to, and to aid the movement for, emancipation of women through spreading education and by removing all bars against professional life of women. In Angora, only the other day, three young Turkish ladies were given permission to learn "flying" in connection with the Turkish Air Service. When we think of the progress of women in India, it makes us very sad and depressed. It is not the women of India who are opposed to progress; but the men of India themselves lack proper enlightenment and they often directly and indirectly hinder the cause of emancipation of Indian women.

In this connection, we further wish to draw the attention of Indian leaders, that in the West, women are entrusted with diplomatic positions, whereas no Indian, however efficient he may be in the arts of diplomacy and well versed in the knowledge of international relations, can serve his country in any diplomatic capacity. We earnestly hope that in presenting any plan for extension of self-government in India, control of Foreign Affairs and National Defense of India by Indians must be provided in it.

T. I.

Retaliation against South Africa

If Indians had some powerful nation to befriend them, the case of the Indians in South Africa would have been given a place of equality with the Armenians who received bad treatment from the Turks some years ago. The press of the powerful nation would in that case have made the South African whites appear before outsiders as sinners of the very first order. But neither the Indians themselves nor any of their friends are powerful enough to make things appear even unconstitutional. So what is the use of talking about its injustice, immorality or sinfulness?

The South African whites are in pov

and they are trying to get rid of undesirable competitors in a time-honoured, though not praise-worthy, way. The Indians, of course, are rightful owners of whatever they own in South Africa. They have theoretically just as much right to be in South Africa as have the whites. But unfortunately they are not strong and as such cannot expect to be treated as equals by their white rulers. And we, their compatriots, we are just as badly off. Had we been an independent and a military nation, we might have done all sorts of things to enable our brethren to assert their rights in South Africa. But we are not so and therefore cannot hope to invade South Africa and bring the whites to their senses by bombardment and bayonets.

Then what can we do?

We wish we knew. It would be just as difficult to answer that as it would be to find a sure short cut to Swaraj for ourselves.

The Corporation of Calcutta have taken the humiliation in South Africa to heart and have resolved

"That all white persons born or domiciled in any of the countries forming part of the Union of South Africa shall be debarred from obtaining any employment under, or from entering into any contract with the Corporation of Calcutta, and

"That goods produced or manufactured anywhere within the said Union shall not be purchased or received for value by the Corporation of Calcutta."

"That every person seeking any employment under or offering to enter into any contract with the Corporation shall have to sign a declaration that he is neither born nor domiciled in any part of the Union of South Africa and the vendor of every goods supplied to the Corporation for value shall have to sign a declaration that it is neither produced nor manufactured within the said Union."

"That Government be requested to take steps to amend the Municipal Act disfranchising the South Africans in Calcutta."

But will this have a retaliatory effect on South Africa? Are there any South African employees of the Calcutta Corporation? If there are any, then the straight course would be to discharge them at once. The resolutions have a ring in them which suggests that there are no such employees of the Corporation, nor are there probably any South Africans supplying goods to the same body. So that, except in so far as they help to create an anti-South African atmosphere in India, these resolutions will serve no use-purpose.

It has been suggested that we should put prohibitive duties on our imports from South Africa. It would not be a bad policy, but

the South African whites would probably not mind this loss very much if they could get rid of the Indian tradesmen and landowners in South Africa who are every day getting a better hold upon the economic life of that country. Still it is worth while discussing the possibilities of putting a heavy duty on South African goods. Some of the leading imports from South Africa are as follows:

Name of goods	Approx. Value in 1922-23
	Rs
Coal, coke and patent fuel	88,00,000
Tanning material	87,000
Machinery & Millwork	50,000
Metal alloys	10,000
Metals	20,000
Provisions	26,000
Rubber	21,000
Sugar	(Large quantities in 1920-22)
Govt Stores of all sorts	14,00,000

So that practically coal and coke form the only item on which we can do anything worth doing in the way of retaliation. We can also bring pressure on the Government to stop buying anything at all from South Africa. Altogether, prohibitive import duties do not promise much. Let us see if we can do anything better by **stopping export** to South Africa. India's largest exports to South Africa are of Jute. In 1921-23, we exported Jute to South Africa as follows.—

Province	Approx. Value
Cape of Good Hope	28,00,000
Natal	83,00,000
Transvaal	2,00,000

And Jute is a monopoly of India, so that it is well worth while discussing whether we can do anything to South Africa by putting a fairly heavy duty on Jute exports to South Africa. The money derived from this source may be used for helping repatriated Indians.

Besides Jute, we also export large quantities of wood and timber to South Africa; but we do not think we can do anything by putting a duty on the export of the same.

Then we can do another thing. There are certain Indian ports at which steamers from various countries call on their way to South African ports. It may be useful to increase our harbour dues for such steamers as are going to or coming from South Africa.

There must be yet other ways of retaliation, but it requires experts to find them out. Let us hope that we shall not take our insult lying down and find out a way or ways to show the whites in South Africa the rough side of racialism.

A. C.

Abinash Chandra Mazumdar.

Of the late Mr Abinash Chandra Mazumdar of Lahore, whom we counted among our revered friends, *The People*, edited by Lala Lajput Rai, writes editorially —

Mr. A. C. Mazumdar who passed away the other day, was a well-known missionary of the Punjab Brahmo Samaj. Not more than a name to many among the present generation, he was very active in the eighties of the last and the early years of this century. He was a pioneer journalist and an advocate of many noble causes. When the temperance movement was inaugurated, Mr. Mazumdar threw himself heart and soul into it and became an unsparing critic of those who tried to thwart it. He also made efforts to purge *Holi* of all scurrilities and set on foot a *Pabitra Holi*, which became a flow of wit and a feast of mirth. Mr. Mazumdar was a champion of purity, and exerted himself against evil, impurity, cant and hypocrisy. A vigorous worker, a fervent preacher, he will be missed in many places.

Abinash Chandra Mazumdar

The Tribune of Lahore reports that the citizens of Lahore assembled in large numbers in the hall of the Punjab Brahmo Samaj on 12th January last to pay their respects to the memory of Mr. Mazumdar.

The gathering was a representative one. Lala Harkishen Lal occupied the chair. He said that

he had been associated with him for 30 or 35 years and worked with him in several institutions, and his impression was that he had never come across a man who was so good all through. Speaker after speaker bore testimony to the noble work that Mr. Mazumdar had done and the intensely pious life that he lived. Rai Bahadur Lala Moti Sagar said that he had realised what real self-sacrifice was when he worked under him in the Kangra Relief Work. His company was elevating and one coming in contact with him felt that he was in the company of a true saint. Maulvi Mahbub Alam said that Lahore and the world had really become the poorer by the death of such a man. The meeting very properly decided to perpetuate the memory of such a noble worker in a permanent form. It was the earnest desire of the meeting that the memorial should take the form of some humanitarian work in which Mr. Mazumdar took such a great delight and to which he devoted his life.

In its obituary of Mr. Mazumdar, *The Tribune* writes among other things:—

It is a great loss to the Punjab generally and the Brahmo Samaj in particular that so soon after the death of Rai Sahib Kashi Ram, his friend and co-worker, Bahu Abinash Chandra should be called away. He was 71 at the time of his death, and his presence was an inspiration to social workers of all ranks. Although a Bengali, he had made this Province his home. By his loving ministrations, noble sacrifice and devoted service he endeared himself to all sections of the people. He was an honoured name in Indian circles. He spent many years in the service of the Railway and since his retirement he had consecrated himself to the service of God and Humanity. Even when he was engaged in his secular work, his spare moments he devoted to the service of his followmen. Wherever he has been, at Allahabad or at Rawalpindi or at Lahore, people hold his memory in reverence. Among the sick and the famished, his was ever a familiar figure with his box of Homeopathic medicines, a food and garment. It was with his efforts that the Sanatorium for the consumptives at Dharampur was built. During the earthquake in the Kang valley he led a relief party. Wherever there was a famine, either in the Punjab or in the United Provinces, he was among the foremost to organise relief for the distressed.

The Indian Social Reformer calls Mr. Mazumdar "a great social worker, especially in the fields of temperance and purity," and his paper *The Purity Servant*, "an excellent little paper".

The Indian Messenger, the English organ of the Sadharan Brahmo Samaj, of which became a missionary some years after retiring from Government service, says among other things:—

His zeal in the cause of purity and temperance led him to start *The Purity Servant*, a journal whose aims were clearly indicated by its name and to organise the *Pabitra Holi*, by which sought to combat indulgence in immorality on part of many Hindus during the *Holi* festival.

the Punjab, reminding us of Savonarola's famous "bonfire of vanities" during the carnival in Florence. He was for many years General Secretary of the All-India Theistic Conference. He organised the Conference at Lahore, Allahabad and Benares, and presided over it at Madras in 1908. He initiated the relief operations carried on, largely with his assistance, by the Brahma Samaj in the Kangra Valley after a disastrous earthquake. He was an active worker in the famine relief operations organised by the Sadharan Brahma Samaj in 1907. It was by his efforts that the Sanatorium at Dharampur for consumptives was founded, a warm tribute being paid to him by the Lieutenant-Governor of the province for his exertions in connection with it. He was appointed a Trustee of the Dyal Singh College by its founder, and he always took a keen interest in its affairs.

He had made a special study of the Sikh scriptures. His Bengali translation of *Jaypee* was published some years ago, and that of *Sukhamani* has been appearing serially in a Bengali magazine.

Japanese Competition in the Cotton Industry

The reason why Japan with her 48 lakhs of spindles against India's 80 lakhs can manage to consume as much cotton as Indian mills do, is that the Japanese mills work 22 hours a day in two shifts, while Indian mills are by law confined to 60 hours in the week.

In Geneva, Sir Atul Chandra Chatterjee was able to draw the League's attention to the disadvantageous position in the industrial field which India occupies compared with that of Japan, because India is a member of the League of Nations.

India and the League of Nations

The League of Nations has deputed Dr. Pillai, Indian member of the Secretariate at Geneva, on a three month's mission to India to enquire into what the Secretariate can do to make better known the work of the League in the past three years. He will confer with the Government of India and the leaders of responsible public opinion and also visit universities and explain to the students how Continental Universities are organising themselves to study the work of the League. He also proposes to start League of Nations Societies at universities and other centres and try to get into touch with the Press or Journalists' Associations in India, in order to

get them to co-operate in ventilating the activities of the League.

As a member of the League, India has to contribute a large sum towards its expenses, for which she does not at present obtain any equivalent return. For this, of course, India's dependent position is to a great extent responsible. But situated even as she is, we could certainly derive much more benefit from it if we were determined to do so.

Sir Atul Chandra Chatterjee

It is true the League is not an ideal body, nor does it possess all the powers and all the means to give effect to its resolutions which it ought to possess. But it is idle to fret at what it is not or has not. The more business-like and commonsense view is to take it as it is and make what use we can of it,—particularly as we have to pay so much for our connection with it.

It is not right to take a fatalistic view of things and remain fixed in the belief that no good can come out of what attempts we may make at Geneva to obtain redress for our grievances.

For instance, it ought not to be a foregone conclusion with us that the South African question cannot be brought before the members of the League.

Of course, it is true that so long as India does not become self-ruling, we cannot elect our own delegates and bring before the League what we the people of India desire to. But there is no reason to suppose that so intelligent and capable a man as Sir Atul Chandra Chatterjee, who ought to have been governor of a province, does not love India and the Indians, does not feel for the humiliations and disqualifications to which his countrymen are subjected abroad, and does not desire that his country should occupy an equal position with other countries, simply because he is a delegate of the Government of India but not of the people of India. On the contrary, we are sure that, in addition to his being an Indian, he feels morally bound to do all he can for India.

But whatever direct advantage we may or may not derive from the League, we ought certainly to be able to acquire and exercise much influence in the international dealings of the League, and in this way attract the delegates of the independent countries of the world towards India. Informally at any rate, this ought to be possible, seeing that in addition to Sir Atul, such a world-figure as Sir Jagadish Chunder Bose would remain for some time at Geneva as member of the League Committee for Intellectual Co-operation.

It would be a little easier for India to obtain self-rule, if the people of the world were on the side of India, even though the governments of the world might not for diplomatic reasons make common cause with India. For this reason, it is necessary that the Indian delegates of (the Government of) India and all other Indians at Geneva should win for India, by their culture, capacity, character and friendliness towards mankind in general, the good opinion of the delegates of foreign countries and other foreigners residing there.

It is a fact that Britishers at home feel the moral pressure of the opinion of the British Dominions and of the world at large. We should see to it that this opinion is favourable to India. And to some extent we can try to make this opinion favourable, through the Indian officials and others who reside at Geneva in connection with the League's work or for other reasons.

There is much to support our view in the following extracts from the interim report of

of the Indian delegation to the sixth session of the Assembly of the League of Nations —

"Our experience of the work of the Assembly has led us to consider that the best service can be done for India by its representatives, if they approach the questions under discussion as far as possible from an impartial and international standpoint, and co-operate fully in the solution of them, rather than view them from a purely national aspect and refrain from the discussion of those which have no immediate interest to India.

"It must necessarily be the case that India's interests are little affected by many of the problems which the League has to solve, but India's representatives have everything to gain by familiarising themselves with the elements of these problems and taking part in the discussions upon them, while, at the same time, the League has much to learn from the store of legislative and administrative experience accumulated in the public life of the great country which they respect,

"Such participation will only be rendered possible by thorough preparatory study and by securing the assistance of a larger staff at Geneva. We are convinced that the Indian delegation can do far more in this way to improve India's position in the League than by criticism from a purely national point of the comparatively few questions which directly affect India's interests, or by excessive insistence on the fact that India is not at present receiving an adequate return from the League for her large contribution towards its expenditure.

"In the course of debates, we tried to turn the general activities of the League into ways of benefit to India. Our observations on the health organisation and the proposed international relief union work of the League in social matters, and our suggestion that a Bureau of Information should be established in India are instances of this endeavour.

"It remains for us to add that we ourselves have derived the utmost benefit from our intercourse with many prominent statesmen and experienced administrators who represented their countries at this Assembly. Our relations with them in conference and in social intercourse have been most cordial."

We do not at all suggest that we should depend only or mainly on world opinion for raising India's status. Our main endeavour should of course be made here in India and by ourselves. But we should not despise or neglect to secure, any subsidiary help that may be obtained from others.

Civil Disobedience and the Liberal Attitude

In previous numbers of this Review, we have more than once made it clear that we should not be opposed to, but would rather favour, a recourse to civil disobedience, *when it is feasible and necessary*, and in case of other means of winning back our birthright

failed. And we should also be in favour of giving an ultimatum to Government, saying that unless our wishes were complied with civil disobedience would be resorted to, *if the country were ready for such a step at a moment's notice*. But we are not in favour of such an ultimatum coupled with the declaration that in case Government adopted an unbending attitude a movement would be inaugurated *for preparing the country for civil disobedience*. For such a mimatory gesture cannot but raise a smile in the British rulers' lips. If there be a bono of contention between two nations, and if one of them gives an ultimatum to the other, it is not usual for the former to say that if the ultimatum did not receive favourable consideration, the claimant would *begin* to recruit soldiers and drill them and also grow a forest and work iron and other mines in order afterwards to build a navy and manufacture arms and ammunition so that war may be waged with the other nation. If Johnnie and Dick have a wordy fight, Johnnie cannot expect to cow down Dick by holding out a threat that unless the said Dick complied with the aforesaid Johnnie's wishes, Johnnie would begin to take lessons in boxing and also swallow daily more food with more vitamin contents in order that afterwards he might deal Dick a knock-down blow. No, the knock-down blow should be ready for delivery at a moment's notice,—nay, better still, if it be ready for delivery without any notice at all to the other party.

For these reasons, while theoretically we are not at all against civil disobedience in certain circumstances, we have not been able to support either that part of Mrs. Naidu's presidential address which delivers a sort of ultimatum to the Government or the main resolution of the Congress of similar import.

Some persons appear to think that, as reason and the love of right and justice ought alone to guide men, individually and collectively, in their decisions and actions, there need not be any sanction behind a national demand; or that, to be plain, the British Government and people need not be made to feel that unless India's popular demands were conceded, Britain stood to undergo some trouble or to lose some advantage. We also would personally prefer that all men, including Britishers, were guided only by reason and love of right and justice. But if we look at history, including

British history, we find that reforms have been generally obtained after much argumentation and representation, and disturbances and unrest and the giving of some trouble. No reasonable man likes disturbances and trouble-giving and unrest. But it would be as untrue, historically, to say that argumentation and representation alone secured the reforms, as to say that the other things alone did the trick. It would be impossible to apportion the credit for the achievements accurately, but some apportionment would be needed.

We all know that love of virtue alone ought to keep men in the path of virtue. But in all countries, is it only love of virtue which keeps people from breaking the rules of morality and from violating the laws of the State? No, whilst some are so kept, more perhaps are restrained by Mrs. Grundy, the police, the law-courts, the jail department, etc.

Whilst some persons observe the laws of health naturally from habit or from love of a harmonious and beautiful physical and mental existence, there are others, perhaps the majority, whom the fear of disease prevents from violating hygienic rules. So, in the universe as we find it, fear of consequences is a sanction. Therefore, whilst we ought all to lay the greatest stress on idealism, on the effort to rise from the merely animal motive to the intellectual and spiritual motive, we cannot in practice in our dealings with men, individually and collectively, entirely give the go-by to the sanction of fear of consequences.

The Liberals may not speak of resorting to civil disobedience, but they also want to create such a situation as would make the Government feel that it would be prudent for it to yield, or, in other words, they want Government to feel that unless it yielded something untoward would happen. Is not that an appeal to fear of consequences? We quote below a passage from Sir Moropant Joshi's presidential address at the last session of the National Liberal Federation of India in support of what we have said.

As extreme measures nothing is ruled out for achieving political emancipation—not even revolutions, much less civil disobedience and obstruction. But the Liberals firmly believe that without adequate preparation of the people, little pressure can be put on Government. As soon as we concentrate on the preparation of the electorate, a stage must arrive when the rulers must find it prudent to yield rather than risk civil disobedience and revolution. Without adequate preparation of

Sir Moropant Joshi

the people, no compelling pressure upon Government is possible, and once they are prepared civil disobedience will be unnecessary. Other parties have themselves realized this by now, and that is why the Liberals suggest unity and concentration of effort on the one common ground, viz., preparing the masses for the struggle to be free.

Widow Marriages.

The honorary secretary to the Vidhya Vivah Sabha of Lahore states that reports of 296 widow marriages have been received from the different branches and co-workers of Vidhya Vivah Sabha, Lahore (Panjab) throughout India in the month of December, 1925. The total number of marriages held from 1st January, 1925 to the end of December, 1925 has reached 2663 as detailed below:—

i. According to Caste:—

Brahmin 447, Khatri 508, Arora 570, Aggarwal 180, Kaisth 76, Rajput 202, Sikh 251, Misc. 429. Total 2663.

ii According to Provinces:—

Panjab & N. W. F. P. 2057, Delhi 41, Sindh 38, U. P. 356, Hyderabad Deccan 5, Assam 30, Bengal 73, Madras 23, Bombay 12, C. I. 11, Rajputana 17, Total 2663.

iii. Voluntary donation received during the month is Rs. 84-14-0 and total during the year 1685-12-0

Bhai Kashi Ram

The People writes:—

By the death of Rai Sahib Kashi Ram of the Punjab Brahmo Samaj, the Province has lost a truly religious man. Deeply religious in thought and practice, generous to a fault, straight in his dealings, honest in his convictions, charitable in his judgment of others, he possessed a serenity of mind and temper which was the envy of his friends. He was always sweet, reasonable, affable and serene. Pure in his private life and regular in his habits, he lived a good and healthy life, reaching the mature age of 76 at the time of his death. The first generation of English-educated Punjabees is passing away, one by one. Very few are now left as reminders of old times and bygone ages. The younger people have certainly more knowledge and greater scholarship to their credit, but whether they have the same respect for principles and the same spirit of sacrifice and service as the older generation showed in their lives, is not certain. We hope Lala Kashi Ram's example and life will for long continue to inspire them with his noble ideals, his pure motives and clean manners.

Lala Kashi Ram

Lala Kashi Ram was a New Dispensationist. The following details of his life are taken from *The Tribune*:

He joined the Brahma Samaj shortly after its foundation at Lahore. The devoted services of Pandit Nabinchandra Roy, Lala Shradha Ram, Lala Gandu Mal, Lala Sobha Ram and Lala Ram Chand, who laid the foundation of the Brahma Samaj in this province, found a response in him; and he joined them wholeheartedly in the noble work they had started. Acceptance of the new faith caused his social ostracism. He was outcasted for taking food with a Christian. His own father cut off his connection. But the young Kashi Ram, true to his conviction, suffered all sorts of persecution bravely and heroically. He had honest differences with his friends, but never broke away from them. His younger brother became an ardent member of the Arya Samaj, but Kashi Ram out of slender income used to maintain his family.

He employed his spare hours in the service of the public, and since his retirement from service in 1909, he became a Missionary of the Brahma Samaj. He was a Minister of the Punjab Brahma Samaj and wrote a number of pamphlets to spread the cause of Theism. He edited a paper called *Journal* for several years.

The Himalayan Brahma Samaj owes a great deal to him.

The All-India Social Conference

The All-India Social Conference, arranged by the National Liberal Federation, met in the Calcutta Albert Hall on the last day of 1925. It was well and influentially attended. A lady, Srimati Sarala Devi Chaudhurani, was in the chair. Many other ladies were present, several taking active part in the proceedings. These are welcome signs of progress. In her presidential address Srimati Sarala Devi laid great stress upon the emancipation of women and the need of a "socially compact" India. She also laid emphasis on the need of educating the "selfish, narrow-minded and unenlightened priesthood" and the "ignorant, superstitious and small-visioned womanhood," who are obstacles in the way of social reform in India. She fervently appealed for the social reconstruction of India, observing, "social reconstruction goes to the very root of nation-building in India. Social solidarity is the progenitor of political privileges. A renovated social India, a socially compact Hindustan, could alone stand shoulder to shoulder with the modern mighty countries of the world."

The resolutions passed urged the acceleration of the progress of female education, further rise in the age of marriage, abolition of the purdah, abolition of the dowry system, re-marriage of widows and amelioration of

their condition, relaxation of the caste system, removal of untouchability, admission to society of women and girls who have been innocent victims of crime, political enfranchisement of women, total prohibition of the manufacture and sale of alcoholic drinks and intoxicating drugs except for medicinal purposes, strong supervision over cinemas and theatres, discouragement of gambling at races, establishment of rescue-homes and enactment of legislation for protection of children in provinces wanting such legislation, better administration of religious trusts and endowments in the country, and maintenance of cordial relations between Hindus and Mahomedans.

Great prominence was given to the resolution on untouchability, the speeches on which roused the hearts of the hearers. Two ladies made strong speeches in support of the resolutions on the abolition of the purdah system and the dowry curse.

Help to South African Indian Deputation

The Council of the Imperial Indian Citizenship Association has made a very good use of the funds at its disposal by sanctioning a grant of Rs 50,000 to the South African Indian Deputation for its work both in India and South Africa.

A Moslem Lady's Victory

The secretary of the All-India Muslim Educational Conference refused admission to ladies at the last session of the conference. But Atiya Begum of Bombay insisted on being heard and succeeded in her efforts. She was followed by Mrs. Sakhawati Hossain of Bengal.

Neglect of Indian Art and Architecture in India

It was Havell who said more than a decade ago,

"Of all branches of art, that of architecture is the one which gives occasion for the exercise of the highest constructive powers, and in the revival of Indian domestic architecture there is a magnificent field open for the energy of the Swadeshi reformer, and the very best opportunity for giving a great stimulus to Indian arts and crafts. Nowhere is it more true than in India that architecture is the mother of all the arts, and the neglect of Indian architectural traditions by Indian leaders of public opinion has been one of the principal causes of the deterioration of Indian art."

He might have well added "deterioration of the Indian mind and the degeneration of Indian life." In India, one finds among the so-called leaders of public opinion an appalling absence of well-defined ideas regarding the hundred and one things that make a nation truly great and the quality of national life excellent. As a matter of fact, on account of this ignorance of the essential elements of a sound national life, public opinion in India has practically nothing to say on most things of importance. All the sordidness and misery in our national life are usually accounted for in the simplest of ways by our "leaders"; speeches are made, leading articles flash magnificently on the pages of party organs and the credulous are convinced of the infallibility of the diagnosis. Very few of our "leaders" have any but the haziest notions of what nation-building means, and in this haze one can easily discern the looming form of institutions and ideals which have reduced life in the West to a terrible ordinariness, which savours strongly of conscription, mass production, barrack life and of the pathology of constant activity with no pleasant end in view. The Government of India by foreigners has caused a whole lot of exotic things to be heaped upon our life, but in that we can only see the foreigner's attempt at keeping us under and rendering us eternally incapable of taking the initiative anywhere. They want us to lose our individual character and embellish the face of the earth, so long as we are on it, only as a market. Our progress, to them, is progress as a market, our moral condition is our unhesitatingness or otherwise in market transactions. We do not blame the foreigners for holding such views, for they must be true to their national character and idealism. But in what way are we ourselves superior to them? Whatever we might have been in the past, to-day the whole of India is as badly attacked by what has been rightly or wrongly called Western materialism, as the West itself. And to add to our shame, we have adopted the disease from the West due to our stupendous ignorance of all values and to our slavish imitativeness. We want a renaissance, if not of our classical super-intellectuality, at least of our commonsense and of the urge to make life a thing of beauty, before we can expect to be truly a free nation.

In this renaissance the revival of our arts and crafts must play the most important

part. The painful impression created by our present-day Burra Bazaar architecture, German mechanical toys, Japanese enamel tumblers, cups and dishes and the horror of seeing the Puja-bazaar flooded with Italian art "silk" fabrics may be symptoms of this re-birth, but what hopes? However, to proceed with our argument, there seems to be a growing realisation everywhere in India of the extreme urgency of helping Indian arts and crafts to their feet again.

If the life of man is measured by his activities, the building art should get a prominent place in human life. All men live in some sort of houses and judging by the amount of time and energy mankind spends in building huts, houses and palaces, one can safely assign to this industry a place which is second to only a few other industries. And apart from its importance as an industry, building has always been a vehicle of aesthetic expression in every country and age. As such, the value of architecture and its place in national life have been everywhere great and important. In the words of Havell,

"National architecture is built out of the national life; its forms and style are moulded by the character of the people to whom it belongs."

So also is the character of the people influenced by the architectural environment they create for themselves. So that damage done to the art and architecture of a country is damage done to the life of its people. In our case, as Havell says,

"It is not merely a question of taste that is involved in the preservation of Indian art, but a question of intellectual and moral character. The surrender of all their artistic traditions, which so many educated Indians have been content to make, is an intellectual and moral loss for which all European science and literature cannot compensate them; nor will the fullest measure of political liberty, as it is understood by western nations, restore to them what they lose by that surrender. India with Indian art completely denationalised by western commercialism and western materialism will still remain in a state of intellectual and moral servitude, even if all the dreams of Swaraj in which the extremists indulge were realised."

And Havell is quite right. Supposing we had been taught so much English that we could not express our thoughts except in the English language and in the English way, would it take much thinking to decide that we would have then lost much of our national independence? Certainly not. For if it is slavery to look to the English for our laws, it is certainly more so to look to them for our language. In the case of art

and architecture, and specially the latter, we have lost our own "language" of architectural and artistic expression and we have been attempting these several decades to express ourselves through western technique. *And that not of the highest order.* We have, as a matter of fact, adopted the worst in western architecture and mixed it up with a lot of bastard forms from everywhere in the world. We are, so to speak, talking pidgin English in the domain of artistic expression. Mr. S. C. Chatterjee's article in this number of the *Modern Review* ought to receive every attention from all who feel that there is a need for the purification of our architecture. Without the active support of public bodies and wealthy people, there is no hope for our architecture, nor for our arts and crafts in general. It is a welcome sign that some of the Municipalities are waking up and trying to do their bit towards the revival of our lost arts. We hope for more. The policy of the P. W. D. in this respect has been a scandal in the past and we hardly see anything to hold better views regarding the future. But among ourselves we can do much, and it is here that our hopes lie.

A. C.

Calcutta University's Plight

When Prof. Jadunath Sarkar suggested in our July, 1925 Number some proposals for the reform of the Calcutta University, and drew public attention to its mercenary lowering of standards with the consequence of the failure of Calcutta graduates in all-India tests, a temporary junior lecturer of the Calcutta Post-graduate Department was put up to deny Prof. Sarkar's facts and glorify the Calcutta University's present policy and achievements. And now no member of any rival University, no writer from some outside Province, but the highest officer of this very Calcutta University, the Vice-Chancellor Sir Ewart Greaves, has publicly announced the same conclusions and suggested the same line of reform as Prof. Sarkar. Our readers will be that Prof. Sarkar's vindication has come from the highest quarter.

Sir Ewart Greaves said at the Serampur College Convocation: "No one, I think, can contemplate with unanimity the present educational system of the province. The very necessary reforms recommended by the Calcutta University Commission have been delayed by financial stringency and by other difficulties to which I need not refer in detail, and it is a matter of grave concern to those responsible for the education of the province that Bengali can-

didates for the Indian Civil Service, and other All-India Services are not occupying in those examinations the places to which their intellectual aptitude entitles them.

"Please do not think that I desire to reflect in any way upon the great work that has been done on behalf of education by many men in various positions in the province, but I only say this to emphasize the need at the present time for the educationists of the province to take stock of the position, in order that the necessary improvements in standards and in teaching may be carried out.

"The multiplication of schools and colleges alone is not sufficient unless we can see that the teaching therein imparted is efficient and tends to the development of character and intelligence, and not to the mere passing of examinations."

He said more in the same vein, but what we have quoted above will suffice.

Another supporter of Prof. Jadunath Sarkar's reform proposals is Dr. Bridge, the learned and responsible Oxford Scholar who presides over the St. Paul's College, Calcutta. This eminent authority has publicly declared

"Educational reform in India is in danger of stultifying itself by paying too much attention to the head, forgetting the deplorable conditions of the feet and the unsatisfactory state of the trunk. The success of the Post-graduate Department depends very largely on the material supplied by the colleges, as the results of the latter are conditioned by the preparation which the schools impart to their alumni.

"It seems to me that a new spirit of closer intercourse, a new articulation of the relationship between the Post-Graduate Department and the Calcutta colleges is needed."

Release of Political Prisoners and Return of Political Exiles

Last month Maulvi Mohamed Shafi moved a resolution in the Legislative Assembly regarding the release of political prisoners and the granting of permission to all Indian exiles in foreign countries to return to their homes, to which Mr. T. C. Goswami moved the following amendment, which was carried by 53 votes to 45:—

"That this Assembly recommends to the Governor-General in Council: (a) forthwith to secure the immediate release of all political prisoners detained without trial; (b) to take steps to remove all difficulties in the way of the return to India of all Indian exiles in foreign countries who may be, or may have been suspected of being concerned in any revolutionary or other activities regarded by the Government as prejudicial to the interests of India; (c) to bring to trial under the ordinary law of the land such persons against whom the Government think that they have sufficient evidence to go to court."

Sir Alexander Muddiman, the Home Member, stated the position of the Government in the following words.—

"We are prepared to inquire into individual cases if they are brought to our notice. We desire to limit our actions, to limit restraints, to the very minimum of what is essential to preserve our position. We do not desire to do more than that. We cannot in order to serve a political movement or to secure temporary support, we cannot compromise the interests of the ordinary citizen which are the interests of law and order. I have tried to meet the resolution in a friendly spirit, and I feel that I have given a satisfactory answer."

It is quite fair to demand that either suspects should be freed or brought to trial in the ordinary way.

Nationalism versus Communalism at Aligarh

On the 25th of December, 1925, a resolution was moved in the Aligarh Muslim University Union embodying the view of the Union that the solution of the Indian problem lies in the immediate supersession of communal programmes by a national one. It was carried by the Union in the face of the opposition to it of such influential Moslem leaders as Mr M. A. Jinnah, Sir Mohamed Shafi and Sir Ab. Imam. This is a very hopeful sign of the times.

The late Lord Carmichael

The news of the death of Lord Carmichael, a former Governor of Bengal, has been received in this country with regret. We do not mean to say that other Governors and Viceroys have not been or are not gentlemen, but we cannot better sum up our opinion of Lord Carmichael than by saying that in his personality the private gentleman was not overpowered or thrust into the background by the ruler and the bureaucrat.

We had it from one of the founders of Carmichael Medical College at Belgachia that, but for his lordship, that institution could not have become what it is.

Mysore's Lead in University Education

Writing about the many new degrees and diplomas instituted by the Mysore University, *New India* observes —

The scheme, we are aware, has been criticised on the ground that it is too ambitious to be introduced immediately. That is understandable, for with the plans for the improvement of the study of Oriental subjects, Kannada and Indology, these additional activities will tax the energies of the

University to the utmost. But we do not think that that is a reason to justify any curtailment of these excellent and very necessary plans. Let the Mysore University give a lead to other Universities in the matter of the organisation of the scientific and industrial side of higher education.

We would exhort the authorities of the Mysore University not to be discouraged by any criticism of their plans as too widespread to be practicable. But it is also necessary that they should remember that the mere drafting of courses and institution of degrees is not enough. In the words of the Calcutta University Commission —

"There is real danger in the idea that, if an examination is provided and a degree course defined, all that is necessary is done."

This danger Mysore, with its resources, ought to be able to avoid.

In future issues we intend to give some idea of the "excellent and very necessary plans" of the Mysore University "in the matter of the organisation of the scientific and industrial side of higher education."

The late Maharaja of Natore

A notable member of the aristocracy of Bengal has prematurely passed away in the person of Maharaja Jagadindranath Ray of Natore. He was a lineal descendant of Rani Bhavani of pious memory. He was a cultured man, possessed of much independence of spirit. He delivered an outspoken address as chairman of the reception committee of the Indian National Congress in 1901, when it met in Calcutta. He also presided over a session of the Bengal Provincial Conference held at Murshidabad. He made a spirited public protest against the partition of Bengal in the Calcutta Town Hall. He was a good writer of Bengali prose and verse, and one of the editors of *Manasi O Mumukshu*, a leading Bengali magazine. He was a lover of music and himself a talented musician. A cricket team was maintained by him, and he was himself a keen sportsman. He was a patron of the Rani Bhavani school in Calcutta and took much interest in its welfare, frequently working as an honorary teacher in its classes. Suavity of manners was one of the marked traits in his character.

The Jubilee of the Maharaja Gaekwad

Though in recent years the Maharaja Sayajirao Gaekwad of Baroda has receded somewhat into the background in the public life of India, he will be undoubtedly remembered as a most prominent figure.

in the history of public life in India in the last quarter of the 19th and the first of the 20th century. He has certainly been one of our nation-builders. His public refutation of the theory of the racial inferiority of Indians in one of his addresses marked him out as a pronounced and right-minded patriot. He took particular pleasure in participating in such all-India movements as had anything to do with the education and uplift of women, reform of caste, including removal of untouchability, encouragement of travel in foreign countries, etc.

In his own State, he was a path-breaker in many important directions, which made Baroda at one time the most progressive State in India. He was the first to legislate against infant marriage in India, as also to introduce universal, free and compulsory education and to separate the judicial and executive functions. Another matter in which Baroda has been the pioneer is its library system, including the institution of travelling libraries. The Maharaja has also done much practically for the education and uplift of the "untouchable" and other depressed classes. In the fields of technical and industrial education and the starting of new industries, he has done much. He has given encouragement to the cause of education and learning outside his State too.

It is to be regretted, however, that even in education and some other respects, Baroda has been of late outdistanced by Mysore and Travancore. And it does not give us any pleasure to state that *The Servant of India* is avert in observing.—

Sri Savajirao, with all his desire to model his State on western lines, has never been known to favour popular government, and though perhaps Baroda was among the first to admit its people into consultation on legislative and administrative bodies, these are still in the same rudimentary condition in which they were at the start, while some other States, coming into the race at a later period, have long overtaken it. Mysore and Travancore are, in respect of popular government, a generation in advance of Baroda. It was hoped that His Highness would be pleased to announce a substantial instalment of constitutional reforms on the occasion of

the Jubilee celebrations, but these hopes have been sadly disappointed.

This is not to say that his Jubilee boons to his subjects are not real boons; but more things and of a different character were expected. To fulfil these expectations, may the Maharaja Gaekwad have a long and prosperous life, during which it need not be necessary for him to travel abroad so frequently and for such long periods as in the past, as he has acquired sufficient experience of foreign countries for the benefit of his subjects and as India possesses a plentiful supply of salubrious spots to suit men, including princes, suffering from all sorts of ailments.

The Solar Eclipse and Bathing at Allahabad

Every year during the Indian month of Magh, there is held a bathing festival at the confluence of the Jumna and the Ganges at Allahabad, when several hundreds of thousands of people assemble and bathe there. This is known as the *Magh Mela* or fair. Every twelfth year, this Mela becomes the Kumbha Mela, when, sometimes, so many as three millions of people or more have been known to bathe at the confluence.

This year, as the solar eclipse marked the commencement of the Magh Mela, the crowd was very much larger than it is during an ordinary Magh Mela. It has been estimated that some twenty-five to thirty lakhs of people had their cere-

monial bath at the confluence. The principal day of bathing was the 14th January, but people bathed both on the 13th and the 15th. The crowd was not standing or stagnant, but was a constantly moving, constantly renewed gathering, like the waters of a river.

And the area over which they moved, rested or assembled was some five square miles in extent. Hence the photographs which Dr. L. M. Basu was good enough to take specially for us do not give even an approximate idea of the vastness of the gathering. Moreover, some

of the most promising exposures yielded no good results owing to the haze created by the suffocating dust.

The devout looks, not of all, but of large numbers of the pilgrims, particularly of the women, were remarkable and elevating. The hardness and indifference to comfortable living of those thousands of them who spent the whole night on the bare sands under the starry canopy of the sky, with only insufficient cotton clothing to cover their bodies and without any bedding, could not but extort the respect and admiration of those who beheld them. In aggressiveness, the Hindus are neither unequalled nor unsurpassed; indeed, they are, comparatively speaking, a mild people. But in patient endurance and in the simplicity of their lives, they are unsurpassed by any other civilized people. What cannot such a people, well taught, guided and led, achieve?

Many were the thoughts that passed through our minds when we became one with the crowd and waded to that part of the stream where the pilgrims were bathing, and also when, in the previous evening, we found numbers of them cooking their simple meals on the sands. Let us by all means, we thought, get rid of whatever superstitions we, Indian men and women, may have, let us be prosperous and educated, but let us keep unimpaired and undiminished the simplicity, the hardness, the patient endurance, the devotional fervour and the spirit of service characteristic of our land.

The sanitary arrangements of the Mela were good. The arrangements of the Seva Samiti and other bodies for restoring to their guardians strayed children and women and for other similar service to the pilgrims were adequate and effective.

Dwijendranath Tagore

Though Dwijendranath Tagore, eldest son of the *Maharshi* Debendranath Tagore, has left this world at the advanced age of eighty-seven, his death will be keenly felt as a loss not only by lovers of the higher life of contemplation, but by those men of action and affairs also who are sincere lovers of the motherland and of the good, the true and the beautiful.

It is comparatively easy to give some idea of the life and personality of men of action and affairs and even of those who are, above all, men of letters. For, one has only to describe what they have done and what

Dwijendranath Tagore, Mahatma Gandhi and Mr. Satish Chandra Das Gupta at Santi-niketan

books they have written on what subjects and that may give some idea of the kind of men they were. But though Dwijendranath Tagore had taken some slight part in public life and had written some excellent works also, he lived mainly in the realm of thoughts and ideas, and was greater and nobler far than what he had done and written.

In his address on the philosophy of our people, read before the Indian Philosophical Congress in Calcutta, Rabindranath Tagore observed that "in India all the *vidyas*—poesy as well as philosophy—live in a joint family. They never have the jealous sense of individualism, maintaining the punitive regulations against trespass that seem to be so rife in the West." He went on to add

"Plato as a philosopher decreed the banishment of poets from his ideal Republic. But in India, philosophy ever sought alliance with poe

Rabindranath Tagore sketched after his death by Sri Kanu Desai, Student, Kalabhavan, Santiniketan

and its mission was to occupy the people's mind not merely the learned seclusion of scholars. According to our people, poetry naturally lies within the scope of a philosopher, when his vision is illumined into a vision.

No better exemplification of these obsessions can be found than in the personality of Dwijendranath Tagore. For he was both a poet and a philosopher. Of his philosophical writings the first was *Tattva* with its English version named *Ontology*. Other philosophical works are *Gita*, *Haramanu Ameshan*, etc., all in Bengali. Of his poetical works, the longest and most notable was *Shapna-Prayan* or *Dream Journey*. He also wrote a book in Bengali short-hand called *Rekha-kshar* or *Handwriting*. Being a fastidious critic of his own work, he was not satisfied with the first edition of *Rekha-kshar*. He prepared a second in an improved form, which was in the press at the time of his death. Literally to the end of his life he was devoted both to poetry and philosophy. His last two poems, including one which was revised by him on the very day of his death, will be published in the next issue of *Prabasi*. From these it is easy to discern that before leaving this world

he had come into possession of the peace and the bliss that pass understanding. Though for more than a year before his death he had totally lost his eye-sight, he continued either himself to write or to dictate to an amanuensis.

Several passages in Rabindranath Tagore's *Reminiscences* refer to his eldest brother's *Dream Journey*. Some of these are transcribed below.

"My eldest brother was then busy with his masterpiece *The Dream Journey*, his cushion seat placed in the south verandah, a low desk before him. Cousin Gunendra would come and sit there for a time every morning. His immense capacity for enjoyment, like the breezes of spring, helped poetry to sprout. My eldest brother would go on alternately writing and reading out what he had written, his boisterous mirth at his own conceits making the verandah tremble. My brother wrote a great deal more than he finally used in his finished work, so fertile was his poetic inspiration. Like the superabounding mango flowerets which carpet the shade of the mango tops in spring, the rejected pages of his *Dream Journey* were to be found scattered all over the house. Had any one preserved them, they would have been today a basketful of flowers adorning our Bengali literature.

"Eavesdropping at doors and peeping round cor-

ners, we used to get our full share of this feast of poetry, so plentiful was it, with so much to spare. My eldest brother was then at the height of his wonderful powers, and from his pen surged, in untiring wave after wave, a tidal flood of poetic fancy, rhyme and expression, filling and overflowing its banks with an exuberantly joyful paean of triumph. Did we quite understand *The Dream Journey*? But then did we need absolutely to understand in order to enjoy it? We might not have got at the wealth in the ocean depths—what could we have done with it if we had?—but we revelled in the delights of the waves on the shore, and how gaily at their buffetings, did our life-blood course through every vein and artery?"

In another passage, Rabindranath writes — "My sister-in-law was a great lover of literature. She did not read simply to kill time, but the Bengali books which she read filled her whole mind. I was a partner in her literary enterprises. She was a devoted admirer of *The Dream Journey*. So was I, the more particularly as, having been brought up in the atmosphere of its creation, its beauties had become intertwined with every fibre of my heart. Fortunately, it was entirely beyond my powers of imitation, so it never occurred to me to attempt anything like it."

The Dream Journey may be likened to a superb palace of Allegory, with innumerable halls, chambers, passages, corners and niches full of statuary and pictures, of wonderful design and workmanship, and, in the grounds around, gardens, bowers, fountains and shady nooks in profusion. Not only do poetic thought and fancy abound, but the richness and variety of language and expression are also marvellous. It is not a small thing, this creative power which can bring into being so magnificent a structure complete in all its artistic detail, and that is perhaps why the idea of attempting an imitation never occurred to me."

Dwijendranath had the gift of humour in abundant measure. It found expression in his Homeric laughter, and in such poems as his *Gumpha-Haran* or *The Rape of the Mustacho*.

Fortune had placed him above want. So it was not necessary for him to study or to write in order to keep the domestic pot boiling. But such was his love of knowledge and thought and such the overmastering urge of self-expression that not only did he live laborious days but would, not rarely, carry on his work of

study and composition by lamp-light till the small hours of the morning.

He was not a *sannyasin* who had killed all emotion. His heart was full of the milk of human kindness. He was blest with the full capacity for pure and refined enjoyment. He lived in the world but was not of it. All his brothers except Rabindranath and most of his sisters, his eldest son, his daughters, and many of his other near relatives had predeceased him. He certainly felt their loss, but remained calm in the midst of all bereavements.

The retreat in Santiniketan where he lived reminded one of the *tapovanas* described in ancient Sanskrit works, such was the atmosphere of peace pervading it and such the *Maitri* or friendliness to all living creatures manifested by its master. The birds and squirrels, etc., which would perch on his head or shoulders or run up his sleeves, and take food from his table or his hands, were not domesticated pets, but lived their natural lives of wild freedom.

We have never seen a more ardent lover of India than Dwijendranath Tagore. His love embraced in its wide sweep the motherland's storied past, its living present and its dream of future. But his patriotism was not narrow and exclusive, as his wide culture and the circle of his friends and admirers both of the East and of the West show. He deeply loved and highly respected Mahatma Gandhi and looked upon the principles of Non-cooperation as India's gospel of political salvation. He also fully believed in the cult of the charkha and khaddar.

Reception in China of Rabindranath Tagore's Message

In the Foreign Periodicals section in the present issue, there is an extract from *The International Review of Missions* relating to the reception of Rabindranath Tagore's message in China which conveys quite a wrong impression. The true facts were stated long ago in some issues of this Review in 1924. *The Japan Weekly Chronicle* wrote that before Tagore left China, "he received expressions of regret from some who had opposed him." *The Tree of Life* wrote: "As his audiences in one city after another listened to him, they felt an instant and instinctive response to his challenge to keep at all costs, their ancient spiritual culture."

CONFIDENTIAL TALKS TO YOUNGMEN

By

PROF. SATYAVRATA SIDHANTALANKAR

Pages 220. Cloth Bound. Gold Embossed.

PRICE RS. 3

Bombay Chronicle:—"It should be translated in every Indian Language, for it is a book which every youngman and woman should read

Vedic Magazine:—"The learned author undertakes to address youngmen on a most delicate topic, viz., that of sexuality. He takes the greatest care to avoid the possibility of any immoral association arising from a perusal of this book. .. Youngmen with a serious outlook on life will necessarily be benefitted by a study of Prof....."

The Student:—"..... the book is sure to yield immense good to the reader and repay more than it costs."

Swami Shraddhanandji:—"Prof. Satva Vrata has done a great service to the Motherland by bringing out this book."

LATEST BOOKS

Temples, Churches, and Mosques by Mr. Yakub Hassan. In this remarkable volume Mr. Yakub Hassan has attempted to give a kaleidoscopic view of the world's architecture. He takes us through the Chaldean to Roman, Greek and Egyptian temples, to Buddhist Monuments and the temples of the Far East in all their variety and splendour, to Solomon's temple and the Kaaba at Mecca, to the coming of the Messiah and the magnificent Cathedrals of Medieval Europe, to the birth of Mahomed and the Mosque architecture of Egypt and Turkey and Spain, and finally to the beautiful Moghul architecture of Hindustan. The reader finds himself face to face now with the pyramids of Egypt or the Parthenon of Athens, now gazing at the dizzy domes of St Marks or St Peters, now passing through the corridor of the Rameswaram temple, or admiring the golden flooring of the Sheshadri Pagoda, now stupefied by the height and immensity of the Kutab or lulled into a beautiful vision by the delicate craftsmanship of the Taj. Price Rs. 1-8.

HINDU-PAD-PADASHIAHI or a Critical Review of the Hindu Empire of Maharashtra by Vinayak Damodar Savarkar. It is written with an intimate knowledge of original sources, correspondence, literature and State papers. Sri Savarkar has succeeded in giving as vigorous and interesting an account of the great Maratha Nation as if he himself had been an actor in that great 18th century tragedy—full of flashes of insight that may place him high in the role of historians. Price Rs. 3.

Wonderful Discovery in the Medical World!!**For some Obstinate and "Incurable" Diseases**

Secured from the hidden stores of Great Lamas and Yogis of Tibet Burma and Himalayan Hills, by Mr P C Mukerjee, B.C.E., MISC.E., F.T.S. Vidyabhusan, late Resident Engineer Calcutta Corporation during his tours and travels in the obscure regions of these mysterious lands while Engineer to P. W. D., of Burma and Personal Assistant to the Chief Engineer of Kashmir State.

The fruits of many years' hard researches in the Himalayas and 25 years' successful experiments by the founder and 12 eminent Physicians of Calcutta and elsewhere are now placed before the public for the relief of suffering humanity in general.

Since 1918 the founder has been practising in Calcutta as a **SPECIALIST IN LEPROSY, LEUCODERMA and DIABETES** and has cured a good many serious cases successfully.

THE HIMALAYAN REMEDIES GUARANTEE CURE OF

I **Leprosy, Leucoderma, Gangrenes** and all incurable types of Sores, Skin-diseases, and of ulcers within or outside, also sinus, and fistula in ano etc.

II **Obstruction of urine** and all urinary troubles due to Gravels, stone, &c. (a) Renal colic, (b) Gall-stone—No operation or catheter-passing is necessary.

III (a) **Diabetes of all stages**, (b) **Pulmonary Phthisis** up to the stage when the patient has not been bed-ridden and reduced to skeleton but has vitality enough to digest our medicines.

Cure is effected by regular and scientific treatment with these unique medicines under the founder, assisted by an able Medical Board who help the founder so far as Diagnosis of any critical case concerned.

For an experiment we request the sufferer to try any of the following cheap but wonderful medicines—**serious Malaria** Special Preparation **painful Asthma** and dreadful **Dysentery** of all stages, Rs 1-8 each, **Scorpion Bite** Rs 8, **Extreme Dyspepsia** and hopeless **Nervous Debility**, Rs 2-8 each **Gastric Ulcer**, **obstinate Eczema**, all **eye complaints** except cataract, as well as long-pending **Rheumatism** of all ages, Rs 2 each.

Medicines are Free from any Injurious Substance.

All confidential Letters are to be addressed to Mr A Banerji M.D. (Homeo)
Secretary to the Medical Board

UNSOLICITED OPINIONS A FEW OUT OF A LARGE NUMBER

LEPROSY CURED Dr. A. P. Bagchi, M.D., C.M., Calcutta, writes 5-7-18. "You have successfully cured a female relative of mine of her leprosy. Her case was of 11 years' standing and tried by most of the well-known Physicians of Calcutta as well as of other places in India but with no effect. Prior to your treatment she used to suffer from severe attacks of fever. Her condition of skin was paralyzed in many places and had sores and swellings all over the body and had lost three toes." But under your marvellous treatment for the last 9 months, she has been completely cured of all her ailments.

CURE OF EXTREME DYSPEPSIA Mr. N. Mukerji, M.A., B.L., C.F., the late renowned Minister of Kashmir State and Vice-Chairman, Calcutta Corporation—writes 11-6-5. "I am suffering from a long and confirmed Dyspepsia, torpidity of liver and extreme nervous debility, I did not expect to live long. But now under your excellent treatment I find that normal tone has been restored

to the alimentary canal and the peristaltic action so revived evacuates the bowels easily and twice every day and I feel stronger daily with the expectancy of a further lease of life."

Major-General A. W. Hughes writes from Darjeeling 15-10-15. "I am an old man of 72, your medicine reminds me of my young age of 32."

Dr. S. K. Lahiri, M.D., writes 15-8-07. "After sufficient trial I have found your (1) Himadrikalpa (Nervous Debility), (2) Himadri Sudha, and (3) "Zerula" colic to be excellent medicines and undoubtedly far above the known specifics for diseases in which your Remedies are applicable. I am sure they will do immense good to the public."

Mr R. Mukherjee, late Chief Justice of the High Court, Kashmir State, writes 9-1-15. "The case of KALA-AZAR which occurred in my house and was declared as hopeless by all doctors, has been completely cured by your Fever-end, Himalayan Remedies."

*Apply with history of your ailments to—***Manager,****Himalayan Chemical Works,****106-1 SHAMBAZAR STREET (M. R.), CALCUTTA.**

Works by Prof. SANTOSH KUMAR DAS, M.A. (Hist. & Econ.)

1. THE ECONOMIC HISTORY OF ANCIENT INDIA

Recommended by The Calcutta University for the M. A.

Prof. GARNER says it is "a work of unusual Scholarship" Dr. JOLLY says it is a "valuable work, very thorough and very lively" Dr. KERRI thinks it contains "much valuable material, carefully collected and presented in an interesting and clear manner" The MODERN REVIEW says it is "a splendid compact little book." The HINDUSTAN REVIEW calls it "A veritable Encyclopaedia" The Vedic MAGAZINE considers it "A pioneer work"

Cloth Bound 311 pages, Price Rs. 3

2. THE LEAGUE OF NATIONS

In this book Prof. Das deals with the League's Theoretic and historical background, its constitution, its achievements in the fields of international relations and humanitarian activities and specially its relation to India

Price Rs. 2.

To be had of the Author at 5-2, Ananda Dutta Lane, HOWRAH.

SRIKRISHNA

HIS LIFE & TEACHINGS

BY DHIRENDRA NATH PAL—A True Companion in every walk of Life

Political Religious

Notes,—References—Researches from start to finish

His Life and His Teachings are the Beacon Light that guided and will ever guide the humanity to the eternal Land of Bliss Equally appreciated by the thinkers of Asia Europe Africa... men a Highly spoken of by Max Muller, Wilson, Telang Sir John Woodburn, Wilmherst, P. G. ridge, C. R. Das and thousands of eminent persons. The only book which has ever been written systematically on a really historical basis All sorts of Human-life emperor and slave, wise and fool over and hater, murderer and martyr, witty and dull, merry and sad march ever onward through the ages of this book The book deals with about 100 subjects in two parts which will fascinate the reader like hypnotic influence.

A few contents:—Part I—The Kingdom of Mathura. The King of Mathura. The Plot against Kansa, the Birth of Krishna, Krishna as a Child, Krishna as a Boy, Krishna in the Brindavana, Fight with alyas Sports in the Forest. The Great Banyan Tree The Indra Yagma. The Great Dance. Departure from Mathura. The Death of Kansa Krishna as a Prince. The War with Jarasandha. Krishna in Dwarka, the Panchala The Marriage of Draupadi, Indraprastha, The Marriage of Subhadra. The Great Assembly all Proposal for Rajasuya Arrival at Girivraja. The Death of Jarasandha. The First Worship. Sishu's attack on Krishna Bhishma's Reply to Sishupala. The Death of Sishupala. Krishna the Greatest the Great. **Part II—**The Banishment of the Pandavas, Krishna as Charioteer, Sanjaya's Embassy, Krishna and Sanjay, Krishna and Pandavas, Krishna and Draupadi, Journey to Hastinapur. CHEERFUL REFUND AGAINST DIS-SATISFACTION

THE RESEARCH HOME (M)—127, Musjid Bari Street, Calcutta.

Wonderful Scientific Health-Building Invention

Before this "PRANAYAMA APPARATUS" known as "Hydro" Lung-Developer and Tester was taken out for sale to the general public, it was first demonstrated before the Chief Medical

and Educational authorities to the Govt. of Bombay, and before many other eminent physicians, including Professors of Medicine and Physiology in Medical Colleges, and all of them unanimously recommended it as a useful apparatus in every household, school and gymnasium. Government of Bombay sanctioned it for use in secondary and Primary schools in the Presidency. It has obtained Patents in U. S. A. and other countries and is on the market for the last five or more years. It is in use by thousands of people in India and abroad and has helped them to restore themselves to perfect health. It costs only Rs 15 plus packing charge of Re. 1-4-0. Free delivery by Post to any Part of India, Burma or Ceylon for Rs. 18-8-0 a trifling investment for **HEALTH INSURANCE** that brings about a revolution in health. One apparatus quite sufficient

for any number of members in the family. No recurring expenses of any kind. With proper care lasts a life time. Complete instructions regarding the use of the apparatus sent with each instrument with a series of scientific breathing exercises. All orders must be accompanied by an advance of *ten pence five*.

Read what the following satisfied patrons say. Follow them and you will be benefited. Health is your Birth Right and you will have it. This simple method has stood the test of time and experience.

Dr. R. H. Bhadkamkar, M.A., M.D., Bombay.—This apparatus is ingeniously devised and is free from any defects. It will be of great use to persons suffering from respiratory diseases. Now-a-days the tendency of Lung-affections, especially Tuberculosis, is increasing and one of its chief causes is the ill-formed chest and shallow breathing. Whenever the respiratory capacity of children is found deficient, the use of this apparatus should be enforced. Every household, school and gymnasium should possess this instrument as it affords a very convenient method of practising Deep-breathing exercises.

The Hon'ble Mr. V. Ramesham, High Court Judge, Madras.—This is an ingenious and useful apparatus. It enables one to measure the development of one's Vital Capacity in the course of Breathing exercises. It will be useful to those who are interested in chest and health development. I think every household, school and gymnasium, may conveniently have this apparatus which is not costly.

Dr. H. K. Nanaraju, L. R. C. P., Ahmedabad.—This apparatus is very good and has given me entire satisfaction. It is very convenient to develop the lungs. I have recommended the same to some of my friends. It is really a boon to suffering humanity.

Mr. A. S. Venkaram Iyer, P. O. Mudikondan, Dt. Tanjore.—Sometime back I purchased from you one Dr. Godbole's Pranayama Apparatus and I should not hesitate a moment to inform you that I am *relieved of my asthmatic complaint*. I feel it my duty to recommend it to patients suffering from lung-complaints even when other remedies fail.

Dr. Henry Lindlahr, M.D., President Lindlahr Nature Cure Institutes, Chicago (U. S. A.) I have very carefully examined your Apparatus and I have no doubt that this device would prove highly beneficial in the treatment of pulmonary troubles and other disorders. I wish an abundant success in your efforts to relieve the suffering humanity.

A Patient from Karnal (Punjab) writes.—This apparatus is a simple but most effective invention for health improvement. By about three months use of this apparatus, I am completely cured of Consumption and have improved all round in general health. (Note—This patient was advised by his attending physician to use this apparatus).

Major K. G. Gharpure, I. M. S., Civil Surgeon, Sholapur.—This is a simple form of Deep-breathing apparatus and is an ingenious design to develop and test one's lung-capacity. This ought to be a great help in preventing respiratory diseases, if properly used. The need for such a developer of lungs in India is great as Consumption alone takes away a heavy toll every year. I consider the use of this apparatus ought to be a part of regular school gymnastics in every school and the simplicity and cheapness of the instrument will make it accessible to every household who have the interest of their children at heart.

Mr. S. Kamesham B. E. (Mech.) M. E. (Hous.) Forest Research Institute, Dehra Dun.—The scourge of mankind is ignorance. This aphorism is never more true unfortunately than in the case of ignorance of men of the benefits of proper diet and the potentialities of Deep-breathing. The latter happens to be the *only prophylactics to lung-diseases*, especially that fell disease consumption and I believe the great complete breath of Pranayama practice is one of the Vital necessities of life and happiness. If India, if not humanity, can ever ward off tuberculosis, it will, so far as one can see to-day be through regular deep-breathing and I heartily recommend Dr. Godbole's Pranayama apparatus which greatly helps the beginner to be broken into correct breathing exercises.

Dr. Bertram Shapleigh, M.D., Chicago, U. S. A. I have examined your deep-breathing apparatus which I find most valuable in practising the breathing exercises and especially in such as are preventive of lung-diseases. I could recommend it for those who are not strong in the lungs and for the development of lung-power in speakers and singers.

DR. M. B. GODBOLEY, 773, Sadashiv Peth, Poona City.

A FEW OPINIONS

Dr Ganganath Jha, M.A., D.Lit VICE CHANCELLOR, ALLAHABAD UNIVERSITY Writes

"I am glad that the book has taken a new line. I myself have never been able to reconcile myself to the idea that the cradle of our race lay outside the boundaries of our own country. It is a great consolation to find that these prejudices of mine have after all some scientific basis. I value your book specially on this account."

THE AMRITA BAZAR PATRIKA Writes

"Dr. Das has reconstructed with consummate skill, the life of the RIGVEDIC ARYANS as they had actually lived it, and we are brought, face to face, with our ancient Aryan ancestors, as it were, in their very flesh and blood. We do not remember having recently read such a valuable and fascinating work as 'RIGVEDIC CULTURE' and we thank the publishers heartily for bringing it out. Every lover of Ancient India, and every social, political and religious reformer should make it a point to read it. Dr. Das has shed a light on the name of the University he serves, and we only wish that there were a few more like him in the other Indian Universities. RIGVEDIC CULTURE is destined to remain a lasting monument to his name and fame."

THE FORWARD (17th January 1926)

DR. DAS HAS DONE A VALUABLE SERVICE TO INDIA by bringing out a handy volume on "RIGVEDIC CULTURE." His book bears distinct traces of his patriotic spirit which inspired his labours. He has conclusively shown that Indo-Aryans in RIGVEDIC periods selected their kings under an elective principle. The Book gives the reader a glimpse into their social and Socio-religious customs of the Aryans and speaks of their truly democratic instincts.

Elementary Banking

(For Indian Beginners)

By **B. RAMCHANDRA RAU, M.A., L.T.**

Author of "Present Day Banking in India," "Economics of Leather Industry," "Some Currency Lessons of the War" Etc Etc., and Lecturer in Economics and Commerce, Calcutta University

Demy 8vo pp 209. Price Rs 3

This book analyses the work of the Banks and estimates the economic importance of their operations viz deposits, note-issue, discounting, loaning and acceptance business based on wide reading it tends to explain the Scientific aspects of banking theory in a vivid and stimulating manner. It is indeed a long-felt need in this country that a Text-Book shown of unfamiliar historical details of banking history of other countries should be written and this book would remove the long-felt want. Now that the banking system of our country is about to be studied in detail by a committee, the people should be prepared to understand the work of a bank by buying and carefully digesting a copy of this book. No commercial student should be without a copy this book.

"NERVIGORINE"

—OR—

"The Royal Gold Nervine Tonic Pills"

It is the best and the surest cure for and safeguard against Neurasthenia, or complete Nervous Breakdown in both sexes, with *that constant tired feeling and lack of interest in work*

BRAIN-FAG
DEPRESSION
ANAEMIA,

SUNKEN EYES
PALE CHEEKS,
YELLOWISH COMPLEXION,

and also all the Nervous Complaints, due to Overwork, Old Age etc, as well as

LOSS OF APPETITE
DYSPEPSIA, (*Indigestion*)

DIABETES,
LUMBAGO, ETC,

caused thereby

It is, therefore, one of the sheer necessities of the present day hard and strenuous life - and not a luxury at all—to have the whole of your Nervous system so completely overhauled and toned up, and to regain within the incredibly short space of a fortnight, all of your used up energies, and acquire a new lease of fresh vigour, vitality and natural Beauty, in all its charms by getting the former rosy bloom once again restored to the pale and withered cheeks, and the long lost cheerful brightness to the lifeless eyes, and feel an altogether *new* man or woman again, by the use of such a *right* Royal Tonic—a fact well borne out by few unsolicited Testimonials, culled out at random, from the letters received from grateful users, all over India and quoted at the bottom

Complete cure, in all the above complaints effected, by the use of only **15** of these wonderful Gold Pills (*internally*) and a *phial* of *Persian Oil*, giving *new life* to the shattered Nerves.

From an old Formula of a great Royal Physician of the Court of of Emperor Ala-ud-Din, King of Delhi, (11th Century)

Price, per Box (complete for 15 days use), **Rs 15-8**, Post Free

A Concession :—Remit **Rs. 15**, in advance, and save **As 8**

A FEW TESTIMONIALS.

(1) Babu P. C. Mitra Nilphamari, (Bengal) writes

"Dear Sir - I was in due receipt of your V. P. Parcel containing "The Royal Gold Nervine Tonic Pills," and I have much pleasure to let you know that by using them only for 3 or 4 days, I was struck with their wonderful results.

I am now convinced that they produce their effects within an incredibly short space of time. I have now to request you, that you be kind enough to send me per V.P.P., another box of these 'Nervine Tonic Pills,' together with the Oil.

Please despatch the Parcel sharp."

(2) C. G. S. Pillay Esq. Advocate, Mandalay, (Upper Burma), on 11th of June, writes —

"Dear Sir, ... I have been using your "Gold N T Pills," since 12th inst., and feel its effects good

(in very Chronic Nervous, Diabetic, Bowel Complications with Paralytical tendencies) ... I am 57 years of age."

(3) Rai Bahadur B. C. Chaudhury, Jorhat, (Assam)

Writes —

"Dear Sir,—Sometime ago, I bought by V. P. Parcel one phial of your "Gold Nervine Tonic Pills," and a phial of "Persian Oil" and used the Pills. . . The result obtained was satisfactory. Please send me a phial of "Gold Pills," by V. P. Post, at once

(4) Khwaja Mubashir Husain Sahib, on 23-2-20

from Nagina (U.P.), writes —

Respected Sir,—I used 15 Royal Gold Pills in December 1914 and 1915 and derived great benefits"

And hundreds of other similarly unsolicited Testimonials are pouring in daily from all over the country.

The Well-renowned Talisman, **Paramananda Brahmachary's**

Nabagraha Kabacha

Do you wish to propitiate the nine planets which regulate and influence human fate? Use, then, Brahmachary's Nabagraha Kabacha. This Talisman has extraordinary power to undo the evil influences of all the planets and to bring you all success, peace and happiness in life. It is purely and sacredly made in the Shastri form. Thousands of unsolicited letters testify that this Talisman is wonderfully and verily efficacious for:—

Success in Business, Trade, Commerce, Agriculture, Examination and Litigation, Cure of all sorts of diseases, Aversion for worldly troubles, Premature death, Dangers at every step, Pecuniary distress, Quarrel with friends and relatives, Mental disquietude, Loss of wife and children, Increase of the number of enemies, service, Promotion, Increment of pay, Suitable marriage, Conjugal love, Honours from Government, longevity of life, in a few words, Health, Wealth and Prosperity.

It acts marvellously on the body of men, women and children, either Hindu, Mussalman, Christian, Jain or of any other faith. PRICE Rs. 3 AND 4 Postage Extra.

A FEW TESTIMONIALS.

1. Raja Sreenath Roy Bahadur, Bhagryakul, Dacca,—I have used your Talisman; its effects are undoubtedly wonderful.

2. Prof. A. B. Bhattacharya, M.A., Rajshahi Government College,—I had no faith in any talacha but Brahmachary's Kabacha's miraculous effects have astonished me.

3. Mr. P. C. De, Well-known Detective Novelist, Calcutta,—One of my relatives, suffering from chronic diseases, has achieved great benefit by wearing your Talisman.

4. Mr. R. C. Guha, Dacca,—Just after using your Talisman I have secured a good service. Its prompt effect really reminds me of Aladdin's Wonderful Lamp.

5. Mr. Racharan Mistri, Khulna,—Babu Harimohan Roy, a neighbour of mine, by using your talisman comes out successful in every litigation. He instructs me to wear your Kabacha. Please send me one.

6. Mrs. Kusunkumari, Dacca,—Wearing your Nabagraha Kabacha I have gained a new life. I am now out of diseases, mental disquietude and pecuniary difficulties.

7. Mr. M. P. Pradhan, Craddock Town, Nagpur,—The Nabagraha Kabachas I ordered, were put on by myself, my brother and my daughter. I got my increment, my brother also got increment and my daughter came out successful in Matric., quite unexpectedly.

WORKS OF PROF. JADUNATH SARKAR, M. A.

AURANGZIB

50 years' eventful history, and a life's task in research.

Complete in 5 vols. sold separately, Rs. 16.

Vols. I & II together (Second edition)

Reign of Shah Jahan and War of Succession, Rs. 5

Vol. III. Northern India, 1658-1681, 2nd ed. Rs. 3-8

Vol. IV. Southern India, 1616-1689, Rs. 3-8.

Vol. V. (1689-1707) Rs. 1

Based mainly on original contemporary Persian sources, viz. the Mughal State Papers, daily bulletins of the Mughal Court, the letters of Aurangzib and his contemporaries, (more than 5,000), Marathi *bakhars* and letters and the Assamese *buranjs*, besides contemporary Factory records of the English, French and Portuguese

H. BEVERIDGE - "Jadunath Sarkar may be called *Primus in Indis* as the user of Persian authorities for the history of India. He might also be styled the Bengalee Gibbon."

VINCENT A. SMITH - "You are doing first-class work. I have the highest opinion of your learning, impartiality and critical ability."

W. FOSTER, C. I. E. - "It is easily the best authority on the period with which it deals."

Studies in Mughal India

320 Pages. Rs. 2

Contains 22 Historical Essays on India in the 17th century and Mughal civilization in all branches

ASIATIC QUARTERLY REVIEW - "A series of essays of the most entertaining description."

The Evolution of Japan and Other Papers

By Lala Lajpat Rai

Price Re. 1, per V. P. P. Re. 1-6.

Second Edition. Revised and Somewhat Enlarged.

Prayag or Allahabad

Price Re. 1-8. Postage Extra.

The book contains 57 illustrations on art paper. The booklet is a guide to the visitor to ancient city. The English speaking reader will know from this book why so many people Allahabad year after year, especially during the Kumbha Mela years. Cloth, gilt. Paper and price beautiful.

The Knight Errant—Rs. 2-8

A Novel by SITA CHATTERJEE.

By the same Authoress

The Cage of Gold—Rs. 2-8

Both the novels received a warm reception from the press and public. In the two novels, the writer has analysed carefully and unveiled the secrets of the human mind in a way worthy of a psychologist. English reading-public will have a great opportunity of seeing Bengali life in some of its beautiful and real aspects.

The Historical Works of
Major B. D. Basu, I. M. S. (retired)

1. Rise of the Christian Power in India.

Five volumes Rs. 5-each; Postage Extra.

The Author has explained in the preface why the British Power has been called the Christian Power.

2. Story of Satara.

A true history of how Satara was annexed and its Raja deprived of his Sovereignty.
 Rs. 10 ; Postage Extra.

3. History of Education in India under the Rule of the East India Company.

The author has shown that English Education in India was first begun by the Indians themselves, and that when the Government took it up, it was done with selfish motives. These motives have been laid bare from official papers
 Rs. 2-8; Postage Extra

All public Libraries, All University Libraries, All College and School Libraries, All Libraries of Educated Indians should possess these valuable works

They supply the corrective to our incorrect knowledge of Indian History. The author supports his conclusions by copious extracts from official dispatches Parliamentary papers and proceedings, and the works of British and other European Authors, which few Indian Libraries possess.

Principal S. Ray's New Sanskrit Works

1. Bhavabhuti's Uttaracharitam

PROF. A. BERNHEDALE KEITH, *Edinburgh University*, says —

"I have looked through your book in order to see whether there are any suggestions which I could usefully make to secure greater adaptation to its purpose. It seems, however, that the mode in which the work is performed is well adapted for its purpose, and I note with satisfaction the effort to render the text into effective English. The explanations seem well adapted to secure comprehension of the text, and certain new renderings deserve serious consideration."

PROF. E. J. RAPSON, *Cambridge University*, says —

"I have read with great pleasure and interest. The commentary and notes are admirably clear."

Rs. 2-8

BEGAM SAMRU

Rs. 2-8

By **Brajendranath Banerji**with a foreword by **Prof. Jadunath Sarkar, C.I.E.**

Profusely illustrated.

Begam Samru was a wonderful woman. "A Kashmiri girl who from abject poverty and obscurity rose to the command of a European-drilled brigade, the sovereignty of a territory as large as two English counties, and the honoured position of a shield to the Delhi imperial family, and died in the fulness of her years in the odour of sanctity as the honoured ally of the English rulers and a saint of the Roman Catholic Church." (Sarkar)

This is the first attempt to write her biography on the basis of a critical study of all the available historical materials in print or MS in English, Persian, Marathi and French, besides the mass of old State-papers in the Imperial Record Office, Calcutta.

SIR EVAN COTTON .—

"A most readable and valuable book."
(*Bengal Past & Present*)

PIONEER :—

"A fascinating historical romance of the 18th century ... the result of patient, laborious research ... a judicious blending of a powerful romance with true and accurate historical information on the downfall of the Mughal Empire (8-10-25).

H. BEVERIDGE, I.C.S. :—

"The author has written an interesting account of the Begam, and has given much valuable information about her."

PROF. P. E. ROBERTS (Oxford) :—

"I have found it extremely interesting and I congratulate you on having found so good a subject and also on having treated it so ably and vividly."

R. B. RAMSBOTHAM, M.A., I.E.S., —

"Your book is an admirable type of scholastic work which I hope other Indian writers will copy."

M. C. Sarkar & Sons**90-2A Harrison Road, Calcutta.****THE AMAZING DISCOVERY OF THE AGE**

THE HIDDEN TREASURE :—How to choose a wife. How to get perfect happiness from conjugal life and many other hidden secrets not mentioned here. It gives unspeakable joy to the reader etc.

The above books deal with many secret sciences which are still unknown to the world those who intend to read the books should apply soon with the guarantee form thus : "I do give you my word of honour to keep the secrets private and not to misuse the powers." The price is fixed at Rs 4 each. V. P. charges extra. Those who will order for two books at a time will get them a Rs 8 including all charges. Limited number in stock, Apply soon.

Durjodhan Herbal Home, Post Box No. 11416 Calcutta, India.**READ WHAT THEY SAY.**

THE PRACTICAL MEDICINES, DELHI : The Mysteries of Nature is the best book of its kind. This is a Novel Book for one and all of any age, caste or creed and in any walk of life. It unravels the many and diverse MYSTERIES OF NATURE and helps one to get all-round happiness in every respect ; for instance, to get promotion in service and how to receive the favour of superior how to win other's affection and to turn disobedient persons into obliging ones and many other valuable suggestions.

MR. A. K. LUKANSY, Palmgroves, Bingerville (Ivory Coast) writes :

THE HIDDEN TREASURE : In my opinion, if there was time, when the marriage topic called for vigilant surveillance, ... it is in these daysthe question therefore arises, what is the root-cause of so many failures, disappointments, separations and divorcements as the after-math of some matrimonial alliances ? Undoubtedly, the answer lies in a deep mine of immutable laws of Nature which I dare say, Prof. B. Patra has successfully excavated.

Altogether, it is an unique and excellent publication that cannot fail in attaining its objective. **THE HIDDEN TREASURE** should find a corner in the wise man's library.

WONDERFUL REMEDIES OF EVIL INFLUENCE OF PLANETS

If you be not benefited by the Kavacha, money will be refunded. We send a letter of guarantee with each Kavacha.

Sani Kavacha—It will save you from adversity and misfortunes, and while lengthening your life, will increase your wealth, fame, peace of mind and success in undertakings. Price Rs 3-6

Shyama Kavacha—It is many in one. While making you free from debts, it will give you plenty of wealth with a happy band of joyous children and at the same time, make you proof against all attacks by enemies. Moreover, as the goddess Shyama is the spiritual-guide of Saturn, it is sure to make its wearer free from the wrath of Saturn and avert its evil influence. Price Rs 9-10

Dhanada Kavacha—Its wearer earns immense wealth with little struggling. Whenever a wearer thinks of something he gets the result without delay. The goddess Lakshmi always resides at his house and gives him son, wealth, long life and fame. In conclusion it will give even a beggar the wealth of a king. Price Rs 7-10.

Shatrubashi Bagalamukhi Kavach—It will help you to overcome your enemies. Moreover the wearer gets his desired object and is released from the court when he is prosecuted as an accused or is a plaintiff through some accident. Price Rs 9-2

Mr. P. Singh, Vakill, High Court, Calcutta—I am well astonished seeing wonderful effects of your Shyama, Dhanada, and Bagalamukhi Kavachas within a week. 29-4-24

Babu J. K. Roy, Zeminder, Honorary Magistrate, Chittagong—I was surprised at the efficacy of your Shyama, Nabagraha, Nrisingha and Sani Kavachas. They made me quite well. 4-4-25

Mr. Banka Satyanarayan, B.A., Deputy Tahasildar, Kothapeta, Godavari, Madras—I have been perceiving the effect of your Sani, Nabagraha and Bagalamukhi Kavachas which I brought from you. 30-10-24

Mr. A. H. Cumming, Judge, High Court, Calcutta—On examining my forehead, the exact time of birth of me and my son was correctly stated. He made some wonderful predictions about me which were proved to the last letter. 27-7-12

Mr. S. C. Sircar, M.A. 70, Shyam Bazar Street, Calcutta—I have got wonderful effects by using your Nabagraha and Shyama Kavachas. 13-12-23.

Our Kavachas have been circulated through all the lands from Hongkong on the Pacific ocean to Baghdad situated almost in the westernmost country of Asia; and crossing the boundary of Asia they have been running to the different provinces of the continents of Africa, Australia, Europe and America. We have always been receiving numerous unsolicited testimonials regarding the efficacy of our Kavachas as well as our astrological calculations, from those quarters, which are not published here for want of space. A copy of them may be sent, if asked for with one anna stamp. For some of them vide the May issue of the "MODERN REVIEW," 1925.

The biggest Astrological Society in India with a magnificent library, containing Astrological and Astronomical works. For Horoscope, Thikuni, and foretelling of all kinds, please drop a line to-day with one anna stamp.

All-India Astrological & Astronomical Society,

President—Pandit B. K. Bhattacharya, Jyotirbhushan, Jyotirbhushan, Vidya Bhushan, r. T. S. 370, (m), Upper Chitpore Road, Jorangan, Calcutta. Branch 49, Dharmaleela Street, Calcutta. Phone No. 1375, Barabazar.

Surjya Kavacha—Its wearer is sure to shake off the most obstinate diseases such as fistula, leprosy, Pthisis, Asthma, Rheumatism, Diabetes, etc. By dint of its virtues its wearers will enjoy long life, and get full vigour in mind. Price Rs 5-3.

Mahamrityunjoy Kavacha—It will ward off all serious disasters and accidents that might otherwise end in premature death. Price Rs 8-2

Nrisingha Kavacha—It will cure Leucorrhoea, Barrenness, Hysteria and other diseases in women and enable them to bear healthy and long-living children. It is sure to save you from the influence of bad spirits. Price Rs 7-5

Mahakala Kavacha—By wearing this even women who are hopelessly barren will get children, and those whose children never live will be mothers of children who will live long. One wearing this Kavacha comes out winner in disputes and lawsuits. And even a fool becomes learned as an effect of this Kavacha. Price Rs. 11-9

Nabagraha Kavacha—Its wearer is sure never to lose any lawsuit and will easily secure good jobs and promotions. He will not die heirless. It effects easy delivery in case of women. Price Rs. 4-4

Mr R.C. Das, Retired Dy. Magistrate Chittagong—I am really charmed by the effect of your Bagalamukhi and Dhanada talismans. 24-24.

Mr Chabaldas Jessaram, Agent, Eduljee, Vinshaw Press, Marwarpati—I have got immense benefit by your Dhanada and Shatrubashi Bagalamukhi talisman. 11-2-25

Mr S N Ghose—Merchant, Burdwan—I am quite astonished at the marvellous effect of the Kavacha you sent me. 2-2-22.

Babu H L Banerjee, Jaypur, Jessore—I have used your Nrisingha and Akshaya Kavachas and found that they have marvellous powers to change the destiny of men.

Mr. Dwarka Nath Chakravorty—Judge, Calcutta, High Court—Pt. B K Jyotirbhushan is an expert in Astrology. I am sure he will satisfy any body.

Mr K L Dutt—Retired Accountant General, Madras and Registrar, Calcutta University—Jyotirbhushan possesses extraordinary power in Astrology and Palmistry. 20-1-18.

**This Beautiful Necklace of New
Aural Pearls
FOR RS. 12 ONLY.**

These Pearls have wonderful lusture, and their exquisite sheen radiates a colour of limpid beauty and delight. Compare them with any other imitation or real Pearls, and if you can detect the inferiority to the latter or fail to see their superiority to the former return them within 8 days and your money will be refunded. An 18 inch long Necklace with gold clasp will be forwarded in dainty plush lined case for Rs. 12 per V. P. P. There is only a small stock of these lustrous gems available, so send your order at once to save disappointment.

SARIBADYARISHTA—Rs: 3 per seer (ideal blood-purifier tonic of the day)

H. E. Lord Lytton, the Governor of Bengal says : "I was very interested to see this remarkable factory which owes its success to the energy and enthusiasm of its proprietor, Babu Mathura Mohan Chakravarty. The preparation of indigenous drugs on so large a scale is a very great achievement. The factory appeared to me to be exceedingly well managed and well equipped, and I hope that it may continue to prosper." 11-8-2.

H. E. Lord Ronaldshay, ex-Governor of Bengal says : "I visited the Sakti Oushadhalaya (Dacca) on July the 17th, and was shown everything by the proprietor Babu Mathura Mohan Chakravarty, B. A. I was very much interested in all that I saw, and was astonished to find a factory at which the production of medicines was carried out on as great a scale ... Babu Mathura Mohan Chakravarty seems to have brought the production of medicines in accordance with the prescriptions of the ancient Shastras to a high pitch of efficiency." 17-7-20.

H. E. Sir Henry Wheeler the Governor of Bihar and Orissa says : "I had no idea that the manufacture of indigenous drugs was carried on upon so large a scale. The whole thing bears marks of enterprise and success." 28-7-20

Beshabandhu S. C. R. Das says : "I desire to place on record my high appreciation of the work of this factory. The business is carried on in an orderly and organized manner. Supervision leaves nothing to be desired. I congratulate the Proprietor on the success which this business has already attained." 24-10-22.

Catalogue and treatise on Ayurvedic treatment free on application.

KHADDAR

By Mrs NORAH RICHARDS

Strange and hard that paradox true I give,
Objects gross and the unseen soul are one.

—WALT WHITMAN.

The Sage wears coarse garments, but carries a jewel in his bosom.

—LIAO Tzu.

THERE is a certain kind of embroidery that is worked upon khaddar. Many examples of it are to be found in the Kangra Valley and in adjacent places, particularly in Chamba. The silken thread used is raw but varied in colour. The motifs of the design are broad in form and the stitchery long and straight, presenting the same effect on both sides. This embroidery, therefore, is reversible. I know of none that is so simple and yet so rich in effect. The richness is enhanced by juxtaposition to the coarse texture of the khaddar upon which it is worked. The texture of the material embroidered is of the utmost importance. How often exquisite stitchery goes for nothing by being worked upon rich material. There is no contrast and one gets a surfeit of richness. Rich material is in itself a medium of 'embroidery' on a larger scale, used in spectacular ways either as house furnishings (by curtains or by the garments of its inhabitants) in drama, or in pageants. For this large scale decoration intricate work often is lavished foolishly where broad masses of colour are all that is required. Embroidery is precious and should be applied with reticence. On clothing, the merest touch satisfies æsthetic demands; overmuch, even of a beautiful thing, so soon becomes vulgar and ostentatious. It is not richness that is desired in decoration but beauty. Small objects and accessories to costume may legitimately be heavily embroidered—Chamba rumals, bags,

purses, caps and so on. These are some fine examples of the Chamba rumal in the Central Museum at Lahore, embroidery of the kind that I have attempted to describe, worked upon khaddar.

A famous oratress has said that khaddar means any Indian homespun, whether of silk, cotton or wool, thereby making of it an economic symbol for homespun. The same lady has said that the decree for the wearing of khaddar by Congress members is merely sartorial. Khaddar clothing is to be the official wear for Swarajists. Both these ideas ignore the value of khaddar itself. Moreover, if khaddar stands for any homespun, why is there not more insistence upon homespun as homespun? Our national economists would be on firmer ground if they dropped the word khaddar in this connection and used the word homespun, thereby including materials made of silk and wool for the wear of patriotic people. As official wear for politicians, khaddar is questionable. It depends entirely on what shade is the politics of the wearer. If he is out for power, his khaddar garment will not become him. No one should wear khaddar but of his own accord, only thus can it be worn with conviction.

To my thinking, khaddar is a symbol of texture. Being made by hand, it is imperfect, but in this imperfection lies its æsthetic value. The hand aims at perfection but does not achieve it. It is only the machine that achieves the perfection of regularity—a

regularity that lacks the human touch. Nor should we expect a mechanical perfection from human beings. It is the humanity of man that endears. We do not love him for his minor perfections but rather in spite of them. We love him because he is humanly fallible. Were he quite perfect, he would be a machine and however much we might admire him, how could we love him? To demand un-human perfection from man is to foster hypocrisy. Pedestals require play-acting to be lived up to, for no true man is a god. Lao Tzu in one of his immortal paradoxes says, "Extreme straightness is as bad as crookedness." The man who is too rigid lacks the faculty of bending, and if he lacks the faculty of bending, he will lack the faculty of human contact, hence of human sympathy, and hence of love, which is spiritual power. A Saviour might well be a sinner in disguise.

But to return to khaddar. The hand, not being a machine but a living human organism, cannot be mechanically regular in its work. The Machine, however, has imitated hand-work and produces material of homespun texture, blemishes and all. Long before the wave of enthusiasm for khaddar arose, leading to counterfeit mechanically made khaddar, the machine in the West was profiting by the widespread development of taste for coarser texture in materials and was counterfeiting handspun. In house furnishings also, this taste for the less refined was showing itself. The canvas texture of hessian and its restful colour appealed to many artistic folk who used it for domestic purposes, among others to line their walls, giving it a coating of size or some other inconspicuous surface to make it dustproof. The Machine promptly produced wall paper designed to imitate the coarse canvas texture and people devoid of artistic conscience as promptly lined their walls with it. Some years ago there was in England a vigorous Simple Life movement inspired largely by the influence of Walt Whitman, Henry David Thoreau, and Edward Carpenter. This led to a certain fashion in simplicity and a famous furniture emporium in London stocked 'simple' things of unpolished wood at fabulous prices. A certain department of the emporium where the 'cottage' furnishings were on show was described by a wit as 'Simple Life for Millionaires.'

It is easy to scoff at this sort of thing, but it shows conclusively that the popular trend was towards simplification and that

plain things were being recognised as more beautiful than ornate things. The texture of life in those days was being khaddar. Like khaddar, its texture was anything but perfect, but there was a tolerant humanism abroad that accepted equally the failings and triumphs, the despairs and ecstasies, the sorrows and joys that weave the fascinating texture of life. Life is not perfect and therein lies its value to us as struggling aspirant mortals, for by its discipline we grow strong in spirit to attain our manhood. Perfection in life must be our constant endeavour though it cannot be achieved. Life itself is therefore, of which we are an integral part, is very much like the imperfect texture of khaddar. We ourselves, each one of us, are part of its warp and woof. We, regular and irregular human threads, are woven into its texture. None need despair because the texture of their own particular character has many human blemishes, many faults and failings, many frailties. This imperfect texture is ready and waiting to be embroidered with work and deeds. Our very frailties spur us on to great endeavour in expiation. It has been said and truly said: "The greater the sinner, the greater the saviour."

The texture of life is of great importance for it is the background of the expression of our individualities. Just as the coarse and simple texture of khaddar enhances the richness of silken embroidery, so the texture of simple life is a good background for deed and achievements. Generally to appreciate the texture of khaddar is a step towards appreciating the texture of a simple life. Life should not be too heavily embroidered; the texture should predominate, for it is better to do the whole than the part. It is the trend of our times, rather than the warp and woof of them, rather than occasional showy deeds and achievements. When lives are over-crowded with 'embroidery', there is little stability; for the background is almost nonexistent and the whole lacks quality. Man cannot truly live if he is perpetually in the limelight. Before he can give, he must receive, and he can only receive when he is receptive, that is, when he is still and not asserting himself. "All comes by concentration," said a Sage of the West, "let us therefore sit at home with the cause." I quote from memory, but in some such words Emerson expressed a great truth and enunciated an infallible method of achievement—to sit at home with the cause. Home

implies peace—withdrawal from the outside. Everyone should be safe from intrusion in his home, a place that should approximate to a temple of silence. We should beware of too much talk in our lives and of too much self-assertion. If we are too vocal, we leave off steam that should be conserved for action. Spiritual economy in life is a necessity and this economy can best be acquired by sitting at home with the cause.

I have hinted that the texture of khaddar is suggestive of the texture of the Simple Life, and we may with advantage ask: What is the Simple Life? To begin with, it is not primitive life, though it may in a measure approximate to it on the surface, but on the surface only. We may with a certain amount of accuracy call it primitive life on a higher spiral. It is life in contact with realities. We handle without shame domestic implements and vessels and we do not hide them out of sight. Rather we display them with pride as household ornaments. We allow a serviceable black kettle, for instance, to find elegant repose upon the hob of our living-room fire-place, ever ready—when a fire is burning to minister to the wants of its co-inhabitants. Even when a fire is not burning, a kettle is a finer finish to an empty grate than a bunch of dried grasses, a living plant, or even a screen. An axe and a hoe depositing in a quiet corner of the kitchen are almost human in their eagerness to get out and work! They prefer to remain, when out of use, in a cheerful busy room, rather than shut up in a dark and musty tool-house. Arrived at this point of contact with realities, we dispense with extraneous ornament as ornament. Works of art find their place in our dwellings but mostly in the form of things to be used. This naturally leads to the demand for utensils and implements of good workmanship. Vessels of earthenware, brass, copper and iron would reappear, for we could not expose tin or white enamelled ware in our living-rooms, and every room in our dwelling is to be a living-room—even the kitchen. In our simplification of labour, the kitchen would also be the refectory and as such offers great possibilities of development—a subject that requires an article to itself. Food eaten in common in a temple of labour—for such is the kitchen—would be the very height of ecstatic communion, where no single human being is refused either because he is a labourer, a stranger, or an outcaste. Life itself is the work of art that we would create.

All that we have learnt of the principles of design in applied ornament we apply to the creation of beautiful interiors. The simplest and most obvious principle of design in decoration is that of symmetry. This requires no thought, no sense of balance. It is mere repetition. It is in fact a primitive method of decoration. It has been with us for long. I have seen not only mantel-pieces so arranged but whole rooms with their furniture placed in monotonous symmetry. Let us not scoff at the lack of imagination that produces this result, for it is a step in the direction of applying the principles of design to the arrangement of a room.

The highest principle of design is that of equal distribution in which nothing is repeated but all is balanced. Masses are well placed and may be balanced by other masses or by space. Space plays a very important part in the principle of equal distribution and herein is a parable for the Simple Life. It is supposed by many that the Simple Life means hard work and strenuousness. This is a mistake. We simplify life in its material aspect that we may enrich it in its spiritual aspect and for this we need leisure space. Not only our rooms should conform to this principle of designed space, but the hours of our day. We may call space silence, if we will. Most assuredly without silence is no cultural growth, no spiritual experience. To simplify life that we may achieve freedom and leisure is to triumph over the clogging weight that pulls us down and enchains us to things. Henry David Thoreau, one of the Concord 'transcendentalists', a pioneer of the Simple Life, had a stone specimen which he displayed in his room, but when he found that it needed dusting, he pitched it out of the window with the reflection that it was waste of time to dust furniture while the furniture of his mind was undusted. Those who embark on the simplification of life find themselves asking what things are worth dusting, what things are worth while. The answer is: Very few. The simplifying process follows. Let it not be imagined that the process is easy. At the start one gets landed into all kinds of perplexities and hard work, and life is anything but simple! To ignore the accumulations of matter that pen us in is infinitely easier than to tackle them that we may escape. It is not until we shake the bars of our prison that we realize how unyielding they are. We had no idea we were so bound to mere things until we tried to detach ourselves from them. We find

numberless excuses for keeping this thing or that, but the day comes when victory has been won and we metaphorically pitch our precious lumber out of the window. This is a stage in our spiritual development, a stage each one of us must pass through; it is a sign that we are approaching the Path of Return, disentangling ourselves from matter.

On the path of Pursuit, material things are necessary to our development, and, as we proceed upon that path, the things we pursue have to be choice. This leads to discrimination between the beautiful and ugly; the useful and useless, the appropriate and inappropriate, in fact, between the worth while and the not worth while. It is an irony of fate that the realization of choice possessions is closely followed by renunciation of these same possessions as we set our feet upon the Return. There is comfort in the thought that renunciation of material things heralds the dawn of the advent of things of the spirit, of which we are to be not the possessors but the possessed. The exclusive use of khaddar implies asceticism, and therein lies its danger as propaganda to a people needing guidance upon the Path of Pursuit. India is in need of materialization for her spiritual good, however paradoxical it may sound. In the mass, she does not appear to be upon the Path of Return, though it is probable that souls on that path will seek rebirth on her soil. India being a land of extremes—a land of heat and cold, mountain and plain, palace and hovel, famine and plenty, drought and flood. According to the law of correspondences of which the saying, "As below, so above" is an indication, and according to observation, this country is a meeting ground for young and ancient souls. They need one another for their mutual evolution. The path of returning soul grows steeper and steeper as the summit of realization appears, and where is there a land needing greater endeavour? The problems of India cannot be solved by callow souls, however numerous. Her problems—economic, political, social, and religious—call for supermen. I have wandered from the Simple Life which does not stand for asceticism—far from it. It is not a poor morsel in material things that will content us. It is not less that we seek, it is more, but the more is in quality. It is in quantity that we diminish. Our clothes are to be fewer in number but more durable and more intrinsically beautiful. Our food less stimulating but more nourishing. Our

houses smaller but more compact. We need, however, more fresh air, more space, more leisure, more freedom, more philosophy, more art. We need an ampler atmosphere of life, an atmosphere in which the spirit man can unfold which it cannot when every hand it is hampered with the acquiring, the possession, and the burden of material things. The Simple Life is voluntary poverty, implying experience of riches. It is a passing beyond them. The gospel of the Simple Life is not meant for those who have no life to simplify. Among the poor, it is but a sordid grind to eke out mere existence. It is not until we have a surplus of the good things of life that simplification can have deep meaning. True cultural life cannot exist in an atmosphere choked with material pre-occupations. It may struggle to exist but will be no more than a superficial thing. Culture should be as much part and parcel of life as the warp and woof of khaddar is part and parcel of its texture. True culture is not a thing separate from life that we call art, literature, philosophy, science—it is life itself, in which beauty, imagination, thought and truth are implicit in our food, clothing, shelter, amusements, occupations, and conversations and silences. How little silence there is in conventional worldly life! It is so imperfectly understood as a cultural element that we are inclined to think we are not cultured unless we are talking about it. How could the seed germinate if it were vocal? Silence is a cultural process with it.

Domestic service there must be wherever there is a group of persons or wherever a single person follows an occupation calling that necessitates a sense of leisure. Dostoevsky says in one of his novels—The Brothers Karamazov, I think—that there must be servants in life but we should establish such a relationship with them as to make them forget they are servants. (This requires co-operation on the part of servants.) For harmonious domestic life, servants should be, as it were, members of the family group. An intimacy should exist that would make them forget their servitude. This intimacy can be established only by the leading a simple life in which all may share without incongruity. It is unthinkable in conventional life where barriers abound between the server and the served. Life must be of khaddar texture before servants can be freed from their servitude.

Disciples of the Simple Life would re

organize their days on a basis in which toil is banished that pleasant work and leisure may appear. More leisure for the worker but more work for the leisured. The Simple Life, however, does not only mean readjustment of labour and leisure resulting in a kind of spiritual economy, it leads also to spiritual alchemy in material things embodying the idea of that profound and disturbing paradox of Walt Whitman that, *Objects gross and the unscen soul are one*. The things with which we surround ourselves should be a reflection of our inner and higher selves. Matter must be spiritualized. This is Walt Whitman's message for our materialistic age. Though *maya* is *maya*, it is yet our greatest reality, for it is through *maya* that spirit manifests itself. We are spirit materialized and it is for us in our turn to spiritualize matter. Only thus can we liberate ourselves from its bondage.

Liberation can come in no other way—a casting off of outer coverings and husks to get to the very kernel of life which is both material and immaterial. In ordinary complex life, spirit and matter are divorced and so we flock to our churches and temples seeking things of the spirit when all the time they are locked up in our selves and in material existence, awaiting deliverance. When we find them, it will be hard to say whether they are spirit or matter, for both will be one. Spirit and matter are the warp and woof of life and as in the leisure and labour of khaddarized lives, it is merely a matter of readjustment of these elements that will lead towards the perfect whole. Like the embroidery already referred to, life must be reversible, spirit and matter harmonized on both planes, until there is no right side or wrong side, no spirit or matter, for both will be one.

BRITISH EXPANSION IN TIBET

CHAPTER II

By TARAKNATH DAS, M. A., Ph. D.

Lord Curzon's Forward Policy towards Tibet before the Anglo-Japanese Alliance

IN 1895, the British Government made a settlement of the border disputes between India and Tibet through the co-operation of China. During the period and the year 1899, when Lord Curzon came to India as the Viceroy, many momentous things happened in the field of world politics in all parts of the world, and particularly in the Far East. The supposedly enormous power of China was proved to be a mere myth when Japan crushingly defeated the former in the Sino-Japanese War. This gave conclusive evidence of Chinese helplessness, and the scramble for partitioning China into spheres of influence by the powers began. It was at this time that Russia, France and Germany, co-operating amongst themselves, humiliated Japan and forced her to give up the continental gains conceded to her by the first Treaty of Simunoseki. This concerted action on the part of Russia, France and Germany threatened British influence in Peking. This was also the time when Great Britain had to give up her idea of having an alliance with China against Russia; ¹ because Li Hung

Chang, the great Chinese statesman, was dealing with Russia to establish an offensive and defensive alliance.² Great Britain was feeling the pressure of insecurity to such an extent that she was considering an alliance with Germany and Japan.³ It was about this time the South African situation was leading to a tension. Thus England felt the imperative necessity of strengthening her influence in China at all costs.

Lord Curzon, the Governor-General of India, sent a despatch to the India Office, London, outlining the policy of direct negotiation with Tibet and disregarding Chinese Sovereignty. This policy was later approved by the Foreign Office. This Curzon despatch dated the 30th of March, 1899, shows the impatience of the British authorities in India. The despatch in part reads:—

"..... We do not desire to conceal from your Lordship our opinion that negotiations with the Chinese Resident [regarding the access of Indian Traders to Phari and the question of boundary marking]—although they have the sanction of long usage—and although the attempts that have so far been made to open direct communications with

the Tibetan authorities have resulted in failure—are not likely to be productive of any serious result. We seem, in fact, in respect of our policy towards Tibet, to be moving in a vicious circle. If we apply to Tibet, we either receive no reply, or are referred to the Chinese Resident. If we apply to the latter, he excuses his failure by his inability to put any pressure on Tibet. As a policy, this appears to us to be unproductive and inglorious. We shall be grateful for your Lordship's opinion as to the advisability of any modification of it in the near future."

The instruction of the British Foreign Office, to the India Office, sent on May 19, reads in part as follows—

"With reference to Lord George Hamilton's inquiry as to whether diplomatic pressure could be exercised at Peking to secure a binding pledge from the Chinese Government, with regard to free access to Phari, and freedom of trade there in the event of rectification of frontier being conceded, I am to observe that during recent years, Chinese authority in Tibet has been little more than nominal. The enclosures in the Despatch which you forwarded from the Government of India would even seem to show that it is at present practically non-existent.

"In these circumstances, Lord Salisbury considers it very improbable that any representations at Peking on the subject would lead to a good result, but he will take an opportunity of consulting Sir Claude Macdonald, who is expected to arrive in England towards the end of this month.

"It would certainly be preferable to open direct communication with the Government of India and the Tibetan authorities, although the Viceroy states in his despatch that the attempts which have so far been made in this direction have resulted in failure.

"As, however, the Tibetans have attempted to repudiate the convention as regards the frontier on the ground that the Chinese have no authority to act for them, it is reasonable to suppose that they might be induced to enter into negotiations, especially as the Government of India are prepared to allow them to remain in possession of the territory surrendered under the boundary agreement."

The Secretary of State for India, in conformity with the policy of the British Foreign Office, authorized the Governor-General of India, Lord Curzon, on the 8th of December, 1899, to carry on direct negotiations with Tibet. The despatch in part reads.—

"Her Majesty's Government approves the course of action adopted by your Government in regard to the establishment of direct correspondence with the Tibetans, and the Secretary of State for Foreign Affairs has instructed Her Majesty's Minister at Peking by telegram to endeavour to obtain assistance of the Chinese Government in securing for native traders from India access to and freedom for trade in Phari."

This really marks the beginning of the elimination of the Chinese factor in the Tibetan controversy. It will be later on seen that

the British Government would sign a treaty with Tibet bringing Tibet within its virtual control. From now on, the third factor—the Russian attitude in Tibet—will begin to play an important part. However, it is interesting to see that the British Indian Government wanted to send a mission to Tibet through Nepal and also through Yunnan. Both missions failed and as a last resort a letter to the Dalai Lama was sent through Ugyen Kazi who as an agent of the Dalai Lama came to India to buy two elephants for him.

The following extract from the letter from the Government of India in the Foreign Department, to the Right Honorable Lord George F. Hamilton, His Majesty's Secretary of State for India, dated Simla, the 25th July, 1904, reads in part:—

"..... Enquiries were accordingly instituted as to the possibility of despatching a suitable emissary to the Tibetan capital either through Yunnan, through Nepal, or by way of Ladakh. Our Resident in Nepal, who was verbally consulted, advised against any attempt being made to reach Lhasa via Nepal, except with the knowledge and consent of the Nepalese Durbar, to whom we were prepared to refer. The Agent whom we suggested to the Government of Burma as a possible emissary for the mission through Yunnan, was reported to be unsuitable. The proposal to communicate through Ladakh, however, seemed to offer some prospect of success. This prospect having failed, we determined to make one more effort to procure the delivery of a letter to the Dalai Lama through Ugyen Kazi. As to the exact form which the altered policy should assume, we shall, if necessary, address your Lordship at a later date. But we may add, that before long, steps may be required to be taken for the adequate safeguarding of British interests upon a part of the frontier where they have never hitherto been impugned. ..."

This expression of altered policy and intimation of taking steps to protect British interests later on developed into Col. Younghusband's expedition to Tibet. The South African War and also the Boxer Outbreak made it imperative for Britain to be cautious in the forward march to Lhasa.

RUSO-TIBETAN NEGOTIATIONS

While the Anglo-Tibetan relations were coming to a head because of the altered policy approved by the British Foreign Office, Russo-Tibetan negotiations were going on with great rapidity. It was because Russia began to take active interest in Tibetan matters that the British Foreign Office and the India Office in London agreed to the forward policy of Lord Curzon. Mr. Percival Landon, in his "Opening of Tibet", gives a vivid description of this phase of Tibetan affairs and says:—

"... I do not wish to suggest that Russia in attempting to gain influence in Lhasa, was guilty of anything which reflects the least discredit upon her statesmen. On the other hand, it was far-sighted and, from many points of view, an entirely laudable attempt to consolidate the Central Asian Empire which she believes to be her rightful heritage. The only reason the British found it necessary to intervene was that the equally justifiable policy which they had themselves deliberately adopted, and their own vastly greater interests in Tibet, clashed all along the line with those of the Muscovites. We happen to have been the better placed to achieve our end. . . ."

Regarding the mission of Dorjiew from Lhasa to St Petersburg (1898) and his later actions at Lhasa, the same author remarks:—

"Precisely what took place in Russia has not been made public. All that is known is that when he returned to Tibet, Ghomang Lobzang (Tibetan name of Dorjiew, who was born in Siberia and Mongolian Buriat, and Buddhist by religion and belonged to the Monastic order Debung Monastery) found himself in the unofficial position of Russian agent in Lhasa. He brought with him a large number of exceedingly valuable presents, and he lost no time in trying to persuade the Lhasan hierarchy that it was to their interest to secure the informal protection of the Tsar of Russia. Briefly stated, his arguments were these: You have no strength in the country to resist invaders, your natural protector and suzerain, China, is a broken reed, even at this moment she is entirely under the domination of the British. If you remain any longer trusting to her support, you will find that she leaves you as a sop to the Indian Government. The English are a rapacious and heretical nation, they will not respect your religion, they will bring you into servitude, and the ancient and honorable rule of the priests in this country will surely be put an end to. On the other hand, if you will ask the aid of Russia, you will secure the most powerful protector in the world. You will have gained on your side the only military power that is able to crush the English nation. More than that, you may be able to induce the great Church of that nation to embrace your faith. Another Emperor, as great as he, has in past years been converted to our great faith, and if you can convince Nicholas, whose sympathies with Buddhism are universally admitted, it will not be long before the whole Russian race are obedient servants and loyal disciples of your Holiness."

Such, in rough outline, was Dorjiew's policy. It produced an almost immediate effect upon the Dalai Lama himself. Impetuously, without consulting his national council, he accepted the suggestion, and even proposed to visit St. Petersburg in person. But the Dalai Lama had reckoned too early. The Tsong-du had still to be consulted, and here the Dalai Lama received a check. The Tsong-du replied diplomatically that it was very far from the Russian Emperor, but that they required no protection, that the Dalai Lama had exceeded his authority in committing the country to a consideration of Dorjiew's offer. The grand lama did all in his power to induce them to accept his scheme, but without avail, and the next

year another ruse was adopted by Dorjiew to further the interests of his patrons.

"He went again to St Petersburg, and there was received in audience by the Emperor himself. He returned after a short stay, the bearer of two interesting things. One was a letter, asking that the Dalai Lama should despatch an Envoy to Russia to discuss the matter fully. The other was a complete set of vestments appertaining to a Bishop of the Russian Church. In spite of the recent declarations of the Tsong-du, the Dalai Lama on his own responsibility, sent in response Tsan-nyid, an Abbott of high rank, to accompany Dorjiew, who a month after his arrival at Lhasa, was again on the road to Europe. Upon their arrival in Russia, they were received with the highest consideration, and a second audience with the Tsar was granted them. Ultimately they set off on their return journey and reached Lhasa in December 1901. They there laid before the Dalai Lama a proposal from the Russian Government, that a Prince of the Royal house should take up residence in Lhasa for the purpose of promoting friendly relations. The other document which the returning Abbott laid before his Master was the hotly discussed agreement between Russia and Tibet."

The British authorities in Russia were keeping close watch on these missions, and the British Foreign office was kept informed about the visit paid to the Emperor, and the two following extracts from the "Journal de Saint Petersburg," verify certain phrases of the Russo-Tibetan transaction:—

"Sa Majeste L'Empereur a reçu le Samedi, 30, Septembre au Palais de Lavadia, Aharamba-Agvan Dorjiew, premier tsanit-hamba pres le Dalai-Lama du Thibet." Great Britain, papers relating to Tibet (1899-1904) page 113.

"Extract from the "Messenger Official" June 25th (July 8) 1907.

"Sa Majeste L'Empereur a reçu le Samedi, 21 Juni, au grand Palais de Peterhof, les Envoyes Extraordinaires du Dalai-Lama du Thibet, Hambo Akhvan Dorjiew et Kaithhook Hambo Donir."

"Après la reception des Envoyes, a eu l'honneur d'être presente a Sa Majeste L'Empereur le Secrétaire de la Mission Djantsan Zombon Taitong Puntack, Chef de l'Arrondissement du Thibet."

"En meme temps a eu l'honneur d'être presente a Sa Majeste L'Empereur le Capitaine en second Oulanov, du 1er Regiment de Cosaques du Don, attache a la Mission Thibetaine comme interprete."

"Le meme jour, la Mission Thibetaine a été reçue par Sa Majeste L'Empereur Marie Fedorovna."

Free translation of the above:—

On Saturday, the 30th September, His Majesty, the Emperor, received Aharamba-Agvan Dorjiew who is second to the Dalai Lama of Tibet, in the Palace of Lavadia.

On Saturday, June 23, His Majesty the Emperor received Hambo Akhvan Dorjiew and Kaithhook Hambo Donir, the Envoy Extraordinary of the Dalai Lama, at the grand palace of Peterhof.

After the reception of the Envoys they had the honor of being presented to His Majesty the Emperor's Secretary of the Mission, Djantsan

Zombon Taitong Puntack, Chief of the Department of Tibet. At the same time, they had the honor to be presented to His Majesty the Emperor's First Lt. Oulanov of the Regiment of Don Cossack, who was attached to the Tibetan Mission as interpreter.

At the same day the Tibetan Mission was received by Her Majesty the Empress Marie Feodorovna.

Sir G. Scott, British Ambassador at St. Petersburg, inquired about the character of the Tibetan Mission from Count Lamsdorff, who assured him that "although the Tibetan visitors had been described as Envoys Extraordinary of Dalai-Lama, their mission could not be regarded as having any political or diplomatic character."¹¹ But this assurance was not regarded sufficient by the Indian Foreign Office and the Secretary of Foreign Affairs and the Marquess of Lansdowne in a despatch to Sir G. Scott, dated, Foreign Office, August 16, 1901, while expressing satisfaction at the announcement that the Tibetan Mission did not have any political character, recorded that "His Majesty's Government could not regard with indifference any proceedings that might have a tendency to alter or disturb the existing status of Tibet."¹²

Writing in 1900, Sir Archibald Colquhoun gives a picture of the then existing Anglo-Russian rivalry from the British point of view:—

"The expansion of the Northern Colossus—more Oriental than European, whose heart of Empire lies in Central Asia into China and towards the natural zone of influence of Europe, her determination to control commerce, religion and communication, are grave dangers for all other nations, more especially the Anglo-Saxon peoples. Unchecked, they would lead to the subjugation of Europe by Asia. The danger is clear to any one who will take up the map. Russia is already becoming a paramount Power in Northern China. Russia with a port on the Persian Gulf or Indian Ocean treated as a right beyond question. Russia connecting Central Asia with the Persian Gulf by railways, from Askabad southwards, and from Tiflis by Kars and the Turko-Persian frontier, thus making herself independent of the Dardanelles and the Suez Canal, and cutting into the direct Indo-European line of the overland communication. A conflict between East and West for the domination of the old world is imminent. Slav and Saxon must contend for supremacy, even for equality, and upon the skill and determination of the two opponents hangs the future of Asia, and not only of Asia but of Europe."¹³

It is generally held that Russia intrigued against Britain in Tibet, and it is due to the bribing of the Tibetan statesmen that Russia secured such a stronghold there. There may be some truth about the bribing of the so-called Tibetan statesmen. But one must not

forget that the rise of Russian influence in Tibet was due to the weakening of the Chinese influence in Tibet, also due to the Tibetan dread of the British, who conquered India through means well known to the world as well as the Tibetans.

"China's loss of prestige in Tibet since the Japanese-Chinese war, owing to her inability to assert her power over the vassal state, has much to do with this pro-Russian leaning. Previous to that war, and before China's internal incompetence had been laid bare by Japan, relations like those between master and vassal existed between Tibet and China. The latter interfered with the internal affairs of Tibet and meted out punishment freely to Tibetan dignitaries and even to the Grand Lama. Now she is entirely helpless. They know that their former Suzerain has fallen and is therefore no longer to be depended upon. They are prejudiced against England on account of the subjugation of India, and so they naturally concluded that they should establish friendly relations with Russia, which they knew was England's better foe.

"It is evident that the Dalai-Lama himself favors this view, and it may be safely presumed that unless he was favorably disposed towards Russia he would never have accepted the Bishop's garment from the Tzu. He is too intelligent a man to accept any present from a foreign Sovereign as a mere compliment. The Dalai-Lama's friendly inclination was clearly established when in December, 1900, he sent to Russia his Grand Chamberlain as Envoy with three followers. The party was received with warm welcome by that court, to which it offered presents brought from Tibet. It is said that on that occasion a secret understanding was reached between the two Governments."¹⁴

Mr. Kawaguchi points out that the British intrigue under the guidance of Sarat Chandra Das, who entered Tibet as a Sikkimese priest and which led to trouble at the frontier, created a revulsion of feeling of the Tibetans towards Indians and other foreigners. Tibetans were suspicious of the motive of the British when they started to build a fort at the frontier between Tibet and Sikkim, and this gave an excuse for the British to construe that the Tibetans were intriguing with the Russians, and the British Indian Government started its forward policy.¹⁵

The British method created fear in the minds of the Tibetans. Mr. Oscar T. Crosby in his valuable study on Tibet and Turkestan, says: "Remove the fear of you in Tibetan hearts, and you thus remove the fear of Russia in yours."¹⁶

According to the despatch sent by Sir E. Satow, to the Marquis of Lansdowne on August 5, 1902, from Peking, it was intimated that there was some rumour that a secret agreement between China and Russia had been agreed upon regarding Tibet, China

renouncing the sovereignty over Tibet, to Russia to secure the alliance.¹⁷ This was hotly denied by the Chinese Foreign Office. But the continued Russian occupation of Manchuria after the Boxer trouble and the persistent refusal of the Tibetans to treat with the British officials regarding the treaty of 1890, which was, according to the British contention, violated by the Tibetans, led the Indian Government to send an expedition to Lhasa. A few weeks earlier the British Indian Government had ordered Mr. White to proceed with a band of escort to the Tibetan frontier. On August 30, 1902, the Chinese Government asked the British Government through Sir E. Satow

"That the Officer commanding the troops may be instructed to refrain from taking any action pending the arrival of the Chinese Officer, when matters can be amicably discussed. He fears that proceedings of the British Resident are likely to be misunderstood by the Tibetans."¹⁸

Of course, the Russian Government took notice of the British forward movement towards Tibet and intimated to the British Foreign Office, that "in the present state of unrest and excitement, measures of this kind were dangerous and might produce a renewal of the Boxer Agitation."¹⁹

This aggressive policy of England in Tibet was followed by the Russo-Chinese Commercial Agreement regarding Tibet in 1902. The principal articles of which are as follows —

Article 1 Tibet being a country situated between Central Asia and Western Siberia, Russia and China are mutually obliged to care for the maintenance of peace in that country. In case trouble should arise in Tibet, China, in order to preserve this district, and Russia, in order to protect her frontiers, shall despatch thither military forces on mutual notification.

Article 2. In case of a third power's contriving directly or indirectly, troubles in Tibet, Russia and China oblige themselves to concur in taking such measures as may seem advisable for repressing such troubles.

Article 3. Entire liberty in what concerns Russian orthodox as well as Lamaist worship will be introduced in Tibet, but all other religions will be absolutely prohibited.

Article 4. Tibet shall be made gradually a country with an independent inner administration. In order to accomplish this task, Russia and China are to be sharers of the work. Russia takes upon herself the reorganisation of the Tibetan military forces on the European model and obliges herself to carry into effect this reform in good spirit and without incurring blame from the native population. China, for her part, is to take care of the development of the economic situation in Tibet, and her progress abroad."²⁰

This treaty makes it clear that China and Russia were apprehensive of Great Britain's designs in Tibet and pledged for joint action. Article 3 shows the possibility of Russia using the Russian Church and Lamaist faith in her favor. Article 4 foreshadows Russian preponderance in Tibet. Not only that, although it is mentioned that China will have the final control over the industrial development of Tibet, the fact that China was in no position to carry on any project of industrial development of Tibet would mean that China would eventually ask Russia to co-operate with her to exploit Tibetan mineral resources.

In fact, there is evidence that a commercial agreement was made between China and Russia for that purpose.²¹

Great Britain wanted to test the strength of the agreement, by sending an expedition to Tibetan soil at an opportune moment. Failure of Russia, the British Foreign Office thought, to act according to the agreement, would destroy the Russian prestige among the Tibetan and Chinese politicians, which would be a great success for British diplomacy. She waited for a decisive move till the Anglo-Japanese alliance was concluded.

21. "No other Power can intervene between Russia and China in this matter, nor can any of these stipulations be modified owing to the interference of other Powers. The Russo-Chinese Bank will defray all the expenses of prospecting for mines in Tibet. A royalty of ten per cent. shall be paid to China upon all coal and metal extracted

Mining proprietors, whether Chinese or Russian must not extract in any year to a greater value than 200,000 taels. All recently discovered veins must be clearly marked out and defined, so as to avoid future disputes. All imports of machinery and tools, if they come via Russia, shall be free of duty. Unauthorised understandings, whether by Chinese or Russians, to be severely dealt with. Mines opened by Russians to be reported to the Russian Minister at Peking, for the information of the Chinese Foreign Office, if there be no objection the Foreign Office will then instruct the assistant Resident in Tibet to take action accordingly. Parker's article on "The Bottom-Rock of the Tibetan Question"

The treaty, if true, does throw some light on the possibility of economic penetration of Tibet by Russia. But when we compare it with the present British economic control of Tibet, we find it to be favourable to China and her sovereign rights in Tibet.

MILITARISM AND EMPIRE

By K. M. PANIKKAR

THE intimate relation and the interdependence of Militarism and Empire have been recognised by all students of history. The Empire is necessary for military power and glory, and military power is necessary to keep up the Empire. Thus, Great Britain cannot reduce her armaments because India and the other parts of the Empire have to be defended. Again, for the maintenance of a great military force the man power of India and the devolution of expenditure so as not to make it fall entirely on England are essential. The same is the case with France whose colonial army has become a chief factor in her defence system. The heavy military expenditure of Japan has to be borne by the Japanese alone, unless the Koreans could be found to share it; but that, in turn, necessitates a larger army in order to maintain peace and order in Korea and to hold it against aggressors.

Besides, the overseas possessions provide the army with ample area for continuous operations which would help to keep the army in an efficient state. During peace time, Indian frontier provides for Great Britain the training ground for her armies, which are given an opportunity to see constant field service in the operations

against the tribes. By periodical change of regiments, the war-spirit in the whole arm is kept up and the field morale of the soldier is tested. This costs the British Exchequer nothing as the whole expense of this policy has got to be borne by India. The Eshe Report gives a frank statement of policy and the Indian army which is supposed to be for the Defence of India is recognised to be an imperial force on which Great Britain could depend upon any time for its offensive and defensive warfare. India and the tropical colonies offer Great Britain a opportunity for successfully perfecting her military arm without arousing the suspicion of the public in England, which by a curious tradition resents military display.

The same is the case with France. Her military glories are won and martial spirit kept up in times of peace in the colonies. In her African colonies also, the same policy of veiled military government is followed and the whole African policy of France is dictated by this consideration.

Benedetto Croce, the Italian philosopher mentions that during the Tripolitan war it was seriously suggested by a writer that the 'great victories' of Italy in this predator expedition should be celebrated in a Latin

history. The spirit of Zubernism which imperial tradition generates is even in normal minds such that a nation which once embarks on a career of conquest and exploitation is bound increasingly to become militarist in ideas. In fact, even in countries which glory in civilian tradition as England, the spirit of military dictatorship for those outside the white race has come to be accepted as a principle. In India, the British soldier and officers are as much privileged individuals as in imperial Germany. The rules and regulations in cantonment areas are sufficient indications of this and the incidents that are daily reported in the press of outrageous actions on the part of soldiers towards civilians which go off unpunished are sufficient proof of this mentality. A recent case which attracted some attention may be mentioned here. A well-known public worker of Karachi fell in with a number of soldiers in a railway train. He was kicked out of his compartment and very roughly handled, but the soldiers who were responsible for the crime were acquitted by a court-martial. The outcry that was raised against Lord Curzon for daring to inflict punishment on a regiment which refused to name a soldier who had committed outrage on an Indian woman shows how strong the feeling of militarism is in Anglo-India. In fact, to breathe a word against the imperial militarists is as much a high crime in England as it was in Germany, and any one, however high his position, who fights for civilian authority over the military as Lord Curzon did in his struggle against Kitchener is bound to go down.

The complete subordination of political and civil policy to military and naval interests in Japan, which country exemplifies the imperialist spirit almost as well as Great Britain is well known. The elder statesman who from behind control the Mikado's government pursue with single-minded determination the policy of perfecting the army and the navy with a view to further aggrandisement and greater position as an imperial nation.

The cynical way in which the principal signatories of the Washington Conference tried to overreach each other after drawing up an agreement for the limitation of armaments is indicative of the policy of force that underlies imperialism. Japan refused to accept the 5-5-3 ratio in relation to auxiliary craft and though she scrapped a number of battleships, the total tonnage of her building programme after the conference was even

greater than what she had laid out for herself before 1921. The hurry with which the fortification of Bonin was completed also showed that Japan was not going to risk the defence of her pacific empire to the decision of the diplomatists that were gathered at Washington. The decision that Great Britain took almost immediately to build a first-class naval base at Singapore, and the stormy protests which the champions of the Blue Water school raised against the decision of the Labour Government to abandon it give some explanation of the motives that lie behind Britain's Naval policy. The whole policy of naval bases and coaling stations is based on the question of Empire defence. The Navy unlike the army cannot unfortunately march on its stomach and even the most powerful Armada is limited in its operations by its steaming radius. If it is to operate in distant seas, it must have dockyards, coaling stations, and supply centres. It is this fact which has compelled Britain to lay her hands on all possible strategic centres. It is the same principle which drives Japan to annex Yapp Islands. For the same reason, the United States is forced into a forward policy in the Pacific as the defence of the Philippines against a maritime attack would be impossible without bases, dockyards and coaling stations for the American navy in the long distance it has to traverse from San Francisco to Manila.

The development of aerial warfare has strengthened again the relation between armament and Empire. Aerial connections between the various parts of the Empire are of the utmost importance to the future of defence. Britain, France, Japan are making serious efforts in that direction. The Imperial Defence Committee of Great Britain has long been seriously engaged on airways and a comprehensive scheme, by which the different parts of the Empire will be knit up aerially, is under consideration. France has already made great progress in this direction, says a special correspondent of *The Times*:—"French aeronautical policy is more immediately directed to the maintenance of the influence of France as a Mediterranean Power and to the exploitation of the rich resources of her African Empire. Regular air services have long been established between the southern coast of France and Morocco and Algeria, and for these the Compagnie Generale d'Entreprise Aeronautique is responsible." Every morning at 7 o'clock aeroplanes leave Toulouse and Marseilles for Casablanca and cover in 13

hours in the air a distance which can only be covered in five days by train and steamer.

Casablanca is connected by a bi-weekly air service with Oran. From Oran an aeroplane leaves for Alicante, on the east coast of Spain, four times a week, crossing of the Mediterranean in three hours. The Compagnie Aero-Navale dispatches three aeroplanes a week from Antibes, near Nice, to Ajaccio. They accomplish in two hours a steamer journey of 23 hours. As soon as an agreement has been reached with Italy for an intermediary landing place in Sardinia, this Antibes-Ajaccio route will be extended—next year, it is hoped, to Tunis and Philippeville. The technical difficulties of a direct service from Marseilles to Algiers have not yet been overcome, but credits appear in the Budget of 1925 for a Marseilles-Algiers service via Barcelona and Palma. Finally, the plans of an air service from Marseilles towards Syria, via Italy and Greece which will from the

prolongation of the London-Paris-Marseilles route, are being actively prepared by the Compagnie des Messageries Transaériennes.

The effect of militarism which is thus the direct result of Imperialist ambitions on the European nations need not be discussed here. Its dehumanising, brutalizing effects are well known, and need no illustration. Thus, by strange irony, Imperialist domination which is injurious to the subject people is, in its turn, having reactions on the psychological life and historical traditions of European nations themselves, which are slowly undermining the basis of their greatness. It is making them more callous, and the noble elements of the life of a people on which alone can the greatness of nations depend are being slowly borne down by the weight of a new set of traditions developed in regions where, for the ruling classes, the ten commandments have no validity and the spirit of the swashbuckler is in the ascendant.

MY REMINISCENCES OF RAMAKRISHNA GOPAL BHANDARKAR

By MAJOR B D BASU, I. M. S. (Retired)

THE first time I visited Poona was in March 1893, when Mr. Tookaram Tatya favoured me with a letter of introduction to Dr. R. G. Bhandarkar. The day following my arrival at Poona I called on him and delivered to him the letter of Mr. Tookaram Tatya. Dr. Bhandarkar had built a palatial house at the confluence of the rivers Mula and Mutha, and hence he named it Sangamashram. He received me very cordially, but as he was then going out on some urgent private business, he could not converse with me long, but said that he would come to see me at the hotel where I was then staying. So he did the next day. Seeing a Bengali book on the table, he took it up and began to read it fluently but with an accent. I asked him if he had ever been to Bengal. His answer was in the negative. He told me that he had learnt Bengali from books and with the occasional aid of a few Bengali

gentlemen who now and then visited Bombay and Poona. Our conversation passed on to other subjects. He had been to Europe and narrated his impressions of Germany and England and especially of the Sanskrit scholars of those countries.

He then asked me to attend the Prarthana Samaj meeting the following Sunday, which I did. He conducted the divine service and delivered a sermon. On the breaking up of the meeting, taking me in his tonga, he drove through the town of Poona, showing me the important places. On coming to the Peishwa's Wada or palace, then in ruins, he said "Do you know why the Maratha empire came to grief?—one word—intrigue." Then he heaved a heavy sigh.

At his invitation, I went to the Deccan College the next day, which was Monday, at 2 P. M., when he had no more classes to take. He showed me round the college building.

different classes and then taking me to library showed me the collection of skrit MSS. mostly made by him.

My visit to Poona in March, 1893, was a short one, but in September of that year, I was posted on duty in that capital of the Deccan, which I reached on Monday, the 25th instant. After washing and dressing, taking my *chota* *tr* in the hotel where I was staying, the first gentleman whom I went to see that morning was Dr. Bhandarkar. Mr. Justice Kashinath Ambak Telang had then died and Dr. Bhandarkar was nominated in his place as Vice-Chancellor of the Bombay University. He talked about Telang's death, deplored the premature death of educated Indians, and attributed it to their pernicious social customs, especially child-marriage, want of proper nourishing food, neglect of sanitary conditions and of care of health.

The death anniversary of Raja Ram Mohan Roy was to take place on the following Wednesday, the 27th instant and he asked me to attend it, which I did.

My stay in Poona was for a couple of months only, from where I was transferred to Ahmednagar in the last week of November. A couple of days previous to my departure from Poona, Mr. A. O. Hume visited it and a grand reception was given to him in the Mahabag, where I went expecting to meet Dr. Bhandarkar. He had retired from Government service and so he was at liberty to take part in political movements. I did not know at that time that Dr. Bhandarkar shunned politics. I was very sorry to leave Poona without being able to bid him goodbye.

In January, 1895, the regiment to which I was posted, marched to Poona to take part in the military manoeuvres there. As medical officer of the regiment, I accompanied it. After the manoeuvres were over, I called one afternoon on Dr. Bhandarkar. Lord Harris, the Governor of Bombay, was then about to retire. That noble lord was not a very brilliant or successful governor. He was anything but popular with the educated classes of the Presidency. He always took the part of the colourless foreign bureaucracy, and was not a little responsible for widening the gulf between the Europeans and the Indians, thus standing in great contrast to his predecessor, Lord Reay, who tried to bridge the gulf between the two communities.

Dr. Bahadurjee was the first man from the Bombay Presidency to pass the M. D.

examination of the London University. He was a capable physician and an impressive speaker and lecturer. Lord Reay appointed him Honorary physician to Sir Jamshetjee Jeejeebhoy Hospital and Clinical Lecturer in Medicine, Grant Medical College, Bombay. A better selection could not have been made. But in those days, all the professorships and hospital appointments were reserved for service men. Bahadurjee not being one of them was looked upon as an interloper and poacher, as it were. He told me, for I had several occasions to see him, with what scant courtesy his professional brethren, the service people, treated him. The matter came to such a climax that the appointments which he held in the college and the hospital were abolished by Lord Harris, in order to get rid of Dr. Bahadurjee from the college and the hospital. This was done on the recommendation of one Dr. P. S. Turnbull, who was the Surgeon-General with the Government of Bombay at that time. Dr. Turnbull was a native of Scotland and had taken the degree of M. D. from the University of Glasgow in the early sixties when, according to Dr. Caird, the M. D. degree was awarded after one day's examination in all subjects ranging from Botany and Chemistry to Medicine and Surgery. After entering the Bombay Medical Service, he spent most of his time in clerical and office works and thus had very little opportunity to practise his profession or keep in touch with the progress daily made in it. His knowledge of medicine would not have done credit to the veriest tyro in that profession in the nineties. He was also a mean man and very bitterly hated the natives of this country. In any quarrel between the Britishers and the Indians he took the part of the former, whether it was just to do so or not.

As Governor of the Presidency, Lord Harris should have tried to be impartial and not acted on the recommendation of a compatriot of that notorious "prince of civilian bribe-takers," Mr. Crawford, whose trial and dismissal made Lord Reay very unpopular with the natives of the country hailing from the north of the Clyde, without himself, thoroughly enquiring whether all that was said against Dr. Bahadurjee was true and whether those who said such things were not swayed by interested and selfish motives.

The Bombay University, on the initiative of its Vice-Chancellor, Dr. Bhandarkar,

proposed to give a farewell address to Lord Harris. On the day I saw him, he told me that he was afraid Dr Bahadurjee would oppose it. I told him that the Parsee doctor did not seem to have been fairly treated by the retiring Governor. Dr. Bhandarkar as a champion of Lord Harris did not agree with what I said.

It may be here mentioned that his championship of Lord Harris made him so unpopular that on the occasion of the convocation of the Bombay University in February, 1895, he was hissed and hooted when he was entering the University Hall.

I had no occasion to meet Dr Bhandarkar till 1899, when I was posted in Poona. Late in 1898, the Central Hindu College was established in Benares. My brother Mr Sris Chandra Basu was greatly interested in it and wrote to me to do something for it. One early morning in February, 1899, I went to Dr. Bhandarkar, and told him that he would prove a tower of strength to the Hindu College movement, if he joined it. As a social reformer, he did not like the sayings and doings of Mrs Besant. He did not see his way to join it, because it would in his opinion encourage orthodoxy and was thus a reactionary movement.

Dr. Bhandarkar was greatly interested in Philology and his *Wilson Philological Lectures*, revised and published a few years back, is an important work on Indian Philology. In his splendid library, now the property of the Bhandarkar Research Institute, were collected most of the published works on the grammar and dictionary of the Indian Vernaculars. One morning, while he was in his library, I happened to visit him. I took out a book from one of the shelves of his library, which was Trump's *Pushto Grammar*. Dr. Bhandarkar asked me if I knew Pushto. On answering him in the affirmative, he asked me to read a passage and explain every word of it to him. He did not know Pushto. I complied with his request. He traced the origin of most of the words from Sanskrit. There was one word, *Yak-tanuha*, which meant "single" or "alone." He had no difficulty in tracing it to Sanskrit *एकतनु* (*Eka-tanu*).

From September, 1897 to January, 1899, I was on active field service on the Panjab frontier and was with the Malakand field force, and also with the Buner field force. I utilized my stay on the frontier by excavating certain mounds in the Yusufzai and Swat valleys, collecting Gandhara sculptures

as well as Indo-Scythian coins. There was a seal in my possession with an inscription on it. When the Anagarika Dharmapala was the guest of my brother in Benares in March, 1899, I showed it to him and asked him, if he could read it. He could not do so, but took an estampage of it and said, he would get it read when he returned to Calcutta. However, I took this seal to Poona and showed it to Dr. Bhandarkar, who took an estampage of it and after some days wrote to me a letter in which he gave the transcription of the seal. According to him, the writing was of the 3rd century A. D. In the monsoon of 1899, Mirza (now Sir) Abbas Ali Beg came to share the same bungalow with me. As Oriental Translator to the Bombay Government, it was his duty to introduce Indian gentlemen to His Excellency the Governor at all official functions. There was a garden party at the Government House. Ganesh Khind, to which Mirza Beg persuaded me to accompany him. He introduced me to the Governor, Lord Sandhurst. Dr. Bhandarkar was also present there. With all his learning and world-wide reputation as a scholar, he was in many respects like a child. As regards his dress and foot gear, he did not care for the remarks of fastidious critics.

When the Boer War broke out in October 1899, Dr Bhandarkar was much perturbed to hear of the reverses of the British in the first few months of that campaign.

I had no occasion to see Dr. Bhandarkar till April, 1903, in Satara, where I was then serving. He was invited there to the anniversary of the Prarthana Samaj. His widowed daughter, whom he had remarried, was then living with her husband in Satara, and Bhandarkar stayed with them. Early in April, 1903 Satara was visited by Mr. R. C. Dutt. A few days after his departure came Dr. Bhandarkar. Mr. Khareghat was the District and Sessions Judge there at the time. Rao Bahadur Joshi, the head master of the district school, had studied Indian economics and statistics so well that he was considered a great authority on those subjects. So Satara was not a dull place to live in in those days. I considered it my good fortune to be there. At the request of some of the citizens of Satara, Dr. Bhandarkar delivered a lecture in the high school, arranged by Rai Bahadur Joshi, and presided over by Mr. Khareghat. It was a very interesting and instructive lecture and lasted for over an hour. The day was a hot and sultry one. The strain of the lecture

On Dr Bhandarkar, a man of 66, was so great, that he fainted. I attended to him on the spot. Dr. Bhandarkar was always thankful to me for the little service I rendered to him on that occasion.

It was during his stay in Satara that, in the course of a conversation with him, I defended the caste-system of the Hindus, (which I do not do now), saying that it had prevented them from adopting others' creeds and preserved Hindu culture. This expression of my opinion enraged him so much that he said — "You, an England-returned man, defend caste ! It has done India no good. On the contrary it has done much harm. There were other causes which preserved the Hindu culture, and people do not easily give up their religious faiths and beliefs unless they are forced to do so by economic distress or other worldly considerations."

I referred to the humanitarian side of Hinduism. He said that Brahminism was anything but humanitarian. Animal sacrifice was the religion of the Vedas, and of the Vedic period. It was the heterodox creeds like Buddhism and Jainism which put a stop to animal sacrifice and made Hindus humanitarian. I always looked upon Dr. Bhandarkar as a field-marshal of Indian scholars, to whose dicta, as a private in the ranks, I had to bow down.

As said above, Dr Bhandarkar's daughter was living in Satara. She was not in good health and Dr Bhandarkar wrote to me from Poona to attend to her. He was under my treatment for the few months that I stayed in Satara. She was afterwards removed from Satara, but I learnt with great regret that no medical skill did her any good and she succumbed to her disease. Her death was a great blow to Dr. Bhandarkar. She, as said before, was a widow whom he had the moral courage to marry to a gentleman who was a widower himself. He faced social ostracism for the step he took. One day, when I spoke to him of his great moral courage in remarrying his widowed daughter, he said that no credit was due to him for doing what he considered his duty. As a parent, he could not suffer to see the life-long misery of his widowed daughter. 'What a heart ! How many Hindu fathers have widowed daughters, and possess moral courage to mind their duty to them as did Dr Bhandarkar, but shying the social persecution staring them in the face ?

The last time I went to the Sangam Ashram was on the 30th September, 1904, on my way to Allahabad on one year's furlough. He took me to his library and we had some talk about Indian history. Referring to the advent of the British in the Maharashtra, he said there were then no statesmen in the Deccan to see through the designs of the British. I interrupted him, saying that the British corrupted the ministers and other high officers by means of "saint-seducing" gold. He was furious and told me, why could not the Maratha ministers and others adopt the same means against the English ? He told me to try to tempt British ministers and other British officers to betray the interests of their country by "saint-seducing" gold. What he obviously meant was that, whereas Indians could be bribed to betray their country, Englishmen could not be so bribed;—there lay the weakness of the Indians and the strength of the English.

Bhandarkar possessed a duplicate set of the several volumes of Cunningham's Archaeological Survey Reports. I asked him, if I could have these for my use. He most gladly presented these to me and on the fly-leaf of one of the volumes, he wrote —

"To Dr B D Basu,

as a mark of R G Bhandarkar's appreciation of his kind nature and taste for literary and historical inquiries.

Poona,

The 30th September, 1904."

I have always treasured these volumes as a memento of the veteran scholar and ardent social reformer.

The last occasion I met Dr. Bhandarkar was in Allahabad. In March, 1908, the Calcutta University celebrated its Jubilee with great pomp. Dr. Bhandarkar was invited to receive the honorary degree of LL.D. On his way back, he broke his journey at Allahabad and stayed with Mr. Balak Ram, I.C.S., Assistant Accountant-General. He knew my brother by reputation and wanted to see him. Pandit Sundarlal, who went to see Bhandarkar, told him that Sris Chandra was a Sub-Judge and was serving at Ghazipur. That well-known lawyer also informed him that I was then in Allahabad on furlough, preparatory to retirement. On his expressing a desire to see me, they drove to my house, but unfortunately I was not then at home. He was greatly disappointed in not finding me at home and left word with one of my nephews that he was leaving Allahabad that

very day by the Bombay Mail. On my return home, I drove to the Railway Station and met him there. Fortunately for me, the train was late and so I had the opportunity to talk with him for about an hour. He was returning from Calcutta and had seen there the agitation that was going on against the partition of Bengal. He said that the division of the Bengali-speaking people was a very wrong thing to do. He said, it was not the policy of Government to have provinces of homogeneous people speaking one and the same language. He was in Calcutta when Curzon got Berar from the Nizam. He was a member of the Imperial Council and had some talk with Curzon about Berar. He suggested to the Viceroy to amalgamate Berar with the Bombay Presidency, for the language of Berar was Marathi and thus the people there were more akin to

those of the Deccan than to those of the Hindi-speaking people of the Central Provinces. But that would be increasing the numerical strength of the Marathi-speaking people in the Bombay Presidency, and it did not seem to be the policy of Government to do so.

He knew I had a collection of Gandhara sculptures, which before his visit to Calcutta he had not seen. When he came to my house, I intended to show them to him, and he jocularly said he would take away such of them as he might take a fancy to. I told him that he was quite welcome to have them. He said when he next visited Allahabad he would do so. He extorted a promise from me that if I ever visited Poona, I would be his guest. Alas! meeting him again on this earth was not to be!

THE ZOO

By HARINDRANATH CHATTOPADHYAYA

To-day I saw the azure skies
 Reflected in a monkey's eyes
 And also in a fleckless dove's,
 And in a peacock's and a deer's
 For all these myriad eyes are Love's
 Which sparkle through the dark of years.

To-day I thought I saw God start
 Flame-like within a tiger's heart
 And saw His old celestial smile
 In the grey-hearted crocodile,
 And saw Him like a splendour wake
 In the brown wriggle of a snake,
 And for their feet, I saw Him span
 A gold bridge in the heart of man.

REPAIRING THE RAVAGE WROUGHT BY WAR

By ST NIHAL SINGH

Illustrated with photographs specially taken by the Author.

I

LEON! Leon!! Come! Come!! Your dinner is getting cold. Leave Monsieur the photographer alone."

But Leon—a Belgian boy of eleven or twelve—was too intent upon appearing in the photographs which I was taking in his native village of Houthulst, in northern Belgium, to heed his mother's call. With the agility of a panther he picked out the object which I was desirous of photographing—an massive structure which the Germans had built in the heart of a graveyard at the edge of that little Flemish settlement. Before I had set down my stand, he had clambered to top of the monument and taken his stand right in the middle of it. His companions, much the same age, followed his example and clustered round him. Some smaller boys not finding themselves equal to the job took their stand at the base of the monument. A girl, a little older than the others, selected, with rare judgment, a position behind one of the German graves which would enable her to stand out in splendid isolation in the picture.

The structure had been built partly to serve as an observation post and partly as a monument to the German's who had fallen. The side facing the lens bore the text

Wir Wissen Das Denen Dio
Gott Lieben alle Dinge
Zum Besten Dienen

A friend of mine who happened to be at the side and who knew a little German told me that the text meant

"All things happen for good to those who serve the Lord."

Round about the monument were graves of men who had fallen in the course of a conflict unprecedented in the annals of mankind alike for magnitude of operations and for the malignity displayed by the combatants—both by the politicians whom those combatants had served as instruments. Native and

foreigner lay interred in the ground. But even in death the barriers created by race—by nationality—stood, just as they had done when that clay was instinct with life, and that life derived its motive power from greed, lust and hatred.

Young Belgium Standing on Monument erected by the Germans during their occupation of Belgium, in memory of their dead Soldiers

The crosses erected over the graves of unidentified invaders bore a legend which, translated, meant "A German Hero". The British marked the last resting place of their dead whose identity had been lost with the inscription "A Soldier of the Great War. Known Unto God." The Belgians contented

themselves with the mere word "*Inconnu*"—unknown.

The contrast presented by those legends leapt to the eye. The only people who had managed to restrain themselves from swaggering—who refused to couple God with fighting—were those who had been dragged into the war because their neighbours on the east were determined to rent their neighbours on the west. As I beheld those graves, an Indian proverb rose before my eyes. "When buffaloes fight," some wise forefather of ours declared, some hundreds, possibly thousands, of years ago, "the bushes get trampled."

Village of Staden rebuilt from the foundations up.

The spirit bred in the Belgians by the suffering inflicted by the contending Powers found expression everywhere in the graveyard. The sod which covered the remains of the German fighters, marked by black crosses, looked unkempt. The graves wherein reposed all that was mortal of Belgians and their Allies were, on the other hand, carefully attended to.

As the eye shifted from the earth to the monument which, despite tremendous hammering from Allied batteries and aircraft, still appeared remarkably solid, it turned from the dead to the living. Over the German "heroes" towered young Belgium. Where was the pride of the men who "goose-stepped" to the tune set by their masters, boastful of their determination to make their will prevail?

Some of the children who looked down from that height upon their interred bones

must have been conceived and born while Armageddon raged. Their nervous system will probably carry upon it the impress of war so long as that system lasts. The economic and financial complications created by the conflict will continue to cheat them of a goodly portion of the fruits of their enterprise, industry, patience, perseverance and frugality—qualities in which fortunately the Belgians are rich—as long as they live.

Some two or three hundred yards away from this monument, across the street from the graveyard, stood the school from which those youngsters had poured out just as my motor car had drawn up in front of it. The sun shining upon its red-tiled roof and red brick walls emphasised the fact that it had just left the builders' hands. Subsequent examination showed that good material, unstinted labour and great thought had been put into its construction. Generous provision had been made for admitting light and air into the class rooms.

Between the school and the graveyard stood all the gunners of the contending armies had left of the sacred structure round which in pre-war days, had centred the religious life of the little Flemish community. Only the base of the belfry remained.

trifle higher than myself and sadly battered. The litter of destruction surrounding rendered it an eyesore.

Monsieur Rene Daled, son of the Keeper of the *Musée Communal* of Bruges, who combines great linguistic talent with an intimate knowledge of the country, and who was acting as my guide, philosopher and friend, explained to me that that side was being purposely preserved to serve as a memento of the war. "It is," he said, "as it was left at the end of the war."

"And that spot," continued my Belgian friend, "gives you some idea of what the place looked like at the time the Armistice was signed, and our people marched into the place. Every single building had been reduced to the ground. Nothing had escaped ruin, not even the meanest hut occupied by the poorest of the poor. The whole town was wiped out of existence—brick and stone covered

up every street and lane—huge gashes cut in all manner of places by shells and filled with water from the sky and from the gutters. It was an awful sight to behold.

"That was the state in which Houthulst was left. And not only Houthulst. Wait till I take you further into the interior. Every village and town was similarly wiped out of existence and has had to be rebuilt from the foundations up."

II

It was the rebuilding that interested me, and even more so the pluck, industry and perseverance behind that rebuilding. A few yards away from that ugly ruin of the old church rose the bell-tower over the new church. It had been fashioned in imitation of the building which it replaced. "Perhaps it is a bit better—more solidly built," my Belgian companion admitted.

At the time of my first visit the structure had been completed. The yard surrounding it was still littered with building materials. Now it has been tidied.

All around the school and church were newly built houses, erected along streets which had been freshly paved. People were waiting their turn to be paved. Everywhere

hustle and activity reigned—carts laden with building materials arriving, carts filled with people departing—families moving out of the temporary buildings hastily thrown together at the close of the hostilities out of the materials used in military hutments, into the homes which have been constructed by the Government to take the place of those reduced to the ground or rendered uninhabitable.

In view of the completeness of destruction, it has been no easy matter to locate the position of streets and sites of property. To the confusion worse confounded, the ruins—ancient and modern alike—of all kinds have perished.

In this circumstance, it was difficult for officials to decide the claims preferred in respect of property. Endless patience and skill with infinite resourcefulness enabled

them to piece together scraps of information. By degrees plans were evolved. Every street and alley was traced out, and every building, whether pretentious or humble, was identified and marked in its proper place.

Every property-owner got his old site. The man who had owned a house on the corner of a street got his old corner back again. The man who had a house in the middle of a terrace was given a house at the same point in the reconstructed terrace. Only by deciding to recreate a village exactly as it had existed before

Reconstructing Roads in Belgium

the war was it possible to satisfy anyone, and obviate jealousy and heart-burning.

III

What I saw in Houthulst I saw also in the village next to it, and in every other village through which I passed for miles around it. And not only in villages. The same was true of towns and even cities. Everywhere a new place had risen from the ashes of the old or was in the act of rising.

During the seven or eight months that I have been going up and down this re-built region, I have sometimes found it difficult to believe that I was travelling through an ancient land, and not through a new undeveloped country which pioneers filled with the spirit of adventure were subduing. Only in the American or Canadian

dian prairies had I theretofore seen anything like the spectacle spread out before me—the spectacle of a town springing up from the foundations in an astonishingly short time. But for the characteristic Flemish style of architecture, the *sabots* (wooden shoes) worn by the children, the bits of desolated sites preserved recalling the struggle, and the memorials put up to the men who had fallen in the fray, the illusion would have been complete.

As one goes about the devastated territory, one hears the whine of saw-mills in which power-driven saws work over-

Inn of the Inundation (inundator), Nieupoort

time, their sharp teeth tearing through the trunks of trees, turning them into lumber to be used for the thousands upon thousands of houses which are going up everywhere. Almost at every turn one comes upon brick-yards manufacturing bricks by the million to be used for the same purpose. They are kept stored in long, low sheds with corrugated iron roofs, or are covered over with thatch or gunny cloth to protect them from the weather. They are stacked up in piles as tall as high buildings. Truck-loads of them are always standing ready to be hauled away to some centre of reconstruction.

IV.

Belgian reconstruction can best be studied at a few central points in the devastated areas. Nieupoort, about a mile inland from the North Sea, for one, furnishes an excellent opportunity for such an object.

Situated on the river Yser, commanding the locks and sluice gates of an extensive system of canals branching out in various directions, Nieupoort was, in itself, no mean prize to win. Had the enemy managed to keep the hold that he had secured over it in October, 1914, he would have been able to push into France and to plant guns on the north coast which would have menaced Dover and the country surrounding it. The Germans were kept at bay at this point by the flooding of hundreds of square miles of land. The operations connected with the piercing of the dykes and the opening of sluices, which let in the tide-water had to be carried on under heavy German fire.

Early last summer, when I first visited Nieupoort and made a tour of the country in the vicinity of that place, I found that almost all signs of destruction had been removed. The land which had been flooded had been thoroughly drained and brought once more under cultivation. Villages and towns which had been utterly demolished by gun-fire had been rebuilt, and life flowed in them in much the same channels as it did before the region was inundated for strategic purposes.

Nieupoort, which the Germans had virtually wiped out of existence, had risen better and brighter than before. The *Hotel de Ville* (Town Hall), the *Halles* (covered market-places), the church, schools and other institutions, had been built on new foundations after the original plans, but, if anything, more solidly. Flemish men and women stood behind the counters in the shops lining the reconstructed streets, serving customers, and nearly every house that had been put in was occupied.

Only when I crossed the tracks on which runs the light railway known as the *Chemins de fer Vicinaux*, did I come upon an extensive collection of hutments in which dwelt the people whose homes had not yet been replaced by the Government. The temporary accommodation looked dingy, and cramped. But not a word of complaint did I hear from anyone. The men and women I met seemed determined to make the best of it.

bad job. The children played about in front of their homes, blissfully ignorant of the terrible travail through which their people had passed.

Ruins of the Cloth Hall, Ypres

On the other side of the river, in front of the locks commanding the net-work of canals, lay the "Redan," here, at one time, here had existed fortifications of great importance. The Belgians had created a network of deep trenches, and fortified them with pregnable-looking dug-outs whose walls were lined with sand-bags.

As I examined the place I found a stream running through its heart—in fact, most surrounding the main lines of trenches. Above and around all was desolation. A few blackened and blasted tree trunks, bare of leaf and green twig, stood like silent sentinels. A few wisps of tough marsh grass was the only sign of vegetation to be seen in this locality, which, for a goodly part of the war, was the constant scene of fighting in the effort to hold or to capture a point of vantage. Rain beating against the lens of my camera

while I was trying to photograph this famous fortification drove me to take shelter in an inn across the bridge spanning the Yser river. As I approached it, I noticed a stone bust in

a niche above the front door, with an inscription which, owing to the sharp shower, I was unable to read. As I walked through the hall, I passed a strongly built Belgian who, seeing that my clothes were soaked through to the skin, felt moved to remark, "*Mauvais temps, Monsieur*" (bad weather sir). It turned out, on pursuing the conversation, that he was an engineer by profession and had served with the Royal Engineers throughout the war, and had been present in Neuport at the time of the inundation. He described to me exactly what had happened, pointing out various places of interest which otherwise would have escaped me. I learned from this

The "Essex Farm" Cemetery near Ypres

an ex-officer, for instance, that the very inn in which I was sitting, drinking a steaming cup of coffee had been the home of Lieutenant-General Dossin, and that the bust over the front door was an effigy of that great man. The original building, destroyed during the fighting, had been replaced by a new struc-

ture, in which I was sipping coffee, waiting for the rain to stop. General Dossin had died a short time before my visit to Nieuport, and the house had been sold to settle the estate, and was being used as an inn, which appropriately had been named *Hotel de L'union des*

V

Twenty miles to the south of Nieuport was Dixmude, to which point the flood let loose by General Dossin in November, 1914,

Monument erected in memory of the 'Morocs' killed in the first gas attack at Boesinghe

extended. That town had also been one of the key-positions during the war.

On the banks of the Yser Canal, just beyond the bridge spanning it at Dixmude, there used to be a flour-mill, standing on a slight ridge or elevation, on a platform consisting of a huge cube of cement. Rumour had it that the Germans had erected that solid platform in peace time in anticipation of war, so that they could mount their guns upon it without any loss of time. From that point it was possible for the side which held it to command the Flanders plain for many miles and to sweep it with long-range artillery.

The corn-mill was captured by the Germans early in the war, and from thence forward was utilised by them to hold the

bridge-head, and also as an observation post. It was the scene of fierce fighting throughout the conflict, but every effort to dislodge them proved of no avail, until towards the close of the war, when the great retreat began.

As was to be expected, the town of Dixmude was left a mass of charred and blackened ruins after four years of almost incessant firing. It had to be rebuilt from the ground up.

I had climbed to the top of a high dug-out disregarding the warning of the guide, who feared that the roof might fall in under my weight, carrying me down with it. His prognostication did not come true, and I had a fine view of the rebuilt town and the rich agricultural land which spread out to the north, west and south.

As I was getting ready to come down, my gaze fell upon a Belgian who, in the very shadow of the dug-out and among the huge pieces of concrete torn from the massive structures built by the Germans by the guns of the Allies and strewn about the vicinity, was hoeing the little patch of greens which he had sown on that blood-soaked soil. He did not take the least notice of me, or of the other persons who were visiting the ruined mill at the time, nor did he appear to be conscious

of the surroundings in which he was working, or of the harrowing scenes which they must have witnessed. His only thought was to grow a little food to eat so that he might have the strength to produce a little more food and so on to the end of his days.

The town which stretched out at the back of that tireless worker had been fashioned by Flemings as plucky and persevering as the peasant. So high a spire had been put on the solidly built church standing beside the magnificent *Hotel de Ville*, that I found it difficult to photograph the edifice. Had the newly-paved square in front of the building not been exceedingly spacious, enabling me to get back a considerable distance, I would indeed have failed in my purpose.

VI

Even a fiercer storm raged at Ypres, some fourteen miles to the south of Dixmude, than at Dixmude itself, and, therefore, the destruction, if anything, was more complete. Belgian enterprise and industry have already rebuilt practically all the town with the exception of the core of the place where had stood the famous Cloth Hall, containing priceless specimens of the handiwork of master-weavers, lace-makers and embroiderers, which, in the pre-war era, attracted to Ypres students of art and tourists by the thousand every year. Back of it rose the high spire of the Catholic church of St Martin, which the natives loved to dignify by the name of "Cathedral," though Ypres was not actually the seat of a Bishop—that honour belonging to Bruges, its neighbour and rival in all those arts, and even more so in buildings of high artistic and historic value.

I found the church site a busy hive of industry. Masons and their helpers, working under the instructions of architects and archaeologists, had put in supports the precious bits which had survived the cannonading and were strong enough to warrant their preservation. Round such nuclei were being built, stone by stone, brick by brick, the structure in faithful likeness of the one which shell and shot and aerial torpedo had practically wiped off the face of the earth. The huge scaffolding gut round the frame of the spire looked to me for all the world like a giant's broken arm put in splints by a skillful surgeon.

The Cloth Hall, it seems, is not to be spared. It has been cleared of debris, stones torn from the walls by shot and shell, lined with sculpture which even in a polished state looks exquisitely beautiful, to be gathered up and lie in huge piles beside the shell of the structure.

No more powerful monument to the folly of war-makers could have been devised. Fortunately, however, either side of the combatants blames the other for causing the struggle instead of placing some of the blame on its own "statesmen." It, therefore, appears that this impressive ruin merely serves to intensify these passions and hatreds, rather than teach a lesson to all who behold it.

Far better would it have been if the Belgian Government had decided to recreate the institution as hundreds of others have been rebuilt or are in process of being rebuilt.

VII

Some 250,000 combatants of various nationalities lie buried round about Ypres. A few minutes' walk outside the town in almost any direction brings a person to one or another of the scores of cemeteries in the neighbourhood.

The "Essex Farm" Cemetery is perhaps the best-known among them. It lies in the shadow of the high bank of the Yser Canal, upon which a tall marble monument has been raised by the British whose dead lie buried there. Rows upon rows of white marble slabs rise above the carefully clipped carpet of grass which has been spread between the tombs. At the time of my first visit, early in the summer, the roses were in full bloom and splashed the white stones with a wealth of colour. Ex-British soldiers have been detailed to keep the place in order, and too high praise cannot be given to the loving care which they bestow upon the graves of their fallen comrades.

Many of the slabs have only a cross carved on them, instead of the emblem of the regiment to which the occupant of the grave belonged, and underneath it the pitiful inscription "A Soldier of the Great War, Known Unto God." Near the graves of unknown soldiers stands a large rectangular stone promising the sleepers in this, their last resting place that "Their Name Shall Live For Evermore."

As I stood at the edge of the cemetery on a bright autumn afternoon, my mind pondering this incongruity, a cart came clattering past me. Above the rattle of the wheels rose a voice—the voice of a woman who had not quite left her girlhood behind. She sat on a heap of straw in the bottom of the cart and sang a mirthful lilting tune—like the song of a bird which has found its mate. She sang in a tongue which was foreign to me, and yet her Flemish words were so close to English that I felt piqued at my inability to understand them. She had found her mate, the sturdy Fleming, who with his face half-turned towards her, was driving the cart, leaving the steering to the level-headed horse between the shales. It seemed to me that they must have been only recently married. The look of ecstasy upon the man's face and the woman's merry song shouted out for all the world to hear "Behold, we are happily married."

The cart passed on, and I, my reverie broken, walked away. In less than five minutes

I came to a field of clover with tall, succulent stems and vivid green leaves. The cart which had jostled my thoughts away from the dead to passion-pulsing life stood just at the edge of the field. The woman was bending over the clover which her man had cut with a sickle and was tying it into bundles with wisps of straw which she braided as required and threw them into the cart. Her lithe, willowy body moved rhythmically, keeping time with the liquid notes which bubbled from her lips as she worked.

In all the fields surrounding the war-cemeteries, Belgian men and women full of the joy of life, with their eyes turned to the future and their backs turned to the past, work from dawn till dusk doing everything in their power to rehabilitate their country. They sing, as they toil, songs full of promise of good fortune to come. As one gazes over the fields green with the waving plumes of beet-root and high-growing clover, one could weep at the thought that a peaceful land like this should have been so wantonly ravished. In the shadow of the cemeteries and of the blackened, blasted trees, cows and calves, and horses and colts graze peacefully, as unafraid as their masters and mistresses of the grey ghosts of war all about them, unmindful of the silent dead.

VIII

About a mile and a half to the north of the "Essex Farm" Cemetery is situated the village of Boesinghe, where I was told, a monument had been erected to the memory

of the "Morocs" as the men are called who came from France's possessions in northern Africa, and who were the first among the Allied troops to suffer the tortures of poison gas, the first gas attack having taken place at that point which they were defending at the time. I journeyed up to it one day to see Christendom's tribute to its heather defenders.

Set up in a land soaked with blood of hundreds of thousands of combatants, the monument reflects the grim mood of its fashioners. On top of what appears to be a bit of a building belonging to past days which escaped utter destruction, and over which merciful Nature has not yet thrown a mantle of green, has been set an old cannon so small as to look almost like a toy perched on a hillock.

All around the monument stand solidly built red-brick houses, with overhanging red-tiled roofs, built to take the place of those which were demolished during the war. The grass sown in the front yards has had time to mat together into the semblance of lawns. In the season, beds of gay-coloured flowers blossom in the gardens, like pretty bouquets laid at the foot of the monument as a tribute to the brave "Morocs" in whose honour it was reared.

As I have already remarked, all these monuments, whether planned on a handsome scale or otherwise, only serve to keep up the spirit of strife, while Europe's great need is to bury race and religious hatred and go on with the work of reconstruction.

SOCIAL LIFE IN THE ANIMAL WORLD :

By S. C. VERMA, M. SC. LL. B.

University Lecturer in Zoology, Allahabad.

"More ancient than competition is combination. The little feeble fluttering folk of God, the spinning insects, the little mice in the meadow, the rat in the cellar, the crane in the marshes or the booming bittern; all these have learnt that God's greatest word is together, and not alone. He who is striving to make God's blessing and bounty possible to most is stepping in line with nature. The selfish man is the isolated man."

MAN is not the only social animal, but the only animal species whose individuals live in mutually advantageous relations with each other, and with individuals of other animal kinds. Indeed the communal life of some insects is developed along more communistic lines far more specialised than

the communism shown by man. Parallel to the evolution of the present highly specialised human society from a primitive living together, we can find a long series of gradatory conditions of social life from mere gregariousness to the extremely specialised interdependent and unified community of ants. But before taking up the series of stages in true social or communal development among lower animals, we may as well give some attention to conditions of animal associations not approaching a real community.

STRANGE PARTNERSHIPS

Animals often live together in strange partnerships. The beef-eater birds (*Buphagus*) perch on cattle and extract grubs from the skin. But a very interesting case is that of the Egyptian plover (*Pluvianus aegypticus*)

CROCODILE-BIRDS.

A friendly agreement appears to exist between the birds and crocodiles. On the sand-banks of the Nile the birds are seen to pick up scraps and fragments of food from the mouth of the

crocodile. These birds are often seen closely associating with crocodiles when they are out of the water basking in the sun. One often finds a plover inside the gaping mouth of the reptile comfortably moving about and picking up crumbs of the monster's last meal that may still be sticking to the buccal cavity instead of "picking his teeth" as the fable alleged. It is a wonder that the crocodile does not even attempt to kill these birds even when he is entirely within his mouth but it has on the contrary, learnt to permit them so that they may clean his mouth and probably also remove leeches and other parasites from his body. In the nests of some crocodiles are met with other insects, such as a wasp or an *Atemeles*, living in harmonious partnership. The *Lepismids* are tolerated as although they act as real free-booters wrest-

ing the food when it is being passed by one ant to another, but the *Atemeles* serve the ants by eating away refuse, dead ants etc., present in the nest, and are fed by the ants from their food in case of need. They have aptly been called "the beggars" of the colony. The marine animals furnish many associations of this type. It is not an uncommon sight to see at times a Swan-mussel attached to a small marine fish (*Bitterling*) by means of a beautiful red cord. During the breeding season of this fish, its oviduct gets considerably elongated, and is projected out of its body as a red tube which attracts the swan mussels. These molluscs manage to get hold of the fish oviduct by means of their mantle flaps. As soon as this connection is established, the fish becomes aware of it, and begins to lay its eggs in the gills of the mussel where they undergo their development for about a month. But while Mrs. Bitterling is thus busy laying her eggs in a safe place, Mrs. *Anodonta* is not idle, she also lets her larvae escape and ascend the tube up into the skin of the fish where they grow until they are able to lead a free life. Another example is that of the large floating coelenterate, *Physalia* (man-of-war) and the small fishes, *Nomeus gronovii*, which always accompany the former seeking shelter from their enemies, apparently knowing the protecting value of the stinging cells of the tentacles of the coelenterate.

COMMENSALISM

But when we find a little fish living contentedly inside a large sea-anemone, or the little pea-crab (*Pinnotheres*) within the horse-mussel, it is clear that the fish and the crab are not only sheltered by their hosts but share their food also. They illustrate the biological relationship known as "Commensalism", which means 'eating at the same table'. A better illustration of this is furnished by the association between crabs and sea-anemones. The hermit crab (*Eupagurus*) has its borrowed shell always enveloped by a sea-anemone (*Adamsia*), and some crabs (*Melia* of the Indian Ocean) carry an anemone attached to each claw. The use of the sea-anemone, with its batteries of stinging cells, as a mask to the crab and also as an aid in attack and defence is obvious; on the other hand, the sea-anemone gets the benefit of being carried about by the crab and may also derive food from the crumbs of its bearer's repast. It is not improbable that in some cases the crab

deliberately chooses its ally, and plants it on its shell or claw, and that it does not leave it behind at the time of shell changing. Deprived of their polyp companions the crabs

HERMIT CRABS

have been seen to be restlessly ill at ease until they obtained others of the same kind

CO-OPERATION AND DIVISION OF LABOUR

Let us for a time wander from these chance companionships or permanent associations as moss-mates to another kind of animal associations confined to the members of the same species or group, that is, to aggregates of individuals or colonies. These aggregates are formed by budding; the resulting individuals being physically united—and in some cases afford striking illustrations of "division of labour", the idea of which has for a long time been familiar to men, but the biological importance of which was first clearly recognised by Milne Edward in 1837. Many masses of corals are animal colonies, but among the members or "persons" as they are technically called, division of labour is rare, and during the growth of the colony the younger individuals often smother the older. But in colonial zoophytes there is sometimes marked division of labour. For example in the colony of *Hydractinia* polyps, which is usually met with growing on the shells tenanted by the hermit-crabs, there are about one hundred individuals, all in organic connection. Among the individuals of each colony

are distinguishable three or four castes. Many are nutritive in form like the little fresh water hydra, tubular animals with an extensile body and with a terminal mouth wreathed round by mobile tentacles. On these depends the nutrition of the whole colony. Besides these there are reproductive "persons" which have no mouths and hence are unable to feed, but secure the continuance of the species by producing embryos which start new colonies. Then there occur long, lank, sensitive members also mouthless that serve as the sense-organs of the colony in detecting food or danger. When danger threatens the polyps cower down and there are left projecting small hard spines which are regarded as starved abortive members like the thorns on the hawthorn hedge. Their life as individuals, is practically nil, and they may well be said to illustrate the seamy side of division of labour.

GREGARIOUS LIFE AND COMBINED ACTION

Quite different from the colonial types is the case of those animals in which the individuals though organically separate from one another, choose to live together in large numbers. Many birds, such as rooks and swallows, nest together and the sociality is often advantageous. The Weaver-birds of South Africa are well known for their huge tent-like collective nests covering entire trees. Of the cranes, Kropatkin notes that they are extremely "sociable and live in friendly relations, not only with their congeners, but also with most aquatic birds." Some of them (more specially the Mediterranean flamingos) have been described to post sentries, send scouts, and have many friends and no enemies. So it is also with parrots; the members of each band remain faithfully attached to each other, and share in common good or bad luck, finding pleasure and protection in combination. Of the mammals there are many that are in some degree gregarious. The solitary kinds are in a distinct minority. Deer, antelopes, goats, and elephants live in herds, which are not mere crowds but organised bands with definite conventions, possessing a power of resistance which often enables them to withstand the attacks of carnivores. Monkeys generally show a very successful gregarious life. Individually most of them are comparatively defenceless, and usually avoid coming to close quarters with their adversaries; yet in a bod-

they are formidable and often help one another out of difficulties. Each band is guided by a veteran leader whose wisdom, experience, and probably also superior strength is always at the disposal of the rest.

On the other hand some of the most successful carnivores—such as wolves, hunt in packs, and not a few birds of prey (eagles, vultures and kites) unite in destroying their quarry. Combination for defence has its counterpart in combination for offence, but peculiarly interesting are those cases in which the relatively weak combine to attack the strong. Thus a few kites will rob an eagle and wagtails will persecute a sparrow hawk. In addition to combining

for defence or attack, many animals also co-operate in labour. Brehm relates that the baboons and other monkeys act in thorough concert in plundering expeditions, sending scouts, posting sentinels and even forming long chains for the transport of the spoil. When the Brazilian kite finds a prey too large for it to carry, it summons its friends. Pelicans fish together in great companies, forming a wide half circle along the shore and catching the fish thus enclosed. But of all cases of combined activity, the migration of birds is at once the most familiar and the most beautiful—the gathering together, the excitement before starting, the trial flights, the reliance placed on leaders. Migration is usually social, and is probably sometimes facilitated by social imitation.

BEGINNING OF REAL COMMUNALISM

Let us now turn to a still better form of association indicating real communalism. The high of a very simple kind. The prairie-mice (*Cynomys*) differ from the gregarious mammals in that each pair constructs an underground abode, a large number of which are situated close together forming what are known as "cities" or "villages." These are, at times, cover vast areas, and when migration takes place for want of food or other natural causes the entire population of the city joins in it. A still more interesting illustration is furnished by the beavers. In these rodents, belonging to a somewhat stupid race, a family of about

A BEAVER'S DAM

For sufficiency of water around their lodges the Beavers construct a dam across some stream.

six members inhabits one house, and in suitable localities, secluded and rich in water and trees, many families congregate in a village community. The young leave the parental roof in the summer of their third year, find mates for themselves, and establish new homesteads. If the community becomes overcrowded, migrations take place up and down stream, the old lodges being left to the young couples. It is said that lazy or otherwise objectionable members may be expelled from the society and condemned to live alone. Under propitious conditions their achievements are marvellous. The burrow may rise into a constructed home of pieces of wood removed from neighbouring trees and fixed to trunks slightly above the water level. Members of many families may combine in log-rolling or wood-cutting, and build large dams across rivers, or even dig canals. Lewis Morgan says that some of the beaver dams are adapted against the rush of floods that the canals are sometimes hundred of feet in length, and that there occur, at places short-cut waterways across loops of the river, and also "locks" where continuous canals are, from the nature of the ground impossible. The Indians were so much struck by the sagacity and the engineering skill of this animal as to invest it with immortality, but it is enough for us to recognise that it is the cleverest of its kind because the most socialised.

INSECT COMMUNITIES

Passing onwards in our scale of social

we remember Fritz Muller's observations

sides the winged males and females which produced in vast numbers, and which, leave the territory in large swarms may intercross those produced in other communities, there are none if not all of the species) wingless males—males—a sort of reserve of reproductive members which never leave the territory where they are, and which replace the winged males or is whenever a community does not find, in me, a true king or queen

these complementary kings or viceroys before winter, their mates live on, aged but still maternal, till at least the next year

TERMITE NESTS OR MOUNDS

Bees

Many centuries have passed since men listened to the humming of honey bees, found in the hive a symbol of strength and unity. From Aristotle's time till now nations have been studying the life of bees, and exhausting either its facts or its suggestions. The society is very large and compact, very stable and successful. The life gives one the impression of an old-established business in which all contingencies have been so often experienced that they lead to cause hesitation or friction. There is a great deal of mortality, some apparent and the constant recurring advent of migration, but though hive may war with hive, interhive competition has practically ceased and the life proceeds smoothly in the harmony and effectiveness of a

perfected organisation. The mother-bee or queen by her prolific egg-laying (sometimes 2,000 to 3,000 eggs a day) increases or restores the community, but she is in no sense the ruler of the hive, being the least intelligent and the most subordinate member of the whole community. The sustained life of the hive is in the hands of the worker-bees, who in brains, in activity, and general equipment are greatly superior to their queen. It is they who, when the old hive becomes too populous, decide that a greater part of its inhabitants should leave and set up house-keeping for themselves; they select those who should join the migrating party, and give the signal for the departure of the swarm and command the old queen to accompany it, leaving her ancient realm to the charge of a younger and more vigorous successor. The drones, or males, though numerous, are ordinarily very sluggish, and only one of them, fleet and vigorous beyond his fellows, will pair with a queen in the nuptial flight, himself to die soon after,—saved at least from the expulsion and massacre which await the residue of the sex when supplies run short in autumn. Thus, though wise laws are made, ingenious devices originated and complex works carried through triumphantly in the face of unforeseen difficulties, there is no central guiding intelligence at all in the hive-life.

The combs are wonderful structures. According to Mr. Cheshire, they consist of

"Rows of rooms unsurpassably suitable for feeding and nurturing the larvae, for giving safety and seclusion during the mystic sleep of pupation, for encouraging the weary worker seeking rest, and for safely warehousing the provisions, ever needed by the numerous family and by all during the winter's siege. Corridors run between giving sufficient space for the more extensive quarters of the prospective mother, and affording every facility to the busy throng walking on the ladders the edges of their apartments supply, while the exactions of modern hygiene are fully met by an in its native purity sweeping past the doorway of every inhabitant (20,000 to 30,000 individuals and 10,000 grubs) of the insect city.

Not only is fresh air continually provided for the bees, young and old, but a fairly brisk air-current is always maintained through the honey-combs to carry off the heavy vapour given off by the maturing honey. In addition to this, both young brood and maturing honey require a high and equable temperature for their development, so that the air must be warmed before it reaches the nurseries and brewing quarters of the hive.

During the winter months, the natural motive power of the warm air given off by the clustering bees is sufficient to create the gentle air-circulation then alone needful. But in warm weather, mechanical ventilation is needed, to effect this, gangs of bees are stationed at the hive entrance, both inside and out, whose duty it is to fan the air in different directions according to the position taken up. The combined result of this fanning system is to draw in air at one side and to expel it on the other, after it has made the whole circuit of the interior of the hive. The bees forming the squads are constantly being changed.

A QUEEN CELL HANGING ON THE EDGE OF THE HIVE

As soon as a swarm is decided upon important preparations engage the attention of the workers in order to provide a successor for the old queen which is to be sent away with the swarm. Queen cells are made of generous size at places on the edge of the comb so as to ensure abundant space and fresh air and in the centre of each cell is laid a small egg from which after three days emerges a grub. This grub is immediately deluged by the workers with a thick glistening, jelly-like substance upon which it feeds and grows at an amazing rate. At the end of five days the richly-fed grub grows to the size of, and largely exceeds in weight, a fully developed queen. The superfeeding is now stopped, and the large cell sealed over. The grub changes to a chrysalis, and becomes a fully developed Queen-bee in about a fortnight's time, ready to take up the important duties that lie before her.

If the swarm has issued, the young queen is allowed to emerge from the cell, but if on account of unfavourable weather the issue of the swarm is delayed, a check is placed upon the ardour of the young princess by the directing powers of the colony. From the moment the preparations for her success become an accomplished fact, the old Mother-bee grows daily more restless and suspicious. Left to herself, she would long have torn down the queen-cell and destroyed its occupant. But the vigilance of the guard at this time is redoubled, all hostile approaches to the old queen are sedulously foiled, and at the same time, the attempts of the young one to break from her prison are frustrated. A hole is bored in the side of the cell through which she is fed, but she is retained a captive until the swarm is gone. To guard against the new queen meeting with death or some mishap during her development, the invariable policy of rearing more than one queen is adopted, but only one Mother-bee is allowed to exist in a normal hive. As soon, therefore, as the workers of the colony find themselves possessed of a new queen capable of attending to all duties of a queen, they withdraw the guards placed around the surplus queen-cells, and allow the new ruler to work her natural will upon them. Then she does with fierce alacrity, breaking down the cell-walls, and putting her royal sister at once to the sword.

A LIVING CHAIN

Bees forming themselves into a cluster for wax-generation

Over the broad combs the queen now incessantly wanders about laying eggs in empty cells.

Sometimes she lays eggs in the small paper cells, and sometimes in the large paper cells; the former develop into Worker-wasps and the latter into Drones. Therefore, the Mother-bee, in addition to the power of producing an enormous number of fertile eggs for years in succession, has also this further astonishing faculty,—that she can lay three totally different kinds of eggs at will, changing from one variety to the other just when and where it pleases her. There is no doubt of the marvel of this, nor of the mystery and even when we arrive at an understanding of how it all comes about, though the seemingly miraculous side of the matter disappears, we find ourselves face to face with a greater marvel than ever.

WASPS

Among the wasps, the male rarely lives many hours after his wedding or nuptial flight which usually happens about the commencement of the winter season. The queen, alighting to the ground appears to feel uneasy and finding a suitable place, such as a crevice in the bark of a tree or a split in the wooden work of some building or its side, goes to sleep for about five months. During this time she remains dormant throughout winter. She wakes up about the middle of April, feeling a little dazed and stiff, and coming out of her hiding place, she warms herself about an hour in the sun. This appears to invigorate her, for she soon becomes active, cleans her jaws, brushes her legs and wings, and starts on her motherly duties of building a thriving city with perhaps as many as fifty thousand inhabitants—all her

she flies about visiting old and broken buildings until she discovers suitable building material for the city which she has to establish. As soon as she is able to locate such a place, she flies again and decides on a spot where she is to construct her city. The selected place requires any amount of work, and she immediately proceeds to do it; she easily observe her doing this duty now and then she comes out of her hole carrying each time something in her mouth—a scrap of dried nutshell, a bit of wood or seed, and not infrequently a piece of paper which she drops outside. When the cleaning is done, she quickly repairs her toilet (which is always an important matter with a wasp) and proceeds to building material bit by bit. This

is turned by mastication into a pulp and first used to form a stout little 'papier-mache' pillar attached to a projecting portion in the roof of the chamber—for the wasp builds the roof of its home first. Then to the end of this footstalk, a cap of the same material is added about half an inch in diameter. To the underside of this cap four cells are attached, and in this manner the first stage in a new wasp city is built. In each of these four cells an egg is laid by the queen-wasp, and other cells are added until a layer of cells is formed each with an egg deposited in it. Meanwhile the eggs which were laid first hatch out, and the queen feeds them on chopped insects and vegetable food which she has to find and prepare. In the course of three weeks, the grubs which emerge from the first four eggs grow so large as to completely fill up their cells. They then seal up their cells themselves with a white cap, after which they trouble their mother no more. In ten days' time these grubs change into worker-wasps and emerge out of the cells by cutting them

THE THREE CLASSES OF WASP FOUND IN EACH NEST.

In the centre is the Female or queen, noticeable for her superior size. On the left is the male or drone with his longer feelers, and on the right is the active little worker.

open with their sharp jaws. By the time this happens, the paper-making powers of the queen-wasp decline, and this work is taken up by the four young daughters, who though sexually imperfect and smaller in size, are like her in all other respects, for they can build new cells and tend the young just as well as she. Day by day new workers appear, and soon the queen does nothing but deposit eggs in the cells as rapidly as they are built by the workers.

Both the queen and the worker-wasps are endowed by nature with some wonderfully made tools to carry on the nest-building function. The tiny shreds of wood bitten off from a wooden paling by means of the jaws are worked up in the complex machinery of

the mouth and mixed with a gummy secretion, until at last a paper-pulp is produced which is then spread out into a thin layer and added either to the outer walls of the city or to the tiers of cells within. Just how the paper is manufactured, and what tools are employed in its production, we do not quite understand, as the machinery of the mouth-parts is rather complex, and it would be out of place here to enter into the details of structure of the biting horny jaws (mandibles), or of the delicate transparent four-lobed tongue to the sides of which is attached a pair of small jointed feelers, or of the sensory six-jointed complex feelers outside the tongue. Suffice it to say that whatever work the wasp has to perform, whether it is carrying a little stone out from the building site of the nest, biting through strong roots, manufacturing paper pulp, robbing the orchard, or stealing tiny portions of sweets from the kitchen or the confectioner's shop which it sometimes prefers to its more lawful prey, the flies—is done by these tools.

INTERIOR OF A WASP'S NEST

So the city grows apace, new tiers are suspended to those above by short pillars until several floors are made. Some of the nests are of immense size—the one placed in the Calcutta museum a short time ago belonging to a species of tree-wasps measures more than three feet in diameter, and consists of over a dozen tiers. Towards the end of summer, the wasp city is at the height of its glory, food is abundant, and thousands of busy citizens are extremely active. About this time too some very large cells are built in the lower tiers and extra food is supplied to the grubs that hatch within them. Then there comes a terrible blow to the community,

the vitality of the queen-wasp becomes exhausted and she can no longer deposit eggs, and the workers soon find themselves idle, having no new grubs to feed. When this happens the large cells are cut open and from them emerge a host of young queens, while at the same time from other cells appear their suitors—slender-bodied male wasps with very long feelers. In the course of a few days the mates are selected, and the pairs leave the nest, accompanied by some workers never to return.

A good many of the workers still remain in the nest, but they appear to go mad. Their sole occupation consists in pulling out the half-developed grubs from their cells and leaving them at the entrance of the nest to perish. Several ridiculous explanations have been given of this action. It is not infrequently attributed to a merciful instinct on the part of the workers who, realising that with the approach of the coming cold weather they will not be able to rear their charges, terminate their suffering in this way. The better explanation is perhaps one of sanitation. Until late in the year there are still queens and males to emerge, so the last service rendered by the workers to their race is the removal of these grubs, so that the sexual individual may mature in a healthy atmosphere. When all the grubs are removed from the cells the workers forsake the nest, and having no home ties or young to feed, they become freebooters, giving themselves over to orgies in any warm kitchen or sweetmeat seller's.

NEST OF THE TREE WASP

The photograph is twice the actual size

shop where they can scent savoury food. Even if they escape the hands of the cook or the shopkeeper their time is now short; for having deserted their nest, they find little shelter, and sooner or later, wet and cold overtake them.

Therefore, in the early history of a wasp hive, there are two kinds of individuals only—the queen and her daughters. The third kind, the male, appears at the end of summer—when the city is at the zenith of its glory, and when certain marriageable daughters have been born to the community from which he can select a wife. His function in life having been fulfilled, he perishes, together with all the busy workers of the city in which he was born. Only the young queens are able to survive the winter and become the mothers of new communities. Their husbands never see the thousands of citizens of which they are the fathers; indeed they never see the beginning and early stages of a city at all.

The queen-wasp is not nearly so aggressive as the workers, and much less likely to sting; the barbs on her darts are often very imperfectly developed. A worker-wasp may lose its life while stinging an enemy, owing to its darts adhering, but the queen, in the interests of the race, is more protected, and uses her sting for its true original function, egg-laying. The ovipositor of the worker-wasp, having largely lost its original function, is now developed into a complex weapon of offence, and is also used for paralysing living prey by means of its poison. The male wasp is harmless in this respect.

Thus we see that in its social economy the wasp is as marvellous as the bee.

ANTS

Of the four groups of social insects mentioned above, adaptive plasticity attains its boldest and richest expression in the ants. They occupy a unique position in the insect world on account of their dominance as a group, as is shown first, in their high degree of variability exhibited in the great number of their species, sub species and varieties; second, in their numerical ascendancy of individuals; third, in their wide distribution over the earth; fourth, in their remarkable longevity—and colonies often outlive a generation of men; fifth, in their abandonment of certain over-specialised modes of life from which the other social insects seem not to have been able to emancipate themselves; and sixth, in their

manifold relationships with plants and other animals—man included. Sir John Lubbock has well said that

"If we judge animals by their intelligence as evidenced in their actions, it is not the guerilla and the chimpanzee, but the bee, and, above all, the ant which approach nearest to man."

Indeed, the resemblances between men and ants are so very conspicuous that they have been noted even by the aboriginal thinkers. Folk-lore, and primitive poetry, and philosophy show the ants as an abiding source of similes expressing the fervid activity and co-operation of men. Although these similes have become trite from repetition, the scientific student can hardly free himself from the many anthropomorphisms which they suggest. He is forced to admit that the social and psychical ascendancy of ants among invertebrates constitutes a very striking example of convergent development. The palaeontologist may be inclined to admit that this convergence has a deeper significance, that it may have been due, in fact, since ants and mammals seem to make their appearance simultaneously in mesozoic times, to some peculiar transitory conditions that favoured the birth of forms destined to dominance through extraordinary psychical endowment. What these conditions were we have but the slenderest hope of ever knowing. Perhaps they may be conceived as having favoured psychical mutations which are not only more remarkable but also more obscure than the physical mutations now engrossing the attention of biologists. Be this as it may, there is certainly a striking parallelism between the development of human and ant societies as we shall see later on.

LIFE HISTORY

Before we direct our attention to some of the more extraordinary ant colonies, let us examine the typical life history of these insects, for, with few exceptions, the general life of one community is very similar to that of any other.

An ant's nest may be built above or below ground; in hollow trees; in plant galls; in decaying wood—in fact, no situation may be said to be wholly unsuitable for a nest if the right kind of ant is at hand to make use of it. The mating of the sexes as a whole centres in the males and females. In those species in which one or the other of the sexual forms are wingless, the mating must take place within the nest or on the ground outside. But, when both sexes are

winged, mating nearly always takes place in the air; in fine summer weather, the males and young queens take to nuptial flight. When the hour for this draws near, a strange excitement pervades the ranks of workers. In some species, even the blind and etiolated ones venture out into the sunlight and accompany the males and females to the entrance of the nest. The winged forms move about in tremulous indecision, but, finally venture forth, run about on the stones or climb about on the grass blades till they have filled their trachea with a plentiful supply of oxygen. Then they spread their wings, and are soon lost to view, rising in the air they glitter like sparks, pale into curling smoke and are lost to view high in the air. "Sometimes the swarms of a whole district have been noticed to unite their countless myriads, and, seen at a distance, produce the effect resembling the flashing of the Aurora Borealis, or that of rainbow hues in the spray of laughing waterfalls." During this flight of love, mating takes place, and their evolutions so far as they can be observed, resemble those of the honey-bee so aptly described by Maeterlinck,

"She drunk with her wings, obeying the law of the race that chooses her lover, and enacts that the strongest alone shall attain her in the solitude of the other, rises still and, for the first time in life, the blue morning air rushes into her stigmata, singing its song, like the blood of heaven in the myriad tubes of the tracheal sacs, nourished on space that fill the centre of the body. She rises still. A region must be found unhaunted by birds, else that might profane the mystery. She rises still, and already the ill assorted troop below are dwindling and falling asunder. The feeble, infirm, the aged, unwelcome, ill-fed who have flown from inactive or impoverished cities, these renounce the pursuit and disappear in the void. Only a small indefatigable cluster remain, suspended in infinite. She summons her wings for one final effort: now the chosen of incomprehensible forces has reached her, has seized her and bounding aloft with united impetus, the ascending spiral of their intertwined flight whirled for one second in the hostile madness of love."

It must be noted, however, that there are several important differences between the nuptial flight of ants and honey bees. In the case of the bees, there is the single female for whom the males compete whereas among the ants there may be hundreds of females. Moreover the pairs of ants often descend to the earth in copula and always separate without the female tearing away the male genitalia. Nor does the female ant as a rule return to the colony in which she was born. In both cases the male dies soon after mating.

On descending to the earth, the first care of the fertilised female is to divest herself of her wings, henceforth useless to her. This she accomplishes either by pulling them off with her legs and jaws or by rubbing them off against grass blades, pebbles etc. She is now an isolated being restricted to a purely terrestrial existence. During her life in the parental nest, she had stored her body with food in the form of fat and bulky wing muscles. With this physiological endowment and with an elaborate inherited disposition, called instinct, she proceeds to establish a colony out of her own substance. She begins by excavating a small burrow, and enlarging it into a chamber at the blind end, closes the entrance and shuts herself away from the outside world. This engineering feat (in the case of one proceeding alone) causes the ant much tribulation. She often wears away all her mandibular teeth, rubs the hair from the body, and mars her burnished or sculptured armour. At length, bruised and scratched, the queen, in her cloistered seclusion, passes days, weeks, or even months waiting for the eggs to mature in her ovaries. When these eggs have reached their full size at the expense of her fat body and degenerating

NEST OF CAMPONOTUS RUFIPES ON A TREE.

After von Thring

wing-muscles, they are laid in little packets after having been fertilised with a few of the many thousand spermatozoa stored up in her spermatheca during the nuptial flight. These are nursed till they hatch as minute larvae or grubs, and are nourished by the queen from its saliva derived from the fat stored in her body and eventually developed into undersized workers (workers minor), whose first care is to break away into the outer world and to proceed with the enlargement of the nest. The newly hatched workers bring food for the queen, and she regains some of her original plumpness, but remains all the time perhaps for 15 years a lonely self-sacrificing egg-laying machine.

In an incredibly short time, the community is in full swing. The ill-formed original workers are replaced by more lusty individuals from a different kind of eggs laid in clusters and not in cells like those of bees and wasps. The greatest care is bestowed upon them by the workers, and they are covered with saliva by frequent licking which causes them to stick together in batches. This renders them transport easier either from chamber to chamber on account of the variation of temperature and moisture from hour to hour, or to a place of safety in case of an accident to the nest.

The grubs which hatch from the later eggs of the queen, (or queens) are soft-bodied, blind, legless, helpless little creatures. Their nurses supply them with nourishment

from their own mouths consisting of partly digested food, or masticated insects caught by the workers, portions of seeds or other edible matter. For a month or more the nursing is continued in order that the grubs may develop into healthy well-grown ants. It is necessary that they should be surrounded during their various stages of growth with an atmosphere of constant temperature and humidity. To bring this about the nurses remove their charges from place to place within the nest and they are arranged in rows according to their ages. The nurses of one Texas species have the habit of bringing their charges to the surface after nightfall and slowly promenading up and down with them after the manner of human beings.

At length the grubs reach the stage at which it is necessary to change into chrysalids, so the nurses embed them in the earth till they have spun their cocoon (the embedding is done so that the grubs may get some points of attachment for the silk), then they dig them up and store them in piles. Inside the cocoon the grub transforms into the adult insect, and when the changes are almost completed, the nurses once more come to the rescue, by splitting up the silken envelope, they remove the half-formed ant (callow) from within. The callow is helpless, its legs feelers and wings, if it be a winged form, are closely folded to its body; all these organs are cleaned, licked dry and unfolded by the diligent nurses. In short, they literally set the callow on its feet.

These immature callows soon develop into males or females, or soldiers as the case may be. The structure of the nests, the number of castes—that is to say, individuals modified in some special manner for the accomplishment of definite duties and the habits of the workers differ widely in the various species.

In some species, workers (normally a caste of non-reproductive females) of different ages perform different tasks foraging or house-keeping, fighting or nursing, as the case may be, and the division of labour is associated with difference of structure. Thus in the Sauba or Umbrella Ant of Brazil (*Ecodoma cephalotes*) so well described by Bates in his *Naturalist on the Amazons*, there are three

DRIVER ANTS ATTACK A SNAKE.

The snake is the Horned Viper and it was attacked whilst casting the skin. The ants covered every portion of its body. The snake struggled for a quarter of an hour but in the end was killed and finally eaten by the ants.

classes of workers. All the destructive labour of cutting six-pence like discs from the leaves of plants is done by individuals with small heads, while others with enormously large heads simply walk about looking on. These *worker-majors* are not soldiers nor is there any need of supervising officers. Bates thinks that they serve as passive instruments of protection to the real workers against the

attack of insectivorous animals. The third order of workers includes very strange fellows with the same kind of head as the *worker-majors* have, but the front is clothed with hair instead of being polished, and they have in the middle of the forehead a twin "simple eye" which none of the others possess.

(To be concluded)

THE ORIGIN OF THE HOLI FESTIVAL

BY PROF. JOGES-CHANDRA RAY, M. A., VIDYANIDHI

THE Holi festival of Northern India is known as Dol-Yatra in Bengal. It is pre-eminently a festival of those who are devotees of Vishnu, whether known as Narayana or Krishna. Well-to-do people have generally a separate pavilion specially built for the occasion, while others erect a temporary canopied structure for the purpose. Early in the morning of the appointed day, the Full Moon day in the month of Phalguna, the deity is brought in his throne to the pavilion and placed there with his face turned to the south. He is anointed and bathed, and, after the usual worship with flowers, touched with coloured powder. The throne is suspended by means of cords and rocked seven times. Hence the name is Dol or swinging. Sometimes he is carried in a procession in the afternoon amid great rejoicing, and coloured powder and water thrown on each other's person. Thus ends the festival which is sometimes continued for a few days more. In the preceding night, however, there is also rejoicing, though chiefly among children. A bonfire is made in the evening in which a figure called 'meda' or ram is burnt. This ceremony is known as 'Charchari' in Sanskrit, and 'Chanchari' in Bengali.

There are various legends connected with the festival, and practice differs in different parts of the country. It is generally believed to be a spring festival, occurring as it does now in the spring month of Phalguna. It is to celebrate the advent of joyful spring after cold weather, and the name, Vasanta-Utsava, sometimes given to it associated with

hilarity, and, in parts of India, with considerable revelry among the lower classes, has lent colour to the view.

But there are serious difficulties in the way of accepting this origin. Firstly, it fails to explain the practice of burning a bonfire on the night preceding Holi into which the supposed figure of a ram is thrown. We can understand the enjoyment of a swing on a full-moon night in spring and merry-making with coloured powder and water, but why should there be fire also? In Maharashtra and other parts of the country, the full-moon night is known as Hutasani, meaning the night on which a sacrificial offering is made to fire. The character of the festival is thus completely changed into a fire festival. Secondly, Dol-Yatra is not an isolated festival occurring once a year in spring. It has its counterpart in the rainy season exactly six months after. It is then known as Hindol in Sanskrit, and Jhulan in Bengali, which, being derived from the same root as Dol, also means 'a swing'. But who would ever think of a swinging pastime under incessant torrents of rain in the month of Shraavana? Thirdly, how to account for the origin of another Dol in Chaitra, a month after Holi. Though this is not as popular as the first Dol, it is not without authority. Fourthly, Phalguna, the month in which Holi is kept, was not a spring month in ancient times, and, were it not for the precession of the equinoxes described later on, would have been now a winter month, unsuitable for holding carnival. Fifthly, we should remember that there is a festivity a month after Holi.

in which Madana, the Indian cupid, is worshipped. If Holi were in origin an amorous sport of Sri Krishna, one should have considered it superfluous in view of the Madana festival. Sixthly, if Holi were of recent date, the time appointed for it appears to have been ill chosen, since Phalguna is cold in Upper India where the festival is extremely popular and where it probably originated.

All these difficulties disappear if one recalls the history of our calendar and takes Holi to be an anniversary in memory of the New Year's Day sacrifice which used to be performed by the Vedic Rishis of old. The event was so remote in time that its origin was forgotten, and various legends grew up in course of time to account for the celebration. Yet, as will be presently seen, there is a substratum of truth in them, garbed though they are with ignorant fancy of various times. This festival, a reminiscence of the commencement of a new year, is not a solitary instance of its kind. It is preceded by the observance of 'Maha-Siva-ratri', the Great Good Eve, a fortnight before Holi, and these two are analogous in significance to Risa-Yatra and Deepali in the month of Kartika when a new calendar began the third calendar, and the present one began in Asvina with Kojagari and Mahalaya and analogues in Chaitra in which there is again a Siva-ratri followed by a Dol and Madana festival.

There are numerous instances of feasts in our calendar which appear to have been appointed for the purpose of marking astronomical cycles, such as Yuga, Manvantara, Kalpa, Samkranti, &c, and Durga Puja in Asvina and also six months after in Chaitra appears to have originated with a cycle of astronomers. The fixing of the dates of the feasts was neither accidental nor fanciful. The wise men of old took advantage of astronomical and historical events and endowed religious observance, may be to commemorate them, just as they selected picturesque places for shrines and pilgrimage.

The Dol-Yatra, literally the swing festival, is one of these. Its clue is found both in the legends and the date which is the Full moon night in the month of Phalguna. It is well known, the Aryans counted days by nights as we do even now throughout India in the name of 'tithi'. It is a lunar day, just as the months Phalguna, Chaitra &c, are all lunar.

At first each month commenced with a Full moon, and the names of the months were

derived from those of the constellations which rose with the Full moon. Thus the name of the month, Phalguna, meant the month of 30 nights beginning with the full-moon occurring in or about the constellation, Phalguni. There are two constellations, first and second which bear this name. Long afterwards, for some reason or another, the beginning of the month was changed from Full moon to New moon, thus transferring the Full moon night to the middle of each month. But as the names of the months were not changed, the two systems of counting, though still in use, have often been a source of confusion.

The Aryans had of course a year, depending upon the annual motion of the sun, divided into two halves, the Ayana, consisting of 180 days each. They particularly noticed the solstices with which are connected long and short nights, winter and summer; and the half-year, the Ayana, was the period from one solstice to the other. The two equinoxes were also observed, and these two together with the two solstices gave the six seasons, three in each half-year.

It was soon found that the twelve months consisting of 354 days did not complete the year. In some years there were thirteen full moons, and in course of time, two or more months in excess of the number calculated at the rate of twelve per year. As a consequence it became impossible to know the seasons from the names of the months and to perform agricultural operations in right time. After a great deal of anxious consideration, the Rishis devised the system of omitting the extra months and displayed the marvellous ingenuity of practically converting the lunar months into solar and making them represent twelve equal divisions of the ecliptic.

The four cardinal points of the ecliptic would have been now in their respective months but for what Western astronomers call the precession of the equinoxes, or, as we say, of the solstices. They tell us that the points are not fixed like the stars, but continuously move backwards, though very slowly, at the rate of 1 degree in 72 years. As a consequence, each point falls back by a month in about 2300 years. For instance, autumnal equinox, which now happens early in Asvina, was not there before. It was at one time in Kartika, at a remoter time in Margasirsha, and so on, making a complete revolution in about 26,000 years.

The two equinoxes are always six months apart, and so are the solstices. These four are

separated from one another by an interval of three months. Hence if,

- (1) autumnal equinox falls on Asvina full moon, the vernal must fall on Chaitra
 winter solstice on Pausha
 summer on Ashadha
 (2) aut. equi in Kartika, wint sol in Mazha ver. Vaisakha, sum. Sravana
 (3) aut equi on Margasirsha, wint sol in Phalgun ver. Jyaisktha sum. Bhadra
 Let us now return to the main question

We have suggested that Dol-Yatra is a celebration of the New Year's Day of ancient times. If so, the year must have begun in Phalgun on the Full Moon night. But was this month counted the first month at any time of which we have any record? The question has been sufficiently answered in Tilak's *Orion* in which he has given many references from the Vedas to show that Phalgun was at one time the end and beginning of the year. Let us see which of the four points could fall in this month. The vernal equinox could not have occurred in the month, since it now happens in Chaitra, which was yet to come. For the same reason summer solstice is excluded. The autumnal equinox which now happens in Asvina may also be left out, since it implies an antiquity of about 12,000 years. The only point left is the winter solstice, and we know for certain that the ancients used to commence the year from winter solstice, that is, from the moment the sun began his northern course. But from what we have seen above, if the winter solstice was in Phalgun, the autumnal equinox must have been then in the month of Margasirsha. Hence we see that, roughly speaking, the seasons have receded since the time by at least two months. To be precise, the change takes us back to 3000 B. C., the beginning of the Kali-yuga.

It will be easy now to trace the origin of 'Indol' in the month of Sravana. Probably it used to be observed in Bhadra, which is the sixth month after Phalgun, and on account of change of calendar, probably due to the greater length of the first six solar months counted from Vaisakha, the festival came to be placed in Sravana. It is, however, clear that what happened to the sun in Phalgun had a counterpart in Sravana, when he was at the other solstice. And if any one observes the sun's journey, north and south, he will at once notice remarkable similarity with the to and fro motion of a pendulum, especially when the sun is observed in the meridian. The pendulum is only upside down, and the

period of semi-oscillation six months. The swinging motion is perceived only at the time of return. Metaphorically, the sun is mounted on a swing. In this connection, the word, Yatra, is significant. It means motion or journey, and it is Dol-Yatra, the motion of a pendulum. As seen from high latitudes, the luminous orb appears low down in the sky in mid-winter, rising higher and higher every day and sending down coveted warmth and light and making the period pleasant and auspicious for all kinds of ceremonies. After reaching a certain point, still away from the zenith, it stops for a few days as if unable to decide whether to proceed onwards or to go back. The same thing happens when it arrives at the southern station, and these are the times when it appears to be rocking in a cradle.

But the sun has been ever doing the journey in this fashion, and what is there peculiar to the Dol Yatra to connect it with the mid-winter ceremony of ancient times? A complete answer is found in the legends and also in the Maha-Siva-Ratri observance on the fifteenth night preceding Dol. It will be remembered that when winter solstice was in Phalgun, the autumnal equinox was necessarily in Margasirsha. The latter month is commonly known in Bengal by its other name 'Agrahayana' which literally means the first month of the year. It is also to be noted that while the names of all the months are derived from the names of twelve constellations, this name, *agrayayana*, is an exception, directly telling us the beginning of the year.

But it will be said that a year cannot have two beginnings, one in Phalgun and the other in Agrahayana. Yet we know both may be current at one and the same time and among the same people. For instance, we have in Bengal a civil year from Vaisakha 1st, and a religious year from Chaitra Sukla. Village people count the year sometimes from Pausha (mid-winter), sometimes from rains (Vaisakha, from which 'Vaisakha', the year), and even from Durga-puja (autumn). It was therefore not unusual to have two beginnings of the year according to the purpose of chronology. In the *Geeta*, Sri Krishna described himself as the first of everything that is counted, one of which is the month of Margasirsha.

The name of this month is derived from the constellation, *Mrigasira* or *Orion*, the great Hunter of Greek mythology. It has figured prominently in popular fancy, and a very large

number of legends has clustered round it. Here was mighty Vritra of Vedic fame slain by Indra, and the grand sacrifice of Daksha destroyed by Rudra, the fearful, the head of Daksha being transformed into that of a goat or deer. Here the demon, Ilvaka by name, who used to assume the form of a ram to lure unwearied Brahmanas to destruction was at last eaten and digested by the sage, Agastya. The curious reader is referred to the History of Hindu astronomy in Bengal by the present writer for an explanation of these and many other stories connected with the striking figure of the constellation Purans, the repositories of popular tales of ancient times, have not forgotten to tell us that Holaka or Holika from which the name Holi has been given to Dol-Yatra, was a demoness who was burnt to death, because, according to one account, she used, like Putana, to eat children. The name is, however, not found in ancient literature, and Sanskrit lexicons do not mention it. It was probably a vernacular name like Dhumdha of Maharashtra, meaning terrible, and perhaps a corruption of the Sanskrit name, Ilvaka or Ilvaka the three stars in Orion's belt. And well might the people dread and abuse her, for with her appearance on the eastern horizon at sunset came diseases, chiefly respiratory, to which children succumbed, and Vedic Rishis moved to India, that they might outlive a hundred Sarat (autumn). What Margasirsha was seasonally at one time, the month of Kartika became later, and received the notorious appellation of 'Yama-damshtra', the jaws of death.

It was therefore not surprising that Sri-Krishna while a child had to suffer from an attack of Putana, a demoness who disguised as a woman used to poison children, and Ayurvedic writers included her among the infantile diseases. It is also just possible that the idea of celebrating Durga-puja in the month of Asvina, as a mother protecting her children against a dark-skinned Asur, terrible in the form of a wild buffalo, originated in this way.

According to another account, Holika is plainly described as a sister of Sambat, the cat (from which the era of that name), and the old year is cremated in order to usher in the new. In Eastern Bengal, Holaka is described as an old woman who is burnt to death. The mist of uncertainty can no longer cloud our vision as to the origin of Dol-Yatra. Probably bonfire meant also rejoicing on the New Year's Eve as it does in Deepali, though

unfortunately it is a moon-lit night at the time of Dol. Possibly the illumination used to take place in Marga-sirsha, and it is surprising, that, a bonfire in the name of burning a meda (ram) is sometimes made in parts of Western Bengal in this month on the occasion of 'Navanna' ceremony, the feast of first partaking of new rice after harvesting.

When the New-Moon month was introduced, the year no longer began with the Full moon in Phalguna. It began with the preceding New Moon, and the night received the name of Maha-Siva-ratri. In Bengal, we have been using a solar calendar and therefore attaching importance to Samkranti—the day on which the sun enters a sign of the zodiac. But to those who follow the luni-solar calendar and count days by tithi, the beginning of a lunar month is equally important. As there are twelve lunar months in a year, they count twelve Siva-ratri, each occurring just one night before New Moon, and may therefore be called New Month's Eve. One of these is Maha-Siva-ratri, the Great Eve, because it is a New Year's Eve also. We need not trouble ourselves with the question whether this eve belongs to Phalguna or the preceding month of Magh. The same question arises with the Dewali night, which was surely the New Year's Eve when autumnal equinox fell in the month of Kartika. A fortnight later there is Rasa-Yatra, said to be a sportive circular dance of Sri Krishna. The night, Rasa-purnima is, however, also known as Tripuri-Purnima, on which Tarakasura, an Asur or demon (formed of Taraka or stars), was slain by Kartikoya, the General of the gods (Deva-senapati), and foster son of Kritika, the Pleiades. It is needless to say what all these mean and who the Asur was. He was of course killed when the autumnal equinox had receded from Marga-sirsha full moon to Kartika full moon, and the winter solstice from Phalguna to Magh about 2300 B.C. making the latter month pure and auspicious even for leaving this world as renowned Bhishma did after waiting on his bed of arrows for fifty-eight days. In another account, the name of the Asur was Mahishasura, the same as is represented in Durga-puja and killed by the goddess. She rides on a lion, since the constellation, Phalguni, is in the zodiacal sign, Leo, whence the people of Madras who follow the solar calendar call the Holi festival, Simga, the festival of the Simha or Leo month, exactly as the people of Behar

call it Phagua from its happening in the month of Phalgun. It is curious to observe how the same old story invented in ancient times has been preserved, though the occasion which gave it prominence no longer existed. In the fire festival of Dol-Yatra, the Asur has got the name, Mendrasur, obviously Medhrasura, an asur in the shape of 'medhira' or ram. For, we are told he could assume any form he wished. We now see why Padma Puran directs the burning of an animal fit for sacrifice, such as a goat or ram. In parts of Northern Bengal, a ram is actually placed in a miniature house made of bamboo and straw evidently for roasting, though taken out just before the house is set on fire. The animal is afterwards killed and its flesh distributed among the assembled crowd.

In parts of South Bengal, a sweetmeat, of the shape of a storied and pinnacled temple called 'math', is sold in large quantities in fairs held during the Dol festival. This appears to be an imitation of the fire-altar which the Vedic sacrificers used to build with bricks for the purpose of producing and keeping fire previous to actual sacrifice. We see further that the proper time for Dol is just before sun-rise on the following day, the commencement of the new year, and that the deity has to be placed with his face to the south, perhaps because the sun has not yet turned to the north.

The Full Moon day in Sravana, when the second Dol takes place, usually goes by the name of Rakhi Purnima. On this day the deity is given a new sacred thread, and in imitation all the four classes of people wear a thread to protect them from evil spirits in the next year. There is difference of opinion as to the day for this festival, some appointing it in the month of Bhadra and reminding us of the ancient calendar when the summer solstice took place in this month. The sacred thread is no other than the endless 'aditi', the ecliptic, which encircles the sun anew who is supposed to pursue a new path on the completion of the old.

There is yet a third Dol. This takes place in the bright half of Chaitra. The exact date varies. There is no bonfire, as there is none in Sravana Dol. This would have been inappropriate, since both of these had no connection with Mriga-sira. The Chaitra Dol goes by the name of Phula Dol, or flower Dol, and is really a continuation of the spring festival of Vedic times, the memory of which is preserved in Sanskrit dramas such as Ratnavali. The name, Dol,

applied to it must have been a later introduction when the original significance of the word had been completely forgotten.

From the dates given above, it must be supposed that Dol-Yatra or Rusa-Yatra has been our festival since the remote time implied by them. We are told by Vedic scholars that the Rishis used to perform sacrifices at the times of full moon and new moon and of solstices and equinoxes. There were other sacrifices performed at long intervals. There were sacrificial sessions, one of which, we are told, the sun's annual course was imitated. On the day preceding a sacrifice, the fire-altar used to be got ready and fire kindled by friction of two pieces of dry wood. The sacrifices served various purposes, one of which was to remember the calendar. The art of writing was unknown and the daily affairs of life could not be carried on without a calendar. The sacrifice became rarer in later times, possibly through the influence of Jaina and Buddhist doctrine during the rationalistic period of our history, but the memory persisted and assumed new forms according to the temperament and environment of the people. That Durga-puja, really a 'Yajna' or sacrifice is plainly to be seen in the ritual texts relating to it, and as the Vedic sacrifices were communal feasts, the puja has become a national festival in Bengal. Similar is the case with Dol which has replaced a Vedic sacrifice, the memory of which though fading is still preserved in the roasting of mutton, though in name. In Bengal, Durga-puja is a puja among those who adopt the cult of Sakti, or primal energy. In the rest of India, it is unknown in its Bengal form. It is there as Satasvati-puja or some other and instead of animal sacrifices as in Bengal, offerings of flowers and fruit are made. Dol-Yatra has become a festival among those who adopted the cult of Vishnu, the all-pervading energy sustaining the universe and cannot therefore have anything to do with destruction of life. On the contrary, humane feelings towards all creatures have been the predominant feature of Vishnu worship. In parts of Western Bengal, a small effigy of ram is made of rice paste as a substitute of a living ram and burnt, reminding us of the use of rice cake or 'purudasa,' in sacrifices in later times, the place of animal of more ancient ritual.

From the explanation of the origin of the Dol festival as given here, it will not be correct to jump to the conclusion that it is sun worship. As seen in the worship of

deities Hindu religion is undoubtedly symbolical. The three steps by which Vishnu has encompassed the three worlds are represented by the three steps of the sun, the morning, noon, and evening. Symbols may vary to some extent, and Salagrama, the round black piece of stone, is a variation of the same symbol.

No human thought is free from metaphors, and no religious worship is free from symbolism. Whether God has made man after His image or not, it is certain man has made God after him, and whether we call Him father or mother, friend or master, it is all the same symbolical. It is equally true that common people in all countries often confound a symbol with the thing for which it stands. It was on this account that Hindu sages did not approve of symbolical worship. But as the symbol, Cross, has continued to represent Christianity, and to be an idol to many, so the sun has been a symbol from remote past to represent cosmical evolution, and every striking phenomenon brought about by the sun has been made an occasion to worship the Ordainer of the laws of creation. Dol-Yatra represents a cycle, albeit a short one, of a succession of natural events with which our life is interwoven, and has therefore been made a token of remembrance of all cycles known to man.

When, however, Srikrishna was recognized as an incarnation of Vishnu, the sun was forgotten, but his acts were transferred

to him. For instance, Srikrishna, while an infant, is reputed to have broken a pair of Arjuna trees and upset a heavily loaded cart. And the people wondered at the feats, which required superhuman strength to accomplish, forgetting the facts that Arjuna is another name of Phalguni, and the constellation, Rohini, has been from its form called a cart in astronomical literature. Stripped of the allegory, the sun is represented to have left the pair of constellations, Phalguni, which by their stars look like erect trees, and consequently the constellation, Rohini also, these two being situated just at the places of the solstice and equinox remembered in Dol. It is not possible to explain every incident in the life of Srikrishna during his boyhood. Thus, in spite of the poetic veneer unconsciously laid upon his acts, many have been detected not to fit well with his after career.

The natural cravings of man for love and amusement found, however, imaginary satisfaction in them. Dol Yatra was confounded with spring festival, and red-coloured powder and water added to complete the picture. There is nothing strange, nothing incongruous, in the playful sports of the Beloved, who has ever been drawing His creatures to Him in ways which He alone knows. And Vaishnavas are perfectly right when they say that Dol and Ras Yatra are his eternal sports, the why and the wherefore of which will ever remain beyond the ken of mankind.

REVIEWS AND NOTICES OF BOOKS

[Books in the following languages will be noticed: Assamese, Bengali, English, Gujarati, Hindi, Kanarese, Malayalam, Marathi, Nepali, Oriya, Punjabi, Sindhi, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses, etc., will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer, etc., according to the language of the books. No criticism of book-reviews and notices will be published.—Editor, M. R.]

THE SUPPLEMENT TO THE MIRAT-I-AHMADI Translated by Syyyid Nawab Ali, M.A. and C. N. Seddon, I.C.S. (Gaekwad Series, Baroda, 1924) Pp. xiv+256 with 2 full-page pictures.

This history of Gujarat was written by Ali Muhammad Khan, the last of the Mughal diwans of

the province, in 1750-60, just before its annexation by the Marathas. Its value lies in the fact that "Ali Muhammad had exceptional opportunities, he writes of things he had himself observed, he was not only contemporary with the events described but himself took an important part in them." He has an additional merit, too, which is possessed by no other Persian historian of India, viz., that he

ives imperial proclamations and regulations in the original with a copiousness which is of the highest service to the historical student. There is nothing like this, except in some of the historical works reduced in Egypt in the Fatimid period, as noticed by Karl Becker in the *Encyclopaedia of Islam*.

The first part of Mr. Muhammad's huge work gives the history of Gujarat from the earliest Muslim period to the Maratha conquest. The second part consists of a detailed topographical account of Gujarat, its cities, castles, temples, mosques, the vestiges of Muslim rule, and of the Mughal administrative machinery. This second part has been introduced into English (paraphrased in parts, summarised in others) in the volume under review.

The edition leaves much to be desired, partly no doubt because the editors worked on the oppressively corrupt lithographed edition of the Persian text, but also because they have not used the other source available to the historical student day after day. It is very far from being a definitive edition.

The *Mut*, such as Blochmann's *Amir Akbar* and Irvine's *Shah Jahan*. The notes and extensions are not marked by scholarly accuracy and fulness. For example on page 415 footnote c) refer only to Gladwin's translation of the *Amir Akbar* for the revenue of Gujarat and seem to be unaware of the fact that fuller and more accurate information on the subject is available.

Thomas's *Revenue Resources of the Mughal Empire* and J. Sarkar's *India of Aurangzeb* (the latter of which gives extracts from the *Khatasat* 1695 and the *Chahar Gulshan* of about 1700).

As regards the translation, the trouble of the editors has been that they had to make their version from the very incorrect lithographic edition published by the Kath Karim Press, Bombay, which has several gaps in it. A MS. (not autograph but longed for by the author) was found at Cambay, late to be used in this edition. The two translators should note that there is another, old but very distinctly written MS. of the *Mut-i-Munim* with extremely useful corrections and notes in the margin, in the Oriental Public Library, Patna, which is described in the colophon in the author's own hand.

We are glad to learn that the Baroda Government are going to print the Persian text of the *Mut* and also an English translation of the first historical part of it. Care should be taken to consult the author's autograph noted above before these are sent to the press.

SCENES AND CHARACTERS FROM INDIAN HISTORY, DESCRIBED IN THE WORKS OF SOME OLD MASTERS, with notes by C. H. Payne (Oxford Univ. Press 25) Pp. A+252, 6s. net.

This is an English reading-book containing ten vignettes describing some remarkable persons and events of Indian history, such as Alexander's invasion (from Plutarch), Yuan Ch'wang's visit to the court of Harshavardhan (from Hui Li), Vasco da Gama's coming to Calicut (from Portuguese sources), Akbar (Du Jarric), Shivaji's coronation (from Pindar), the Court of Aurangzeb (from Tavernier). These are all taken from contemporary writers, and alone (as Mr. Payne rightly observes) can give us the genuine atmosphere and life of the periods, while the scientific historian often has to reproduce these for us.

In choosing his sources, Mr. Payne has been

guided by considerations of style and not of scholarly accuracy. Thus, for Plutarch he goes to Dryden's incorrect version (as patched and repaired by Clough) for 'the Chinese Buddhist pilgrim to Stanislas Julien's primeval French translation (instead of the more modern rendering of Beal). Similarly he prefers Erskine and Lowden's translation of the *Taber-namah* (a translation two stages removed from the original) to Mrs. Beveridge's recent version made directly from the Turki text, with all the lacunae filled up—his reason being that Mrs. Beveridge's style is not of a kind to attract the general reader (p. 123 n).

The topics chosen are all attractive and the editor's own notes useful and learned.

SHIVAJI'S BIRTHDAY CELEBRATIONS.—It had hitherto been held that Shivaji, the great founder of the Maratha nation, was born on 6th April 1627. But the chronicle preserved in manuscript by the Jedhe family of landed magnates in the Poona district records that he was born on Edgum dark 3rd 1751 Shaka, corresponding to 19 February 1630 (New Style). The contemporary Sanskrit epic the *Shivaji Bharat* says the same thing. Though there is evidence for the former date also and the question has not been finally decided by scholars, a party at Poona headed by Mr. Sadashiv Mahadev Divekar organised a Shivaji birth anniversary celebration at the fort of Shivner (his natal place) on the latter date last year. At this gathering papers learned and otherwise contributed by a wide circle of writers in and out of Maharashtra were read. A selection of these has been now printed in a volume of 356 pages by the Lhasa S. Mordal of Poona at the price of Rs. 1, with a beautiful card-board portrait of the hero in bas-relief. The volume is one which no future historian of Shivaji can afford to neglect. In addition to marshalling all the facts and evidence known to the writers from a variety of sources and standpoints, some extremely rare works (like the Jedhe Chronicle, the *Rajmardhan Kosh* &c.) have been here reprinted. As many *Shakavals* (chronicles kept by different families) as are known to exist in Maharashtra have been printed besides fresh contributions to our knowledge, such as Afzal Khan's letters, Shivaji's relations with the Portuguese from the Goa records (by three writers), a charitable grant (in Persian) by Jai Singh I, &c. We only miss here the balanced and critical discourse written by Mr. Wakaskar (of Baroda) on the date of the hero's birth which was printed in a journal in May last. Mr. Divekar deserves the support of all interested in Maratha history.

J. SARKAR

A FEW WORDS ON OUR FINANCIAL RELATIONS WITH INDIA. By Major Wingate, of the Bombay Engineers. First published in 1859 by William Blackwood and Sons, Edinburgh and London. Reprinted and published by Major B. D. Basu I.M.S. (Retd.), Allahabad, 1926. Price six annas.

We make the following extracts from this instructive publication. Most of what Major Wingate said in 1859 is true to this day in an even more intensively aggravated form.

The exaction of a tribute from India, as a conquered country, would sound harsh and tyrannical in English ears, so the real nature of the

Indian contribution has been carefully, though possibly unwittingly, concealed from the British public, under the more inoffensive appellation of 'Home charges of the Indian Government.'

Not only is it a fact that India has been acquired without the expenditure of a single shilling on the part of this country, but it is equally a fact that, so far from involving outlay, India has regularly paid to Great Britain a heavy tribute, which there is reason for thinking has not fallen far short of the almost incredible sum of a hundred millions sterling in the course of the present century!

"This enormous tribute, obtained without sacrifice of any kind is, then, one great and undeniable advantage derived by this country from its connection with India, but it is, by no means, the sole advantage. The funded debt of the Government of India, borrowed in India, is estimated at nearly sixty millions sterling, of which three-fifths, of thirty-six millions, is the property of our own countrymen. The whole, or mostly the whole of these thirty-six millions consists of investments by Europeans in India out of money made in that country, and constitute, therefore, a clear addition to British property, gained through our connection with India, as does also the property of our fellow countrymen invested in India in banks, houses, factories, and various other ways, which probably amounts to more than ten millions. And in addition to British investments made in India, we have or shortly shall have, no less than eighty-one millions raised in this country, on account of East Indian stock, deposits, bond debt debenture loans, Indian railways and public works, making the aggregate amount of British capital dependent on the preservation of our Indian empire, nearly one hundred and thirty millions sterling * * *

'The problem then which the Indian financier, and above all the Parliament and people of England are called upon to solve is not how to raise additional revenue from India for that to an adequate extent would be found to be at once ruinous and impossible—but, whether it is fair and just that the entire cost of upholding British supremacy over India, should be defrayed by the people of that country. Has our policy in India been determined out of pure, unselfish, and benevolent regard for the welfare of the people of that country and without the smallest regard for the manner in which it may affect our own country? Was this the principle which guided us in imposing prohibitive duties upon Indian manufactures imported into this country, and merely nominal duties upon British manufactures imported into India? Was it out of pure regard for India that cotton exported to Great Britain from India, is exempt from duty, while it is taxed on exportation to all parts of the world besides? Was it Indian interests which dictated the fixing of import duties upon goods brought to India in British ships at one-half of the amount levied upon similar goods brought in ships of any other country? Were native interests solely concerned in the exemption of Europeans in India from the jurisdiction of the ordinary courts of criminal justice, by which native redress for British wrongdoing has been made a practical impossibility in ninety-nine cases out of a hundred? Was it out of consideration for the taxpaying Hindoo and Mahomedan, that the official Europeans in India was provided with a costly ecclesiastical establishment before

anything was done for their education or enlightenment? Was it unselfish regard for the natives that dictated the policy of obtaining, upholding, and extending British dominion in the East, by means of taxes raised in India, in opposition to the rule obtaining in all other British dependencies, of providing for the costs of their military defence from the British Exchequer? And lastly, were the arrangements for defraying what is styled 'the home charges' out of the Indian revenues, under which nearly one hundred millions sterling of taxes collected in India, have been transferred to Great Britain in the course of the present century, devised for the purpose of benefiting the people of India alone? Let the candid reader thoughtfully and conscientiously answer these questions for himself, and then say whether British interests as well as Indian interests have not had a share in determining the course of our Indian policy.

If, then, we have governed India, not merely for the natives of India, but also for ourselves, we are clearly blameable in the sight of God and man for having contributed nothing towards defraying the cost of that Government.

'We have there at this moment, an army of upwards of a hundred thousand British soldiers, which upholds the power and influence of Great Britain over the whole of Asia, and adds greatly to the status of our country, even among the nations of Europe. But for India, this large body of men would be thrown upon the labor market at home to the injury of the whole class of our laboring population, while the very recruiting for the army of India, probably relieves us of poor-rates to the extent of a quarter of a million a year. By means of the army and revenues of India, this country has carried on wars and made conquests in all parts of Asia. Ceylon, Singapore, Hong Kong, Aden, and Rangoon have all been so acquired. The first China war, the Afghan war, the Burmese, and Persian wars, were chiefly fought with the resources of our Indian empire but, in pursuance of a British policy with which the interests of India were but remotely concerned * * *

"Let Englishmen then, consider well the facts which have now been stated, viz. that India in the present century has paid to this country a tribute of at least a hundred millions sterling that our countrymen have a capital of one hundred and thirty millions invested in public securities in other undertakings connected with India, that the trade of India is probably of more importance to us than that of any other nation in the world, that our ambitious youth and a large body of our poor are provided with congenial occupation there, that the possession of India adds immensely to the power, dignity and influence of our country in all parts of the world and apart from all higher considerations connected with their duties as civilized and Christian rulers, they will surely on the lower grounds of self-interest, come to the conclusion that India is indeed well worth keeping.

Pol.

THE PROBLEM OF THE RUPEE. By B. R. Ambekar, sometime Professor of Political Economy at the Sydenham College of Commerce and Economics, Bombay. Published by P. S. Keng & Son, Ltd., Orchard House, 2 & 4, Great Smith Street, Westminster. Price Shillings 15 nett.

The book which was published in 1923 is an exceedingly instructive treatise on a terribly controversial subject and retains its topical interest

even in 1926. Prof. Ambedkar tackles the problem of the Rupee in all its details. He traces its history, analyses the mountain of all sorts of opinions which has grown round it and finally gives us his verdict that the problem has arisen on account of the neglect, by those in power, of the truth that it is the internal purchasing power of the Rupee which is of primary importance and not its exchange value as has been assumed and worked upon by them.

"Stability of a currency in terms of gold is of importance only to the dealers in gold, but its stability in terms of commodities in general affects all....."

This highly important aspect of a good currency was overlooked (and was it intentionally?) by our rulers during several decades.

The closing of the mints to the free coinage of silver in 1893 was the outcome of a great and continued fall in the purchasing power of the Rupee. But this step did not lead to any stoppage of the depreciation. Why? Because, although the people could no longer bring silver to the mints, the Government could and did. So fervently did they go in for Rupee coinage that prices rose in India during 1893-1914 even more than in other countries.

This was due to the fact that the Government coined Rupees to meet the demands of the trade of the country during the busy season, but this expansion thus caused could not be remedied by suitable contraction in the slack season. The Rupees went out year by year but never came back to the treasury in proportional quantities after doing their work. Lying in the remotest corners of the country in "small pools" they reduced the economic life of the country to the state of a water-logged marsh. Fresh demands by big traders led to fresh coinage every year and the cumulative effect of this made the problem of rising prices progressively serious.

This is due to the fact that the Rupee currency cannot be contracted normally, as in the case of a gold currency, by export or melting on account of its low specie value. And the economic structure of Indian society is such that money once set into circulation does not return easily and quickly to the fountain-head.

So Prof. Ambedkar prescribes closing the door of the mints not only to the people but also to the government (beyond a limit). This will prevent inflation and disturbances in the internal price level.

So much about the *tokens* the rupees. The standard of value should be gold and the elasticity of the currency should come from this source. With a gold basis both expansion and contraction should be easy.

Prof. Ambedkar has shown great scholarship and a tremendous amount of hard work in this book. It beats all other treatises on the Rupee by a good many lengths and is a noteworthy contribution to the Indian economics.

A C

JAMSETJI NUSSEHWANJI TATA. By F. R. Harris New College, Oxford. Published by the Oxford University Press. Price Shillings 15 net.

This is a profusely illustrated and finely got-up volume giving a chronological account of the life of the great Parsee. It should be welcomed by admirers of Jamsetji Nusserwanji Tata.

THE LEAGUE OF NATIONS: By Prof. Santosh Kumar Das M.A., B.A., and Econ., of the Maharaja's College, Nepal. Published by the author, at 5-2 Ananda Dutt Lane, Howrah. Price Rs. 2.

The author thinks that the India of to-day longs to take her place in the world of nations and all talk of living an isolated life coming from reactionary idealists is useless in view of this urge which is more fundamental than such idealism.

Narrow nationalism will no longer serve us to any purpose, nor will it do so to any other nation. The state of perpetual warfare must be finished and the world organised on better lines.

The author then analyses the causes which lead to war and finds fault with certain explanations as put forward by socialists and others as being not the whole cause. "Sinister interest," may sometimes cause war, but the real cause lies deeper and is biological, psychological and economic in nature. The theory of Balance of Power or arming and so organising nations as to let no nation or group of nations think of war with impunity, has been found to provoke rather than prevent war. A better scheme would be disarmament and international arbitration by a League of Nations.

The League ideal is nothing sudden or novel. It is the legitimate outcome of the system whereby law and order have been established in every community and it "embodies the highest ideal of sociology." It will ultimately lead humanity by way of cultural Syntheses to a place which will be a step up in spiritual evolution.

The author then gives us the historical background of the League of Nations and an account of the various influences which have contributed to its development. He also gives us a fairly detailed picture of the League's organisation and functions and an idea of what it has been able to do so far. With India's position in the League of Nations, the author is not at all satisfied. India has been admitted into the League so that Britain may have "one more vote without paying for it." India pays an exorbitant sum to the League and gains thereby nothing worth mentioning.

In conclusion, the author says, "The mere establishment of a League, however, does not necessarily imply the achievement of the ideal. Even the total abolition of war, were that secured, would not be enough, for those who have been genuinely moved by the ideals of liberty and order with regard to the relation of nations and States desire a world in which every nation and every race shall develop its own character and tradition fully and freely within the common life of all humanity, and many years of disappointments may yet divide us from such a world."

An Appendix contains the complete text of the League of Nations Covenant.

Altogether this book is a well-schemed-out one and deserves the attention of all serious students of history, economics and politics.

THE OCEAN OF STORY (VOL. IV) BEING C. H. TOWNLEY'S TRANSLATION OF SOMADEVA'S KATHA SARIT SAGARA. Now edited with introduction, fresh explanatory notes and terminal essay by N. M. Puri. M.A., F.R.G.S., F.G.S.

We have already reviewed in these columns the first three volumes of this splendid ten-volume

edition of the *Katha Sarit Sagara*. The foreword to this volume which contains matter up to the end of Tawney's first volume (End of Book IX) has been contributed by Dr. F. W. Thomas, Ph. D., the erudite Librarian of the India Office Library.

MEMORIALS OF ALFRED MARSHALL Edited by Prof. A. C. Pigou M.A., and published by MacMillan & Co., Ltd. Price shillings 12-6 net

This memorial volume edited by the great pupil of the greatest economist of modern times will be heartily welcomed by the millions of admirers of the late Prof. Alfred Marshall who live in every corner of the civilised world. It contains twenty selected papers by Prof. Marshall, a good many letters written by him to different people at different times, a life of the late Prof. by Prof. J. M. Keynes and reminiscences by Profs. Edgeworth, Fay and Pigou and by E. A. Benians. The book also contains several interesting pictures of which two are photogravure reproductions of two photographs of Dr Marshall. The publishers have done well to keep the price of this volume of over 500 pages down to 12-6 only as there are many who would prize it but cannot afford to pay a higher price. We congratulate Prof. Pigou and his collaborators on the success that they have made of "this tribute" to the great savant.

A. C.

"POULTRY AS A BUSINESS" By Bhupendra Kumar Guha Thakurta. This is a précis compiled by the Author as a result of his observation in America and perusal of American literature on the subject. It is not indicated in his notes as to whether the Author is himself engaged in poultry-farming. Had he given us his own personal experiences, the book would have been much more interesting. Poultry-Farming is a strenuous life the layman generally imagines it is merely a matter of throwing a few grains to the hens and collecting the eggs. When he embarks on the enterprise and finds that it means all work and little leisure, he becomes disheartened.

As a hobby, which not duly brings in fresh eggs and chickens which reduce the household bills, a few well-bred hens will keep any man thoroughly interested. Their upkeep costs little as they consume the leavings from the table.

We would be greatly benefited if the Author would do a sojourn in his native land and work out practical methods to suit the conditions. Piano-boxes for the construction of poultry houses are not to be had in India for the asking, nor can permanent structures be advocated for the housing of fowls in a country where the invaders of the night are, unhappily, so plentiful.

Lover of Poultry

ANCIENT INDIA AS DESCRIBED BY MEGASTHENES AND ARRIAN: By J. W. McCrindle, M. A., Principal of the Government College, Patna Calcutta, Chuckerjarty, Chatterjee & Co. Ltd., 15, College Square, 1926

Emboldened by the success of their venture in the matter of publishing a cheap reprint of Cunningham's *Ancient Geography of India*, Messrs. Chuckerjarty, Chatterjee & Co. have undertaken the publication of similar reprints of the late Prof. McCrindle's works. We have here *Ancient India:*

As Described by Megasthenes and Arrian, and the publishers have assured us at the end of their preface that they intend to publish the others gradually at an early date. So far as the present reprint goes, we have nothing but praise for the excellent printing and get-up of the work. The pagination of the original edition has been indicated throughout for facility of reference. The price has been fixed at Rs 7-8.

A. G.

GUJARATI

KOTAGRI By Vmatak Nand Sankar Mehta, B. A., P. C. S. (I. P.) Printed at the Gujarati Printing Press, Bombay. Cloth bound. Pp. 62 (1925) (Price not noted)

The title of the book is interrogative, meaning "Who is awake?" It is a drama written to illustrate the chastity of a Hindu wife, whom the friend of her husband wanted to inveigle, the period chosen is between 1620 and 1640 A. D. and the place, the banks of the Holy River near Benares. There is both vigor and virility in this style and expression of idea, but there are two things which get on the nerves of an ordinary Gujarati, born and bred in Gujarat, the padding of the language with North India words, phrases and idioms, and the mode of life depicted, which is foreign to Gujarat in its association. The author excuses himself for the first by saying that there could be no limits placed to the expansion of a language (here the Gujarati language), for the second, perhaps his long residence in the U. P. and away from Gujarat is responsible. It is a pleasant, little volume all the same, from which the abundance of animal spirits peeps out now and then.

SRI DATTAPROBODHA KALPADRUMA SAKANDA III. By Dattatreya Boova Printed at the New Sodagar Press, Surat. Paper cover Pp. 232 Price Rs 2-0-0 (1925)

We have already noticed the two prior volumes of the series. The predominant feature thereof is the imparting of *Bhakti Jnan*, and it is done here by means of dissertations and illustrative stories, from our mythological works.

CHHATROPOJHI GUJARATI SAMDRAKOSHI By Lalubhai G. Patel, printed at the Surya Prakash Press, Ahmedabad. Cloth cover. Pp. 863. Price Rs. 6-4 (1925)

After the Narma Kosha, two generations old, there is hardly a good Gujarati Dictionary to be found. The present effort therefore of Mr. Patel deserves felicitation not only because of its pioneer work but because of its intrinsic worth and labor. Although meant to be useful only for school boys, it reflects the expansion of the language, and consequent addition of words therein, to its fullest extent and is thus up-to-date.

SRI BRISHMA CHARITRA, PART SECOND: By Vaidya Shastri Damodar Kany. Printed by the Lakshmi Electric Printing Co., Baroda. Cloth bound. Pp. 218 Price Rs. 2-8-0. (1924).

A most interesting book. The preaching and

precept of Bhishma Pitamah are an abiding source of inspiration to Hindus. They are let out here in a very impressive way.

Unmi - By Yogendra. Printed at the Sanatantra Printing Press, Bikaner. Cloth cover. Pp 167. Price Rs. 2-0-0 (1924)

Dr. Surendranath Das Gupta once asked Mr. Yogendra as to which were the readable books in Gujarati literature, and he said practically none, with the exception of one or two. This collection of his own poem with self-made comments seems to have been published with a view to remove that blot from our literature. Natural scenes, birds, flowers and like subjects have furnished the material and it is sought to show that emotion has inspired the verses.

SAMAR PARIVAT NATAK - By Thakur Narayan Vaman. Printed at the New Printing Press, Ahmedabad. Pp 182. Cloth cover. Price Rs. 2-4-0 (1925) with photos.

This Natak is meant for the stage, and is therefore embellished with the clap-trap and fun which popularise shows on the stage. A trustee commits breach of trust with the assistance of a corrupt solicitor, whose first wife becomes a Barri for and leaves him and he marries a second wife who is a Doctor. The fraud is ultimately exposed and the proper party gets his due. There is nothing further done or said to leave behind any abiding influence.

DESHA BANDHU - By Jaganath Kumar Maunishankar Bhatt. Printed at the Sanatantra Printing Press, Bikaner. Pp 200. Paper cover. Price Rs. 1-0-0 (1925)

Everything relating to the late Deshabandhu Das is to be found here, his library, legal and political activities. Translations from *Sagar Samrat* are not forgotten. Such a biography of the late Indian patriot Das was badly wanted in Gujarati, and it has been brought out with commendable promptitude. It is illustrated with pictures.

SHRI GITA GOVIND AND SHRI KRISHNA GITAVALI - By Vaidya Shastri Damodar Karna. Printed at the Lakshmi Electric Press, Baroda. Cloth bound. Pp 96. Price Rs. 1-0-0 (1925)

This collection of songs and verses written in praise of Shri Krishna is modelled on the old style and pleases the audience when recited.

K. M. I.

HINDI

BARI DUDH—Translated by Pt. Rupnaram Pandey. Indian Press Ltd. Allahabad. 1925. Re 1.

The Indian Press Ltd. has taken to the task of translating the work of the Bengali novelist Babu Saratchandra Chatterji. This laudable enterprise seems to be well conceived and well executed from the book under notice. The style of the translation is charming.

PRAKRITIKI—Translated by Mr. Nandkishore, M.B., B.S. The Indian Press, Ltd. Allahabad, 1925. Rs. 2-8.

This popular scientific work of Babu Jagadnanda Roy of Bolpur has been the subject-matter of this publication. The general get-up is satisfactory, but the illustrations should have been better.

Those who are interested in the juvenile literature in Hindi, will congratulate Mr. Premchand for editing a series published by Ganga Pustakamala Office, Lucknow. Some of these works are

(i) *PARMEHI KATHA*, PARTS I, II, —Translated by Bhadrinath Bhattacharya. Price Re 1-4 each.

These are translated from works written under the order of H. H. the Gaekwar of Baroda. Moral tales of various countries are collected here.

(ii) *GADHI KI KAHANI - Bhupnaram Dikshit*. Price, Rs. 12.

The tale is a translation of *Memoirs du Anjo* by Countess de Sagan.

(iii) *NAT KHAT PANDE - By Bhupnaram Dikshit*. Price Rs. 1-5.

The interesting story of a bad boy.

(iv) *KHILI PACHISI - By Thakur Pratapal Singh*. Price Rs. 6.

Some of the popular games both indoor and outdoor are here described.

(v) *KID-MAKODI - By Bhupnaram Dikshit B.A., L. P.* Price 10.

This short account of insects is a good beginning for taking up larger work on Natural History.

(vi) *BHARAT KI SAULT - By Tulshibhushan*. Price Rs. 10.

Some tales of great men of mediaeval and modern India are here told with ease and grace.

RAMES BAST

TAMIL

THE EDITIONS OF ASOKA WITH TEXTS IN DEVANAGARI. By R. RAMAIAH, ASSISTANT LECTURER, KUMBHAKONAM COLLEGE. Pudukottai, C. Coomaraswami Naidu and Sons, Madras.

The intensely human appeal which the Edicts of the Great Buddhist Emperor make to all classes of people renders this and other books of this kind a most welcome addition to popular literature. In the present work, the author has tried to bring the wisdom of Asoka at first hand to the Tamil reader and there can be no doubt as to the educational value of this work. A lengthy introduction into the historical narrative of the period to which these documents belong has also been given and forms a fitting historical background to the study of the edicts. It should be said to the credit of the author that the translation follows the spirit of the original most faithfully. The Devanagari text of the edicts added to this work might by itself be useful as a separate hand-book to Indian history and will, if published independently, be useful to non-Tamil public as well. A word of praise is due to the beautiful language of the translation.

S. V. C.

THE MUDDIMAN COMMITTEE MINORITY REPORT ON INDIAN STATES

By RAO BAHADUR M V KIBE, M. A.

THE question of the relation between the Government of British India and the Indian States has loomed large in the political horizon of India. Although responsible leaders like Dr. Besant have ignored it, yet the Minority of the Muddiman Committee, while devising a constitution which would be a real step towards self-government on colonial lines, could not overlook a portion of the Continent comprising one-third of its area and over one-fifth of its population.

But opinion among the leaders in British India is much divided on the subject and in fact it is nebulous. The first in the field to express his considered opinion on the subject was no less a person than Mahatma Gandhi. At first from the Presidential Chair of the Indian National Congress and later as a speaker in the Indian States Conference held in the same week and lastly from the Presidential Chair of the Conference of the subjects of the Native States in Kathiawar, he has expounded his views on the continued existence of the Indian States. To take his speeches one after the other, he has unfolded his weaknesses in behalf of them. Even as relics of bygone times and while even British India is not popularly governed, the Mahatma will not interfere with the powers and prerogatives of the rulers of the Indian States. He has advised them to follow in the steps of idealised historical kings like Shree Ramchandra Maharaj. But he has not said a word to encourage the subjects of the Indian States to assert their rights and not confine themselves to merely discharging their duties. This is what the critics say. In the Mahatma's opinion, however, one may imagine that rights and duties do not come into conflict in a State which he has described.

At the other extreme is the view taken by Dr. R. P. Paranjpye from the Presidential Chair of the National Liberal Conference held at Lucknow in the last week of December, 1924. He announced that unless the Indian States joined the proposed federation in British India, he would have nothing to do with them. Apparently he and his friends

would observe a sort of benevolent neutrality in a conflict between the subjects and the rulers of Indian States. He would have a repetition in India of the process by which the kingdoms in Italy and Central Europe disappeared. He would not mind the bloody path of revolution.

Between these two extremes comes the recommendation of the Minority of the Muddiman Committee on the Reforms of India. It is indeed a subtle recommendation as becomes the lawyer element in it.

Hitherto, the affairs of the Indian States are beyond the pale of influence of the popular legislatures in British India. But the report while agreeing to leave the direction, the control or disposal, or by whatever name the relations between the Paramount Government in India and the Indian States may be called, to remain with the Governor-General, would allow the popular assemblies to discuss affairs relating to them and move resolutions on them.

In the first place, the report is not clear whether it will withdraw from the Governor-General's Council the power it has of being associated with the Governor-General in dealing with the questions of the Indian States, and in the second, it is remarkable for a body which counted among its numbers an emeritus member of the Government of India that it should say that "it believed" that the Governor-General alone dealt with the Indian States.

It is true that he is the member of the Government in charge of that portfolio, but his powers with regard to it are not greater than those of other members in regard to theirs, except in so far as he is possessed of some superior powers over them in his capacity as the Governor-General.

The Minority of the Muddiman Committee would remove the bar that is now laid on the legislatures in British India to discuss questions relating to the affairs of the Indian States. The Members cannot, except by grace of the Government, ask any information about them. And this though the so-called Princes Protection Act, which requires the Government

of India to be satisfied as to the falsity and know the true facts, before a prosecution of an offending newspaper published in British India could be allowed. So the subject "Indian States" was to be regarded as more sacrosanct than subjects like the military forces which are non-votable for financial purposes, although they could be discussed and influenced as any discussion could do so. What the Minority proposes is to bring the subject "Indian States" into the category of foregoing subjects.

It thus goes even a step further than what was proposed by Mr. N. C. Kelkar from the Presidential Chair of the Indian States Subjects Conference at Delhi. While calling upon the subjects of the Indian States to organise in order to assert and wrench rights of Government from their Rulers, he would extend to them an asylum in British India. Whether he would go to the extent of allowing plots to be hatched against Governments of Indian States on the British Indian soil has not been made clear by him. But he would no doubt encourage non-cooperation between the subjects and Rulers in Indian States since the former course would be open to objection on account of the treaties of alliance, amity, friendship or protection existing between the Rulers of British India and the Indian States. Debarred by their helplessness as the Indian States generally are from using any force in checking even a rising of their subjects, although instances of the kind occur here and there, for instance, as in Baroda and Udaipore, even the panacea of determined non-cooperation as advocated by Mr. Kelkar may lead to their success in the establishment of their rights or power, which is what they would eventually want. Yet it is a cumbrous weapon and many lives may be nipped in the bud, or even if flowered may wither for want of notice or encouragement.

But the subtle suggestion of the Minority Committee cannot fail to have far-reaching results. In any case, a debate in the Indian Legislatures is bound to attract attention practically all the world over. Then the Members being privileged to tell anything, exaggerations of facts will have more publicity than true facts. When a debate is raised, the Government will be bound to reply and it will be difficult for it not to express its view on the subject unless it can take shelter for a few days behind the statement that the matter was under enquiry. But eventually it will have to come out with its considered opinion and disclosed the action

taken by it, as, even in these days, it some times does.

The present practice which has been former from precedent to precedent, although never of a uniform character, is that the paramount power in India claims to judge and set right affairs of Indian States in certain contingencies on the plea of preventing internal or external commotion which it is bound to do in many cases by treaties or engagements or in the exercise of rights of self-defence as far as its own territories are concerned. Even in Europe which was studded with numerous petty though independent States, neighbouring States declared war on a State the affairs of which were in a state of commotion. The case of France after the French Revolution at the close of the 18th century is an instance in point. It is true that the action of the British Government in such cases in India was not subject to any real popular check for want of genuine interest on the part of the party-bound legislatures in Great Britain. Sometimes there would be a debate in either or both Houses of Parliament before an empty House. For any effective action by them, one must go back to the middle of the 19th Century when the confiscated principality of Dhar was restored by command of the House of Commons.

The recommendations of the Minority, if given effect to, will bring the popular vote nearer Home. In some cases, it might check any arbitrary exercise of its right by the bureaucracy in British India, but such occasions will be rare. It must be admitted that the highly cultured, judicious and trained mind of the Rulers of India almost invariably based their decisions on sound principles of equity and law. But that does not affect the question.

The same mind under the dominance of Imperialism encouraged by the noble desire of seeing justice being done between party and party are apt to brush aside sovereign rights of parties which are no longer in a position to enforce them by *force majeure*. In the circumstances, the popular assemblies are much more likely to be swayed by the same considerations, and in exciting moments carried off their heads and may prematurely or more vigorously force the hands of the Government. The consequences may be fatal to the weaker party when precedents are not uniform and the rights of the parties have been obscured.

The only remedy, then, to preserve intact

their identity which the Indian States have to fall back upon, is to organise themselves along with British India into a League of States and bring into existence all those constitutions and safeguards which have been already described in the Article headed, "The Constitution and Functions of Indian League" It has been objected that it means the giving up of powers now exercised by the Government of India or the British Government to other bodies But even if it be so, it means doing nothing more than what is proposed to be done in the pure domestic

affairs of the Indian Government And the proposal with regard to the Indian States has greater justice behind it The powers exercised by the British Government or its Agent in India do not owe their origin to a contract, but to drifting forces of circumstances. When the latter have changed, justice demands that the direction of the drift should also change Any way, that proposal alone will preserve the Indian States amidst various others suggested and its acceptance requires no other justification.

INDIAN PERIODICALS

Unemployment in Bengal

In the *Bihar and Orissa Co-operative Federation Gazette*, Ismail Abdulla Mohammed publishes his views on the above subject He first tries to locate the causes which have contributed to the present situation and rejects right at the beginning the suggestion that it is something in the nature of the Bengali race that makes them unfit for success in any walk of life as untenable, because

From the very beginning of Indian History Bengal was a rich Province, which fed and clothed its population with ease The Bengalees were a hardy, adventurous people It is recorded of them that in the early centuries of the Christian era they crossed the ocean and successfully settled in Java Is not Assam and Bihar today filled with many affluent and influential emigrants from Bengal? Going back to the middle ages, it is a matter of common knowledge that the Mahomedan General of the Pathan King in the eleventh century was tempted by the riches of Bengal to essay its conquest The English flourished and built their empire in India because they had, as their base of operations, the rich and resourceful province of Bengal Bernier, a European traveller of the seventeenth century, has recorded of Bengal that it was a province which supplied the neighbouring kingdoms with abundant rice and sugar Bishop Heber tells us that the small army of Clive which won for him such victories was chiefly composed of Bengalees.

Then Mr Mohammed goes on to give us some of the causes which lie at the root of this evil Deserting the villages is one.

The last census figures show a considerable increase namely 16.9 per cent in the populations of the small industrial towns of Bengal. This results

in two evils Men leave their homes and occupations in the village and come to the towns to earn their livelihood The village is, therefore, left unmanned and thereby becomes the more neglected. The Bengalee Zamindar does not care to live in the village with such unhealthy and uncongenial surroundings. His example is followed by the middle classes as well The supply of agricultural labour is soon found insufficient to meet the demand At present cultivation is not intense Nor is the whole country brought under the plough

The English school-educated youth has an aversion to crafts He is only willing to hunt after a clerkship Such a field of employment does not, and cannot, in the nature of things, absorb the whole of the middle class and once taken to, has its enervating effects, leading to still further degeneration

Foreign competition in the economic institutions of the people is cause number two.

In addition to other causes, unemployment is increased by the immigration of foreigners into Bengal and especially Calcutta The rich fruits of the trade of Bengal which are unclaimed by her sons have been seized by others. Thus the competition of the foreigner has been growing larger and larger in every walk of life

The magnitude of what the people have lost can be understood when it is known that an export trade worth 300 crores of rupees passes through the hands of such middlemen

Our education is also to blame, says the author, in whose opinion

Another cause of unemployment is the nature of the education which the youth in Bengal receives, be he Hindu, Mahomedan or Christian. The curricula of our universities are bequests of the mediæval age.

Starting a number of technical colleges will alleviate the distress in the authors opinion, but the difficulty of this arises out of lack of funds Funds can be raised by the

universities, by making a monopoly of the text-book trade.

Leaving a wide margin for the expenses of printing and authors' remuneration more than sixty lakhs of rupees could be made out of this source. Most of this money could be taken in by the University by issuing its own publications, using the profits to supplement the income of the University. It is refreshing to note that a good start has been made by Calcutta University in this direction.

This is an unhappy choice of means, for in the case of the Calcutta University the practice of making money out of text books has led to undesirable results. The author appears to be an adherent of Western methods. No Western University would dream of inflicting on its alumni text-books of the type of the Calcutta University publication, because such text books defeat the end for which the money is earned, *i.e.*, sound education.

Expert advice on matters of choosing careers for boys is wanting in our Universities, and this is another cause of the present unemployment. As the author says:

Another cause of trouble is that at present our young men are not guided by the advice of experts in the matter of selection of professional courses.

In this matter, the system that obtains in some Western Universities can be profitably followed. A board of prominent educationalists and business men should be appointed. The duties of this board would be to give proper advice to all students when they apply to it, as to the choice of a future career in life.

The author recommends reversion to agriculture as a palliative.

Healthy public opinion ought to be created in favour of agriculture. There must be practical demonstrations at Government agricultural farms showing that by scientific tilling every inch of land ought to yield profitable results. Public lectures in the vernaculars should be held at all places, in villages as well as in towns, by a staff of enthusiastic workers, explaining the immense potentialities of agriculture, if only conducted in the right way. New text-books for boys ought to be written extolling this occupation and explaining its advantages. In these and various other ways this temperamental dislike of the *Bhadralok* class could be removed.

And *charka* as another

India is yearly sending 60 crores of rupees to foreign countries for the purchase of cloths. Cotton is plentiful in the country. There is no reason why India should not manufacture all the cloth that she requires. Efforts is the only thing needed. In this connection, Mr. Gandhi's advocacy of the use of the *charkha* in every Indian home is to be

applauded. There is not work enough for the year throughout the year.

Though we do not see how this applies in the case of middle-class unemployment in Bengal.

"Hinduism" Condemned

A very strong condemnation of Hinduism in its present-day working shape appears in the *Indu Manjini*. The writer S. Ranga Iyer, M. L. A. does not economise adjectives and phrases to fully express his contempt for the corrupt practices which go under the name of Hinduism. He says:

Our patriots, Sannyasies and petitioners have been responsible for such egoistic literature on this 'Punya Bhumi' of ours. Swami Vivekananda whose feet I bear on my head used to call it 'Punya Bhumi'. I am afraid the *paradi* of the past has yielded place to *paradi* in the present. Aryavarta is today an Aryan. The ancient land of bliss is a land of curses and crimes today.

We have lost the national virtues which made us great in the past. We have become robbers and thieves robbing our lives of its beauties and duties—stealing the greatness of the past to camouflage the meanness of the present. We are a degraded people. We are vain. We are quarrelsome. We are idle. We are lotus-eaters, money-grabbers, violators in creation, flatterers of unscrupulous of the West or torturers of the Vedas to suit our purposes. Worst criminals on God's good earth quoting scriptures like the devil to defend the ugliest of humanity, the inhuman in the diabolical horrors which we practise and perpetrate. Hinduism has become a curse to cover a multitude of sins and loathsome vices. No wonder Hindustan is punished by God with loss of freedom.

Who are the Hindu leaders today? Men who have not the courage of their conviction. I do not want to name names. But there are loud-tongued leaders who denounce untouchability but who will not drink water at the hands of an untouchable—who will not eat the food cooked by an untouchable even if he happens to be cleaner than their own Brahmin cook—who will ask their sons and nephews to perform *prayaschitta* soon after their release from prison even though they went there as happy pilgrims of the national struggle to the temple of freedom. This is as much true of the United Provinces and Upper India as of the benighted Madras and Southern India.

We open temples in numbers and get reputed men to lay the foundation stone of god. But our temples are worse than brothels—especially so in South India. Untouchables cannot go to the temples which keep dancing girls to amuse the deities and please its worshippers. Indeed it must be an awful Hindu god who cannot get on without prostitutes and who will be polluted by the presence of an untouchable.

The Hindu husband can marry a thousand wives and keep a harem of concubines and mistresses but the Hindu Religion-in-practice cannot let the girl

divorce the cad and blaguard of such a husband. An old rogue of three scores and ten can marry a young girl of twelve and leave her a widow to pour her lot for the rest of her life—a child widow whom her high caste prevents to remarry. Some of the children-in-agony run away with a kind non-Hindu or a brothel-keeper who are to them better landlords than their own religion. As heaps of evil omen, these innocent widows are looked down upon by the believers of the great Hindu religion.

And concludes

"Hinduism" is a monster. It is not the Aryan religion. It is not Krishnaism or Ramanism or Buddhism or Aryanism.

So long as the poisonous reptile of Hinduism is not killed and cremated, not all the sacred waters in the Ganga, the Yamuna, the Saraswati, the Godavari, the Narmada, the Sindhu and Kaveri can wash our society of its follies and impurities.

Let Hinduism the moral dunghill of priestcraft and superstition cease. Let Aryanism, Vedantism, the Vedas prevail.

Buddhism as the World-Religion

Those who argue about the superiority of a given religion over others to serve the whole of humanity as its religion, take for granted that humanity will follow the logical path and accept the reasonable as soon as it has been proved to be so. However that may be, it is always interesting to hear what each religion has to say for itself in regard to its suitability for the honour of being the World-Religion. The followers of Christianity generally use up the maximum of paper and ink to prove their case. In view of this fact, the Hon'ble Mr. D. B. Jayatilaka's article on the above name in *The Buddhist Annual* (Calcutta) will be found interesting. He says:

"The Buddha is the World-Teacher (*Suttā Deraṇṇasūpanṇā*) and his message is addressed to all mankind irrespective of race, colour, caste or sex. This note of universality which characterizes Buddhism is no after-thought, no subsequent development in its career due to some accident of history. It was struck by the Master himself not at the end of his earthly life but at the very beginning of his public ministry when he sent out his disciples with the injunction that they should wander over the world, out of compassion for mankind, to the good of the many, for the welfare of the many, and set forth the higher life in all its fullness in all its purity. And the message thus proclaimed brings peace and happiness equally to the rich and the poor and the lowly as well as to the high and the mighty—to Brahmasara, the sovereign of the Magadhas, and Sumita, the outcaste son of the merchant prince Anathapindika and the beggar Indaka, to the Sakyan Queen-mother Prajapati and Capa, the hunter's wife, to the wealthy and high-souled matron, Visakha, the

courtesan Ambapali, and the sorrow-stricken Patacara, to the Brahman sage Pokkharasati and the child Sopaka. Though the mission of Buddhism is thus all-embracing, it is not infrequently described by Western writers as a rigid asceticism—a cult meant for recluses, who have withdrawn from the ordinary life of the world into the seclusion of the monastery or the forest. This is a serious misconception. Buddhism does indeed insist on the high value of renunciation, the giving up of what one holds dear and precious, for the sake of the Truth. 'Every good deed has in it the element of renunciation,' says the Buddha. It is at the same time recognized that utter self-sacrifice even for the sake of the higher life is at any particular time possible only for the few, while the majority must follow a less difficult path, and train themselves in the sphere of duties attached to household life. The due performance of these duties is extolled by the Buddha in no unmistakable terms. On one occasion, he was asked:—What is the highest blessing? He answered the question in several verses, one of which translated runs—

"To support father and mother,
To maintain wife and child,
To be engaged in blameless occupations
This is the highest blessing" (*Mangala-sutta*).

Surely this is not asceticism. In fact, the Buddha Dharma condemns all ascetic practices which involve self-mortification as painful, ignoble, and unprofitable just as it discourages and disapproves of all forms of self-indulgence.

The coming religion, it has been well said, must appeal to reason, and stand the test of human experience. Buddhism completely fulfils this requirement. One of its most striking features is its rationality. In the first place, there is no veil of mystery which envelopes either the person or the teachings of the Master. The Buddha never claimed to be a supernatural being, nor did he ever say that the truths he taught were discovered by him by means of supernatural intervention or agency.

Again Buddhism offers no dogmas, the belief in which is necessary for salvation. It is understanding, knowledge, wisdom that purifies, not mere faith. The seat of authority is Reason which must prescribe for each one of us the rule of life.

The Buddha Dharma contains no speculations as to the origin of things and first causes, which form the most important battle-ground in the warfare between science and religion. In fact, Buddhism condemns all such vague speculations as utterly unprofitable. Upon the sure foundation of principles derived from the facts of life it builds a system of practical ethics—a method of self-culture, which has for its end the emancipation of man from all evil and all suffering. The training is threefold, and it is summed up for us in the famous utterance of the Master which contains the essence of all his teachings. It is this:—

To abstain from all evil,
To fulfil all good,
To purify the heart,
This is the teaching of the Buddhas.

India and Africa

Mr C F Andrews says, in the course of an article in the *Young Men of India*, that Africa will yet need the spiritual help of India to drag itself out of the "utter savagery" in which it is still merged. The article runs as follows:

On every fresh journey, when I have crossed the Indian Ocean from India to Africa the ever old yet ever new problem has arisen, filling my mind with thoughts that never seem to get a suitable answer—'What in God's Providence is the true relation of these two lands to one another?'

The earliest records of the inter-communication between India and Africa are very few. We can tell from fossils and from the flora and fauna that remain, as well as from geological evidence that a land-bridge once united Madagascar and the continent of Africa with India. The peaks of the submerged continent are still to be traced in the Seychelles and the Maldives and the Laccadive Islands, together with Mauritius and Reunion further south. But this bridge of land had probably sunk below the sea in places long before man began his history upon the planet.

In the prehistoric time, it is not impossible that men went still backwards and forwards from island to island, till Madagascar was reached and from thence the coast of Africa just as in an opposite direction they traversed from island to island eastward. In as the Polynesian Islands of the Pacific. The marvellous similarity of legend and fable and primitive custom points to such a wandering of mankind from India as one of its main centres in different directions.

Historically, we have the records of the coasting voyages along the Persian Gulf and Arabian shores and across the Gulf of Babelmandeb to the 'Island of Storms,' now called Socotra, on to the harbours of Kisumu and Mombasa and the island of Zanzibar.

One of the strangest of all mysteries to me in the reading of early Indian history is to find every other route of travel occupied by the stream of Buddhist monks, which poured forth in the first great impulse of the religious movement which followed upon the death of Gautama, the Buddha, but to find at the same time this one great open route, seemingly unoccupied and untraversed. Far into the Eastern seas they went facing the dread typhoons. Far into the highest mountain passes they pierced facing death by avalanche and cold. But this open sea-route to the West never seems to have been used. At least, we have no record of it. Possibly it was actually traversed and settlements were made and lines were laid down and the Dark Continent covered over the records with jungle once more. For there have been many buried efforts of mankind in this land of deadly fever and disease.

But one religion at least swept down the coast to conquer and possess the earth. The Mussalman invaders from Arabia and the Persian Gulf established small kingdoms which were visited year by year by Indian merchants, who bartered their goods and returned. The Malabar coast and the Gulf of Cambay sent forth these adventurous voyagers. When the settled monsoon winds had

been discovered, as passing all the way from Africa to India advantage was taken of their steady current by the sailing ships and there was no need any longer to hug the coast.

Yet, after a thousand years, how little progress has been made in civilization! Today the part of Africa that is most incurably diseased, morally and spiritually is this very coast district. No literature or art or culture has flourished for any length of time during this rule from Arabia and Persia.

The Portuguese, who came with Vasco da Gama, had also done very little to spread refinement and light and peace after this conquest of the coast kingdoms. The deadly slave traffic from the very first entangled them and made the religion of the Cross a mockery. Only very slowly is this greatest and darkest stain on Christian Africa being obliterated.

It has been my own supreme hope, which I have expressed at many conferences of Christians that the Indian Christian Church itself may find its own life-meaning and purpose in fulfilling that which Buddhism so nobly tried to achieve, and after great achievement failed to maintain. For there are in India itself, and to the south-east across the sea and to the west across the Indian Ocean countless human lives still sunk in utter savagery and needing the sympathy of passionate love which Christ has brought back to earth and given to His followers to offer to the sons of men. Each time that I have crossed this Indian Ocean, I have been more certain than ever that the time will surely come when India, in the spirit of the living Christ will stretch out her hand to the East and to the West to save mankind.

Rabindranath vs Gandhi

Referring to the recent controversy between Rabindranath Tagore and Mr. Gandhi, the *Prabuddha Bharata* says—

The conflict between the poet and the saint is a conflict of the visions of life. Other things are merely details. And one cannot deny that so far as interpretation of national life goes the poet is more comprehensive than the saint. It is no wonder that Mahatma is to-day finding himself in the minority. He is a worker at the foundations and such work as his cannot become a mass movement without imperilling itself. Time is an important factor, and one must be patient. A reform carried out too soon destroys itself in the long run. His influence on the national life, indirectly vast, is bound to be because of his philosophy of life directly only partial. But one need not regret if a single man fails to stamp himself on the fate of three hundred millions of people.

Religion and Politics

In the same journal we find an able analysis of the complexities created in recent times by using religion as a political weapon by the Indian nationalists. We are told:

Up till 1919, i.e., the Amritsar session the Congress has been a purely political organisation. The special Calcutta session inaugurated the policy of Non-violent Non-co-operation. This gave the Congress, in effect and practice, a religious colouring. It assumed a philosophical tone and preached a certain gospel of life. Non-violence had to be lived. Fasts and *hantals* were instituted for the purpose of self-purification and self-discipline. Soul force was the sword to be wielded in that battle. Swaraj, though it remained undefined as the political end, was variously interpreted. Some declared that individual and personal Swaraj had been obtained by them, though collective Swaraj was not yet. Non-co-operation assumed a religious aspect. The sacred books were consulted to see if co-operation with the Government was not against their holy injunctions. Altogether the movement looked more religious than political. Thus was religion made a hand-maiden of politics.

Let us see consequences. First, the Khilafat movement. It is seriously to be doubted whether it should have been made a part of the Congress programme on religious grounds. More than one thinker have attributed the growing fanaticism of the Muhammedan community to this unwise step of the Congress. Muhammedan bigotry was dying of natural death. The Khilafat movement ensured it a fresh lease of life. Then co-religionists in other countries have found through bitter experience the folly of mixing religion with politics. But Indian Musalmans do not seem to have learnt that lesson.

The splendid show of unity between the Hindus and the Muhammedans with which it began has been converted in the end to bitter mutual hatred and suspicion. This is the danger of invoking the power of religion for secular purposes.

What is altogether a fresh trouble is the sowing of an evil seed in minds of the myriad villagers in India. The Non-Co-operation movement led to the sending of propagandists to the villages.

In the name of religion, with its cult of soul-force, the one signal which is still able to energise even the dying Indian with zeal and enthusiasm. When the movement would fail as it was bound to fail it would leave behind a sinister force in the villages, working against the ancient traditions, exciting communal self-consciousness and a sense of having been deprived of rights by the upper classes, and a struggle for their acquisition.

The future will bear the fruit of this attempt at using of a higher force for a lower end, i.e., the employment of religion to gain a political end.

State Aid to Libraries

Mr T. C. Goswami, M A., Bar-at-Law, M L A., contributes to the *Indian Library Journal* an English version of speech delivered in Bengali as President of the Hoogly

District Library Conference. The speech does not add to the credit of our rulers as will be seen from the following quotations.

Mr Chapman said here last night that a nation had the library it deserve. But in his speech he has admitted that the Imperial Library was the creation of Lord Curzon and that its progress has been arrested by the fact that the subsequent Viceroys and Governors have shown little interest in it and he said further that when Governors of a country are men of wide and cultured interests, the libraries find help and expand, otherwise they do not. Might I, therefore venture another generalisation—A nation has the sort of libraries that are worthy of its Governors.

In our country, the State does not evince the least interest in such institutions. As a member of the Legislative Assembly, I had to study the Imperial Budget, and I found that our revenue has almost doubled what it was in 1911, from 76 crores it has risen to about 130 crores. But in matters of education and public health there has been very little progress if any. We shall have to do everything by our own efforts without expecting any help from the state.

Education in the Indian Army

Mr Ernest Burden, C I E., C S. I., gives a sketch in the *Indian Review* of the system of education followed in the Indian Army. We quote important items from it.

In the *first stage*, the recruit learns Urdu (including the necessary English military words for which no Urdu equivalent exists) orally, taught by the 'direct method'. Other subjects are mental arithmetic, including simple addition, subtraction, division and multiplication, measurements and angles. Religious instruction in the soldier's own faith is given, and drill, personal hygiene and cleanliness, and a spirit of comradeship are inculcated.

In the *second stage*, elementary Geography, Urdu in the Roman script and written calculations in arithmetic are introduced. In combination with Geography, the soldier is taught the history of his unit and its campaigns, the simplest facts connected with the defence of India, by sea and land, and he is given an elementary conception of the British Empire.

In the *third stage*, a good knowledge of Urdu and the Roman script is required. The Geography of India is taught as thoroughly as possible, including its economic Geography, and trade, and the effect of geographical conditions on the life of men and animals. Regimental History, the work of the Navy and Army and the problems of defence and the necessity for law and order are taught, again in connection with Geography.

In the *fourth stage*, Indian History is introduced and the subjects taught in the earlier stages are now taught more extensively and up to a higher standard.

A man who has qualified in this stage and has obtained his First Class Certificate is fit to take

his place as a Viceroy's Commissioned Officer both in civil and military life.

The last stage, in the system, as it exists at present, is the Special Certificate which is gained by passing written examination conducted in English. The standard of Geography, Indian History and Mathematics is fairly high and the candidate has to discuss problem of the day and have some real knowledge of the main problems connected with Imperial and Indian defence. He is required to know the methods of Government in India from the village to the Central Government and to have a rough idea of the methods of Government in other part of the Empire and the meaning of Indian and Empire Civilization.

We should like to go through some of the texts adopted. Those dealing with History, the British Government of India and the Empire must be specially interesting.

A Forecast of Life in 2026 A. D.

Utopians never rest satisfied for the simple reason that they never have to go through an actual existence on earth. Mr. A. S. Wadia, M. A. paints a picture of what things will be like a hundred years hence in the *Hindustan Review*. We are told:

A century hence the world will be dotted all over with pin-heads of air-mast and aerodromes and the air itself will vibrate night and day with the throb of thousands upon thousands of aeroplanes. Their cross-flight would dim the sunlight over towns during the day and at night the heavenly constellation itself would pale before the brighter constellation of thousands of moving red, white and blue points of their lights. But on a gala night the procession of illumined air-ships and aeroplanes will fill the heavens with such a fantasy of fairy lights as to make the brightest visions from the Arabian Nights appear but little but a gaudy dream.

There will be one great change. The hills and mountains that are now lying waste and uninhabited will then come into their own and their tops especially in the Tropics will be converted into residential quarters for more prosperous classes of the townspeople who will fly to their business in the morning and back to their hill homes in the evening. When the air comes finally to establish its free empire on the face of the Globe, the present national frontiers will be old historic ruins and the tariff walls now running contentious with them will be found only in the economic histories of several nations.

So much to the credit of Aviation. Seen from a different viewpoint, development in Aviation may only force the fighting nations to leave a strip, several miles wide, along the frontiers uninhabited and desolate to act as "no man's land" in war time. Colour and class prejudice will be dead in 2026, says the writers. The troublesome elements

in our mechanical civilisation will disappear due to improvements in manufacturing process, etc., and

With the gradual removal of these deluding elements and the steady expansion of our manufacturing capacity there will necessarily arise conditions which will lead to a vast increase of the world's population and create a growing passion for enervating pleasures and more luxurious modes of life. In other words, life being made the more easy by the perfected machine and more hurried by the subjugated air it will naturally become more complex and vastly difficult. To counter-balance these tendencies the newly-launched idea of birth-control will be then legally recognised and widely practised and the recent ideals of simplicity and art will once more take hold of the human mind with the consequence that the then growing cult of pleasure and luxury will be, to borrow a term of the psycho-analyst, sublimated into nobler channels.

Another boom will be that in 2026

Religion will have again simplified itself into a few basic beliefs of common utility and universal validity. Nor will Religion then be at loggerheads with Science as she now is, but both will employ their best energies in the quest of the Absolute, the one in revealing, the other in realising the Mystical Heart of Things. And Science will have taken vast strides by then and harnessed most of the free energy of the world that is now going waste such as atmospheric electricity, tidal power, solar and atomic energy. As coal has now most replaced wood and as oil is fast replacing coal, electricity derived from natural forces, harnessed and conserved will in those days wholly replace wood, coal and oil.

Science will also enable us to practically conquer the diseases of the human body. Not only that but

Another great change will be that our present prisons and penitentiaries will be converted into social reformatories and mental institutes where the criminal will no longer be looked upon as a wilful decadent of society deserving social ostracism and harsh punishment, but will be treated as a mentally defective and morally delinquent delinquent who, by certain restrictions put on his movements and long provided with regular work, food and exercise was to be gradually won back from his wild irresponsible ways to a life of decency and discipline and if possible of good citizenship.

So that there will be nothing left to be desired, and, probably in another century, in 2126, humanity become so perfect that it will attain Nirvana through germinal degeneration. This is biologically possible.

Political Agitation Declared Foolish

The Feudatory and Zamindari India is an organ of that extremely "loyal" section of

Indians who have inherited property for the continued and unhampered enjoyment of which they have to depend more or less on the British rulers of India. The following extract from this journal, though sounding a bit like discouraging something which has a possibility of affecting one's pocket, will be found useful by some politicians who have made what they preach quite distinct from what they practise.

Political agitation is easy work, you have only to abuse the Government to your heart's content, to use their actions, give them gratuitous advice. It does not impose upon you any restrictions or duties. Not so social reform. It means self-introspection, which the politician would avoid. Social reform means the carrying out of the reforms in one's self and in one's household. The politician has no taste for such work. That is why he characterises the social reformers as enemies of his country and as playing into the hands of the Christian missionaries and foreigners. He looks upon the exposure of social defects and abuses as unparliamentary and would advise covering them up so as not to expose them to the gaze of the foreigner. The present-day congresswallah, the politician-fire-eater, is an ardent social reactionary. He would defend the abuses as the distinguishing features of society and warn against their being obliterated in any way.

The Widow's Cause

We take the following from the *Widow's Cause*, the organ of the *Vidhva Viraha Sabha Sabha*, Lahore, as descriptive of the achievements of the *Sabha*.

It was on the first of December, 1914, that the overwhelming grievous cries of the laes of Hindu widows had a beneficial response from above by moving the feeling and living mind of Sir George R. K. R. B. C. I. E. M. V. O. who rising to the occasion, as a practical, though silent, worker founded on that auspicious day, the *Vidhva Viraha Sabha*, Lahore, to uplift the widows out of the degradation in which the Hindu community had forcibly thrust them into and to rebuke vigorously the propaganda of widow burning among the Hindus.

At first it appeared too discouraging and hopeless for one individual to grapple with that colossal Hindu brain, which was dead to all sympathies. But there was the Almighty's working and in a short period the signs of success became apparent.

The number of widow marriages reported in 1915, 1916, 1917, 1918 and 1919 was 12, 13, 30, 40 and 90 respectively. In 1920, 1921 and 1922, it rose to 220, 317 and 454 respectively. In 1923 it actually rose to 982 and in 1924, it was as high as 1,043 viz., almost to double the previous years. In 1925, the number has increased to 2,663. All this shows how the pernicious custom of enforced

widowhood, blindly followed by the numerous generations of Hindus for many centuries is losing its hold, particularly in Upper India, to which the work of this society has been mostly confined. It is worthy of note that large number of the marriages took place among high caste Hindu families. Of the total number of 6,210 remarriages, there were as many as 1,146 among Brahmins, 1,242 among Khashtrias, 1,910 and 549 among Aroras and Agarwals, 130 and 206 among Rajputs and Kuthis, 212 among Sikhs and 957 among miscellaneous castes. The Punjab took the lead, next to the Punjab, the large number of marriages took place in U. P. In the year 1925, 2,098 widow remarriages were held in Punjab and Delhi provinces, 38 in Sindh, 73 in Bengal, 156 in U. P., 23 in Madras, 12 in Bombay, 11 in C. P., 17 in Rajputana, 5 in Hyderabad Deccan and 30 in Assam. These have been reported to this office. But the number of marriages actually held must be much larger.

The Sabha has branches and co-workers at about 500 stations throughout India. It is encouraging to note that sympathy and co-operation are being enlisted from all quarters. Recently 20 new branches of the Sabha have been established in Bengal, Madras and Bombay Presidencies and C. P. The society has received more than 12,000 applications of gentlemen of high castes and various social status, willing to marry widows.

Taking into consideration the fact that while some 20 years back the marriage of a Hindu with a widow was not only a rarest occurrence in India, but a thing severely condemned by society followed by a social boycott and ex-communication of the family, it is now being appreciated as a mark of advanced civilization—the success achieved appears to be really encouraging.

But we need not think too much of this success taking into consideration the other side of the picture. The census report for 1922 showed 20, 218, 780 Hindu widows in India, out of whom 97,800 were below 10 years of age, 234,000 between 10 and 15 years of their ages and 113, 500 between the ages of 15 and 20.

The School Master's Plight

The following, a quotation from Dr. W. S. Uquhart's Presidential Address, before the All-Bengal Teachers' Conference, demands the serious attention of those in power in the socio-political world.

The teacher is exploited in order that the community or perhaps some wealthy man may have the glory of association with and credit for a Higher English School. *The teacher is worse paid than a domestic servant.* Those who minister to the comfort of the wealthy members of the community are considered of more account than those who educate their children. There is need here to get rid of confusion of ideas. When the authorities are strict about the conditions under which a school is to be recognised, the cry is often raised that they will be depriving a struggling community of the advantages of education. This cry would be

intelligible and justifiable if we could always be certain that it was the community as a whole which was struggling and not merely the poor teachers, if we could be sure that the service of poverty was always at the expense of the community as a whole and not merely at the expense of the teacher. Often I grant that the community does its very best, but it is not always so and it is for an association such as this to devise means whereby the community may take its fair share in the burden of education and those who have adopted more lucrative professions may be induced by public opinion to divide some portion of their wealth with those who are actually engaged in education. We must give the teachers their proper place in the social economy, so that the young teacher after having by toil and sacrifice on the part of himself and his family, come to the close of his University course should not feel that his life has reached an anti-climax and that he is compelled henceforth to exist under miserable, helpless and soul-destroying conditions. The teacher must not be regarded as merely the insignificant employee of the community but as the depositary by the community of a sacred trust and the community must see to it that it provides honourable conditions under which the teacher may carry out that trust.

Jaina Philosophy

The following appear in an article by C. S. Mallam in *The Jaina Gazette* and describes the fundamental concepts of Jaina Philosophy.

According to the Jaina the liberated soul is not in absorption but retains its individuality in perfection. It is not an attendant but a Lord. It is not annihilated but continues to exist. It lives, it knows and it enjoys bliss. It is *Satchidananda*. All the liberated souls are equal and they are second to none. Jainism is the most democratic of all the Religions. It not only preaches the brotherhood of all mankind but proclaims the equality of all the souls in the Universe. The soul in a plant or bird or animal is potentially equal to that of a human being. Again all those souls are equal in point of their intrinsic nature to God—a Perfect Soul. Democracy does not end on Earth. It continues in Heaven also. All the Souls that are in Moksha have equality of status, quality and bliss. No soul there is inferior or superior to the other in any way.

Jainism is pre-eminently a Realism based on its *anukampa* system of Logic. It believes in the eternity of Soul, Universe and Moksha. There are infinite souls *Jivas* in the universe, each one of them being potentially God possessing the qualities of infinite knowledge, infinite perception, infinite power and infinite bliss. They are transmigrating as celestial, human, sub-human, or hellish beings according to their karmas. The soul has for its natural attributes consciousness, knowledge and perception. It has no form, it is the doer of actions, it is of the same size of the body in which it dwells, it experiences the results of its own actions, it has the tendency of a natural upward motion.

The Universe is a reality constituted of six

dharmas—soul, Matter, Space, time, the medium of Motion and the medium of Rest. The Universe was never created and will never be destroyed. Only modifications of the substances are growing on every moment. That which is a mountain to-day may be levelled to a plain to-morrow, that which is clay now may be made into a pot a few hours afterwards and that which is fire now may be water some time hence and so on. The basic teaching of modern scientific discovery that matter is indestructible has been the teaching of Jainism from time immemorial. The substance continues to exist through change.

The Jain cosmography describes the Universe (the microcosm) to be of the form of a human being (the microcosm) standing erect with legs apart and hands placed on the waist. The whole universe is enveloped in three atmospheres called *atavalayas* or wind-sheaths and is divided into three regions: the nether world, the middle world and the celestial regions all being situated one above the other from bottom upwards. Above the celestial regions at the very peak of the universe is the Blessed Region of Moksha called Siddhasila in Jainism.

There is no place in the Jaina Theology for a God who creates and rules the world. The God of the Jains is the all-knowing pure and perfect soul which resides in Siddhasila.

The Anagarika Dharmapala on India and the West

In an article in the *Maha-Bodhi*, the Anagarika Dharmapala gives us his thoughts on various things during his stay in Switzerland. He much appreciated the way the Swiss have used science to make life joyous and expects Indians to take a lesson from it. He says:

I stayed at Zurich a week and enjoyed the scenery of the Zurich lake. There are over a hundred motor boats plying in the lake taking passengers from one place to another, especially to the baths. How different are the sights in the Gangetic valley. Enjoyments are made possible in Europe and America in a grand scale due to scientific progress. Electricity is helping the people of Europe to make life joyous, and the people get all the joys on this earth because of their education on scientific lines. Every boy and girl gets the best education in departments of arts, literature, science, industries, agriculture and their future is assured. To read the history of Switzerland is a pleasurable inspiration. The motto of the Swiss people is "One for all and all for one." The Lord Buddha when He enunciated the Seven principles of concord to both the Bhikkhus and to the *kshatriya* princes anticipated the ethics of modern enlightened democracy based on co-operation. Unfortunately conservative elements of Brahmanism sapped the foundations of purifying democracy and the sublime principles of healthy co-operation enunciated by the Prince of the Sakyas were allowed to go to the limbo of oblivion. Brahmanism is only for the high caste, and the non-high-caste people preponderate in India.

So that unless this false aristocracy were done away with, we may not hope for much progress.

The Dharmapala's views on British influence on Indian life, as quoted below, are worthy of his keen intellect.

Under British rule the people live in a state of placid ignorance contented with the rituals and superstitions and degenerating social customs, spending in vain so much money which could be usefully spent in bettering their social status. But the disintegrating ethos of Brahmanical dogmatic sociology is too stupendous an obstacle which could only be removed by enlightened co-operation, and the millions of people live and die like sheep. The British missionaries are the emissaries of the trinity, politics, trade and Christianity. They are dunderheads utterly ignorant of scientific and agricultural economics which are essential to-day for the progressive development of a nation. Europe advances on scientific lines, but poor India knows nothing of the advanced conditions of European races. The intelligentsia of India are pupils of British constitutional law and they are, like the British missionaries, selfish looking only for their individual enrichment through British law courts. Among the teeming millions of India there are only a few scientists, and they do not care to work on practical lines which would be of help to the teeming millions. The poets dream dreams, and the wealthy class spend their money in luxury. The rajahs are haremish sensualists who spend their time in the enjoyment of abnormal sensual orgies. The once powerful brahman priesthood is to-day impotent to do anything in the way of progress. All they can do is to retard the progress of the working classes who form the backbone of the nation. In other lands, the labouring class are a power and the government of each country help the agricultural development by improving the waterways and assisting the people by educating the young generation in agricultural methods. The United States and the different European governments are foremost in developing the resources of agriculture. The Indian landowners do nothing to help the agricultural community. They neglect improved methods of scientific agriculture, they do not visit great agricultural centres in Europe, the United States and other countries to witness the many improvements made within the last fifty years. Indian people suffer for want of scientific knowledge in agriculture, dairying, road building, ship building, etc. Educated philanthropists and scientists from European countries seldom visit India. Globe-trotters visit India during the cold weather to see magicians and monkeys. Missionaries with the knowledge of eighteenth century theological dogmatics go with their families to find their livelihood, and all they can teach the people is that Elohim created Adam from mud, and that the serpent deceived Eve, and they both fell from their spiritual nakedness, and that Jesus the Nazarene, son of the carpenter Joseph came down from heaven to save the people from the sin of Adam, and that unbelievers will be cast into a hell of brimstone and fire for eternity. This gospel fit for the doldrums, is preached to the people who pass their lives in stagnation.

And his thoughts on the fate of Christianity are enlightening.

The theory of evolution as proclaimed by Darwin shook the foundations of Hebrew Christianity and as time went on men like Herbert Spencer, Huxley, Tyndall, Mill entered the arena and drove out the theologians from their strongholds. The future of Christianity is doomed. Science is advancing, and the discoveries of fossils go to show that the earth was not created 6,000 years ago but that the earth is many millions of years old. Radioactive science and the law of relativity will help the European races to get a better idea of the cosmic process than through the Semitic book of fables.

Muslim Education in Bombay

The *Mysore Economic Journal* gives a summary of an official publication showing the progress of education among Muslims in the Bombay Presidency during the past ten years. The following is taken from the above summary :

With regard to secondary education, eight Government High Schools out of seventeen have been provided with special teachers of Urdu and 15 per cent of the places in Government secondary schools have been reserved for Muslims, while free studentships for Muslims at the rate of 22½ per cent of the total number of Mahomedan pupils in each Government secondary school have been sanctioned. Altogether the proportion of scholarships provided for Muslims is largely in excess of that provided for other schools.

No difficulty is felt by Muslim pupils in gaining admission to Government Arts Colleges and in each Government professional college 10 per cent of the total number of places are reserved for Muslims provided they possess the minimum qualifications required for admission. A large number of scholarships are also available for Muslim students in these colleges.

The measures taken by Government have led to a marked progress in the education of Muslims in the Presidency Proper. Comparing the figures for 1915-16 and 1923-24, it is seen that Muslims attending colleges increased by 76 per cent, those in secondary schools by 25 per cent, and those in primary schools by 27 per cent, although the total Muslim population recorded in the Census of 1921 was less than that in the Census of 1911. Taking the three main communities, 15.11 per cent of the Brahmins attend school, 3.726 per cent of the intermediate Hindus and 7.77 per cent of the Muslims. Muslims are more than twice as advanced as the intermediate Hindu community in primary education and from 3 to 1 times in secondary and higher education.

Exuberant Loyalty

Indian Princes, chiefs, zemindars etc., are noted for their love of the British and their

loyalty to the crown and its representatives. This is no doubt in the fitness of things in view of the fact that the British have relieved them of much of the heavy and often troublesome burden of sovereign by such as arise out of problems of defence, foreign policy etc. The following news, taken from the *Frederator and Zemindary India* will go to show that this loyalty is not empty.

To mark the occasion of the successful recovery of H. E. the Countess of Reading from her recent illness Raja Raghunandan Prasad Singha of Monghyr presented Rs. 10,000 to be devoted to any purpose Her Excellency might think fit. Her Excellency has decided to give Rs. 15,000 out of that amount to the Medical College Hospital, Calcutta for the purchase of a deep Ray Therapy Apparatus for the use of indigent patients and the remaining Rs. 5,000 to be devoted to medical requisites for hospitals at Lahore.

If only all the princes would join in and celebrate their loyalty by opening schools and hospitals and by helping welfare organisations instead of doing so through expensive dinners, parties and journeys abroad which produce no beneficial results for the people of India.

Bengal's Intellectual "Decadence"

Answering Justice Greaves' statement regarding the loss of her intellectual pre-eminence by Bengal, "A Bengali" writes in *Willfar*:

It was due to the backwardness of other Provinces, rather than to any innate greatness, that Bengal had so long been leading India in things intellectual. Also the present "decadence" of Bengal in this respect is due very much to the progressiveness of other provinces and not so much to any degeneration of our own brain substance. The will to progress is a living sentiment in the youth of the other provinces. They are deadly serious in their academic and other intellectual pursuits. In Bengal, on the other hand, there is a lightheartedness attached to the academic outlook of students. They take a cynical view of achievements in the world of examinations and feel that there is no "real" merit in topping the list. This is not altogether a wrong view, and if Bengal can along with this attitude of mind, cultivate a love of true scholarship her losses in the field of

government services will be fully compensated for by successes in the field of learning. Nevertheless, this sneering attitude towards success in examinations, often hides a want of self-confidence, especially in those who go in for these examinations in spite of an avowed contempt for the same. This is a symptom of lack of grit and strength of character.

Scholarship is a contemptible thing in none of its various aspects. Bengal has lost sight of this truth in the heat of her strong feelings against the pseudo-scholarship propagated by the system of mass production of university men inaugurated by the late Sir Asutosh Mukherjee. Under this system thousands of graduates were turned out by the University of Calcutta with academic hall marks to which they had no real claim. The result is that to-day Sir P. C. Roy can justly say as he is reported to have said to a representative of the *Statesman* that 'it was not difficult to find first class M. A.'s who were 'deplorably ignorant on the most important subjects and had only a superficial knowledge of others'. And such M. A.'s often obtained the first place in the University. No wonder that they cannot hold their own against better trained men from Madras or Bombay.

The kind of scholarship which helps one to win laurels in examinations is scholarship, not in the field of deep thinking, but in that of facts and information. A thorough grasp of fact, of what others have said on a subject, of the *pros* and *cons* of a thing etc. etc., are what education should aim at in order to produce success in competitive examinations. This means the choice of sound text-books and teachers. In the Calcutta University both are sadly conspicuous by their absence. The text-books are often selected with a view to enrich the author or the publisher (we guess this from the fact that some of the worst books on certain subjects are written by the members of the Calcutta University themselves and are selected as text-books). Yet other such books are published by the University and forced on the students (we shall be glad to be proved wrong in our view) and not with an eye to excellence. The teachers also are very often, with some exceptions, not quite so well read as they should be. The standard of the examinations of the University is also set to suit the teaching rather than to exact hard work from the students and sound teaching from the professors. We remember our college days, when we used to get through the examinations of the Calcutta University with no trouble worth the name. And that with intellectual abilities none too remarkable. So that if Bengal desires to do better in the Services examinations great and immediate efforts should be made.

- 1 To overhaul the list of our text-books,
- 2 To overhaul our hierarchy of teachers and
- 3 To overhaul our curricula and standards of examinations

FOREIGN PERIODICALS

Mr Gandhi's "Fundamental Error"

In the course of an article contributed to "Foreign Affairs," Sir Frederick Whyte, the late president of the Indian Legislative Assembly, writes thus on what he calls Mr Gandhi's "fundamental error"

It has often been asked: What did Mr Gandhi mean by Swaraj? Not even he himself knew, or if he did, he professed so many interpretations of it that in the end the world was bewildered and forsook him. Swaraj actually means self-rule, and sometimes he interpreted it in the political sense of responsible government, sometimes he interpreted it in the purely personal sense of self-knowledge, self-discipline, self-control. In truth, Mahatma Gandhi cared nothing for politics and knew nothing of it. Statcraft to him was an unnecessary encumbrance in human life, for at the bottom of his heart he believed or professed to believe that the only permanent bonds which can hold human society together are these of goodwill and love. The ideal was too high even for him to reach let alone the common humanity of India and the policy which he founded on this conception of society naturally broke under the strain of circumstances. He attempted to impose upon his own movement an ideal too high for it, and he confessed himself that he had committed a "Himalayan blunder" in believing that a movement of passive resistance could long remain passive.

Here lay his fundamental error. He and India have paid for it since.

Nevertheless, Sir Frederick has the fairness to add that

in none the less remains true that his influence, both for good and for evil, stretched more widely throughout India than the influence of any other man in our generation, or perhaps in any other. Non-Cooperation in some of its aspects will soon be forgotten, or will only be remembered as a movement composed of mixed good and evil which was marred by some hideous bloodshed. But whether Non-Cooperation is remembered or not, there is no shadow of doubt that the influence of Mahatma Gandhi will remain, not in virtue of his spinning wheel or his homespun, but in virtue of personal example. It is idle to inquire what personality is, whence it comes or how it can move mountains, but the fact remains that the most novel feature in the whole landscape of India during the past five years has been the awakening of the masses to their political and economic conditions. That awakening is Mahatma Gandhi's work. Thousands, if not millions, of Indians have understood for the first time during these years, vaguely and ignorantly the meaning of the word "political" and wherever Gandhi passed, he left behind him an imprint on all minds which will not rapidly be effaced. Therefore, despite all the extravagance, chicanery, corruption and cruelty of

the Non-Cooperation movement, the net sum of it is not evil and goes to the credit of its creator.

Some persons who professed to be Non-co-operators may have been guilty of extravagance, chicanery, etc., but these things did not follow from the principles of the Non-cooperation movement, nor did Mahatma Gandhi countenance or connive at them. On the other hand, the entire credit of the awakening of the masses does not belong to him, it was due in part to contemporary events, as partly enumerated thus by Sir Valentime Chirol in an article in the *Near East and India* —

Bad harvests, the renewed ravages of the bubonic plague, two appalling outbreaks of influenza which carried off within a year nearly two millions of people, the huge rise in the cost of living, a sudden blast of intense economic depression reaching across from Europe, the disastrous antics of currency and exchange, the queer stories brought home by a million native troops thrown for the first time during the war into close contact with western life all these were enough to produce a dangerous and unprecedented ferment which spread even to the silent masses. Then came Amritsar and in the Duke of Connaught's own phrase its shadow lengthened over the face of India, whilst the strange figure of Gandhi, surrounded with the halo of ascetic saintliness which has from times immemorial appealed to the religious emotionalism of India, concentrated every popular grievance real or imaginary into a comprehensive denunciation of British rule and of western civilisation as satanic.

The Montagu-Chelmsford Reforms also have disturbed, to however small an extent, the pathetic apathy of the masses

The Awakening of Asia

This is the title of an article in the *Nineteenth Century and After* by Professor F. A. Ossendowski. He considers Japan to be the leader of a pan-Asiatic movement, whereas Bolshevik Russia masquerades as the friend of "enslaved Asia" and is pursuing the ideas of a "Central Mongolian Empire" or pan-Mongolism. In support of this latter statement he observes —

The ideals with which the Bolsheviks approach and tempt Asia are not Communistic. They go into Asia preaching the fallacy of materialism,

positivism, and of Christianity as taught by the white races. The whites, they say, have divided nations into conquerors and vanquished and mankind into workers and those benefiting by their toils. These burning words have been known to be used before. The same lesson was preached by the Christian Buddhist Leo Tolstoy, the Indian Rabindranath Tagore (*Nationism*) and the Chinese Professor Ko-hoo ming (*The soul of the Chinese People*).

These words can but have one meaning and one consequence, a war for freedom from the white yoke.

I have seen sorcerers, clairvoyants, and prophets calling Asia to her mission of revenge and war. The Soviets have wrung the control over this outbreak from the hands of the Asiatic and anti-Bolshevik leaders. They knew how to turn religious worship and passion into action and into deeds which would bring about their aim: the conquest and destruction of Europe.

Rabindranath Tagore never had the remotest idea of preaching a *jehad* or any other kind of war for the conquest and destruction of Europe.

Why France and Great Britain should Combine

The following passages occur in an article in the *Nineteenth Century and After* on the revolt in Syria.

The French have maintained throughout that the cause of the Syrian revolt (including the Druse outbreak) is entirely due to Pan-Islamic influence and anti-European feeling in Asia. That this antagonism to European influence exists seems to be beyond doubt, but it appears more likely that the Druse insurrection with its results is being exploited in the interests of Pan-Islam than that Pan-Islam is the cause of the turmoil in Syria. Since the outbreak in July the Arab craving for independence has been stimulated by a local Press which expounds the desire of the people to govern themselves, although they are utterly incapable of doing so. Anti-European propaganda floods the newspapers of Palestine and Syria where everything possible is being done to sow dissension between France and Great Britain.

All this is said in order to enforce the lesson—

Above all, France should realise—and M. de Jouven certainly does realise—that in the Near East she should sink her individual nationality and become an integral part of the European whole. Great Britain, as mandatory Power in Palestine and Iraq, should do the same and the two representatives of the same League of Nations should work hand-in-hand in the closest co-operation and with the same end in view—the good and welfare of the peoples entrusted to their guardianship. The task of the League in the Near East is not easy. But if its emissaries are united, and firmly so, the difficulties should be greatly

reduced. If, on the other hand, the Asiatic can see his way to sow dissension between the French and British elements of the League's influence, he will most assuredly do so. He lives by intrigue and is a past-master in the art.

It is only the superabundance of humility that has impelled the British writer to give the palm in intrigue to the Asiatics. The European, particularly British, record in effective intrigue has yet to be broken. *Vide* "Rise of the Christian Power in India."

The Biological Function of Humanitarianism.

Mr. Aldous Huxley writes in *Vanity Fair* that humanitarianism is the expression of the mystical idea of the equality of man—an idea which has already profoundly modified human society and which is destined to produce incalculable effects in the future.

We are all humanitarians now whatever our political opinions and whatever our social position. Even those who are in possession of wealth and power admit that those who possess nothing have certain rights. They are perpetually giving away little bits of their wealth and power to the dispossessed. Why they could still resist the dispossessed, if they liked, they could still oppress them even as their fathers resisted and oppressed. But somehow they are not able to do so. Humanitarianism has become a part of them; it is impossible for them to ignore it. It was this surrender of the power-holders to the dispossessed that outraged Nietzsche into propounding his new superman's morality. Nietzsche justified his anti-humanitarianism in the name of Natural Selection. The justification is, Mr. Huxley argues, quite invalid.

Darwinism, as Benjamin Kidd pointed out long ago, justified humanitarianism, not Nietzschean immoralism. It is by a ceaseless process of competition that the breed is improved, is even kept up to existing standards. In a tyrannical society, where humanitarian principles are not recognized, nine-tenths of the individuals composing that society are so unfairly handicapped by poverty, bad conditions, and inadequacy of education, that they are not in a position to compete for any of the higher prizes of life. By ameliorating the lot of the dispossessed, humanitarianism removes this handicap and thus by multiplying the competitors, tends to create an intenser and therefore biologically more stimulating competition. Humanitarianism, then, has a biological function—to render possible an intenser competition within society. When all men are free to compete and all start equal, the chance of getting able men at the head of affairs is obviously increased. That is the political justification of humanitarianism. Societies should be run on humanitarian principles because an increase in the number of competitors increases the chances of efficient leadership.

"The New and Infinitely More Exciting Vision of Nature."

Sri Jagadish Bose's demonstration of the existence of a pulsating heart in trees and plants has led the famous Irish poet and economist "A. E." to animadvert in the *Irish Statesman* upon the insensitiveness of the public to the greater number of scientific generalisations. "These affect society but little unless they are embodied in some invention." "A. E." adds —

We know that in every pin-point of space there is an image of the universe of light brought in waves or rays so that the eye can echo that impression of infinitude. Through wireless and telecasting we have become practically certain that every pin-point of space is capable of holding within it an echo or reverberation of the whole universe of sound, that a voice crying here goes round the world, for it may be caught up anywhere. There is an instrument delicate enough. Our ears, yet have not the range of our eyes and cannot bring to consciousness that universe of sound as we bring to consciousness the universe of light. Perhaps the ear will become more sensitive in further evolution. But it is astonishing how in this miraculous nature science reveals to us facts out normal consciousness.

'We walk about with our beings insensitive to the whole our intellect is convinced of and the intellect soon gives up the effort to civilise the brute nature and we relapse after the first wonder of hearing some new discovery into a normal wondering commonplace. The theory of evolution was probably the scientific generalisation which most rapidly affected human consciousness. There were popularisers of that now almost obsolete Darwinian doctrine. But what genius will popularise the new and infinitely more exciting vision of nature revealed to us by later scientists, who make the universe suddenly appear living and so real to us as it really is, and not inanimate and dead as our gross senses make us think.'

The Religion of the American Indian

In the *Buffalo Art Journal*, Mr Ellsworth Turner defines the original attitude of the American Indian as "simple and exalted."

The worship of the "Great Spirit" was silent, pure, and free from all self-seeking. The Indian was silent because he knew all speech to be vainly feeble and imperfect. His worship was vain for he believed that He is nearer to us in nature. From the very birth of the child his spiritual instruction began. At first, merely pointing to nature, then in whispered songs, bird-like, during and evening. The child's spiritual training continued until he was sixteen, when he took his first solitary communion with the Great Spirit. This was called "hambleday" literally "mysterious being" or it may better be interpreted as "consciousness of the divine." The first "hambleday" was a very elaborate ceremonial.

The youth first purified himself by means of a vapour bath to cast off as far as possible all fleshly influences. The father of the boy then sought out the most commanding summit in all the surrounding region—a place where beauty and silence reigned. The silence was his voice. Beauty was a stimulant to the spiritual self, knowing that God set no value upon material things, the youth took no offerings or sacrifices other than symbolical objects such as paints and tobacco.

Wishing to appear before Him in all humility, he wore no clothing save his mocassins and breech-clout. At the solemn hour of sunrise or sunset he took up his position, overlooking the glories of nature and facing toward the sun, and there he remained, naked, erect, silent and motionless, for a night and sometimes longer. At times he would chant a hymn or offer the ceremonial pipe. In this ecstasy the Indian found his highest happiness and the guiding influence of his life.

Mussolini

Mussolini is a powerful man and is moulding Italy into a powerful nation. In view of Italy's geographical position, the possibility of a stronger Italy is looked upon with disfavour by some of the most powerful nations of to-day. That it is so can be seen from the tone of the following extract from *The New Republic*. How far it is a true picture of the situation in Italy cannot be judged by people who are outside Italy and have only non-Italian sources of obtaining information regarding that country. That it is an one-side picture can be guessed from its temper. It runs—

Mussolini's is the blackest shadow which hangs over Europe at the present time. The belief is widespread that the future policy of the Italian Dictator is likely to prove the most dangerous and disruptive force at work anywhere on the continent. The heart of the Fascist "philosophy" is the use of force if the time should come when it had nothing to fight about. Mussolini's Black Shirt organization might be in danger of melting away. In internal affairs he has been almost too successful for his own good. He has crushed political opposition, exiled or intimidated his enemies, almost literally abolished hostile criticism in the press and elsewhere. In order to continue to feed Italy the now familiar diet of raw meat, his enemies believe he may be compelled to embark upon a dramatic external policy of some sort. France and England would hardly be likely to permit him to go to war with Austria, and we trust he would be too shrewd to put his hand into the fire by picking a quarrel with Jugoslavia. What he is most likely to choose, if the prophets are correct, is an effort at colonial aggrandizement, perhaps in northern Africa. Such an attempt, however, might easily lead to international friction of the sort which culminates in war. Meanwhile with his talk of a new Holy Roman Empire, his

proposal for "an all-Latin bloc" and the attacks which his Fascists are making on the Locarno Pact, he is worrying the chancelleries of western Europe just at the moment when they thought to enjoy a little well-earned peace. Already, pessimists are saying that Italian intransigence is likely to be the fatal stumbling block in the path of the coming League Conference on Disarmament.

The last vestiges of freedom are being stamped out in Italy with a scientific thoroughness which must excite the admiration of all those American business men who have avowed love for Mussolini is based on his efficiency. No citizen is permitted under the new statutes to speak or write in anything but hearty approbation of Il Duce and all his works. A hostile critic if he lives in Italy is subject to fine and imprisonment, and if he lives abroad, any Italian property he may possess is subject to confiscation. Civil government by another device, has been abolished outright in all towns with fewer than 5,000 inhabitants. These are now to be ruled direct from Rome. The last of the opposition newspapers have given up the ghost, after a period of declining circulations due to the fact that the public did not care to wade through their heavily censored columns and read about birds and flowers. In short, the present internal administration of Italy is as strikingly similar to that of Russia, as their foreign policies are for the moment along parallel lines.

Chinese Minister learns Sanscrit

The following appears in in *The Young East*

Mr. Wang Jung-pao, Chinese Minister to Japan, has recently taken up the study of Sanscrit with the help of Dr. M. Nagai of the Tokyo Imperial University, and while studying it, His Excellency is comparing Chinese translations of sutras with originals.

Why not India?

The following is taken from *The China Journal of Science and Arts*

That China and other countries on the Pacific have a very good friend in the Rockefeller Foundation is evidenced by the various undertakings fostered by that institution. Recently Dr. Harry L. Russell, Dean of the College of Agriculture of the University of Wisconsin, has arrived in China from Japan, being on a visit to this and other countries in the Far East for the purpose of investigating educational conditions here. He is making a thorough examination of the science education in the Universities and Colleges of these countries, and will select groups of already trained scientists with the idea of giving them further training in science through the medium of the Rockefeller Foundation, the department of which concerned has been handsomely endowed by John D. Rockefeller, Jr.

Up till now the Rockefeller Foundation in these parts has been mainly concerned with medical education and research, carried on at the Peking

Union Medical College and the present increase in the scope of the institution's activities must come as a great boon to China and other countries of the Far East.

Dr. Russell is looking for suitable men in China to benefit by the plan of the Foundation. These must have received their doctor's degree in educational work, and must be willing to return to their own country when they have received the extra training in America, to devote themselves to work there for the benefit of their own nationals.

This is offering young men who have graduated in foreign countries and returned to China but find that they do not know enough about educational science, a wonderful chance to acquire that knowledge. Science teaching in China is woefully inadequate, and we sincerely trust that Dr. Russell will be successful in his search for candidates of the Rockefeller Foundation's new enterprise.

Broadcasting Obscenity

Pornographic literature and obscene "art" has become a serious social menace in India where there are no good organisations to fight these evils and as such, such things can be circulated among the youth of the country with impunity. That this evil is no less present in such well-organised and advanced countries as the U. S. A. can be seen from the following extract from the *Literary Digest*

"Pictures from Paris" whose purpose is obvious in their titles, magazines which are openly or furtively obscene, and that sort of literature which is published secretly and sold on the sly, are some of the grave dangers to which the youth of the country is constantly and carelessly exposed. The situation, we are told, is probably worse to-day than it has ever been, because of new publications constantly appearing on the market and the easier distribution, and the traffic in obscenity is said to be practically without hindrance. In some cities, attempt to sell improper literature to children on their way to school are reported. Jersey City recently took a decisive step in banning a dozen magazines from a news-stand, after arresting and indicting the proprietor. The proprietor was permitted to go free on his promise to discontinue the sale and distribution of the magazines found objectionable. In Philadelphia it is reported that attempts are made to sell improper periodicals to school boys and girls, in some instances at the very doors of the schools and the ire of the educators and clergy of that city has been thoroughly aroused. According to Dr. Broome, superintendent of schools in Philadelphia, as he is quoted in *The Bulletin* of that city, these publications form one of the most serious menaces to our youth, to-day." He goes on

"There is no traffic more insidious or harder to deal with on one hand or more damaging to the character of youth on the other than these publications. These periodicals are so candid and frank in vulgarity, both in text and illustrations, that there is no effort to conceal the purpose for which they are published.

The schools, public, private, and parochial, are constantly exercising the utmost care to counteract these vicious influences. But they cannot accomplish results without cooperation from every citizen who believes in clean-mindedness.

Whether the conduct in this respect is worse than twenty-five years ago, I am not prepared to say. The same amount of foul-mindedness does more harm to-day, however, and reaches more young minds because of the greater facilities for publication.

Lord Hardinge on Locarno and After

The Financial Review of Reviews publishes an article by the Right Hon. Lord Hardinge of Penshurst, K. G., in which he deals with the Locarno Pact, the history which gradually led up to it and its effects on the political and economic future of Europe. We give the concluding portion of the article below.

The Locarno Pact, which may be described as the effective end of the war, consists of a treaty of mutual guarantee between England, Germany, Belgium, France and Italy by which the maintenance of the territorial *status quo* on the French and Belgian frontiers is established and the demilitarised zone on both banks of the Rhine, to which are attached Arbitration Treaties between Germany on the one hand, and France, Belgium, Poland and Czechoslovakia on the other. Encouraging and hopeful as the conclusion of these treaties may sound, it does not necessarily follow that they will ensure peace indefinitely, any more than the Treaty of 1815 guaranteeing the neutrality of Belgium which Germany, as a victorious Power, treated as a scrap of paper. As the example of what befell Germany is a very costly lesson, and the greater certainty now that this lesson would be repeated on an aggressor will not necessarily make any ambitious Power more before embarking on such a course. But what is in the Locarno Pact, yet does not appear in the wording of it, is a new atmosphere of peace and conciliation with our former enemies and an admission to the comity of nations on equal terms. It is only by the constant pursuit of a policy of peace that war and strife amongst nations can be permanently averted and this we may hope to be the true interpretation of the Locarno Pact.

With the stabilisation of the political situation in Europe, economic equilibrium will undoubtedly follow in due course. Already our two principal enemies in the war are making good. Germany has stabilised her currency, is steadily paying what is due to the Allies under the Dawes' report, and in spite of her diminished resources she is gradually working up to her pre-war standard. With courage and determination beyond all praise she is meeting her difficulties, and by her industry and energy is rapidly overcoming them. Germany's commercial supremacy in Europe is far more likely to be realised than the military predominance which was her aim for more than a generation. Then again, Austria, with the financial assistance of the Allies, has stabilised her currency, has balanced her budget, and gives every indication of

a growing economic prosperity. Her principal difficulty is that, deprived of access to the sea she is surrounded by States who make the export of her manufactures almost impossible. A more friendly disposition towards Austria on the part of the Central European republics would be of incalculable value to her, and also indirectly to themselves.

Of the Central European States, Czechoslovakia is the more advanced and progressive, having embraced most of the richest manufacturing districts of the former Austrian Empire. By a great effort, she has stabilised her currency, balanced her budget and, being self-sufficient in manufactures and foodstuffs, with a fair proportion of raw material, her industrial activities are likely to expand considerably. She is fortunately having a capable President and a very efficient Prime Minister in M. Benes.

Roumania, Serbia and Poland, all of them devastated during the Great War, are slowly but surely recovering and tending towards permanent economic stability.

Thus, as we look around, we see, with the signal exception of the situation in Russia, steady progress and reoperation on all sides in Europe and fortified by the Locarno Pact and its subsidiary agreements, we may hope for the development of mutual and peaceful co-operation in the path of progress and civilisation. Such progress will undoubtedly occasion demands for capital, which can be found more readily on the English market than elsewhere and after careful investigation should present favourable opportunities for safe and sound investment. In conclusion it may be stated that now that the future of these various nationalities in Europe is more assured, investors can turn their attention in these directions with more confidence than they could have had during the past few years.

European Solidarity against the Orient

Although Orientals know little about it, the occidental press has been talking a lot about a certain anti-European movement which is rampant everywhere in the Orient. Whatever anti-European movement there is in the East is directed not against Europe, but against Europeans who indulge in exploitation of the East. As soon as this exploitation ceases, let us suppose by the greater practice of morality and self-control among Europeans, who up to now cannot resist the temptation of despoiling others if they can do so without much risk of physical injury, the anti-European movement will also cease. But there are some people still in Europe who think that by better organisation of European military power and by a suitable solution of the troublesome problem of dividing the spoils, they can keep up this work of exploitation for yet some time. Such efforts will no doubt call forth similar efforts of a defensive nature in the East as well.

However that may be, we give below quotations from an article from the *Politica*, Rome, which was reproduced in English by the *Current History Magazine*.

Although this is not generally realized as yet "the National-Religious revolution of the Moslem world and the National Communist revolution of the Yellow world, are but two phases of a single anti-European movement extending from Casablanca to Vladivostok. This movement is constantly fed by Bolshevik propaganda. Although Germany may be seen alongside Russia extending aid to that movement her part is by necessity a temporary one. Germany is essentially a Western and a Christian country, a colonial power both by her past and by her aspirations, an integral part of imperialist Europe. She is anxious to free herself of the necessity of making common cause with Bolshevism and with the East, and it is to the interest of Europe that she should succeed. The negotiations for a Rhine compact are an effort to detach Germany from the Bolshevik combination and thus to push the defense line of the West back from the Rhine to the Vistula. Russia on the contrary, is not a part of the Western system, and attempts to detach her from the Orient, such as were made by Lloyd George, are doomed to failure. Just as the Czarist State was European on the surface only, so is the Bolshevik revolution, in spite of its European label.

The anti-European revolution, however, is anterior to Bolshevism, as it is anterior to Versailles, to Wilson, to the World War to the twentieth century. Its origin is to be found in the system of ideas that has prevailed since the eighteenth century in that very Europe against which it is directed. Though the present conflict is, in a sense, but one of the gigantic phases of the age-long duel between Orient and Occident this phase differs profoundly from all the preceding in that the revolt of the Orient against Occidental domination is carried on this time in the name of a universal 'right,' which the Occident itself made universal. The struggle is waged in the name of an international ethical system which is entirely of Occidental European origin in the name of universal 'equality,' of inherent rights of men and of peoples of the 'principle of nationality,' of the 'right of self-determination.' Then came the World War, and all Asiatic peoples, whether sovereign or subject began to be courted, flattered and solicited to join the war for right against might, in the name of 'justice and universal liberty.' "The most categorical and demagogic anti-imperialist doctrine was officially proclaimed during four years by the leading imperial capitals, and then it resounded to the remotest corners with the powerful voice and authority of Wilson. * * * Under the ferrule of the great trans-oceanic demagogue who also was anti-European by an irresistible instinct though from different motives—Europe for the first time abased her prestige in the eyes of the Asiatics by admitting their 'right' and her own wrong." With the advent of peace, the victors repudiated their promises and the anti-European revolution flared up, with Wilson's Fourteen points as a slogan.

In the face of this movement, Europe's resistance is weakened by a "crisis of conscience," which has all the symptoms of a crisis of decadence.

Europe's infirmity consists of the predominance of a universalist ideology based on the principle of universal equality as over 'the direct instinct of historical necessity of power, and of might.' It is a case of bad conscience that handicaps Europe in her dealings both with the East and with the new Transatlantic West. To the anti-European revolt in the East and the anti-European pressure from the West there should be opposed the solidarity of the imperialist powers of Europe. That solidarity, however, is non-existent as yet not only in politics but even in public sentiment. The responsibility for this rests primarily with the older and greater colonial powers France and England, who took advantage of their victory not only to deprive the enemy power of its overseas empire but also to dispossess their ally, Italy, of her share of the colonial conquest. The result has been to force Germany to seek revenge in a universal collapse and at the same time to cause Italy to assume an attitude of benevolent neutrality toward the Oriental revolution. A real European solidarity is possible only after a thorough revision of the imperial hierarchy of the world whether effected peacefully or by war.

Medical Effect of Music

We find in the *Literary Digest* that

Recent experiments to determine the effect of music upon the human mind and body are discussed by a German physiologist named Resser in *Ästhetische Hilkunst*. An abstract in *Naturwissenschaften* by E. C. Goethel is quoted in part below. The author begins by observing that music not only soothes melancholy and induces forgetfulness of sorrow but may actually exert a healing effect upon nervous affections and reduce pain. He mentions as examples in which neuralgic pain was relieved by music Gladstone, Herbert Spencer, and the late Empress Elizabeth of Austria. He says:

Gallus relates in his *Gallie Knights* that the ancients believed that all persons suffering from sciatica are relieved of pain when they hear the notes of the flute. He says that he has read in a work by the Greek author Theophrastus that the effects of snake-bites are neutralized by suitable tones of this instrument. Likewise, the Greek philosopher Democritus declares that many diseases are healed by fluteplaying. Gallus himself appears to give credence to these ideas, since he remarks: "So great is the relationship between the body and the soul and correspondingly between the diseases and the remedies of soul and of body."

The influence of music upon the human organism is employed as a therapeutic measure by physicians. Various investigators have studied this influence by means of physiological devices, which have arrived at a high degree of perfection in modern times.

The author cites experiments made by Dr. Trachanoff with the Mosce dynamometer which proved that cheerful music of a gay and spirited tempo actually increases the lifting power of the muscles, whereas a slow and melancholy melody exerts the reverse influence. It has likewise been demonstrated that a bell sounded at regular intervals has a definite effect upon the elimination of

carbondioxide and the absorption of oxygen, in other words, the sounds produce an acceleration of the processes of metabolism.

The author next refers to the favorable influence which music exerts upon mental troubles. He remarks also that certain French physicians have demonstrated that music operates as a sedative influence in narcosis. Experiments such as those of Dr. George Zehden of Berlin also indicate the favorable effect of certain sounds in such cases. An interesting experiment quoted by him is that made in a clinic in Berne, Switzerland, with the object of modifying pain by a combination of music and narcosis.

Trade Monopolies as a Source of War

Nations have fought in the past often and bitterly, because they have tried to monopolize fields for economic exploitation. Now we find Americans resenting the monopolistic exploitation of their markets by other nations through the sale in America of monopoly goods of different kinds. The following quotation from the same journal would give an idea of the trouble.

Rubber, the cushioner of shocks and deadener of sounds, now threatens to become a cause of wars and tumult. For, at Secretary Hoover's suggestion Congress, disturbed by the fact that America's twelve or fifteen million motorists and her millions of other users of manufactured rubber paid some hundreds of millions of dollars more for their tires and rubber goods in 1925 than they did in 1921, has called for an investigation of England's control of crude rubber prices. Already our press echoes with such ominous phrases as "trade war" and "reprisals." A Western daily characterizes the British Government's boosting of prices by restricting production on British-owned rubber plantations as "commercial banditry." A Massachusetts State Senator declares that the British "have, in reality, declared a trade war against the United States and invited reprisals." Our editorial statisticians estimate that if the present high prices are sustained, the British rubber-planters will take more money from this country in exorbitant profits than the British Government will pay us in settlement of her war debt. In England, the correspondents tell us, the man in the street reads of American indignation over the price of tires "with the complacent smile of the cat that has just stolen the cream." And when this man in the street has a smattering knowledge of American politics, says the London correspondent of the *New York Times*, he comments as follows: "Hoover is just pulling off what that they call a political stunt. He is grooming himself for the presidential fight in 1928. He is twisting the British Lion's tail, and there is no more in it than that."

Secretary of Commerce, Hoover, who leads this onslaught on the high price of rubber, says that the group of British rubber-planters who control the market are causing American purchasers to pay from \$30 to \$70 excess profit on every set

of automobile tires they buy. To quote his statement further:

"The manufacturers point out that there are ample supplies of rubber in the world, but they have been held up by this combination, and speculators, until rubber has increased from 35 cents a pound to an average of \$1.10 last month. A year ago the combine declared that 35 cents was a reasonable price, but the difference now demanded by them and speculators amounts on our 900,000,000 pounds of annual rubber import to nearly \$700,000,000 per annum, and means a charge of \$30 to \$70 a year on every user of an automobile.

Not is rubber the only raw material consumed in the United States and controlled by a foreign Government, Mr. Hoover reminds us. There is now an official Franco-German control over the price of potash. The Chilean Government controls the price of nitrates. The Dutch Government controls quinine. And the Yucatan Government controls the sisal fiber from which is made the binder twine used in American wheat-fields.

Russia Wheels Round

Social reformers in the past had been in the habit of believing and asking others to believe that progress and betterment of society would not be possible unless radical changes were made in every field of life. They proclaimed the whole social structure unsuited to human well-being. But they forgot that during its thousands of years of evolution, the social structure had been subjected to the test of compatibility with human happiness at practically every step. As such it is not reasonable to think that an intellectually evolved scheme of society would do more for human happiness than would the established system which has been built up slowly and with a view to attain happiness, if not for the greatest number at least for more than a mere few as some would like the world to believe.

Russia which had been trying to improve the lot of her greatest number by means of economic fads has found out at last that the beaten track has at least the virtue of leading somewhere. She has been slowly coming round since four or five years ago. The following extract from the *Literary Digest* will show us the extent of the recovery.

From rigid communism Russia passed in 1921 to the famous "new economic policy," but as Russian editors point out, the Soviet Government still retained three institutions, which they considered corner-stones of communist philosophy. These institutions, we are told, are the dictatorship of the proletariat, the nationalization of the main branches of industry, and thirdly, the monopoly of foreign trade by the Government. Private capital in

Russia could do no harm, it was held, as long as these three bulwarks were maintained. But about the middle of November last, it appears, a new reform was decreed, which modified, if it does not actually abolish, the monopoly of foreign trade. As recorded in the Russian press, the Commissariat of Foreign Trade has been taken from its chief and staunch supporter, Comrade Krassin, and has been fused with the Commissariat of Domestic Trade under the direction of Comrade Tzurnpo, a more liberal Communist. Henceforth, licenses to export and to import will be granted more readily, we are told, and what is more, the Soviet Government will encourage the formation of "mixed companies," composed of foreign capitalists and representatives of the Soviet Government for the purpose of promoting foreign commerce.

Also, it is pointed out, individual Soviet trusts and cartels will have the right to purchase materials directly in foreign markets. While it is true, say some Russian newspapers, that the Commissariat of Trade will still control all individuals and organizations engaged in business, they assure us that this control will not be nearly so oppressive as it has been heretofore.

In the Moscow *Pravda*, there is a statement taken from one of Kamenoff's speeches in which he said that "no longer could we endure the condition under which only our Trade Delegations had the power to buy pins, soap, machinery, clothing, nail-files, and what not. Such a state of things is dying a natural death." In this paper, also, we read that the foreign trade monopoly built up an enormous and clumsy machine of Trade Delegations, that were slow and inefficient, and it is related that in Berlin alone the Soviet Trade Delegation had a personnel of eight hundred

and national discipline. Instead of proclaiming revolution, it professes to be the nation's defender against revolution.

The recent luxuriant growth of Fascist organizations in France is due to a feeling that the Opposition in Parliament is powerless to prevent the Socialists from carrying out confiscatory financial and taxation policies. This fear has induced everyone in France who feels his property interests threatened to seek the aid of any agency even that of these extremist Nationalist groups, that will defeat the Cartel's programme.

The French Fascists are, however, not a powerful body, for

Notwithstanding the military mimicries of most of these groups, they still lack the discipline and ruthless tactics that characterized the Italian Fascists even before their March on Rome. They have made boyish demonstrations of hostility to Herriot and they raised a little student-rumpus to show their displeasure at the appointment of Francois Albert the former Minister of Education, but these were amusements. A more serious incident occurred in the rue Droumont at Paris where the Jeunesses Patriotes attempted to hold a parade one night by military divisions with prearranged commands and signals. But when a few rowdies, either Apaches or Communists, fired a revolver shot or two at them, they promptly took to their heels.

Britain's Work in India

Using a textile metaphor, Mr R K Sorabjee, M.A., describes in the *Journal of the East India Association*, how the British have reinforced the fabric of Indian life by stretching it on a frame of "efficiency" and by supplying the "warp" which consists of several strands, viz., Justice, Education, Finance, Irrigation, Transport and Communication, Organization, Banking, Defence, Missionary Effort, Industry and so on and so forth. The writer says,

Foremost amongst these is the strand of Justice. Britain may well be proud of the system of Justice it has introduced into India. Justice means impartiality and with all the will in the world no people of the many peoples of India could have set that strand in the warp. Religious feeling in that land of many religions runs so high. Prejudice, in that land of caste and community, is so strong.

The other "Strands" are equally good and strong.

We need hardly comment on what has been entirely spun by Mr Sorabjee and his spiritual co-operators. He asks the Indians to supply the wool for this hybrid fabric which in his opinion would be the ideal India. Our doubts are many. They concern the true quality of the warp as well as the

Fascism in France.

The Living Age tells us that Fascism is fast developing in France. The reasons are financial, social as well as political. We are told

France is watching foreign Fascism with growing attention. Her reactionary press does not conceal its belief that Mussolini's dictatorship is a model form of government. The great boulevard papers seem to please their enormous circle of readers by publishing column articles portraying Fascist rule in its most favorable light. So the merits and demerits of Fascism have become a matter of bitter partisan contention.

During the past few weeks certain organizations that hitherto have avoided, and indeed indignantly disclaimed, any sympathy with the Fascists have begun openly to copy them. We begin to hear of Blue Shirts whose purposes and tactics are identical with those of the Italian Black Shirts. Prominent in this agitation are the *Camelots du Roy*, organized by Charles Maurras and Leon Daudet, who have made themselves conspicuous by various disorderly manifestations against Radicals and Socialists. But French Fascism evades declaring itself as yet on the question of a republic or a monarchy. It puts forth a more plausible programme, limited to a reassertion of State authority

possibility of weaving anything successfully on the Imperial Loom, whose consumption of wool is always disproportionately large compared to the amount of *real* cloth turned out.

Position of Women in Islam

The Review of Religions publishes an article by "Hidayet" on the above subject. It opens as follows:

One of the accusations of the opponents of Islam, which always surprises me, is the assertion that Islam keeps the position of woman low.

As yet, I have not succeeded in finding out on what this assertion is based, certainly not on the Quran at any rate, as nowhere I have found in that book a verse indicating or even hinting in the slightest degree, that the position of the woman should be an inferior one. On the contrary, the verses dealing with woman's rights state clearly that the position of woman in Islam is as honorable as that of man in every respect.

As regards her social position, we read in Surah IV 32: "Men shall have the benefit of what they earn and woman shall have the benefit of what they earn."

I know that many a working woman in Holland would jump up with joy if this Islamic injunction were to be put into practice here. It seems to me, that the position of the Dutch lady in The Hague, or whose private business property her husband had drawn a cheque for several thousand guilders, and who a few weeks ago lost her case against him before the Dutch court, is far more inferior to that of a Muslim woman, who under Islamic Law, never could have been subjected to such treatment.

Revival of Buddhism in Japan

Struggle for existence against Christianity has given new vigour to Buddhism in Japan. The Buddhists are making rapid strides and the way they are tackling the problem of revival should convey a lesson to Hindu revivalists. *The Harvard Theological Review* in an article by James Thayer Addison, gives us the following information on the subject:

One unexpected result of sixty years of Western civilization in Japan has been the revival of Buddhism. When the new era of Japanese progress began in the sixties of the last century, Buddhism was seriously declining. Though still powerful as the religion of the masses it was intellectually sterile and apparently incapable of renewed vigor, either spiritual or practical. No great movement of reform, on account of energy had marked its history for six hundred years. And when the restored imperial government reestablished Buddhism, its last hope seemed to vanish. But from that day to this Buddhism has enjoyed a new lease of life. Both intellectually and practically it is far more flourish-

ing and active to-day than it was in 1890. Yet, strangely enough, it may be doubted whether its standing is higher and its influence greater than they were sixty years ago. The progress of Western thought and of Christianity has been so rapid and effective that relatively speaking Buddhism has probably made little, if any advance. In other words, it has had to run fast in order to keep in the race at all, and only its revival has prevented its gradual disappearance as an important factor in the national life.

Though the educational, philanthropic, and missionary activities of Japanese Buddhism are the chief outward signs of revival, several others are important enough to deserve mention. Among these are the efforts of the temple priests to win and hold the people—especially the young people. Leaders of the larger sects are no longer content with a laissez-faire attitude, for they cannot afford to drift. Again with one eye on the vigorous methods of Christian missionaries, they are making ever greater use of preaching.

The Nichi Hongwanji sect claims to have about 2000 Sunday-schools with nearly 100,000 pupils, and while there is no reason to believe that these figures are accurate in a Western sense, they indicate at least a remarkable growth of this form of religious education. And at least three of the other sects are almost equally active in the attempt to reach and hold the children.

To hold the boys and girls who are too old for Sunday-school methods there are a growing number of Young Men's Buddhist Associations and Young Women's Buddhist Associations.

"Sordid Imperialism"

The New Republic says —

The mandate system of the League of Nations is the least admirable aspect of the whole Geneva enterprise. The mandates of the British in Mesopotamia and the French in Syria were both awarded in flat contradiction of the wishes of the populations involved. In both cases, the honor of the Allies had been expressly pledged to another arrangement. Great Britain, of course, took Mesopotamia partly for the sake of the Mosul oil, partly because it fitted in with her Persian policy, partly for the general diplomatic and military advantages. Never has the economic motive in imperialism been more flagrantly exposed than in British policy in the Middle East, where the British government's partial ownership and complete control of the oil companies holding the chief concessions is not even camouflaged. The whole chapter is one of sordid imperialism for which, though the Mesopotamian mandate has been better conducted than that of the French in Syria, there is nothing to be said.

British Justice and Fairplay

Harold J Laski writing in *The New Republic* on the Communist trials says —

The conviction of twelve British communists for conspiracy to publish seditious libels and for

incitement of the army and the navy to mutiny is the first considerable political trial in this country for many years. It is important that it should be understood in its proper perspective since it affords a useful clue to the present temper of English politics.

Ever since the Baldwin government came into office, the Home Secretary, Sir William Joynson Hicks, has been fulminating against the Communist party as a gigantic conspiracy which is shattering the foundations of the British Empire. He has been passionately supported by the Yellow Press and the semi-official Tory organ, *The Morning Post*.

Upon a number of documents submitted to the Attorney-General the latter was induced to indict twelve of the most important Communists in England.

They had I think, a perfectly fair trial. The Attorney-General, who led for the prosecution, could not have put his case more moderately. Their own counsel were treated fairly both by the judge and the Attorney-General.

But he thinks the English Law of Sedition is hardly ideal. For, says Mr. Laski:-

On the law as it stands in England, I may quote the remarks of two great English lawyers. "The legal definition of sedition," wrote Professor Dicey, "might easily be used to check a great deal of what is ordinarily considered allowable discussion, and would if rigidly enforced, be inconsistent with the prevailing forms of political agitation." "Where factions are unequally balanced," wrote Lord Cockburn, "and the times violent there is no department of criminal justice where such extensive unfairness may plausibly be practised under the forms of law."

Apart from the fact that the trial took place in an atmosphere of carefully propagated anti-Communist feeling that the law of Sedition in England is rather amorphous, Mr. Laski thinks it unwise to have prosecuted the communists for other reasons too. He says:

But was it wise? Ought in other words, the prosecution to have been undertaken? I append some reasons why Englishmen who care for freedom, men like Mr. C. P. Scott, Prof. L. T. Hobhouse, Mr. Shaw and Mr. Wells—I take names unassociated with politics—do not think it should.

(1) The Communist movement, on the confessions of its own leaders, is a dwindling movement. They put its membership at 4,000, and the recent decisions of the Labor party made their further decline inevitable. Persecution will have the inevitable effect of increasing the party's prestige and importance. (2) It is always inadvisable to prosecute mere opinion. No one would have defended the Communists for attempting definite acts, but not even the most urgent efforts of the secret police could discover documents of other than abstract and philosophic nature. To punish for these is to go back to the worst trials of the Napoleonic epoch. (3) The prosecution comes badly from a govern-

ment some of whose members would have been found guilty of far worse offences in the Ulster controversy of 1913. For men like Sir Austen Chamberlain and Lord Birkenhead to accuse others of sedition is farcical. (4) The prosecution is political and not judicial. It follows upon a year's campaign by the Home Secretary (himself a seditionist of the Ulster period) and a specific demand for exactly this action from the Unionist party. (5) It is always impossible to define sedition and the only result of putting communism in that category has been to make thousands acquainted with its teaching who never before were even interested in it.

Regarding the nature of British Justice in Modern Times, Mr. Laski thinks *it is no longer as impartial in its administration as it was in former days*. For

The Home Secretary is referred to by the Manchester Guardian as the "Secretary for Class War." Certainly since he came into office, the police, who are under his control, have winked at illegal drilling by Fascists all over the country. A charge made against three Fascists who attacked the lame driver of a Daily Herald van withdrawn without any proper charge being substituted in its place, though everyone agrees that this would not have happened had the van belonged to the *Morning Post*.

Britain is degenerating. Mr. Laski continues

Professor Hobhouse whose wise insight into English Politics seems to me unsurpassed, said to me recently that he had detected in recent years a decline in the British respect for freedom. I believe that is true, though it is difficult to measure how far it is true. Certainly, men like Sir W. Joynson Hicks are educating their supporters into a belief in class-justice, class-liberty, and class-force. They are persuading large numbers of the working class that what Mr. Gladstone once termed the "resources of civilisation" are exhausted. Nothing is worse for a country than to magnify petty sedition into public danger.

The above should receive the attention of the keepers of Law and Order in British India.

The National Spirit of China

David Z. T. Yui writing on the above in the *World Tomorrow* says

The Chinese people have often been criticised as having no national spirit. How can one imagine the absence of a national spirit among a people who have witnessed the rise and fall of many nations and who have themselves passed successfully through 5,000 years without serious interruption? It is perhaps true that they do not have what is known as a nationalistic spirit, which, however, is different from a national spirit.

A national spirit is the inner-being or soul of a people. It is that which holds a people or race

together, distinguishes them from any other people or race, and marks out their special contribution to the world's civilization. It is built upon their cultural heritage, their accumulated thought-life and the activities, abilities, habits and experiences of past generations.

The ideals of life and life's relations enunciated and lived by our forefathers remain unsurpassed even according to present standards of both East and West. We are not a people merely with a glorious past but one in whom that glorious past is still surging and throbbing and seeking for avenues of expression. No force can check its activities; it is bound to issue forth in a greater present and future. We are struggling not to save our country as the ordinary expression goes,—nor who can destroy our nation with such a national spirit as we have—but for the benefit of ourselves and the world to strengthen and improve by taking advantage of what the modern civilization has to offer.

We should remember that our national development should not be brought about in any forced manner but it should be allowed to follow in its own way and take its own time. While we shall need and appreciate outside cooperation, we must all take care that no greenhouse process be employed which might hasten its blossoming as well as its early withering and death which would be a calamity not only to the Chinese people but also to the world at large. We, therefore, reiterate, give us time, our national spirit will do the work.

China and the "Powers"

Frank W. Lee advocates the abolition of extraterritoriality in China by the "Powers" in the same journal and says:

The powers may assist China by abandoning the practice of united action in China. Chinese understand that in Europe and the West no such concerted action governs the relations between States except where they deal with so-called inferior Powers or late enemies. The Concert of Powers in China smacks too much of superiority to be welcomed. The powers in their anxiety to present a solid front to China assume a dictatorial policy not conducive to friendly feeling. Joint representation, joint notes and warnings, joint memorandums on all conceivable subjects have been thrust upon China. Even when the representatives of some of the foreign powers have had reasons to doubt the wisdom of a given action they have been dragooned into a quiescence by the fetish of preservation of feigned prestige. Let each Power deal with China in its individual capacity and according to the dictates of the wishes of its own people.

Those Powers who sincerely sympathize with China's national aspirations should announce their determination to relinquish extraterritoriality within a definite period, and then offer China their friendly assistance for the establishment of the necessary judicial machinery to enable China to take up her new responsibilities. Encouraged by the friendly gesture, China would welcome that kind of foreign assistance. By such an act, any of the Powers can render substantial help to

China and hasten the day when modern courts will dispense justice to both Chinese and foreigners. Something must be done to restore confidence, promote goodwill and bring about whole-hearted cooperation. Nothing will clear the atmosphere so effectively as a voluntary expression from one or more of the Powers that they are willing to place their nationals under the jurisdiction of China with the perfect assurance that China will rise to the occasion and protect their interests under her own laws just as well, and better, than they can now be protected under the system of extraterritoriality.

A New Caliph ?

The *Living Age* gives us the following news:

Last autumn representatives from all Islamic countries held congress at Cairo to consider the restoration of the Caliphate. This congress will reassemble at Baku under Soviet protection shortly. It is significant that the names having the strongest support for the honor of heading the Mohammedan world are the Rifiun leader, Abd-el-krim, the sheik of the Senussi, the victorious sheik of the Wahabis, Ibn Saud, who already holds Mekka and has just occupied Medina, and, last but not least, Mustapha Kemal Pasha, the President of Turkey.

Karl Marx on India.

The following are quotations from Karl Marx's letters written for Horace Greeley's daily paper nearly three quarters of a century ago. They appear now in the *Living Age*. Regarding British rule in India, Marx says:

The British in India have taken over from their predecessors the department of finance and of war, but they have entirely neglected that of public works. Hence the decay of agriculture, which cannot be carried on in accordance with the English principle of free competition, of *laissez-faire, laissez-aller*. We are, however, quite accustomed to see in Asiatic empires the decay of agriculture under one government and its restoration under another. The harvest here corresponds to the presence of a good or bad government, just as in Europe it reflects good or bad weather. The subordination and neglect of agriculture however, had it might be, could not be regarded as the ultimate ground of the collapse of the Indian social order brought about by the British invasion, if it had not also been accompanied by circumstances of quite a different significance, by an entirely new phenomenon in the annals of the Asiatic world.

The cause of Indian's "Collapse" was in that

It was the British invasion that shattered the Indian handloom and smashed the spinning wheel to pieces. England began by displacing Indian cotton goods from the European market. Then she

brought cotton yarn to Hindustan, and finally flooded with cotton from abroad the real home of cotton itself. Between 1818 and 1837 the export of yarn from Great Britain to India rose in the proportion of 1 to 5200. In 1821, the export of British cotton goods to India amounted to hardly a million yards, in 1847 it already exceeded sixty-four million yards. At the same time the population of India dwindled from 150,000,000 to 200,000,000. This shrinkage of Indian cities long renowned for their fabrics was by no means the worst consequence. British steam power and British science destroyed all over India the union of agriculture and hand-manufacturing.

A very able analysis of the problem, no doubt Marx says, regarding the motive of England's inroads into the Indian social structure, that

It is also true that England in setting into motion a social revolution in Hindustan was actuated solely by the lowest interests and proceeded stupidly in her endeavor to bring it about. But this is not the matter in issue. Rather the question is, can mankind fulfill its mission without a fundamental social revolution in Asia? If it cannot then England, whatever the crimes she may have committed in the carrying through of this revolution acted only as the unconscious instrument of history.

The conceited European in Marx thought that Indian "barbarism" should be improved by contact with "enlightened" Europe. He says

The Arabs, Turk, Tartars, Moguls, by whom India was successively overrun were quickly Indianized since barbarian conquerors in obedience to an eternal law of history always succumb to the higher civilization of their subjects. The British were the first who were superior to the Hindu civilization, and therefore conquerors inaccessible to its influence.

Moslem rule, in some parts or other of India lasted some seven centuries. If British rule lasts so long it will be time to consider whether conquered India will have conquered her conquerors by that time. Already the influence of Indian culture and civilization over not only Great Britain but the whole of the West is quite perceptible and considerable. There are thousands of Western thinkers including British ones, who think that India will give a better outlook upon life to them. If their hope is realised, shall we call the British also "barbarian conquerors" of India?

Marx made another mistake when he said

The railways will cause a reduction of the army and of military expenses.

He also said something which will answer those who preach that Indians have been

greatly benefited by the introduction of modern methods and appliances into India's economic life. Marx opines that

The Indians, however, will not reap the fruits of the new blessings conferred upon them by the British bourgeoisie as long as in Great Britain itself the present ruling classes are not displaced by the industrial proletariat or until the Indians themselves become sufficiently strong to shake off the British yoke once for all. In any case, in the more or less near future this great and interesting country this noble branch of the human race, which, to use an expression of Prince Sidiykov, is *plus fin et plus adroit que les Italiens*, will experience a great revival.

And this revival will certainly be (or has been) concomitant with a partial shifting of the British "yoke." Karl Marx has little faith in the British Bourgeoisie in India, for, in his words

Has not the bourgeoisie in India, to employ the phrase of that great robber Lord Clive himself taken refuge in cruel extortion when simple corruption could no longer keep pace with its rapacity. Has it not while in Europe it chattered of the inviolable sanctity of the national debt in India confiscated the dividends of the rajahs who had invested their private savings in the securities of the East India Company? Has it not while it fought the French Revolution under the pretext of the defense of our holy religion at the same time forbidden the propagation of Christianity in India? Has it not in order to extract money from the pilgrims streaming to the temples of Orissa and Bengal made a trade for itself out of the murder and prostitution of the temple of Juggernaut?

The British exploitation in the days that followed Marx has, of course, been not quite so crude as the description above. Yet some think it has not been any the less in volume.

British Rule in Palestine

F. N. Bennet gives us a valuation of the British administration of Palestine in the *Century*. He says in one place regarding the relative merits of Turkish and British rule

Before the war law and order were maintained in Palestine by half a battalion of Turkish troops and a few hundred gendarmes, and on the whole the law was observed and travel was both safe and easy. It is true that occasionally the methods of the Turkish police seemed to the Western visitor somewhat unusual.

But apart from occasional eccentricities of judicial procedure, the administration of the law was on the whole efficient, and I do not hesitate to say that to-day, in many parts of Palestine, life and property are less secure than they were under the old Turkish regime. Crime has increased rather than decreased since the Ottoman days, robbery with violence is far from uncommon.

The constitution is also defective Says Mr Bennet

Another change lamentably for the worse, is the practical disfranchisement of the inhabitants of Palestine. Under the sultan, the Palestinian enjoyed a more complete system of adult suffrage than ourselves at the time, and four or five representatives were duly elected to the Ottoman Parliament in Constantinople. Local self-government was also in force in municipalities, like Haifa, Jaffa, or Gaza were administered by councils elected by the ratepayers. To-day the country is governed by an autocracy far more complete than any system found in a crown colony, for the Palestinian inhabitants have wisely declined to accept a form of 'representation' which is illusory and humiliating. The proposed Legislative Council was to consist of ten nominated and of course pro-Zionist, members, and twelve elected members, two of them to be Jews and two Christians—a permanent majority for Zionism was thus assured and the 'representation' of the vast Arab majority turned into a farce. In addition to the loss of any parliamentary representation for the nation as a whole, the local government of the municipalities has also been destroyed. With the single exception of Tel Aviv and some other smaller Jewish communities, municipal councils are no longer, as formerly elected by the townspeople, but simply nominated. Not long ago an extraordinary spectacle could be witnessed at Haifa. An armed police guard accompanied the workmen engaged in the erection of standards and wire for Rubenstein's electric lighting contract—a contract laid over the heads of even the nominated town council, who were actually unaware of its terms. It protested in vain against such a flagrant contempt of local opinion. And all this is going on at a war fought to secure the 'self-determination of small nations'—a war too, in which the armies of Great Britain were materially assisted by the

very Arabs whose just claims are now contemptuously ignored. One of the most painful results of the World War in Islamic countries has been the utter loss of belief in the "word of an Englishman." The whole of the Near and Middle East is strewn with the wreckage of broken promises.

And the British have created a problem of racial and sectional hatred by means of apparently thoughtless bits of idealism such as the opening of the Jewish University. We are told

In the days before the war, there were, few traces of racial hatred in the towns and villages of Palestine. Bitter feuds did indeed exist at times between the rival churches of Christendom, but even these were mainly confined to the actual representatives of the various communities brought into contact within the precincts of certain holy sites, especially the Church of the Holy Sepulcher. The normal attitude of Moslems, Christians, and Jews toward each other was friendly and tolerant. My dragoman called himself a Protestant, that is, an Arab who had abandoned the ancient Syrian Church of his ancestors in order to adopt a form of Christianity invented by British and American missionaries. Two of our retinue were devout Moslems, the third was a Jew. They got on excellently together and I never detected a trace of racial or religious animosity among them. To-day the whole country is full of bitterness and ill-will. Moslems and Christians have united in a joint detestation of the immigrant Jews, who are even distrusted and disliked by large sections of their co-religionists who dwelt in Palestine before the Balfour declaration.

The divide and rule policy is thus finding a fresh field for application.

CULTURAL UNITY—ETHICAL TEACHING OF THE QURAN AND THE UPANISHADS

By MR WAHED HASAIN, B.L., M.L.C.

"If people had been aware of the mysteries of truth, there would have been no strife between sects in which they are divided."

Lying close together, as they are, for centuries in India, it is rather strange that Hindus and Moslems should possess such an imperfect knowledge of what is contained in their respective scriptures. Vague ideas of one another's religion, no doubt, they have, but they are mainly derived from their defective observation of the outward signs and expression of faith of each com-

munity. The outward rites and ceremonies performed by a nation are often delusive, and form no criterion of the ethical ideas which impel a sect or a nation to conform to them. Beneath the surface of outward ceremonies and practices, he embedded the gems of truth which, when discovered, shed eternal lustre and dispel doubt and darkness from the mind. But such gems must be found out and laid bare to the eyes before people can be asked to appreciate their real value.

Now the Vedas and the Upanishads, pre-

served as they are in a language difficult to master, are sealed books to the Moslems of India. On the other hand, Islamic ideals of ethical truth treasured up in a language equally difficult to understand, are not easily accessible to non-Moslems. It is no wonder then, that they have a very imperfect idea of the Islamic religion and philosophy. The result of such ignorance is that each community fails to make a proper estimate of the grand universal truth which the highest thinkers and the best mind of every nation have been striving to attain. It is not my object either to defend any form of religion or to show the superiority of one religion over the other. There is no lack of hands for the task. My object, pure and simple, is to place in my humble way before the public the high ideals of truth to be found in the *Śruti* and *Smṛiti* of the Hindus and the *Quran* and *Hadiths* of the Moslem. I do not pretend to make a new discovery in the province of religion. My task is to pick up gems of truth from the Aryan and Semitic Scriptures and to show that the highest ideas of a Supreme being are to be found in the doctrines of almost all religions, be it the religion of the Hindu Temple or the Jewish Synagogue, the Christian Church or the Moslem Mosque. Truth is not the monopoly of a particular religion or of a nation and should be sought everywhere.

The following quotations, taken as types, will give an idea of the nature and conception of *Allah* as given in the Holy *Quran* and of the supreme being (*Brahman*) as given in the *Upanishads*.

AL QURAN

1. There is no deity except one Being—*Allah*—*Credo of faith*.
2. It is *Allah* who is and besides whom there is none except that Being.
3. It is *Allah*! There is no deity but He the living, the self-subsisting—*Chap. 2-56*.
4. Say: He is the absolute one. He is not dependent on any thing, nor is anything independent of Him. He does not forget nor is He begotten and there is none like unto him—*Chap. 112*.
5. There is nothing which hears His similitude, it is He who sees and hears.
6. No one participates with *Allah* in his person and attributes—*Chap. 42-9*.
7. Do not liken him to any of his creatures—*Chap. 16-76*.
8. He is of pure essence, free from all impurities, free from all defects, self-sufficient, self-subsisting, self-effulgent, light of all lights, possessing splendour and glory, self-dependent and ever-existing, an ever-living God, omniscient, omnipresent, imperishable even when all comes to nought. He is the beginning and

the end, the manifest and the hidden, the absolute and one indivisible, the minute of the minutest, the great of the greatest, the most intelligent, the most patient, the most magnificent, the most exalted, the high of the highest. He is beyond all attributive description. He who pervades the universe and His knowledge extends over all, He who breathes life into the body and He who takes it away. He who created at the beginning and He who begins again with subsequent creation, He who watches everything and keeps everything within His knowledge—*From Isma Huseini*.

9. Whatever is in heaven and on earth sings praise unto God and he is mighty and wise. His is the kingdom of heaven and earth. He gives life and puts to death. He is almighty. He is the first and the last, the manifest and the hidden. He knows that which enters into the earth and that which issues out of the same, and that which descends from heaven and that which ascends thereto. He is with you wherever you are, for God sees that which you do not. His is the kingdom of heaven and earth and all things shall return unto God. He causes the night to succeed the day and He causes the day to succeed the night and knows the innermost part of man's heart—*Chap. 57*.

(a) God created heaven and earth on Truth and made the night follow the day and the day follow the night and fixed the sun and the moon so that each of them rises and sets within a fixed time.

(b) The sun and the moon run their courses according to a certain rule and the vegetable which creep on the ground and the trees submit to his disposition—*Chap. 55*.

(c) With Him is everything regulated according to a determined measure—*Chap. 13*.

(d) Whatever is in this world is perishable but the glorious and effulgent countenance of thy Lord is eternal—*Chap. 55*.

(e) Praise the name of thy Lord the most high who has created and completely formed his creatures who determines them to various ends and directs them to attain the same—*Chap. 87-5*.

UPANISHADS

1. God is indeed one and has no second—*Kathopanishad*.
2. There is none but the supreme Being possessed of universal knowledge—*Bṛh. 4-19*.
3. The Vedānta declares that Being which is distinct from matter and those who are contained in the matter is not various, because he is described by all the Vedas to be beyond description.
4. He is immortal and without form or figure, omnipresent, pervading external and internal objects, unborn, without breath or individual mind, pure and superior to eminently exalted nature—*Mundala 12*.
5. He who is without any figure and beyond the limit of description, is the supreme being—*Chhandogya*.
6. Appellations and figures of all kinds are emanations.
7. All figures and appellations are mere innovations and the supreme Being alone is the real existence.
8. "The supreme Being, free from all stain,

beyond of figure or form and entirely pure, the light of all lights, resides in the heart, his resplendently excellent seat" "God as being respondent and most proximate to all creatures is indeed the operator in the heart. He is great and all-sustaining for on him rests all existence such as those that move, those that breathe those that twinkle and those that do not. Such is God. You all contemplate as the support of all objects, visible and invisible the chief end of human pursuits. He surpasses all human understanding and is the most prominent. He who irradiates the sun and other bodies who is smaller than an atom, larger than the world and in whom is the abode of all the sub-divisions of the universe and of all their inhabitants, is the eternal and the origin of breath, speech and intellect as well as of all the senses—*Mundaka-Upanishad of the Atharva Veda*.

"In God heaven, earth, and space reside

and also intellect with breath and all senses—*Mundaka Upanishad of the Atharva Veda, 1-1*.

That spiritual Being acts always, moves in heavens, preserves all material existence as depending on him—He who causes breath to ascend above the heart, and peditum to descend, resides in the heart. He is adorable and to Him all the senses offer oblation of the objects which they perceive—*Katha 2-2*.

(a) God being eternal existence the universe and whatsoever exists, exists and proceeds from Him. He is the great dread of all heavenly bodies as if he were prepared to strike them with thunderbolt, so none of them can deviate from the respective courses established by him—*Katha-Upanishad of Yajur Veda 11-36*.

(b) God is eternal, amidst the perishable universe, is the source of sensation amongst animate existence, and he alone assigns to so many objects their respective purposes. *Ibid, 2-2-5*

UNREST IN THE EAST

By ASIT KUMAR HAZRA

ASIA is in the throes of a revolution. From time out of mind she is suffering—suffering like a caged lion. Now she has awakened. Her torpor is gone. She is shaking her manes, slowly indeed but surely.

Might is always right. The weak and the helpless must be swept away. It is the same old that made Rome formidable in history. It is why the English "traders" became "lords" of India. For this alone China has become the "vultures' play-ground". Japan has been driven from America, and the South African Colour Bar Bill is becoming a historic law. Might is the fountain of right. Neglect it, do away with it and you are doomed. Asia is in bondage and does she deserve it?

The "Sickman" has wonderfully revived, or has not only revived—but has given a terrible blow to the white Imperialist. The calculating manoeuvre of Lloyd George to crush this "Islamic power" did ignominiously fail. Pan-hellenism had been crushed and the recent *coup d'état* of Pangalos, the dictator of Greece would not be able to revive it. Lord Curzon, though worsted diplomatically at Lausanne, was hailed by the London Press as a brilliant Macchiavelli. The solution of the newer Eastern question could not come from

without, it must come from within. And it came at last. Kemal Pasha could not be bribed, the Caliphate was abolished. England groaned in agony—not only groaned but shed crocodile tears.

Nevertheless, there was the mandate, the mandate of the League of Nations. Mesopotamia is under her protection, Iraq and Hedjaz are her satellites. Egypt is "free" indeed! Sudan is "protected". And the uncounted millions of Africa? Why, they are the "Whiteman's burden"! Civilise them, "educate" them, exploit them, so that sooner or later the 'burden' may come to a happy end. It is "liquidating the claims of history"! Britain, however, is an angel in comparison with other powers. France is ever watchful of the ferment in the East. Syria is hers. Her dependencies in Africa require a strong hand. Did not France once proclaim amidst jubilant acclamations that there are the "Rights of Man"?

The noble pro-consul of the Eternal City cannot merely bombard Corfu, he can hurl an "Ultimatum" on an independent nation. The Amir of Afghanistan is a heathen, a "barbarian". He must be humbled for the "murder" of the Italian engineer. The Afghan foreign office must salute the Italian flag. She must

fill the Italian coffers with blood money. Or, the Fascismo will let loose her terrible forces both secret and open for the speedy destruction of this impertinent chief. Mussolini is "Roman" in his greatness. Cavour was to him a pigmy. "*L'état c'est moi*."

Has Afghanistan any right? Certainly not. The white nations alone have rights. They are the superior races. They have intelligence, they have courage and resourcefulness. Why should they not possess extraordinary rights? No Eastern power must be allowed to go against the interests of the Western powers. Persia, till the other day a victim of Britain, has become "free." But the Persian Gulf must be an English preserve. The League of Nations has the right of search in Persian ships. Persia is independent? She does not possess the right of free importation of arms. The Persian representative withdrew from the Arms Conference in disgust. The "resolution" of the League is no scrap of paper. Respect it, obey it, or you are doomed. The Great Powers know only too well how to command a "majority." Had Persia been strong, she could have like Italy in Greece turned a deaf ear to this dictation. Persia is not Italy. The Great Powers have enough weapons in their unscrupulous armoury to curb Persia, "*Divide et impera*."

The Islamic powers have been disillusioned. For so long a time they have been outwitted by the Christian powers. The ferment in the East began with the Russo-Japanese War. So the historians say. Japan triumphed and the glory of Japan is the glory of Asia. For the first time in history an Asiatic power overwhelmed a non-Asiatic giant. The hand of autocracy fell everywhere. Everywhere there is awakening and the Islamic powers, benumbed till the other day with dizziness, have at last awakened. How can the West tolerate this new awakening? She is continually forging newer and newer fetters for the enslavement of the East.

If Britain has any enemy, it is Russia. And there is every possibility of a world-wide alliance of Turkey, Persia, Afghanistan, Egypt and Russia. This would be a supreme menace to Britain. Her empire would be imperilled. Her splendid navy would fail to save her, her heroism and inexhaustible resources would not do, and even her diplomacy would be futile. What can save her is her supreme common-sense.

What is France doing? Her policy of aggression is manifest everywhere. She is dream-

ing of a world empire. Already she has begun a war in earnest. It is in Morocco. Abdel Krim began the war first against Spain. Spain, in spite of the dictatorship of De Rivera, has been continually worsted. The Moroccan chief is now fighting against the combined forces of Spain and France. France, her politicians declare, has no "ambition". She is fighting in self-defence. Abdel Krim is a "rebel" chieftain. He has splendid resources. He has German, Turkish, Egyptian and Indian advisors. "Down with the rebel" has become her cry. But once more a noble band of rebels is triumphing over the most determined nation in the world. Abdel Krim must be starved. Morocco must be blocked, so did the French imperialists declare. But the blockade in Morocco must mean naval supremacy on that side of the Mediterranean. And France has no considerable naval forces. She is desirous of bringing England on the field. Britain is clever. She cannot tax her exhausted energy for the victory and glory of France. To gain over England, France is evacuating the Ruhr, supporting the English policy in the Chinese "Treaty Ports" - singing the praise of Downing Street, and has expelled even the Chinese "intruders" from France. And France is obviously the nursery of freedom.

But Britain cannot yet be gained over. She is too clever to be duped. Britain is giving a "moral support" and that support, too, is secret. Abdel Krim cannot be starved. France is experiencing disasters. She would sooner or later concentrate all her resources for the speedy destruction of this rebel chieftain. But she wants the support, the moral support of the Great Powers. For this she is offering peace terms to the Riffians. And the offer is "liberal". Abdel Krim has no right to live like a free man. He must respect the white man's right. He must surrender some of his aims, for the prestige of France demands it. He must not enjoy absolute sovereignty, but, "full freedom of development under the nominal sovereignty" of the Sultan in Morocco. Between full freedom and absolute dependence there is a *via media* and that is "full freedom of development".

Obviously the Riffians would reject the "liberal" terms. And France knows how to crush an eastern people. Morocco is engaged in a "hopeless struggle". The struggle is between nationalism and imperialism. It is the prelude to a world struggle, the struggle between the East and the West, between the

right to live and the right to govern. It will go down to history as an epoch-making event. Folly there is, disaster there may be, but the crown of martyrdom Abdel Krim will win. Kemal Pasha was also a "rebel" and the Riffians are also rebels. History repeats itself. From Morocco to Shanghai, from Kenya to Singapore, everywhere there is ferment. In some regions there is calmness (viz. Turkey and Japan) but it is the same calmness before the storm. The West has hitherto driven her triumphal car

over the corrupt and vapouring East. But now she is in commotion. Europe knows that in war and war alone lies the supreme talisman of statesmanship. Peace would imperil their destiny. And Asia knows how to meet the approaching peril with robust confidence. Sooner or later the forces of the East and the West will meet and meet in a clash. It is inevitable and it is impending.

July 14, 1925

THE NEW MYSTICISM

A DEFINITION OF IDIATISM by May Sinclair (Macmillan & Co., 1917) is a philosophical work which contains a chapter with the above heading. We propose to give below some extracts from the above chapter which are likely to be of interest to the Indian reader. Before doing so, we should like to quote the authoress's apology for introducing this subject. Referring to critics who "might protest against the appearance of an essay on 'Mysticism' in a volume professing to deal seriously with serious problems" she says:

I agree that mystical metaphysics are an emanation. But metaphysical mysticism is another matter. I would remind my readers that some psychological questions were part of the programme, that mysticism is of immense interest and importance in Psychology, and that I have criticised certain aspects of it as severely as its bitterest opponents could desire. I am as much repelled by the sensuous variety of mysticism as I am attracted by its austere and metaphysical form. I am as conscious as any alienist that its more aberrant psychological extravagances are the historical resurgence of natural longings most unobtrusively suppressed. These exponents are worthy only of the pity we give to things suffering and harassed.

But there is another side even to what may be called the Saints' Tragedy. There is a passion and a strain and a disturbance of the soul, born of the struggle between religious dualism and its unconscious longing for the Absolute.

And there is also a pure and beautiful Mysticism that springs from the vision of the sense of the "Oneness" of all things in God. It knows nothing of passions, disturbance and its strain. Its saints are poets and its counterpart in philosophy is spiritual Monism."

According to the authoress, western saints and religious mystics, especially of the Catholic world, come under the second of those classes and Indian mystics like Kabir and Rabindranath Tagore come under the third class, and it is mysticism of this type that she calls the new mysticism in which the mystic genius has reached its perfection.

In the Jew, the passion for oneness with the Divine "never rose to the metaphysical conception of the Absolute. To the very last Jehovah retained some of the old ways of the tribal deity. He was a struggling and a battling God, full of mercy when he got his own way, and of vengeance when he didn't."

The moments of certainty due to contact with Reality, when ultimate Reality is discerned, the positive ecstatic vision of reality—this is the essence of Mysticism. There is no certainty that life can give which surpasses it or even comes anywhere near it.

"This is the kind of certainty we want to tide us over the straits where Western Mysticism often leaves us floundering."

I say Western Mysticism, because in the Buddhist Sacred Books and in the Upanishads and the Vedanta, and in the Mysticism of Kabir, you do not find anywhere the same repulsive quantities. You enter a purer and a subtler air, and the light of Godhead does not flow, it is strong and very still.

There are reasons, as we shall see for the difference. The Western mind comes to Mysticism by a peculiarly dangerous and difficult path. For one thing, it came to it a bit too early. The art and science of it were perfected in Asia, if not before the first principles had been discovered in Europe and Asia Minor, at any rate long before they had had a chance to develop. The Christian

Mystics seem never to have quite perfected the technique of the thing; and seldom to have achieved a perfect and a safe detachment. Admirable psychoanalysts as they were, they lacked that minute psychological theory and practice which the Indian seems undoubtedly to have possessed. They plunged into the dangerous adventure without adequate preparation, as one who should jump into the Atlantic without a safety-belt. In the language of modern psychology, they had not learnt how to sublimate their libidos.

"And this apparently was what the subtle Indian had learnt before ever he set out on the adventure. The Western Mystic did not know or had forgotten that the desire of life, even physical desire, is an indestructible and holy, though a dangerous thing. He suppressed physical desire, he stamped it down into the unconscious, and then in a state of passivity or trance, he went down there after it and was met by the resurgence of all his savage and ancestral memories. He retrogressed. He did not know that this would happen to him: he knew nothing at all or very little about the Unconscious and every time it did happen he was agonised and astonished. But the Indian Mystic knew very well what would happen, and why it happened, and when he went travelling in the untrodden country he took good care to close the gates of the path that led downwards. Sometime they swung to of their own accord and the Christian mystic was safe."

"We are very near the secret of the psychic backsliding and spiritual torment of the Christian mystic. They are due not only to imperfect psychological technique, but to imperfect metaphysics. In spite of the refinements of the schoolmen the Christian idea of God was never wholly sublimated by thought. It rests on a naïf and obstinate dualism that resists the process."

"It is to the East that we must turn to find the highest and the purest form of Mysticism, a mysticism that has passed through the fire of metaphysical thinking, and is itself sublimated."

But before we compare Western with Eastern mysticism, as I am going to do, to the disadvantage of the Christian variety, three things must be kept well in sight.

"First, that the final goal of Christian Mysticism, in not 'experience,' not vision, not ecstasy, but the *Unitive Life*, the life lived in union with Reality. Life lived not merely contemplated, a life of 'inaction and activity,' lifted far above the powers of the subconscious."

"Again, the Christian saint brings to the quest for Reality something that is not always found in mysticisms that have been highly sublimated by thought."

"Lastly, Mysticism itself is a thing of gradual development, and the Eastern and the Western forms of it are tending to approach with the result that Pantheism is absorbing Christian Humanism to Humanism's great gain."

This tendency is so conspicuous in the modern literature of East and West, that it may be fairly called the New Mysticism. It has been, I think not only an affair of influence, but of the slow yet inevitable maturing of the Western mind. It is no food for sick souls: it has put the disease of asceticism behind it: it is a robust and joyous mysticism, reconciled to the world.

"When Sir Rabindranath Tagore was overhere, in the years before the War, he told us that the

destiny of the East was 'to spiritualize the West. Complacent westerners smiled at the saying, as if the great poet had been offering to teach his grandmother an art that she had perfected before he was born. Yet this was simply the calm statement of a truth."

"Still, if some of our poets and mystics had not gone before him, we should not have been as ready for him as we were."

"Before publication of his translation of the *One Hundred Poems of Kabir*, his own *Gitanjali* stood almost alone representing for many of us all that is purest and highest in Mysticism. Therefore I venture to repeat here what I wrote of it four years ago: * There is hardly a word of it that will not apply equally to the work of his forerunner, Kabir."

"To the Western mind there is a gulf fixed between the common human heart and Transcendent Being. The European and the American, in their quest of Reality, are apt to be taken in by appearances: they do not readily make the great distinction. That is partly why, with the exception of the classics of Mysticism, the devotional poetry of the West, Catholic and Protestant alike, is so unsatisfying. Most of it is written by people who are not poets. But the worst of it is that it is not supremely devotional. It does not deal directly with the Transcendent, but proceeds, fervently indeed but always by way of dogma and tradition as it were by perpetual makeshifts, and through the most horrible tangle of carnal and material imagery, to a visionary Throne of Grace. You never seem to arrive. Your heart may be soothed by the assurance of atonement, but your *inner* metaphysical hunger is left for ever unappeased."

But take these songs of Divine Love from the *Gitanjali*:

In the deep shadow, he moves fully with secret steps. I walkest, unseen, in the electric all watches.

The woodlark I have hushed their songs, and doots are all shut every here. Thou art the solitary wayfarer in this desert. I have only tried my best beloved the white unicorn. I have tried to pass by like a dream. It is to move the hollows upon the earth. It is to that I seek to 'dream to let' my pitcher.

I know not if I shall come back home. I know not whom I shall chance to meet. There at the fording in the little boat the unknown man plays upon his lute.

"In the poems of this mystic the world appears no longer in its brutality, its vehemence, its swift yet dense fluidity. It is seized in the very moment of its passing, and fixed in the clarity and stillness of his vision. It is always the same everyday world: the dusty road, the deserted street, the solitary fording, 'the bank in the shady lane where 'the yellow leaves flutter and fall.' At the coming of the Unknown Traveller 'the leaves rustled overhead, the cuckoo sang from the unseen dark, and perfume of *labla* flowers came from the end of the road. A world vivid to every sense yet the stage of a supersensual drama, the scene of the divine adventure. So vivid and so actual is it, that only its strange fixity stirs in you the sense of the supersensual."

"And through this fixity, this stillness of rhythm and of mood, there is a mysterious trouble and excitement, an awful tension of ex-

* [In the *North American Review*.]

stancy. It is the stillness of intense vibration, of life inconceivably living, the ecstasy of supreme passion consummated and consumed.

"There is nothing in the Western world to compare with these poems, but the writings of those mystics who were also saints: St. Augustine, St. Thomas a Kempis, St. Francis of Assisi, Julian of Norwich, St. Teresa, St. Catherine of Genoa, who said, 'My Me is God, nor do I recognise any other Me, except my God Himself.' Above all St. John of the Cross in *The Dark Night of the Soul*.

All these impassioned lovers of the Godhead use the same language, telling of the same unique experience and it is invariably the language of passion, for the simple and sufficient reason that there is no other. At the same time, with the exception of Dante's *Paradiso* and *Vita Nuova*, would be hard to find in all the poetry of Western mysticism a perfect parallel to the passion of the *Gitanjali*. There are few Western mystics who do not somewhere betray the restlessness that lies around their rest. Until the final attainment of the Unitive Life their peace would seem to have been harder won, to be held more precariously, to be always on the point of passing. vivid is the sense they give of effort of struggle of frantic desperation. There is a bounding vehemence and violence in their poetry. St. Teresa says of the state of the quiet soul:

Isolation reaches it from heaven, and it is not there; it wishes for none from earth, and it is not there either; it is caught between earth and heaven, enduring.

St. John of the Cross speaks of an 'intense impetuous impetus' answering to St. Teresa's 'passivities'.

For, as we have seen, the language of the Catholic mystic is often the language of sensual emotion so voluptuous that it lends itself very easily to the interpretation of the profane. But it is impossible to doubt the 'spirituality' of those Bengali songs of Divine Love. They are at the very highest level of attainment in their kind. They have the serenity and purity of supreme possession. Mystic passion embraces whole; it takes in the whole range of human passion. Like human passion it works through body, heart and soul. It is the soul and the heart of passion that you find in the *Gitanjali*, its secret and invisible things, small and great, all in it that is superb, inviolate, holding all that is lowly and most fragile, its palpable incommunicable moods its evanescences, its dreams, its subtleties, its reticences and intimacies, its fears and delicate shames.

I asked nothing from thee, I uttered not my name to thee
When thou to let thy leave I stood silent.

There is no querulousness and no grossness, no impatience nor restlessness in this passion of the expectant soul.

And on the part of the pursuing God there are none of those impetuosités that overwhelmed St. Teresa. He comes 'with silent steps'. He is the lover waiting in the shadows. He is the watcher by the bed, the solitary wayfarer in the deserted street, the traveller at the well; he is Krishna, the lute-player, the 'unknown man' playing in the little boat at the fording. I know nothing so persuasive as the glamour of this

Eastern stillness, nothing that evokes so irresistibly, so inevitably the sense of the Unseen.

'There, where spreads the infinite sky for the soul to take her flight in, reigns the stainless white radiance. There is no day, no night, nor form nor colour, and never, never a word.'

'Before this austerity and restraint, all foregoing comparisons break down. There is through all their likeness, an unmistakable difference between those great Western mystics and Rabindranath Tagore.

Their passion utters a more lyrical cry. They experience a more violent rapture in union, and a deeper tragedy in separation. Nothing could well be further from his spirit than their emotionalism. Individual temperament has no doubt something to do with it, but it is not the whole secret. This tumult and tragic pain of theirs has its own law. It displays itself in proportion to their asceticism to the violence of their rapture with the divine visible world. It is the outcome of the dualism inherent in Christianity. There never was a religion that promised so much and gave so little that kept man's soul in such an awful poise between heaven and hell that left his passion for God so agonised and unappeased. Its dualism, its asceticism, frustrates the longing of its saints. Their holiest ecstasies are troubled with the resurgence of the source it has polluted.

To the devotee of a creator unconceivably different infinitely remote and separate from his creation, the visible world is necessarily undivine, abhorrent, and unholy. In renouncing the world the Eastern ascetic denies its reality. But the Christian in the very act of renunciation, affirms its shocking independent entity. Thus his deliverance is never either physically or metaphysically complete. That is the Christian's tragedy. He cannot, without an agonising struggle, get rid of the world that weighs on him; whereas, it is comparatively easy for the Oriental to divest himself, as it were, of his cosmic clothing. It is doubtful if any Eastern ascetic, Brahmin or Buddhist could feel the same furious hatred and horror of the world, seeing that to him the world, the whole visible universe is at its worst no more than an illusion. You may refuse to become attached to an illusion, you may withdraw from it with every circumstance of profound repudiation, but you cannot furiously hate and abhor a thing which, for you, has no real existence of its own.

In the *Gitanjali*, you will find none of this hatred and abhorrence, none either of this serene indifference and denial.

'Deliverance is not for me in renunciation.' 'I will never shut the doors of my senses.' The delights of sight and hearing and touch will bear thy delight.'

'What drink, drink,' he cries, 'wouldst thou have, my lord, from the overflowing cup of my life?' And again, 'Come, Kibit'

The same stream of life that runs through my veins runs through the world and dance in rhythmic measures.

'It is the same life that shoots in joy through the dust of the earth in numberless blades of grass, and breaks into tumultuous waves of leaves and flowers.'

'Is it beyond thee', he asks 'to be glad with the gladness of this rhythm? to be tossed and lost and broken in the whirl of this fearful joy?' To him the life of God is an "a bounding joy, that scatters and gives up and dies every moment." The whole complexity of things, the veil of Maya, the illusion of the world, is simple.

and translucent to him so simple and so translucent that reality is neither hidden by it nor obscured. That wearing of the veil of illusion is the jest of the Divine Lover holding himself from his beloved that he may be the more passionately desired.

It is he who waves the red flag. Many persons of free
of soul and vigor, the most excellent of our people, out of the
folds of him first at which he has left the red flag.

"Everywhere in these poems there is this acceptance of humanity, this ecstasy of joy in movement and in beauty, this adoration of life."

1. I don't think that the way we have been expressing ourselves is the way that
 make the world a better place. The way we have been expressing ourselves is the way that
 you that make the world a better place. The way we have been expressing ourselves is the way that
 and make all this world a better place. The way we have been expressing ourselves is the way that
 if it is possible for the world to be a better place. The way we have been expressing ourselves is the way that

'It looks at first sight as if this all-embracing mysticism were different in its very nature from the view of the Catholic who is imprisoned in his cell. And it has apparently even less affinity with Indian mysticism of the Pantheistic type. And this is a little disconcerting. Surely you say there must be things in the Upanishads from which some at least of these poems are descended? You take down your Upanishads and hunt through them excitedly for those things but in vain unless you are prepared to accept wholesale the interpretation of the ingenious Ramanuja, who contended that even in union with Brahma the individual self maintained its separate identity. And it is only now and again in the *Gitanjali* that there comes any reverberation of the mystic words, 'Tat tvam asi, Thou art it' of those resonant and resplendent passages which proclaim the absolute, inseparable identity of all things of all selves, in the great self.

Now the metaphysician may deny or affirm that identity as his appetite or his instinct prompts him. Nothing can be more certain than that, for some mystics, the personal relation is an experience, a fact. All the same, it and the separation it implies is an experience and a fact that begins and ends in their individual consciousness. It is irreducible, indescribable, incommunicable. Metaphysically, it stands for nothing more nor less than that moment in which the human soul becomes conscious of itself in God. The thing is duplex only in one aspect. Around it, continuing in it, and transcending it are all the unity, all the identity you can desire. The separation is not real, not absolute, any more than death or birth is. It is part of the illusion, part of the great game, the hiding and seeking of thee and me.

It is the part of sports that spread throughout the world and give birth to shapes unnumbered in the future by

It is this series of sequences that lies in shade all night from star to star and moves from one cluster to the next, darkness of July.

It is this ever-protruding pain that deepens into loves and desires, into sufferings and joys in human life's— and that it is that ever melts and flows in soul—the human poet's heart.

"To find Rabindranath Tagore's true sources and affinities, you must go back first of all to the fifteenth and sixteenth centuries to Kabir the mystic, to the great Vaishnavists who were the Humanists of India, to Chandidas the poet, to Chaitanya Deva, the God-intoxicated saint and seer

But going back farther still, as far back as you can go you find this naïf personal attitude in the Vedic Hymns. The ancient Rishis, as lamentably as any Christian felt 'self' to be separated from their deity or deities by the fact of sin. It was those who came after them, the more philosophic Rishis of the Upanishads, the Buddhists who came after them and the expert metaphysicians of the Vedānta who reversed this view and found sin in the illusion of separation. And all the later mystic poetry of India from Kalar onwards, springs from the conflict and reconciliation between that immemorial feeling of separation and that profound and supersensual certainty of oneness. This indeed is the source of all the mysticism that ever was. Only in India the feeling of separation is the baffling thing. The supersensual certainty is taken for granted while in Christianity it is all the other way. In India it is simply a question of whether you are going to agree say, with the ingenious Ramanuja that the individual preserves its identity in union or with the learned Sankaracharya that it had never any separate identity to lose or with the poets who are the seers of Reality that it may have identity and lose it and recover it and lose it again. For there is always this third alternative.

'It is clear that what the mystics are seeking is transcendent identity. There are three who, by their double genius of passion and of insight, have the right to speak for all of them. One is Julian of Norwich. One is Rabindranath Tagore. And one is the greatest of them all—Kalan—the repudiators of Pantheistic Monism have used Kalan freely as a proof that Christianity had 'spiritualised' India. He is closer—far closer than Tagore—to the pure metaphysical Monism of the Svetasvatara Upanishad. His mysticism is only free from metaphysics because it has passed through the last fires of thought. It is utterly sublimated.' ... I confess I don't see how the haters of Monism can without blushing quote Kalan any longer in support of their contention. In his world-discussions as to individuality lost or individuality preserved, have little meaning.

Now it is quite clear that in the classics of Mysticism we are dealing not only with a peculiar kind of experience, but with a peculiar kind of genius. And again, having made all allowance for the influence of 'mystical ill-health', the lover of literature must protest against the grossness of the interpretations that have been brought to these texts. The writings of the great mystics are not *all* charged with unsublimated libido. To bring nothing but the literalism of the pathologist to bear on her [Julian of Norwich's] Revelations is absurd. Professor Jung finds resurgent lust in the Brahman, Jung finds the Absolute. At this rate there is no reason why he should not find megalomania and resurgent lust in Dedekinds and Cantor's theories of the infinite, or in Mr Bertrand Russell's pursuit of the Fourth Dimension on the grounds that they involve 'generation of series'.

'We have admitted that psycho-analysis had much to say, but when it has said it, the secret of mystic passion and of mystic certainty remain alike insoluble. Its criticism rests on the assumption that ends have the same form as origins

which is contrary not only to evolution, but to psychoanalyst's pet theory of sublimation.

But this arrangement of mysticism need concern us any more. It only applies to those manifestations that belong to the transition periods of childhood and its youth. Where they persist they persist by way of survival or reaction to disease, and they are doomed to disappear.

For if we are right in supposing that what is supernormal consciousness now will be normal consciousness some day, we may expect its perfection to be reached by forgetfulness of its old labour and effort, unconsciousness of the very practice that will have made a perfect Pantheistic Mysticism begin where Mysticism that are not pantheistic end. It takes for granted that as between God and the world, the Absolute and the finite selves there is no separation.

Thus, though we cannot say what the Mysticism of the future will be, we may be pretty sure what it will not be. It will not be sickly; it will not be morbid and hysterical or sentimental in exchanging God the Father for God the Absolute; it will have lost that irresponsible dependence

which has kept men and women for centuries in a pathetic infancy. Sooner or later the mystic has to grow up like other people. He will know that he fulfils the absolute purpose best by trying to become, as far as possible, a self-determined being.

"And he will not be violent. That was where the imperfect mystic made his great mistake. Just as primitive man desired to get by magic physical things that would have come to him of their own accord, in due season, so the imperfect mystic desires to get spiritual things by mysticism that will come to him without it of their own accord in their due season. The savage is trying to force Nature's hand. The imperfect Mystic is trying to force God's hand.

Not so the accomplished lover of the Absolute. His passion may be overpowering and importunate, but not its method. He will not forestall its perfect consummation by one hour. The more certain he is, the more he can afford to wait.

"Kabir says: stay where you are, and all things shall come to you in time."

INDIA'S CASE AGAINST SOUTH AFRICA

(I Phase of the Problem of Greater India)

By Dr. TARAKNATH DAS, M.A., Ph.D.

ON January 20, 1926, Earl Reading, in the course of his speech delivered in opening the Indian Legislature, made reference to the position of Indians in South Africa. It has been reported that the Viceroy of India, among other things, said:

There has been continuous progress in the legislation of South Africa prejudicial to the position of Indians and tending to make it increasingly difficult for them to prosper or even exist in the Dominion, and further anti-Asiatic legislation had recently introduced and was now pending in the Union Parliament.

The Township Bill (the Viceroy continued) means what appears to my Government to be a radically objectionable principle. We could not accept a conference whose main object would be to reduce considerably the number of Indians in South Africa.

In short, the policy of the South African Government is to drive out by some means other the Indians who have developed the land, who are engaged in business and settled in that country as permanent residents. If any such policy were ever adopted by any Government against Englishmen, the British

Government would have taken vigorous steps to preserve its national honour, even by going to war. Earl Reading has publicly declared that India cannot accept any settlement whose principal object would be to reduce the Indian population in South Africa. However, it is wise for Indian statesmen, particularly members of the Assembly, to demand the publication of the correspondence between the Government of India and the South African Government on the question of preserving the rights of Indians, so that the Indian nation may be able to judge for itself the exact position of the two Governments and be able to take necessary steps to protect Indian interests.

According to the press reports, Dr. Abdul Rahman, the head of the Indian Delegation from South Africa, who is now in India, proposes that a strong representation be made to the Imperial Government so that it may oppose the enactment and enforcement of the Anti-Asiatic Bill by the South African Government. It is very desirable that an Indian delegation be sent to England.

to present India's point of view before the British Government and public. It is well to consider that this may not stop the South African Government's high-handed action against the people of India and other Asiatic people. The South African Government can politely refuse to accede to any such request from the Imperial Government, and for this reason the British Government may very well refrain from making any such request, on the ground that the Self-governing Dominions within the British Empire have full right to conduct their internal affairs without any interference from Imperial authorities. It has been reported that lest the representatives of the Government of India may raise the question of rights of Indians in South Africa, in the next Imperial Conference, the South African Government is not anxious to participate in it. The Governments of India and Great Britain seem to be absolutely powerless to protect Indian interests in South Africa, a part and parcel of the British Empire. However, the Indian nation cannot very well quietly submit to the legalised persecution of Indians by any Government.

It is apparent that the Indian nation is alive to the gravity of the situation, created by the ill-treatment accorded to the Indians settled abroad. Mrs. Sarojini Naidu, the President of All-India National Congress has made, in her Presidential address, the following reference to it:

Never before has our duty to our kithred in foreign countries been so vividly brought home to our minds nor the necessity of establishing a close and living contact with all their changing fortunes. We should not lose a single moment in forming an Overseas Department in the Congress manned by those who can keep themselves vigilantly aware of all the legislation and edicts that adversely or otherwise affect Indian settlers abroad.

Mrs. Naidu went further than any of the former Presidents of All-India National Congress when she formulated the sound principle of representation of India in all foreign countries and presented the following proposal:

"Above all, a reliable foreign news service should be established to transmit to all the chief centres of the world the correct version of Indian affairs, and friendly embassies appointed to foster feelings of goodwill and understanding between India and the people of other lands."

India has a serious case against South Africa; and if Mrs. Naidu's suggestions quoted

above are to be carried out in practice, then no time should be lost to bring the Government of South Africa before the Court of International Public Opinion. The Indian National Congress, with the aid of competent advisers and lawyers, should prepare the case of India against South Africa. It should ask the Government of India through the members of the Assembly, to present India's case against South Africa, before the coming session of the Assembly of the League of Nations.

It might be regarded as a foregone conclusion that the Government of India would refuse to carry out the above demand of the Indian National Congress, so it is necessary that Mrs. Naidu herself, the President of the All-India National Congress, Pandit Madan Mohan Malaviya, the President of the Swatantra Party, assisted by men like Lala Lajpat Rai, Mr. M. Jinnah and others, particularly the Indian representatives from South Africa, should form the Indian National Delegation and go to Geneva to present India's case individually and collectively before the representatives of 54 nations represented in the League of Nations.

The Arabs, Jews, Armenians, Hatians and all minority groups in various lands are seeking the assistance of the League of Nations to secure justice for their nationals. Only the other day the League of Nations appointed a special committee to investigate the grievances of the Christian community in the disputed area of Mosul. Nationalist India should send her duly accredited embassy to the League to present India's case against the Government of South Africa as well as that of the Kenya Colony. I do not mean to say that the Indian Delegation to the League will be able to secure justice at once, but I venture to say that this action on the part of Indian nationalists will force the British and South African Governments to pay more attention to solving the question of India's rights in South Africa with greater consideration and sympathy. However, this idea may not appeal to some of the Indian political leaders, particularly Mr. Gandhi and his no-changer followers, but it is expected that Mrs. Naidu, as an idealist, will grasp the vast significance of this move, and carry it out and thus make the Indian problem a factor in international politics and diplomacy.

During the Peace Conference at Versailles, Japan as the champion of Asian people and supported by Hon. Dr. Wellington Koo of China, demanded racial "equality". Although the majority of the nations assembled in the

ference voted for the just proposal of India, it was due to the stubborn opposition of the United States and the British Empire, particularly of Australia and South Africa, that the just principle was not accepted. Now, under the pretence of racial superiority and the plea of the solution of domestic problems, the South African Government, the Government of the Kenya Colony and other States are persecuting the Indian people, and it is to India to expose these acts of civilized barbarism of these nations, and to take steps to right the wrong done to her people, in co-operation with other nations which have common interests to side with India. The so-called Asiatic Bill of the South African Government is primarily directed against the Indians in South Africa, but all Asia has a just concern against such an abominable measure.

After careful observations of the atmosphere of the League of Nations, during my recent visit to Geneva, it is my impression that an Indian nationalist delegation composed of Indian leaders and headed by Mrs. Naidu herself will receive sympathetic hearing and moral support from the representatives of China, Persia, Japan, many of the South American States and some of the European States represented in the League. *Whatever may be the result of sending a delegation to the League of Nations, it will at least achieve*

one thing—international contact of nationalist India with the outside world, not in the form of secret conspiracy, but in the form of direct negotiations with the knowledge of the whole world.

The problem of protecting the rights of Indians in South Africa and the right of all Indians to travel and settle in any country in the world is merely a phase of the tremendous problem of Greater India, which must be considered with sympathy by all far-sighted Indian nationalists. It means that the 320,000,000 people of India must not accept such unjust dictation from any nation, to be cooped up within the border of their homeland. It means that the sphere of activity of Indians must expand all over the world, as the other peoples, possessing strength, stamina and culture are doing today. There cannot be any compromise in this issue, if the Indian people are to live with self-respect and possess any vision for the future. India must adopt all possible means in her power, even in co-operation with other nations and world public opinion, to enforce her demand effectively so that her children should not be discriminated against by any people and in any country. The situation in South Africa is nearly an incident and the real problem is the problem of a Greater India.

Cannes, France

January 28, 1926.

SIR ABDUR RAHIM AND HINDU-BAITING

By "HINDU"

It is time that serious attention was paid by the Hindu public to the activities of Sir Abdur Rahim. With sections of Mussalmans, Hindu-baiting has become a pleasant pastime and the passport to leadership. The glory and prestige of office having gone, Sir Abdur is out to catch votes and he knows how to do it. Hence, in a recent utterance addressed to Mahomedan admirers in the metropolitan suburb of Bhowanipur, he dotted the 'i's and crossed the 't's of his notorious Aligarh speech and urged that communal electorates should be recognised on principle, and appealed

to his audience for a nucleus of workers to organise a party for safeguarding their vital interests and securing their advancement as a community. Had he stopped there, no Hindu would have reason to quarrel with him, for we know by this time that the communal bump is unfortunately so abnormally developed among most Indian Moslems of all ranks that even the most liberal culture cannot give their leaders the wider outlook of statesmen.

But Sir Abdur Rahim did not stop there. Though the Hindus have just begun what the followers of the Prophet have been doing

all along, and what Sir Abdur again urges them to do, viz., to organise with a view to safeguard their vital interests and secure their advancement as a community. Like a clever tactician, he professes to take alarm magnitudes and exaggerates the Hindu movement, and, as nothing was more calculated to rouse up his audience than a song of hate, he launched a few more attacks on the in-offensive Hindu in his Aligarh vein, and explained that 'his criticisms were directed solely against certain Hindu movements such as the *Shuddhi*, *Mahasabha* and *Sangathan*, and he took this opportunity to repeat with emphasis that these movements had set up a conflagration in India which, if the leaders of these movements did not take care, would lead to dire results' (quoted from the *Bangalore*).

A fire-eating speech like the above shows that if the Hindu movements referred to had set up a conflagration anywhere, it was certainly in the chambers of Sir Abdur Rahim's brain. He has not only forgotten the dignity of speech expected of one who has held high office, but he seems to have lost the capacity of weighing his words, and his reckless and sweeping generalisations will fall absolutely flat on those for whom they are intended. And it is well that this should be so, for, had the Hindus as a community been as inflammable as he pretends to consider them to be, Sir Abdur's threats might set up a conflagration indeed, the dire consequences of which would have staggered every well-wisher of a united Indian nation.

The present writer in the pages of this **Review** was among the first to applaud Sir Abdur Rahim for his able, courageous and patriotic work in connection with Lord Islington's Public Services Commission. Since then, it has been rumoured that his celebrated Minute of Dissent was really the work of Gokhale, whose untimely death prevented him from finally putting it into shape. We do not know if there is any truth in the rumour, but the performance was entirely worthy of that great statesman, and in that sense, rumour has paid Sir Abdur the greatest compliment that he could expect. If he be the author of that document, which is pervaded by a spirit of genuine statesmanship and nationalism as opposed to mere sectarianism, a Hindu might be pardoned for

crying out at his latter-day metamorphosis—lo, how are the mighty fallen!

From the man, with whom we have dealt only incidentally, let us now turn to the propaganda he has identified himself with. As we have seen, the *Shuddhi*, *Sangathan* and the *Mahasabha* are his pet aversions. We do not know what they have done to provoke such 'dire' threats from Sir Abdur, except that, as he says, they are trying to convert Mahomedans back to Hinduism. It is passing strange that to a follower of an aggressive proselytizing religion like Islam this should seem so objectionable. But perhaps he believes, with the bulk of his coreligionists, that this is a game which only one should be allowed to play at and that what has always been sauce for the Moslem gander should not be so for the Hindu goose. But in the name of common sense and fair play, what earthly reason can he have to complain against those who refuse to believe that it is the Mussalman's exclusive privilege to convert the *Kafir*? True, during the past few centuries Hinduism has not cared to assert this prerogative, at least openly. Nevertheless, men like Lyall and Hunter have pointed out the silent accumulative tendencies of this ancient religion, and in the past, before Islam obtained a foothold in India, Hinduism is supposed to have taken a more active part in ousting Buddhism from the land. Historians like Professor Habib of the Aligarh University are rightly of opinion that even Moslem culture in India is redolent of the soil and has assimilated many important features of Hinduism. Sir Abdur ought to know that every action is followed by a reaction, and these Hindu movements have not arisen without a cause. They are the outcome of a natural instinct of self-preservation on the part of Hinduism against the fierce communal onslaughts of Indian Mahomedanism. One so fond of the communal principle as Sir Abdur Rahim should not be sorry to see the same principle being laid hold of by the Hindus with a view to organise themselves communally. The communal Frankenstein is a Mahomedan creation pure and simple, and it will not do for a Mahomedan leader to be scared by it when it rears its head among other sections of the people. Almost the last act, the parting shot so to speak, of Sir Abdur before he resigned office was to enunciate the communal principle in a Government *communiqué* on the

* We, too, have heard it from the lips of one who knew Mr. Gokhale very intimately. —Editor, *M. R.*

Public Services. Therein 45 per cent of the appointments in Bengal were reserved for Mahomedans, and 55 per cent. were to be distributed among non-Mahomedans, including Indian Christians, Anglo-Indians, Buddhists, Jains, and Hindus, without regard to the respective proportion of the educated classes as opposed to the agriculturist masses, who alone would compete for service, and without any special reservation for Namiasudras and other depressed classes, who on the communal principle and if fitness and capacity are no longer to be the sole tests of selection for the public service, need protection much more than Muslims. The sense of justice of the ex-Chief Justice of Madras betrays the same partisan bias when he complains against the nascent communal organisations of the Hindus in the very same speech in which he calls upon his followers to organize for communal purposes. The Hindu movements referred to by him ask nothing more than what he himself pleads for. As for communal electorates, the Hindus would be ashamed of advancing a brazen-faced scheme of the 'Heads I win, tails you lose,' type which some Mahomedan leaders, emboldened by success, have not scrupled to formulate.

We use the expression 'emboldened by success' advisedly, for with Mahomedans it has simply been a case of a mere walk-over, especially in Madras, where the forcible conversions by the Moplahs and the overwhelming preponderance of Hindus would make one suppose that the Government would be sympathetic towards the latter. But the contrary is unfortunately the fact. In a recent *communiqué*, the Madras Government has prohibited its Hindu officials from joining the Mahasabha, on the ground that the society may cause trouble with the Mahomedans. So long as the Hindus were utterly disorganised, everything was plain sailing and no Government interference was deemed necessary. Now that they have begun to organise themselves for social protection, they are actively discouraged. This is not playing the game. It is the Madras Government, again, which has recently issued a Circular discouraging the study of Hindi in state-aided schools. The objective seems to be the same—to stamp out the communal self-consciousness of the Hindus. We could have given the Government credit for its anti-communalism, had it not been confined to Hindus, and had it not, in the words of Lord Morley, the then

Secretary of State, to Lord Minto, itself "started the Mahomedan hare." It is an open secret that it has done nothing to check the growth of communal feeling among the Mahomedans, rather by recognising the communal principle in representative institutions and the public service it has actively fostered it, and it ill beholds it now to suppress its development among the Hindus. But we forget. The story runs that once upon a time the goat approached Vishnu, the preserver, and asked why, though entirely herbivorous and harmless, it should be killed and eaten by man. The Lord forthwith ordered it to leave the divine presence, as otherwise He too might be tempted to eat it, so harmless it was. To be weak is miserable, doing or suffering, and the Hindus are tolerant, mild, unorganised, and therefore weak. Hindu-baiting is thus not only a pleasant pastime, but a sale one too, for the Hindu has no friend or ally outside India, whereas it may be highly politic, in view of the delicate negotiations going on about Mosul, and the hundred and one perplexities of the Anglo-Iraq treaty, of the happenings in Egypt and Mesopotamia, and of the Near Eastern region generally as the gateway to India and the proposed naval base at Singapore, not to rouse the Pan-Islamic proclivities of the Indian Mussalmans, by keeping them in good humour.

Not that we are in entire sympathy with all the activities of the *Shuddhi*, *Sangathan* and the Mahasabha movements. Proselytizing organizations, whether among Hindus or Mahomedans, proceed on a credal basis which is antagonistic to the development of a larger national life, and to that philosophic breadth of vision and freedom of thought which is the goal of civilised humanity. There are aspects of these movements among the Hindus which may possibly be dictated by prudential considerations and the exigencies of practical politics, and like all communal movements, they have their reactionary tide. Moreover, the movement for the uplift of the depressed classes of Hindus is as necessary as that for protecting Hindus as a whole from the aggressive cultural attacks of other communities. There is just that grain of truth in Sir Abdur Rahim's taunt that Mahomedans were being converted into Hindus 'to swell the ranks of the untouchables' which makes it dangerous, and those who are keen about these conversions, should see to it that the converts have an honoured

place in the Hindu social order. If they cannot assure them such a position in their scheme, they should not try to win them over from the comparatively more democratic organization of Islam. A Moslem missionary, we know, would not show any such consideration to those who embrace his religion, not from any real change of heart but on purely material grounds, and it would be easy for a Hindu leader of the *Shuddhi* movement to meet him with a *tu quoque*. But that would not solve the problem for good, or in a manner worthy of such a sacramental resurrection as the change of one's faith. The question would recur—what is Hinduism going to do with its converts, or for that matter, with its untouchables and depressed classes? To be quite consistent and logical, all prejudices against intimate social intercourse must be abandoned. Otherwise the unity and solidarity which is the primary aim of these movements to promote, will never be brought about. As a matter of fact, we have seen quite recently how the non-Brahmins of Madras in Conference assembled, preferred the sympathy and co-operation of the Moslems to those of certain sections of their own community, actuated as the latter were supposed to be by motives of exploitation, as opposed to purely humanitarian benevolence.

As to Sir Abdur, let him not feign such alarm or imagine such a dire conflagration as a result of these Hindu movements. Or possibly he was thinking of the conflagration in his own community which any revivalist movement among Hindus, however innocuous, might produce in the present state of tension. If that be so, the proper course for him is to allay the misunderstanding of his followers by sage counsel, and not to emphasise the communal principle and at the same time hold out threats to the Hindus for doing precisely what he preached and what Indian Muslims have practised ever since they began to organise themselves. Fanaticism, it may be admitted, easily catches fire, but tolerance is the badge of the Hindu, and he has never throughout the ages sought to qualify as a fanatic—his whole philosophic temperament is against it. And what are the real facts, so far at least as that part of India, which is the native land of Sir Abdur Rahim and the present writer alike, is concerned? There, not the slightest ripple has been caused in the placid bosom of Hinduism by these movements. The activities of the Bengal

branch of the Arya Samaj, suffering from particular lack of funds and unable to make headway against popular apathy, are confined to the metropolis and its neighbourhood whereas the writer can from his personal observation give Sir Abdur Rahim the cheerful assurance that in the outlying parts of all the East Bengal districts, the population is being fast Mahomedanised. Unless both the Hindus and the Moslems are moralised, and the former are ready to marry their widows and the latter cease to indulge in a plurality of wives, the Hindu cannot keep pace with the Mahomedan in the increase of population. Unless Hinduism is better organised and is more sincerely actuated by a desire to treat the lower classes on terms of social equality, and unless it can offer better protection to its widows and orphans and make adequate provision for their leading a worth-while life, unless again it is prepared to relax its rules as to food, drink and marriage, in a word, until it gives up its *tapasya* torpor and apathy and cultivates the *rajasa* virtues of the cohesive and agglutinative Mussalman, it will not be fit to take its part in the competitive struggle. But to succeed in the struggle, Hindus must also shed some of the noblest fruits of their philosophic culture, they must allow their freedom of mind to be crushed by the dead weight of soul-killing credalism in order to qualify for the communal game. By introducing the communal factor, Mahomedans, even of the front rank, have degraded the level of national life and unless Hindus can climb down to that level, the only other way to success for them, both as individuals and as members of a united nation, is by way of raising the Mahomedans to their mental and spiritual plane. The Aligarh Debating Society is said to have decided against communalism by a majority of votes; and in that truly noble work of planting the seed of a common nationalism it is the patriotic youths of the premier Muhammadan University who must lead the way, and we call them, with all the earnestness we can command, to that glorious task, though knowing full well that such good seed will take time to germinate and fructify, for in this imperfect world, knowledge may come but wisdom lingers. Turkey, rejuvenated and shaking her mighty locks, is on the way to become a puissant nation once more. She has definitely cut the painter, and drifted away from her ancient moorings, and looks for inspiration

"Not to the crowded East,
Where, in a well-worn groove,
Like the harnessed wheel of a great machine
The trammelled mind must move,"
but to countries where theocracy has had her
day and religious wars are like an evil
dream of the past. Shall the Indian Moslem
alone lag behind? The Hindu is willing to
meet him more than halfway as the com-
munal consciousness is foreign to his cultural
heritage. But if this appeal to the nobler
side of enlightened Islamic culture fails, as
fail it may, surely the fault will lie, not on

the tolerant and philosophic Hindu, but on
those Moslem leaders who do their best, in
season and out of season, to preach the com-
munal doctrine to their coreligionists, and
they should be the last persons to lay the
blame on the shoulders of those Hindus who,
from the sheer instinct of self-preservation,
borrow a leaf out of their books and start
defensive organizations like the *Shuddhi*
and the *Sangathan*, which seem to have
thrown Sir Abdur Rahim into such a
paroxysm of rage.

broken, although one of them was driven half an inch into the beads because of extra pressure at that point.

Is Sleep Just a Useless Habit?

Practically a third of our life we spend in the blank unconsciousness of slumber. Is this really necessary, as physicians long have believed to rest our tired body and mind and restore our nervous energy? Or is it simply a useless and tragic waste of a third of the precious hours of a lifetime?

A few weeks ago eight students of George Washington University—four men and four women—under the supervision of Prof. Fred A. Moss, head of the university's Department of Psychology, voluntarily submitted themselves to a test of 60 continuous hours of wakefulness. One purpose of the experiment was to answer this very question—of whether sleep actually is vitally necessary. And while their answer was in no way conclusive, it seemed to tend to corroborate the conclusion reached by other scientists in recent months:

That sleep, instead of being a "blessed thing," really may be a wasteful habit handed down to us by our primitive ancestors.

While Professor Moss declares his experiments are just beginning, his findings in the first test with the eight university students reveal these surprising discoveries.

Sleep really is a kind of intoxication. Like drunkenness, it has to be slept off. Too much sleep, like too much intoxication, actually may be harmful, broadening the activities of mind and body.

In the last three years Professor Moss has reduced his own period of sleep to six hours without impairing his efficiency.

While prolonged wakefulness causes extreme drowsiness and irritability, apparently it does not result in any harmful effects on the body. At the end of their long vigil the eight students declared they felt "in fine shape." Indeed, two of them, Watson Monroe, 17 years old, and Lester Petrie, 15, were not satisfied when they reached the 60-hour goal, but extended their sleeplessness to 80 hours. And even then they expressed their willingness when they were ordered to bed, to keep awake indefinitely.

Among notable scientists who have been studying the mystery of sleep there is one Dr H. L. Hollingworth, Professor of Psychology at Columbia University—who has gone so far as to advance the astonishing theory that it may be possible to develop a sleepless race. He declares that eventually we may eliminate sleep entirely by scaling it down gradually and getting accustomed to going without it. A way to do this, he suggested, is to reduce our sleep five minutes every two months. At the end of 16 years, provided we start at eight hours a night, the stupor of sleep would be banished—if it could be.

Doctor Hollingworth calls sleep a "tragedy" to which we should give the same consideration that we do to other human ills. His theory is that our deep-rooted desire for slumber is inherited from our remote ancestors who, when night fell, were hemmed in by a wall of blackness. Without lanterns and without electric lights it was impossible for them to carry on the activities of the day. They did nothing to do, and naturally when night came they fell into a sort of blank stupor which continued until daylight returned.

That says Professor Hollingworth, is why so many of us begin to feel drowsy when night comes and why we nod and go to sleep before our bedtime at the end of the day.

Other scientists, notably Dr. Frazer Harris, Dr. A. W. Crile, and Prof. Arthur Cotton are endeavoring to find a substitute for sleep. Believing that the need of slumber is caused by electrochemical reaction in the brain cells, which drains them of their vitality, Professor Cotton has been working on an electric apparatus that he believes

will recharge the worn-out cells by direct electric current instead of by sleep.

Whatever may be the final solution to the everyday mystery of sleep, the fact remains that some men can do without sleep to a very large extent and still achieve great things. Thomas Edison, for one, has given striking demonstration of his pet theory that sleep is largely unnecessary. Such men as Napoleon, Frederick the Great, Schiller, and Tesla have been satisfied with from three to five hours' sleep daily. If they can do it, why not everybody?

Flower Baskets on Lamp-Posts Adorn Streets

Appearance of streets in a Pennsylvania city has been improved by basket for flowers and vines attached to the lamp-posts. The plants are supported high enough above the pavement to be protected

Flower Baskets on Lamp-Posts Adorn Streets

ed from vandals and do not obstruct the vision or interfere with the lights. Hundreds of these "hanging gardens" give some of the streets the appearance of well-kept parks.

I KNOW NOT

SRIMATI SVARNA KUMARI DEVI

Translated by SRIMATI INDIRA DEVI CHAUDHURANI

I know not if I love, I only know
Some force mysterious checks my speech's flow,
At one soft touch I dream eternal dreams,
In one heart lies the universe, meseems
In two eyes beautiful Heav'n's light doth shine,
In one dear face doth dwell God's love divine.

In every soul I see her glory bright,
Truth, goodness, beauty, unconfined delight
In finite flesh here lives infinity,
All fruit of former births, all things to be
If this be love, to love I must confess,
In joy or pain which never will grow less.

NOTES

The "Indian" Navy in Embryo

The Viceroy stated the other day in the Council of State in a magniloquent manner that India was going to have a navy. But after examining the scheme we find that the main thing that is Indian about it is that Indian money will pay for its construction and maintenance. We have no doubt the incredibly generous promise that *one* (not a half or a quarter, but an entire human being, mind you!) Indian cadet will be trained in it annually, *provided he can be found*. We are old that it is, likely that several years will elapse before any Indian cadets enter it from the Prince of Wales' College, Dehra Dun. A topo is, however, expressed that some of the Indian boys at English public schools might be attracted towards service in the "Indian" navy. The brilliant prospect of one possible admission per annum may attract an embarrassing number of candidates. One admission in twenty-five years would be, therefore, a more convenient proposition. We are overjoyed at the prospect of India having a full-fledged navy in A. C. 2526, by which time it is hoped aerial warfare will have become obsolete owing to the greater vogue and efficiency of aerial warfare, and navies will have become objects of curiosity fit to be kept in aquatic museums. That has given rise in our minds to the brilliant idea that in A. C. 2526 Indian young men should begin to be recruited for the aerial force at the rate of one admission per century.

Proposals have also been examined and reported on for recruiting lascar combatants. The lascars will certainly "Indianise" the "Indian" navy as the sepoys have Indianised the "Indian" army.

Lord Reading has told us that it would be a great honour for the "Indian" navy to be allowed to fly the British white ensign from the very beginning. Certainly it would be as great an honour as it is for the Union Jack. What greater glory can there be for India than to lose her nationality and identity entirely in the British Empire? No price can be too high to pay for such a glorious destiny. Why should we grumble even if the "Indian" navy be part of the Singapore Base idea in disguise?

Sivaji's Navy

It may be mentioned here incidentally that Sivaji began to build his navy at Malavan in the Ratnagiri district in the year 1661 A. D. By the year 1665, that is in the course of four years, he was able to extend his sea-power down to Karwar. The English and the Portuguese tried to destroy Sivaji's navy and plotted with the Janjira State for that purpose. But they could not gain their object. He fought at sea with the Portuguese and defeating them near Daman, captured one of their war vessels and brought it to the harbour of Daul. Sivaji died in 1680. At the time of his death his navy was so strong that the English, the French, the Portuguese and the Dutch were kept in check and could not become masters of the Indian seas. *And this result was accomplished in less than twenty years without sending for Indian cadets at English public schools, at the rate of one per annum as the maximum.*

Indians are powerless at present, but Lord Reading should know that they are not exactly fools, they understand what is what.

Those who read Bengali are referred to Major B. D. Basu's article on the Maratha Navy in *Prabasi* for Agra-hayana, 1311, B. E., which appeared 21 years ago.

The Spread of English Education in India

To consolidate their power, the British rulers of India thought it expedient to spread English education here. They remembered what Macaulay had written in his famous minute:

"We must do our best to form a class who may be interpreters between us and the millions whom we govern, a class of persons Indians in blood and colour, but English in taste, in opinions, words and intellect."

According to many Britishers, the spread of English education would prevent the growth of nationality in India. The well-known Christian missionary, Dr Alexander Duff, wrote:

"The vast influence of language in moulding national feelings and habits, more generally if fraught with superior stores of knowledge, is too little attended to, and too inadequately understood."

Then he referred to the Romans and the Arabs who "Romanised" and "Saracenised" the peoples they conquered. (See 'History of Education in India under the Rule of the East India Company', pp. 107-108)

Since the time of Macaulay, it had been the policy of the British authorities in India to do all that lay in their power to encourage English education, mostly at the expense of the Vernaculars. But this was not considered enough. So, after the outbreak of the Mutiny, a British member of the Bengal Civil Service, named Mr Henry Harington Thomas, wrote a pamphlet entitled, "The late rebellion in India and our future policy," published in 1858, in which he said —

"The natives must be taught the true meaning of the words 'Progress' and 'Improvement,' and learn to reach our level."

The general introduction of our own language seems to my view, the most certain way to bring the natives nearer to the Government. Once let them speak and understand English, and they will begin to think in English, and to have English aspirations. They will discover in due time, that the British Government though vexatious, and unintelligible to common Oriental minds, is superior to the Mahomedan, after all, and the rising generation might yet appreciate those advantages of our administration, to which their fathers had been obstinately blind. To this day, the Government has offered no sufficient encouragement to the study of English in our schools and colleges, and little progress has been effected, except in Calcutta, where the students mostly belong to the wealthier classes, and learn English as an amusement, or an elegant accomplishment. The general diffusion of our language throughout India seems to be the remedy for that estrangement between the Government and the people, which all other previous attempts have failed to soften. Why should the language of the conquerors any longer remain a dead book to their subjects? ... I think that better opportunity for introducing this measure likely to be found, than that which the present state affords. The natives cannot but feel conscious that their recent excesses are 'sure to be followed by many stringent acts on the part of the Government, and 'An order to learn English', they will term it, will be received without punishment, but rather regarded as a very natural consequence. Their growing familiarity in our language, and their acquirement of our culture would render their relapse to barbarism impossible; their predilection for torture and cruelty would be soon eradicated, and in a short point of view, their inquiring minds would not be long in leading them to 'Search the scriptures' for Gospel truths, which they will not presently receive from the Missionaries." (Pp. 24)

The outbreak of the Indian Mutiny deeply impressed the stay-at-home people of England with the truth of the observations of Mr (afterwards Sir Charles) Trevelyan, when a witness before the Parliamentary

Committee of 1853, he submitted a paper on "The political tendency of the different systems of Education in use in India", and said regarding the spread of English education in India that "the spirit of English literature cannot but be favourable to the English connection" with India. He had spent several years in Delhi before he came to Calcutta. Mentioning his experience of the Moghul capital, he said — "There high and low, rich and poor, had only one idea of improving their political condition." But in Calcutta, he "found quite another set of ideas prevalent among the educated natives. Instead of thinking of cutting the throats of the English, they were aspiring to sit with them on the grand jury or on the bench of magistrates" (See "History of Education in India under the Rule of the East India Company", pp 74-80)

The truth of those observations was brought home to them by the occurrences at Delhi in May, 1857. So they became very ardent advocates of the diffusion of English education in India.

A Letter from a Japanese Statesman

We publish the following extract from a letter written to Dr Tarakanath Das by a Japanese statesman, expressing his feelings regarding the injustice done to the people of Asia. The letter gives expression to the true Japanese spirit—the spirit of the Bushido, the spirit of a Samurai and it may serve as stimulus to those in India who are engaged in the struggle for freedom as a fight against injustice and not one of race-hatred.

"According to your letter, you left America which canceled your citizenship and are now in Europe. This is indeed a surprising news for me and I cannot but sympathize with your fate. You have lost your citizenship of India when you were presumed to have secured the American citizenship. You are a landless person. But Mr Das! what is this world? A small ship of revolving universe. Everything is changing and very quickly. Don't be discouraged by the incident! Go straight ahead on the road on which you started out. I believe the time will come when fortune will smile upon you. I am also struggling against all kinds of injustice. I think, however, there is no nobler work than to fight injustice. The human life might be regarded as a great drama. A man who can fight injustice is assuming a happy role in this drama. Though you are undergoing all forms of hardships which are the outcome of the present unreasonable and selfish atmosphere of the world, I might congratulate you on playing a happy and

holy role in the play of human life God is after all fair, so I believe. One who believes oneself unfortunate simply lacks a penetrating vision to find a better and brighter side of this life. We should be wise and then we can find that God is all fair. I am determined to continue the present holy war until I die. We are fighting on the common ground. Mr Das I am sorry to have noted the other day that a prominent leader having the same name (C. R. Das) passed away. I hope that on the ruin of this man, thousand of vigorous young men will arise to carry out the holy war"

Some Important features of Japanese Budget Estimates

Mr. Hamaguchi, the Japanese Minister of Finance, gave a broad outline of the Japanese budget estimates and the new plan of taxation in the general meeting of the Japanese Clearing Banks held on November 19, 1925

"The main features of the plan were reduction of income tax, land tax, and business tax the abolition of *Excise duty on cotton textiles* and traveling tax, as well as lesser taxes, the establishment of a new tax on the interest arising out of capital and an increase in the duties on spirits and higher death duties"

"The estimates of expenditure for 1925-1927 showed an increase of about 18,000,000 yen as compared with those of the previous year, the principal items of fresh expenditure being as follows -

	yen
Increase in the grant to local authorities for salaries of primary school teachers	10,000,000
Construction of auxiliary vessels for the Navy	8,000,000
Relief to the Industrial Bank of Japan, the Bank of Taiwan, and the Bank of Chosen in connexion with their loans to China	7,000,000

Japan has suffered very seriously by awful earthquakes and floods and her industrial and economic prosperity has received a setback. However, the Japanese Minister of finance has adopted a plan by which, land-tax will be reduced and *Excise duty on cotton textiles* will be abolished. He has also adopted the policy of taxing the interest on capital. The fundamental idea at the back of this plan is to graduate the burden of taxes according to the ability to pay. This plan will relieve the Japanese peasants from a high land tax, and aid the Japanese textile industry to hold its own in home and foreign markets, while the rich will have to pay a special tax on the interest derived from invested capital.

The Japanese Government proposes to spend during 1926-1927 under the heading of fresh expenditure no less than 4 crores

to aid the local bodies so that the salaries of primary school teachers may be raised, and at the same time extends as aid to the Japanese (not foreign) banks the sum of 1 crore and 40 lakhs of rupees, and a sum of 1 crore and 60 lakhs of rupees will be spent to strengthen the Japanese navy—a vital arm of national defense

We wish to draw the attention of the Indian members of the Legislative Assembly to the above facts and hope that they will formulate a policy regarding the Indian budget which will contain the features mentioned above. The Finance Minister of India should adopt a course by which (1) *the excise duty on Indian textiles should be abolished* permanently, (2) the land tax on poor Indian peasants be reduced and (3) a tax on interest derived from invested capital be imposed

As the Japanese Government is aiding the local bodies with 4 crores of rupees to increase the salary of primary school teachers in order to increase their efficiency, similarly we think that the Indian Government during the year 1926-27 should aid the local Governments with a sum of no less than 4 crores to promote primary education. We also suggest that the Indian Government should sanction an initial outlay of 2 crores of rupees to further the military education of Indians by establishing a National Military College in India and aiding Indian Universities and Colleges so that they may be able to undertake the task of imparting military education to College students. We also suggest that the Indian Government should adopt a policy of building up an Indian national merchant marine by extending preferential treatment to Indian shipping in all Indian coast-wise trade

South African Nationalists Propose to Reorganize National Defence

The London *Times* publishes the following news item, which will be of interest to all Indians who are engaged in studying the question of Indian national defence.

A Nationalist deputation has submitted proposals to the Minister of Defence for the reorganization of the Union defence system. They suggest the abolition of the General Staff, the Permanent Force and the Active Citizen Force, and the substitution for them of a Commandant-General and a burgher force, *schoolboys to be trained as cadets on a new system and rifles to be provided for all burghers at one half of the cost price.* The deputation represented the Transvaal and Free State Nationalists.

Civil Justice in Bengal

Civil litigation in Bengal continues to run in its old grooves despite the appointment of the Civil Justice Committee and its voluminous report. The committee has made many suggestions for hastening the pace of litigation, which, for its tardiness, had in the past been the subject of severe criticism by their Lordships of the Privy Council. The committee, however, failed to lay its fingers on the sore spot in the system, with the result that, despite all its tinkering reforms, Civil Justice still continues to run very much the same course as in the past. And if the state of things in the Alipore Civil Courts existing today is symptomatic of the course of litigation in Bengal, the sooner these courts were abolished the better. An ordinary ejectment suit in which no question of title is involved, filed by a landlord against a defaulting tenant in the beginning of 1924, was still pending in the beginning of January 1926! This, I was told, was the normal course of things in these courts and the judges who saw the injustice of the whole thing were powerless to redress the wrong. I would fain believe it to be true, but I think it is not so. The judges, as remarked in the Civil Justice Committee's report, are too prone to surrender themselves to senior pleaders and allow the trial to drift as they list. The result is that adjournments are granted on the flimsiest of grounds and grave injustice is done to parties who want a quick decision of their suits. There can be no earthly reason for an ejectment suit filed by a landlord against a defaulting tenant to last more than one or two hearings after summons is served on the defendant. Yet the thing has been pending for two years and is not yet over. Consider the plight of the poor landlord in the case in question, supposing he gets a monthly rent of Rs. 150 for his house. The tenant has not paid rent for two years and for some time prior to the institution of the suit. By the time his case is over the arrears due against him would probably come to something like Rs. 4000. But what can one expect to recover from a tenant who is being sued in ejectment as a defaulter? At the end of the suit he one day quietly disappears in the city of Calcutta leaving the landlord to pursue such remedies as the law gives against unscrupulous debtors! The landlord loses his 4000! But what of that? The Government has got its court-fees and the pleaders have earned their daily

fees. And the judge goes on drawing his salary of, say, 1000 p. m., whether he takes 6 months or 2 years to decide the simple case. And British Justice is still the boast of all of us!

January 25, 1926

Reports of Re-marriage of Widows

The honorary secretary, Vidhva Vivah Sahak Sabha of Lahore states—

Reports of 213 widow marriages have been received from the different branches and co-workers of Vidhva Vivah Sahak Sabha, Lahore (Punjab) throughout India in the month of January, 1926.

i. According to caste—

Brahman 56, Khatri 24, Arora 10, Kaithi 10, Aggarwal 31, Rajputs 15, Sikh 29 Misc. 38, Total 233

ii. According to Provinces—

Punjab and N-W F P 141, Delhi 8, Sindh 3, U. P. 16, Assam 2, Bengal 5, Madras 1, Bombay 1, C. I. 6 Total 213

iii. Voluntary donation received during the month of January 1926 is Rs. 37-10-0.

An American Professor on India and America

Professor J. H. Holmes, Professor of Philosophy, Swarthmore College, Pennsylvania (U.S.A.) and Associate Editor of "Unity" and member of the Society of Friends and one of the leaders of the Peace Movement in the United States of America who attended the recent session of the Congress at Cawnpore, interviewed, said to a representative of the Associated Press that what struck an American most particularly was the evident poverty that was so widespread in this country, the more so as it was contrasted with the extreme luxury of a few who naturally included some foreigners. Referring to education in India, he said that while there were many Colleges, some of which were exceedingly well equipped, there was hardly even the beginning of primary and secondary education. This fact must be closely associated with the general poverty.

Questioned regarding Anti-Asiatic Legislation in the United States the Professor said, "I deeply deplore the recent Anti-Asiatic Legislation in the United States and I am ashamed of our record in dealing with our own Negro problems." He said that there were, however, millions of thoughtful people in America who were labouring to get rid of race prejudice and race discrimination. India and America had much to give one another. He concluded by saying, "America can contribute her energy and her inventive capacity and her century and a half's experience in self-government, while in our turn we may hope to receive from India her great capacity for self-control, her patient philosophy of life and above all the new interpretation of our own religion which we profess without really

believing it, for our religion condemns love of wealth and love of violence and yet our people have been guilty of love of wealth and of imperialism, having almost destroyed themselves in the Great War."

India should not rest content merely with receiving from abroad the result of the inventive capacity of foreigners. Indians, too, possess inventive capacity. Every effort should be made by the people of India and its Government to develop this capacity. So long as our country remains the market or the dumping ground, as the case may be, of foreign inventions, it will be mercilessly exploited by the West.

Wild Animals Born in the Calcutta Zoo

It is generally thought that wild animals do not breed except when *ferae naturae*. But there are exceptions. During the year 1915, 4 lions, 5 black leopards, 1 barking deer, 5 Indian antelopes, 1 great kangaroo and 1 Bengal porcupine were born in the Zoological Garden at Alipore, Calcutta.

Germany's Great Novelist Looks towards Russia and the East

The present tendency of the practical politics of German statesmen in power, is to forge closer political relations with Great Britain and the closest possible economic relations with America and to achieve equal status for Germany as one of the Great Powers of the world, by entering the League of Nations and securing a seat in the council of the League.

However, Herr Thomas Mann, who is regarded widely as the greatest living novelist in Germany, author of "Buddenbrooks", "Tristan", "Death in Venice" and "Enchanted Mountain", and whose "Observations of a Non-Political Thinker" which appeared originally in the "Neue Rundschau" some years ago and is considered by experts all over Europe as one of the profoundest studies on political tendencies written in recent times, thinks that "whatever cordial relation with Western Europe may be, Germany must continue her close friendship with the East and notably Russia."

During his recent visit to Paris, where he spoke before the Carnegie Foundation on "the cultural relation between Germany and the

rest of Europe", in an interview Herr Mann has been reported to have said :—

"The bond between Russia and Germany is very intimate, and the intellectuals of Germany must do their best to uphold this bond. The political system of Russia cannot, to be sure, be adopted by Germany but sympathy with the aspirations of Russia will always be extended by the intellectual forces of Germany, who are, as you know, responsible for the democratic form of government. I realise that Germany belongs to the West. Our language is easily rendered into Western languages such as English. My books have been translated into English. My books, I imagine must be hard to translate into Russian. Yet I hold despite this that we must retain the closest possible relations with Russia and the deepest East."

Whatever may be the creed of the political opportunists of any country, it will always and ultimately depend upon the persistent efforts of the "intellectual forces" of a nation to formulate a policy of far-reaching consequence. This is fully evident when Herr Mann advocates, that in spite of all things, *Germany must retain the closest possible relations with Russia and the deepest East*. This, in plain words, means that Germany while remaining friendly towards France, England, Italy, America etc, should be in the closest friendly relations with Russia, China, Japan, India and other Asiatic countries. To us, it is self-evident from the standpoint of culture, material resources, man power and political possibilities that the deepest East embraces China, Japan and India, more than any other part of Asia.

The intellectual forces of India, upon whose sagacity depends the future of the nation, of Asia at large and world peace, should formulate a world policy for India, which without antagonising any nation of the West, will bring about closer co-operation between India, China, Japan and those nations of the West and the East which are sincerely in sympathy with the aspirations of the people of the Orient.

T. D.

Herr Mann may have been influenced in his utterance by the fact that industrially undeveloped Russia, China and India are more likely to buy German goods than European countries in general. Editor,—M. R.

Italy's Trade with India

In the field of Science, Italian savants have made considerable contributions; and to-day Italy, although handicapped by the lack of

raw materials, is making immense progress industrially. The following news item will be of interest to those in India interested in commerce and industry.—

Imports into Italy from India during the first eight months of 1925 were valued at approximately 1,187,000,000 lire, while exports from Italy to India were under 179,000,000 lire in value. Among the principal goods sold by India to Italy during the period mentioned were raw cotton (44,800 tons, value 473,000,000 lire), oil seeds (128,800 tons, value 145,500,000 lire), and grain (41,000,000 lire). Among the principal Italian exports to India were textiles and other manufactures of cotton (1,300 tons, value 41,500,000 lire), textiles and other manufactures of wool (800 tons, value 23,000,000 lire), rubber tires, &c (500 tons, value 17,500,000 lire), and artificial silk and waste (300 tons, value 17,500,000 lire).

Will India always remain a supplier of raw materials to other nations, who will sell finished products to her children?

T. D.

German Traders Gaining in China

The Peking correspondent of "Berliner Tageblatt" has recently published an article on the rebuilding of German trade in China.

War losses and the subsequent expulsion of the Germans seemed at the time to destroy German trade in the Far East indefinitely, but the financial rash in 1921 ruined other foreigners as well and presently the Germans began to come back to something like even terms. Actually more German firms are now doing business in China than before the war and the present turnover is greater, although the correspondent does not believe the net profits are as great as before the war.

The great lack of capital in Germany itself is also felt abroad, the correspondent believes, and many businesses resumed operations on ridiculously small capital.

This success of German traders in China is mainly due to two factors, (1) unbelievably hard work on the part of German business men and (2) the political situation in China. In 1916-17, when I was in China to study the international political situation, I found most of the Germans who were interned in China were studying the Chinese language, as a preparation for their efforts to secure Chinese trade. With the end of the world war, Germany was eliminated from holding any special "spheres of influence" in China and she had to give up extraterritorial jurisdiction in China. The Chinese people, particularly the Chinese nationalists, fully realise that Germany has no political ambition in China and so they are friendly

and sympathetic to the German merchants, who are very anxious to do all that is possible to please their Chinese customers.

German business men, through their initiative, hard work and far-sight, are engaged in building up a profitable market for the future, altho they are not making a very large profit. In the field of international commerce, like that of science, something worthwhile cannot be achieved without serious efforts. What have the Indian business men so far done to secure a standing in the international commercial world? They can learn a great deal from the Jews all over the world and the German merchants now engaged in securing their place in world commerce.

T. D.

American Naturalization Law Is Against the Chinese, Japanese and Hindustanees

American naturalization law is not directed against all the Asiatic peoples. This is self-evident, because the Jews from Palestine, Syrian Christians and others are allowed to become citizens of the United States by naturalization. The following news item shows that, although the Armenians are Asiatic people, they can also naturalize as American citizens.—

Washington, Jan 6 (U. P.).—Armenians are eligible for naturalization as United States citizens, Attorney-General Sargent decided to-day after conferring with officials of the Department of Labor.

The question arose in Portland, Ore., where the United States District Court declined to cancel a naturalization certificate granted to Tatos Osginian Cartosian, an Armenian.

Investigations into the racial and ethnological problems involved in cases decided by federal courts showed that Armenians were entitled to become American citizens, Mr. Sargent said.

We understand that Persians can also naturalize as American citizens. Thus it is apparent that the American naturalization law has been so applied as to bar the Chinese, Japanese and Hindustanees from becoming citizens of the great republic of the United States. According to the present laws of the United States a man of the position of the late Dr. Sun Yat Sen of China, men of such eminence as Dr. Nitobe or Dr. Anazaki of Japan and savants and scholars like Rabindranath Tagore, Gandhi, Jagadish Chunder Bose or P. C. Ray cannot become citizens of this country. On the other hand "all alien white persons and persons of African birth

and nativity can become citizens of the United States by naturalization." Those who cannot become citizens of the United States by naturalization are also debarred from emigrating into the United States and cannot own or lease any land in certain States of the U. S. A. owing to the existing anti-alien land laws. India, China and Japan form the heart of Asia, with a population of no less than 800,000,000 souls. The policy of the British Empire and the United States is that these people should not be allowed to enjoy the right of emigrating into their territories. We are often told that the United States is friendly to China and India, and this may be true. But it cannot be denied that the Chinese, Japanese and Hindustanees are equally discriminated against within the British Empire and the United States. Thus China, Japan and India should have a common policy so that in future the people of these countries may not be discriminated against by any nation.

T D

Why Spanish Should Be Studied

Oxford University is raising an endowment fund of £25,000 to establish a chair for the Spanish language. *The Observer* (London), Jan. 17, 1926, editorially makes the following comment on the importance of the study of Spanish from the standpoint of cultural and political interests:—

To establish a Chair of Spanish at Oxford is, in every way, a most fitting sequel to the Prince's South American tour. That language has claims as the key to wide areas of history and to a literature of peculiarly individual quality, which in themselves press for recognition. But from the standpoint of commercial importance the case is overwhelming. Spanish stands second only to English as a vehicle of the world's business. As the development of South America proceeds it will become still more necessary to trading nations and quite indispensable to the maintenance of our own position in those markets."

Recently Mr. C. F. Andrews, in a special article in the *People* (Lahore), has rightly pointed out that ambitious young Indians should go to South American countries, where they can find greater opportunities for their advancement than in British India or within the British Empire, where anti-Indian color prejudice prevails. We hope that Indian Universities will follow the example of Oxford University by establishing a chair for the Spanish language.

T D

Sir Reginald Craddock on a Royal Commission on Agriculture

In a note on the Royal Commission on Agriculture in our last issue, we repeated some of the reasons for opposing the appointment of such a commission. Sir Reginald Craddock's article in the *Asiatic Review* on "Two Indian Landmarks" gives expression to opinions which go to support two of our main objections.

We observed in our last number that "the principal causes of India's backwardness in agriculture are wellknown," and enumerated them. Sir Reginald Craddock, who has ruled over two provinces of the Indian Empire viz., C. P. and Berar, and Burma, and, according to the *Asiatic Review*, "after a long experience as Revenue and Settlement Officer has had the advantage of developing an Agricultural Department in two provinces," writes in that review:—

"There is, indeed, little that a Royal Commission can find out that the Government does not know already, or cannot collate from the abundant material available in the settlement and revenue reports and the recommendations of numerous committees and conferences held annually or from time to time. In fact, for years past the Government has been much more active and much better equipped with reference to rural economy than to urban and industrial problems—witness the remarkable success of its efforts in coping with successive famines."

So, Sir Reginald Craddock's observation goes to show that a Royal Commission on urban and industrial problems is a greater necessity than a royal commission on agriculture.

We also wrote last month:—

"The terms of reference show what the Commission will not have the power to do. But what is excluded is of vital importance. The problem of India's agricultural poverty cannot be solved without a radical reform in the existing systems of land revenue assessment, of land ownership and tenancy, irrigation charges, etc. But it is these things which it will not be within the scope of the Commission's duties to examine."

We read in Sir Reginald's article:—

"Before it could be decided whether there should be a Commission, and what should be included in or excluded from the terms of reference of such a Commission, one requires to have some sort of preliminary diagnosis of the malady, if any from which Indian agriculture suffers."

Then Sir Reginald plainly says:—

"If you exclude land-tenures from examination you will be excluding matters which have a vital influence upon agriculture and if you pay puncti-

draws attention to the susceptibilities of provincial Governments and provincial ministers, you may be debarred from recommending action by the Central Government, which was extremely advisable in the best interests of agriculture, though tending *pro tanto* to limit the discretion of provincial ministers."

It is not necessary here to examine the correctness or otherwise of the writer's latter observation, but it is noteworthy that the terms of reference of the Commission state that "it will not be within the scope of the Commission's duties to examine the existing division of functions between the Government of India and the local Governments"—such is the British Government's *aid* to maintain diarchy, increased by the unanimous condemnation of that system of administration by all shades of Indian political opinion. Summing up, Sir Reginald observes —

"It would be singularly unfortunate if its terms of reference laid down any forbidden ground upon which it must not trespass, even though the interests of agriculture were vitally affected by the prohibition."

But "forbidden ground" has actually been laid down.

The "Conservatism" of the Indian Ryot

Some people suppose that the backward condition of Indian agriculture is due to the conservatism of the Indian peasants and farmers. On this point Sir Reginald Craaddock bears the following testimony to the sound common sense of the Indian ryot in his article, referred to in the previous note —

"The Indian ryot is no fool, he has long inherited experience, and though if left alone he is very conservative, yet once let him be convinced that a particular crop or a particular method is within his means and is going to pay him, he will adopt it. But he has no use for an itinerant lecturer with a science degree who merely lectures and passes on. Long before scientific agriculture was heard of in India particular improvements and more advanced practices came into use. The ryot must know that you know all that he can teach you before he will begin to learn from you. The way to convince the Indian ryot is not by publishing the results obtained on some distant farm, but by demonstration *in situ*."

Appeal for Bhandarkar Oriental Research Institute

The appeal for funds issued by the Bhandarkar Research Institute of Poona should have the whole-hearted support of all lovers

of the ancient Indian culture. It is signed by Mr. V. G. Paranjpye, the Secretary, and states :—

All the energies of the late Sir Ramkrishna's mighty intellect were spent in a single-minded devotion to truth as manifested in Sanskrit literature, philosophy and religion. His own life was the best illustration of the religious truth that he maintained. It is the duty of all true sons of India that there should be a fitting monument to the great son of India who has recently left us, and that the torch of learning and of the quest of truth that he has lighted should burn with an ever-increasing lustre.

What better monument could there be to commemorate the life of Sir Ramkrishna than the Bhandarkar Oriental Research Institute, inaugurated in 1917 by Lord Willingdon, the then Governor of Bombay? It is in the fitness of things that the institute, founded during the lifetime of the great scholar and under his inspiration, should now find redoubled support at the hands of the public. I have to bring to your notice the useful work done by the institute since its foundation and to its urgent need for more funds, which has proved a serious impediment in the way of its progress.

The following brief chronological summary of the work of the institute during the last eight years will give some idea of its usefulness —

1917 Inauguration of the institute at the hands of Lord Willingdon. A commemoration volume presented to Sir R. G. Bhandarkar. Completion of the main hall of the institute.

1918 The Decan College Manuscript Library together with the manuscripts grant and the Bombay Sanskrit Series with the publication grant handed over by the Bombay Government to the institute.

1919 The Mahabharata edition undertaken by the institute. Manuscripts collation inaugurated by Sir R. G. Bhandarkar. The Annals of the Bhandarkar Institute started. The first Oriental Conference held under the auspices of the institute.

1920-22. Organisation of the institute and of a colony of sympathisers. Addition of two wings to the main hall. Publication of proceedings of the first Oriental Conference, Vol. I and II, Annals, vols I-III.

1923-25 Publication of the Virataparva, Sarvadarśana-saṅgraha, Rurveda Selections, Vols. I and II, Prakriyakaumudi, Part I, Kavyalankarasara-saṅgraha, Nārshikarmvasiddhi, Anubhasya (besides two more works nearly completed and several more in the press) and Annals, vols IV-VI.

Beside this, the institute has done a good deal of Mahabharat collation. It maintains a staff whose total emoluments come now to close on Rs. 1,500 per mensem.

The appeal adds :—

Besides its magnificent collection of books and manuscripts which it owes to the generosity of Government and the late Sir R. G. Bhandarkar, it has on its library table practically all the journals dealing with the ancient culture and history of India.

The institute has started well and yet it must achieve a good deal before it can claim to be a real memorial of the great departed whose name it bears. In order to accomplish its real purpose, it must be a school of post-graduate studies in oriental subjects for university students as well as Shastris, affording the necessary facilities for study by means of properly endowed lectureships and fellowships. It must be a centre of scholarly activity with a library and a guest-house for scholars. It must have a press of its own.

A rough estimate of the expenditure necessary for the materialization of these ideas is given in the appeal, the total coming up to four lakhs of rupees. All donations are to be sent to the secretary.

"Vegetable Ghee"

We read in *The Calcutta Municipal Gazette* which, by the by, has proved a very useful weekly and has belied the anticipations of the opponents of its foundation—that at a meeting of the Calcutta Corporation held on the 3rd February last, the Chief Executive Officer stated in reply to some questions asked by Rai Lalit Kumar Mitra that "paraffine and nickel have been found" in samples of "vegetable ghee" tested by the Analytical Department of the Corporation. We hope legal action will be taken in due course.

"Cocogem," manufactured and sold by Messrs. Tata and Sons, is pure and refined coconut oil prepared for cooking food with, and may really claim to be 'vegetable ghee.' But perhaps this preparation is not widely known to the Indian public owing to Messrs. Tatas' almost entire dependence on English agency and newspapers conducted in English.

Bihar and Orissa Budget

Bihar and Orissa has the distinction of having an Indian, Mr. Sachchidananda Sinha, as its Finance Member; and that province can show a budget in which the apportionment of expenditure between the Reserved and the Transferred Departments is different from what it is in Madras, Bengal and Assam. According to *New India*,

A study of the budgets of Madras, Bengal, Assam and Bihar shows that while in the first year, Reserved expenditure is about seventy per cent, in Bihar, expenditure on the Transferred Departments has never been less than 70 per cent the total expenditure, since 1921 Mr. Sinha, analysing the figures since 1924 in his budget, points out that the percentage of recurring expenditure on the Transferred Departments to

the total recurring expenditure was 90, 93 and 95 during the three years commencing 1924-25, while non-recurring expenditure amounted to 65, 81 and 75 per cent respectively.

New India rightly thinks that "some of the credit for this should undoubtedly go to Lord Sinha, but it is due mainly to the present Finance Member, and it is a feature on which the province is entitled to warrant congratulations."

There is, however, another feature of the Bihar and Orissa budget on which that province cannot be congratulated. It is stated that its *abhari* revenue has nearly doubled during the last four years, and that last year the excise revenue exceeded the previous year's revenue by seventeen lakhs. A Bihar Minister observed in a previous year that the province could not do without the money derived from the degradation of the people by drink and drugs.

It is no excuse to say that Madras and Bombay have much greater excise revenues. The provinces should not run a record-breaking race along the downward path that leads to perdition. They *must* do without the *abhari* revenue.

Opium Policy

In the Viceroy's address to the reconstituted Council of State, it is stated

We have come to the conclusion that, in order at once to fulfil our international obligations in the largest measure and to obviate the complications that may arise from the delicate task of attempting to sit in judgment on the internal policy of other Governments, it is desirable that we should declare publicly our intention to reduce progressively the exports of opium from India so as to extinguish them altogether within a definite period, except as regards export of opium for strictly medical purposes. The period to be fixed has not yet been finally determined, as before arriving at a decision it is necessary to consult the Government of the United Provinces regarding the effects that the resulting reduction in the area cultivated with opium will have on the cultivators in that province. We further propose to discontinue, altogether, the system of auction sales of opium in India as soon as the agreement for direct sale now being negotiated with the Government of French Indo-China is concluded.

While welcoming the Viceroy's declaration of policy so far as it goes, we cannot say that it is altogether adequate or satisfactory. It is stated in the Report of the Indian Delegation to the Geneva Conference that "when prices are normal the opium used for drug manufacture, is mostly European

Turkish or Persian, because these have a higher morphine content than Indian opium."

If this statement be correct, Indian opium is not much used abroad for "strictly medicinal and scientific use." So, the stoppage of the export of Indian opium except for "strictly medicinal and scientific use" ought, if such a policy can be effectively carried out, to put a stop to the export of Indian opium almost entirely. But can this policy be strictly given effect to? Who is to determine what are the requirements of each country for strictly medicinal and scientific use? If we may judge by the past action of some Governments, they may not be above issuing import certificates for more Indian opium than they could legitimately require for use within their own territories. The other alternative is for the League of Nations to ration the importing countries. But will the League do it? One result, however, of the Viceroy's declaration of the opium policy, when it is given effect to, will be to satisfy public opinion abroad and win the world's respect for India, which is no small gain. "The definite period", mentioned in his speech, should be a short one, say five years, and it ought to be fixed soon.

The Viceroy said nothing as to the use of opium in India itself. When will it cease to be available except on the production of a medical prescription? When will its manufacture and use in India be limited to strictly medicinal and scientific purposes? It is good to think of the welfare of foreign nations, but should not philanthropy have scope at home also?

A Plucky Village Woman

In a Press note the Government of Bengal state that they have sanctioned a reward of Rs 300 to Hemala Gopini and of Rs. 150 to each of her three brothers in recognition of the pluck and personal courage displayed by them in attacking an armed gang of dacoits.

The facts of the case are stated below.

In the month of April last, at about midnight, three men, including one Asraf Ali, went to the house of Krista Kumar Saha of Ramnagore in the Manikgonj subdivision of Dacca, of whom one was dressed like a havildar and armed with a gun and two others like constables. They called Krista Saha and told him that they had come there to supervise the patrol duty of the Chowkidars, etc., and enquired of Krista if any one of his village had any gun. After this they left the house and shortly after 20 men entered Krista's house and began to break open the doors. Krista could then under-

stand that they were dacoits and immediately ran to the neighbours' house and informed the villagers about the dacoity. In the meantime some Goalas (milkmen) who lived in the southern contiguous house of Krista attacked the dacoits with lathis, which were supplied to them by their sister Hemala Gopini, a widow of about 32 years of age. While the lathi fight was going on, the dacoits suddenly removed the lights from there. Hemala, seeing that her brothers had been fighting in darkness with lathis and with a view to illuminate the locality, besmeared a cloth with kerosene oil, made a torch, lighted it and put it at a place to illuminate the whole yard and she supplied three "gatus" (fishing spears) to her brothers to spear the dacoits. The brothers speared some dacoits and wounded the leader of the gang, who ordered his men to retreat. The dacoits then left the house through a narrow lane followed by the Goalas, one of whom carried the third spear. Hemala, the sister, seeing that her brothers had been following the dacoits in darkness followed them with the torch. At that moment one of the Goalas hurled the spear on the back of a dacoit injuring him seriously. The other dacoits tried to drag away the injured dacoit but could not do so. Neighbours from all sides appeared, whereupon the dacoits fled, leaving the injured man behind.

Another Plucky Indian Woman

Some months ago, another account of a dacoity appeared in the papers where another Indian woman displayed great courage and presence of mind. The following report of the occurrence is taken from the *Bengalee*.

Information has reached the Alipur Police of a daring attempt at dacoity which was averted by the plucky action of the house-holder's, wife. Girish Chandra Adak is a rich man of Rajanapur within the Police Station of Budge Budge. On the night of the 16th inst, just after dusk the wife of Girish Babu was sitting in the verandah of her room with her children playing by her side when she saw a number of men trespassing into her compound. As the husband was then away, the lady naturally grew apprehensive and pushed her children inside the room, herself following them.

In the meantime, some of the dacoits ran up to the verandah and tried to prevent her from barring the door of the room. Then ensued a vigorous scuffle between the lady and the dacoits on either side of the strong door, she trying with all her might to bolt the door from inside. Suddenly one of the dacoits threw a cracker through the opening of the door which burst, burning the face of the valiant defender. She loosened her hold a bit, and one of the dacoits put in his hand between the leaves of the door to force it open. With rare courage and presence of mind she faced the desperate situation and with all her might managed to bolt it with the dacoit's fingers caged between the leaves. The dacoits then tried their utmost to free their comrade, who at last succeeded in extricating himself but not without leaving his four fingers cut off behind.

A Police Inspector took up the enquiry with

the fingers as his clues, and he was surprised to find that one Bankim Chandra Das, son of Jogendra-nath Das of Kalipur, a neighboring village, was lacking in four of his fingers. This young man is a student of the 3rd class and his father is also a rich and respectable man. Bankim was produced before the S. D. O., Alipur, where he has made a confession. The accused has been remanded.

Dr. R. P. Paranjpye's Election.

We deliberately discourage the growth in our mind of a partisan mentality, and do not take much interest in party triumphs. But the election of Dr. R. P. Paranjpye to the Bombay Council is more than and different from a party triumph. He gave the best years of his life to education for a pittance and as Education Minister did some notable things. He is, moreover, a man of high culture. He was India's first senior wrangler at Cambridge. It was, therefore, fitting that the Bombay University should return a man of his self-sacrifices, calibre and record of public service. We are the more pleased at his election, because he was subjected to a highly unbecoming personal attack by Mr. Horniman, who should remember that he has been always highly paid for his journalistic work in India.

We quote below from *The Sabodha Patrika* of Bombay a paragraph bearing on Dr. Paranjpye's work as Education Minister.

During the regime of Dr. R. P. Paranjpye the first Education Minister under the new Reforms Scheme, a step of far reaching importance was taken whereby all Government and Aided Schools were asked to admit Depressed Class children without observing any caste distinctions whatever. Some persons of pronounced advanced views protested against this measure on hygienic grounds. Of course, there was not much substance in this argument, because as a matter of fact there were and are many high-caste children who are of a unclean habits as the D. C. ones and all D. C. children are not dirty. The opposition was the result of prejudices which die very hard. The D. P. I. in a note on the situation, now says that generally speaking, all schools except some which meet in temples, admit untouchable children without distinction. We know some schools which even go so far as to give special facilities to these children. Thus what was considered a rash step has resulted in the promotion of a much needed reform. The object of education is to help to eradicate evils and we are glad to find that the Educational Department has succeeded in eradicating an evil of a very long standing.

Regulation III of 1818.

The rejection by the Assembly of Mr.

Amarnath Dutt's bill for the repeal of Regulation III of 1818 shows that even many elected members of that body have not done their duty. They are either pusillanimous, or selfishly satisfied with the thought that they in any case are never likely to come within its clutches, or they have a poor ideal of personal freedom in a civilized country in times of peace.

Repeatedly challenged to state for what crimes Aswini Kumar Dutt, Krishna Kumar Mitter and Lajpat Rai were deported under the Regulation, the bureaucracy have never been able to do so. In fact, in the case of the first two what Sir Hugh Stephenson once stated in the Bengal Council amounts to this that they were deported for strenuous and persistent agitation against the partition of Bengal, which was modified afterwards.

The police and executive can never be trusted to make a proper and impartial use of such a weapon. The Regulation was made for other times and other circumstances. It ought now to be repealed.

Sir Alexander Muddiman said that Government could not do without such a weapon, which is a condemnation of the Government more than of anybody else. His plea that the Assembly will not pass any requisite law if the Regulation were repealed is also unconvincing. Make the Government responsible to the people, and then the legislature will pass all necessary laws.

The old bogey that witnesses would be murdered if political suspects were brought to trial, instead of being deprived of their liberty under the Regulation, was trotted out again. *The Calcutta Weekly Notes*, Pandit Motilal Nehru and others have shown the untenability of that plea, but the bureaucracy have scant regard for facts when they clash with their interests.

It was said that the Free State of Ireland had enacted laws like the Bengal Regulation. That does not make out a case in favour of the Regulation. Rather it shows that, given self-rule, a people will take vigorous steps to maintain law and order. Ireland, even after it had obtained freedom, was in an unsettled condition, Bengal is not in that condition. Moreover, the Government of a self-governing country which is responsible to its people through its legislature is entitled to make emergency laws in its own interests. But a foreign bureaucracy, not responsible to the legislature and people of India, cannot now legitimately make use of an obsolete regulation,

framed more than a century ago, in order now to fight in its own interests against the struggle for liberty of a subject population.

Mr Donovan stated that during his 16 year's official career in Bengal he had never heard anybody complaining against the Regulation, though he had plenty of other complaints to deal with. That was a very ridiculous argument. In the first place, why should people complain against the Regulation to him? He was not and is not the person who had, has or is ever likely to have the power to repeal the Regulation. In the next place, even our villagers are not fools; they know what complaints will displease a European magistrate. Why should they go out of the way to displease him?

Much was made of the fact that the Regulation was never used against any Musalman in Bengal. That may be due to several causes, which we are not inclined to state. Those Musalmans who, like Sir Abdul Rahim, wish to profit by posing as extra-loyal subjects of the British Government may do so. But some Musalman members showed in the Assembly itself that all Musalmans are not of that description by saying that they wanted the Regulation to be repealed.

The Law of Contempt.

The law of contempt of court, as recently enacted, may be used to harass the Press and curtail its liberty of criticism. It is legislation of a retrograde type. The Swarajists and other members of the Assembly ought to have nipped it in the bud, instead of which they allowed it to go before a select committee in which they even served. By this blundering policy of theirs, they have done a disservice to the country.

Section 109 of Cr. P. Code

By section 109 of the Criminal Procedure Code, Magistrates can compel suspected persons to furnish security for good behavior, during which they can be sent to jail. It is not that these persons are suspected of having actually committed some crime. The suspicion is that they may commit some crime. So only preventive, as opposed to punitive, measures are required; and therefore when imprisonment is ordered, it is enough to make it simple. Magistrates former-

ly could at their discretion inflict rigorous imprisonment also. This discretion was taken away in September last. Owing to a criminal neglect of duty on the part of some members of that body, this discretion has now been restored, and in future it will be quite easy again for the police and the magistracy, when they are so disposed, not only to clap into jail persons whom they dislike, but to make them undergo hard labour and subject them to indignities. That some of these "public servants" are not above such abuse of their powers was proved in a flagrant manner when many persons offered *Satyagraha* at Nagpur, and for that offence were punished with rigorous imprisonment. Other instances need not be mentioned.

It was said in support of the restoration of discretionary power to magistrates, that all local governments, and the police and jail authorities were in favour of such a step. That was no cogent argument at all. They would always be in favour of having as many weapons in their hands as possible to deal with inconvenient persons.

Vice-Chancellor of Dacca University

The Leader of Allahabad writes editorially

From what the Dacca correspondent of the *New Empire* says, a certain Mr Langley, a junior officer of the I. E. S., has been appointed by Lord Lytton as Vice-Chancellor of Dacca University, his resignation from the Service having first been got to avoid criticism from senior officers. The appointment has been made, apparently, because Mr Langley is Professor of Philosophy, for which subject there is no provision in the University budget. To avoid the unpleasant necessity of asking a worthy man to go, may or may not have been the gubernatorial Chancellor's motive, but what is the meaning of such an appointment in a presidency so rich in educational and literary talent and experience?

Christmas "Good will"—"Statesman's" Brand

The Statesman of Calcutta wrote after last Christmas.—

Christmas this year in Calcutta was reminiscent of pre-War days. During the war people were naturally depressed and in the years immediately succeeding political passions ran so high and racial divisions were so accentuated that the whole atmosphere of goodwill was lost. Last year saw a change for the better and this year it is as if there were no politics at all. The old and friendly custom of presenting gifts to European friends has

been revived amongst Indians, and on Christmas day the streets in Calcutta were full of brokers in their cars and gar's bearing presents

This is delightful.

According to *The Statesman*, the "good-will" which Christ lived and died to promote must be manifested by non-Christians towards Christians, not *vice versa*. For, we do not find it mentioning how Christians manifested their goodwill towards non-Christians during the week of holy mirth.

And is the presentation of indirect bribes by "brokers and others" and their acceptance by "European friends" a particularly Christian transaction?

Social Welfare Work in Japan.

The Young East of Tokyo for September, 1925, wrote as follows —

According to investigations lately made by the Religious Bureau of the Department of Education social welfare works carried on in Japan by Buddhist Shintoist and Christian workers are as follows —

Work	Buddhist	Christian	Shintoist	Total
Juvenile reform	16	1	2	19
Nursing for babies	83	22	1	106
Protection of children	8	2		10
Protection of weak or abnormal children	6	1		7
Relief of the poor	38	9	1	48
Medical relief	19	7		26
Support of aged poor	14	3		17
Giving advice to persons in distress	16	4		20
Finding work for unemployed	15	3	2	20
Giving free lodging	4	1		5
Miscellaneous	7	2		9
Total	246	55	6	307

Social welfare works carried on in Chosen, Taiwan and Karafuto are not included in the above table.

A matter, which must be taken into consideration in connection with study of social welfare works in Japan, is that many enterprises of the kind managed by individual Buddhist believers are not given in the above table, for the reason that they have given no report to the authorities concerning them, they carrying them on in private and being contented with consciousness that they are doing just what they ought to do. Under the circumstance, it is probable that if such are taken into account the figures will be more than three times as large as those quoted. On the other hand, Christians laying great stress on social works and devoting much of their attention to them are punctual in reporting of them to the authorities so that the figures quoted in the above table represent all but what they are doing in this line.

The same magazine wrote again in November, 1925. —

The headquarters of the Japanese Buddhist Federation in Tokyo has recently carried out an investigation regarding the social welfare work undertaken by Japanese Buddhists in our country. The classification and number of these works are as follows:

Organ of connection, unity and investigation	1
Relief of the poor	2
Caring for the aged	2
Medical relief	1
Finding work for unemployed	1
Giving free lodging and providing people's dining saloons	2
General consultation	1
Reformatory education	2
Protection of juveniles	5
Rearing of babies	1
Nursing of babies	1
Education of poor children	1
Education of the blind	1
Education of nurse-maids	1
General protection of children	1
Dormitory	1
Protection of ex-convicts	36

It may be mentioned that other social welfare works now being carried on under Buddhist management such as the young men's and juvenile associations, girls' and ladies' associations, Sunday schools, kindergartens and various other institutions for so-called special villages and education of illiterate adults are not included in the above mentioned table.

The prevailing religion, of very long standing, in Japan is Buddhism. In China also Buddhism holds a pre-eminent position. But whereas in Japan the Buddhists are the principal workers in the field of social welfare, in China it is the foreign Christian missionaries who are the principal social welfare workers. According to Dr. Harold Balme, President of Shantung Christian College, "To-day, out of approximately 500 modern hospitals in China, 301 are connected with [Christian] missions." In India, too, though hospitals date from before the Christian era, it is at present the Christian missionaries who are more active in his kind of philanthropy than either Hindus or Moslems.

The reasons for this difference between Japan on the one hand and China and India on the other require to be investigated. The Chinese and the Indians are, on the whole, not less kindhearted and neighborly than the Japanese. But among other points of difference, there is one great difference between Japan and the two other Asiatic countries. Japan has never been subjected to political and industrial exploitation, but India and China continue to suffer from such

exploitation, which has a depressing effect on the peoples subjected to it.

The "Trimurti" of Western Imperialism

Western Imperialism has three *murtis* or forms or incarnations. Two of its *murtis* or forms or incarnations are well known and well recognised. They are political domineering and industrial and commercial exploitation.

It has been long known that alien rule saps character. Professor Ross repeated this truth in an article in the last December number of *The Century Magazine* which was summarised in our last January number. Mr. Ross added —

I recalled the high head, squared shoulders and eye flash of the Japanese as they pass foreigners in their streets. "We are masters here," their bearing says. Here in India, not so. In our presence, most Indians, even the educated, act as if unsure of themselves. They have been sat upon so often! But many others are unmanned by the consciousness that, no matter how able, patriotic, or right they may be, it is always the foreigner who decides. As you note that characteristic droop of the shoulders, that too deferential air, you feel it unnatural that the will which reigns here originates sixty-five hundred miles away.

The Nationalists warn that alien rule is emasculating Indian character, for the British are coming to be more masterful, the Indians more subject. A century ago treaties would be made between British officials and native potentates as equals but gradually the Indians are sinking into a common subjection. The native princes are but gorgeous puppets who would never dream of lifting a finger against the real lords of the land.

Industrial and commercial exploitation of a people produces the same sort of result in a somewhat different manner. It impoverishes the people who are exploited. Indigence leads to malnutrition. When the body thus becomes feeble, it easily falls a prey to disease. When a people become weak in body and are in constant ill health, they cannot be sturdy in character. Moreover, a poverty-stricken people cannot spend much money for or devote much time and labour to the acquisition of knowledge. So, the depression produced by political subjection is aggravated by the indigence, malnutrition, diseases and ignorance due to industrial and commercial exploitation.

Here Western philanthropy steps in as the uplifter and saviour. We are not concerned here with the motives or intentions of Western philanthropists. We believe,

in fact, that among the Western social welfare workers in Eastern countries there are true and sincere lovers of humanity.

What we are concerned with are the facts that the Political Imperialism and the Industrial Imperialism of the West give rise to opportunities for the Philanthropic Imperialism of the West, and that the last kind of Imperialism has also a depressing and demoralising effect on the peoples who are philanthropized. We will explain how.

Let us take the sphere of education in India. Many Britishers have left it on record that in pre-British India there was a school in every village. That shows that the British came here, not to a land of savages, but to a land inhabited by people who loved knowledge and could pay for its acquisition. That land now is the most illiterate of all countries under any civilised government. We need not discuss how such a state of things has come about. We only note here the fact that in the 500088 towns and villages in British India there are only 219131 educational institutions of all kinds and grades. We shall be told that in the pre-British period the schools in India were mostly primary schools. Let it be so, — even in the matter of primary schools there are now only 168013 of them in the 500088 towns and villages of British India. Therefore, there has been a decline in primary education in India under British rule.

To meet this deficiency in the supply of educational institutions, foreign Christian missions have opened schools of various kinds and grades. From the first, many or most of them have received help from the public treasury, that is, from money paid by the Indian taxpayer.

No European country has been at every period of its history adequately supplied with schools. Take the case of England. Its educational needs have been gradually supplied. But we do not find that any German, or American, or Belgian, or any other foreign mission opened a number of schools there.

In India, on the contrary, we find ourselves in the pitiful position of receiving educational charity from foreigners, though the Government could have, if it liked, so managed matters as to establish or get established a network of schools all over the land. The depressing and demoralising result is that a feeling of helplessness and inferiority is created in the minds of the

Indian people—the feeling, namely, that they are beggars and cannot educate their own children. The reply will be, “Why don’t you do so with your own resources?” That is an unfair question. Because, our resources for public work are taken by the Government, the Government-established municipalities, district boards, etc., in the shape of taxes, rates, etc. In spite of that fact, however, we do educate ourselves with our remaining resources. For example, in Bengal, most of the secondary schools and colleges were founded and are conducted and maintained by private bodies.

To sum up, if the Government had done its duty directly and through the public bodies created by it, we should not have been recipients of any foreign educational charity. Benevolence does good, but it does harm also. It pauperises, and saps the manhood and sense of self-respect of the recipients of charity.

Let us pass on now to the sphere of medical help. Here, also, we are recipients of foreign charity, with the resulting depressing and demoralising effect. India has been a cause of the prosperity of Great Britain and some other countries, which do not depend on foreign missionary charity for medical help. But the country from which other countries have derived a great part of their wealth has to depend, beggar-like, partly on foreign medical charity,—such has been the political, industrial and commercial exploitation to which it has been subjected.

The natural resources of India are such that any Government, conducted solely with the aim of doing good to its people, can very well meet all their educational and medical needs, without creating in their minds a craving for foreign charity. But such have been the administration and exploitation of India that both combined have created a vast held for educational and medical charity.

To feed the hungry is a very praiseworthy act. We do not blame but rather praise the missionaries for their famine relief work by opening orphanages, etc. But what are the causes of India’s famines under British rule? No doubt, there were famines in India in the pre-British period; but they were neither so frequent, nor were spread over such large areas and affected such vast numbers of people, as in the British period. We need not here inquire why this is so. We only note that, whereas in modern times,

famines have become unknown in the advanced European countries, in India, a land of vast resources inhabited by an industrious population, and ruled by an enlightened European nation, the people have every now and then over large areas to depend on state charity, private Indian charity and foreign missionary charity.

Foreign missions gain credit and converts by their famine work. We do not grudge them either. What we want to say is that their philanthropic opportunity is born of conditions which in their turn are due to Western Political, Industrial and Commercial Imperialism. Famished people cannot but appreciate the work of the hand that feeds. But the facts cannot be ignored that to receive charity is demoralising and that the occasions for the receipt of such charity with the consequent demoralisation need not have arisen.

Take again what happened after the flooding of North Bengal. One of the causes of this disaster was the way in which railway embankments were made without leaving a sufficient number of culverts of sufficient size. That shows that railways have been constructed with greater regard for high dividends than for the safety, prosperity and health of the people. For railways have been the causes of occasional floods accompanied by loss of human lives and cattle and of crops, and are a perennial cause of malaria.

Now, if flood relief work or antimalarial activities offer opportunities to philanthropists to do good, they are indebted to Industrial Imperialism for such opportunities.

The Rev. Mr. Macmillan of Benares, now of Fiji, once exhorted Indians to go to Fiji, not merely for making money but also to educate and otherwise help and uplift the Indian population there. Mr. C. F. Andrews also once reminded our people that they had a duty to do to Indian emigrants abroad. The duty consisted in sending Indian men to them who would be able to give them education and medical help and also spiritual guidance and instruction. These exhortations and reminders were proper and quite well meant, and we took them in the spirit in which they were written, and lent our support to them. At the same time we wish to say without meaning any offence that the European gentlemen and ladies who have done and do good work for the Indians in Fiji, South Africa, etc., are indebted for such opportunities for their good work to the combined effects of

Western Political and Industrial Imperialism. So, while we do not in the least minimise the duty which we owe to our countrymen abroad, and while we consider the European friends worthy of love and respect, we are constrained also to observe that whatever philanthropic work Europeans do for our countrymen abroad are only some atonement for the evils caused by their compatriots and co-religionists. It is also to be observed that it is not quite as easy for Indians to live and work for their countrymen in lands which discriminate against Indians as it is for European humanitarians. This produces a feeling of depression and a sense of inferiority in us, inasmuch as we are unable to do what these Europeans do.

If Mr A. O. Hume, Sir William Wedderburn and other friends of India had been able to win self-rule for India, it would have done some good to India. But it would also have been thought that Indians were such weaklings that they could not themselves win freedom for themselves. That would have left an enduring sense of inferiority in the minds of Indians. If Dr Mrs Annie Besant's Commonwealth of India Bill becomes law, it will confer some civic and political rights on Indians, but at the same time Indians will have to feel that they were an inferior people who could not win freedom for themselves without European leadership. It would, therefore, be an act of wisdom on the part of those British statesmen who consider Indians racially inferior to themselves and who want to produce or conserve that sense of inferiority in our minds to make the Commonwealth of India Bill an Act of Parliament as early as possible. The help of Europeans as equals, comrades, assistants, etc., is always welcome; but their leadership has its moral disadvantages as well as its advantages.

In conclusion, we wish to observe that the motives of Political Imperialism and Capitalistic Imperialism on the one hand and those of Philanthropic Imperialism on the other may be and often are different, but very often they are—it may be unintentionally—found to work together and even Philanthropic Imperialism is not without its depressing and other bad effects on the philanthropized peoples.

Achievements of Mysore University

In his introductory speech on the report

of the Mysore University reorganisation committee, Dr Brajendranath Seal, its Vice-Chancellor, thus enumerated the reforms already carried out in that University—

We have made the study of Economics more thorough and scientific by opening analytical, statistical and mathematical sections,—of History more concrete and realistic by linking it up with archaeology and documentary study,—of Philosophy more living by placing it *en rapport* with the most recent advances of contemporary thought and science, on the one hand, and the priceless inherited culture of India on the other, we have added Mathematics and Experimental Psychology as key sciences to the humanistic studies on the Arts side, and we have removed the old system of 'water-tight and light-proof compartments' between the physico-mathematical and the biological sciences. We have added a Medical Faculty with a University diploma as well as a University degree, we have opened a department of Teaching as the first step towards a Faculty and placed it on an exact basis of mental tests and measurements,—we have taken over the Department of Archaeology and are contemplating excavations in Talkad and other ancient sites, we have a scheme for a Faculty of Oriental Learning for which we have deputed a capable officer to the Oriental Institute of the London University, who is receiving up-to-date training in the allied departments of Culture, History and Archaeology and will shortly proceed to Egypt for an apprenticeship in Excavation work under the auspices of that University. Finally, in view of the coming department of Chemical Technology we have deputed another capable officer to the London University, who is also attending suitable Polytechnic courses in London. Neither must we forget the large extensions of our Science laboratories in our College of Science and of our Engineering Installations in our College of Engineering to which we have just added a much-needed department of Electrical Engineering in view of hydro-electric developments in the State.

He added that "all this building work, these additions of wings and facades, of pilasters and balustrades, have been inspired by a steady vision of the complete edifice; and it is this complete edifice that the reorganisation committee has worked out in general plan and outline." We intend hereafter to give an idea of this general plan and outline.

Communal Representation in Proportion to Numbers

On the motion of a Musalman Swarajist member, a resolution has been carried at a meeting of the Bengal Council, from which the Swarajists walked out, in favour of the Musalmans having representation in proportion to their numerical strength in the Province, the interests of small minorities being safe-

guarded by special provision being made for their representation.

We have all along been against the separate representation of different religious communities and classes. Our attitude remains unchanged.

But supposing communal representation is to be retained, any changes that may be required to be made in the numbers of representatives of the Hindus and Moslems and other communities, should be made simultaneously in all the provinces. The present numbers of Moslem members are according to the Lucknow pact, by which in provinces where the Moslems are in a minority they have got a larger number of members than their numerical strength would entitle them to and in provinces where they form the majority they have got a lesser number than they could claim according to their numerical strength.

If now in determining the number of their members, their numerical strength alone is to be made the only deciding consideration, then the principle should in fairness hold good in every province both where they are in a majority and where they are in the minority.

Hence, the question ought to have been raised in the Central Legislature.

One important consideration has been all along lost sight of. Representation according to the numerical strength of communities really presupposes universal adult suffrage for both men and women. In a province, a community may be strong in numbers, but on account of its backwardness it may, in the absence of universal adult suffrage, possess a smaller number of voters than another community which is numerically smaller but more advanced. In such a case, if the numerically larger community were to possess the right to return members in proportion to its numerical strength, what would really happen would be that in the case of this community a smaller number of voters would elect a larger number of members than the larger number of voters belonging to the other and smaller but more advanced community. Therefore, man for man, a voter of the former (backward) community would count for more than a voter belonging to the latter (advanced) community.

For all these reasons, we say, in the first place, that there ought not to be any separate communal representation at all; secondly, that if there is to be communal representation, the

election should be by mixed electorates, the third place, that if the Lucknow pact is to be changed, it should be changed in all the provinces according to some fair and consistent principle, in the fourth place, that the number of representatives assigned to a community should be in proportion, not to its total numerical strength, but to the number of voters it possesses, in the fifth place, that if the number of members is to be fixed according to total numerical strength alone, that should be done after the introduction of universal adult suffrage for both men and women, and lastly, that at the end of a definitely fixed period, not in any case exceeding twenty-five years, communal representation should cease altogether.

Dyarchy for N.-W. F. P.

At the time of this writing, we do not know whether the N.-W. F. Province is to have dyarchy or not. It is also not clear whether the majority of the inhabitants of that Province want that "boon," which the other provinces do not now consider quite a boon. Muhammadan opinion is not also unanimous in the matter. But if the majority want the "Reforms," there must be very strong reasons indeed for not gratifying their desire. No doubt, Musalmans are in an overwhelming majority in the province. But Hindus are in an overwhelming majority in Behar and Orissa and a still more overwhelming majority in Madras, and both these Provinces have had dyarchy from the very introduction of the "Reforms." The heinous atrocities are brought up against the N.-W. F. P. They took place when "law and order," the administration of justice and every other department of Government were in the hands of the bureaucracy. After the introduction of dyarchy, law and order and the administration of justice, being reserved subjects, would continue to be in the hands of the bureaucracy. So the prevention of or connivance at atrocities would rest with the bureaucracy as before.

If a minority were asked to choose between trusting in the sense of justice, neighbourliness and generosity of the majority of the permanent inhabitants of a place or in foreign rulers who are birds of passage, perhaps the minority would be wise to choose the former alternative. But this is a matter in which we are not competent to

offer definite advice, being ignorant of conditions and feelings in the N.-W. F. Province. All religious communities in India ought, however, to bear in mind that no community can expect to be in the majority everywhere. All communities ought to try to adapt themselves to differing conditions in different provinces.

It has been said that N.-W. F. P. is backward in education. But we find from the Indian census report for 1921 that the number of persons per thousand who are literate are 50 in N.-W. F. P., 46 in the Punjab with Delhi, 42 in the United Provinces, 49 in Central Provinces and Berar and 51 in Bihar and Orissa. And in the latest report on education in India we find that in 1924 the percentage of total scholars to population was 2.6 in N.-W. F. P., 2.53 in the United Provinces and the same in the Central Provinces and Berar.

To have dyarchy the Province ought to be able to pay its way, which we understand it does not do at present. Its Musalman inhabitants have intimate social and other relations with the transfrontier independent or semi-independent tribes, who are turbulent. That has to be considered. It being a border province, the defence of India has also to be kept in view. But neither internal law and order nor the charge of the army is made over to Ministers under dyarchy. So the problem of India's defence at the north-west frontier is not an insuperable difficulty in the way of the Province making beginnings in representative government.

Discoveries Relating to Ancient Civilization in Sind

Interesting additions have been made recently to the discoveries previously made by Mr. R. D. Banerji of the Indian Archaeological Department at Mohenjo Daro, in Sind, relating to the civilization which flourished and fell in the valley of the Indus not later than the third millennium before Christ.

Sir John Marshall, Director-General of Archaeology, has spent most of the winter directing the excavations. The operations were most fruitful. They revealed spacious, well designed and constructed burnt-brick buildings and disclosed a system of house and street drainage even more elaborate than had already been reported. There were also found three large statues of ornamentally draped figures and there were indications that others might be found.

The newest finds include a considerable collection of gold jewellery corresponding with the beautifully made specimens already unearthed and

most valuable of all, a dozen or more skeletons of what has been called the Indus-Sumerian period. These were lying in one room of a house, and along with the statues will greatly help in the determination of the ethnic origin of the people of this ancient civilization.

We understand that Mr. Biraja Sankar Guha, who has had previous experience of anthropological research in India and later conducted anthropological investigations in America in connection with the Smithsonian Institution after further training at Harvard University, has been asked to proceed to Mohenjo Daro to study the finds from the anthropological and ethnological points of view. We learn further that Mr. R. D. Banerji also is at Mohenjo Daro.

It is to be hoped that photographs and descriptions of the finds will be published first in India, before Sir John Marshall sends them to some British or American paper in order to earn a big honorarium, as he did when Mr Banerji made the first discoveries.

Some Points in Sir Abdur Rahim's Aligarh Speech

In his "famous" Aligarh speech, Sir Abdur Rahim said, "they are all actuated by a common anxiety to see that no public measure of importance overrides or overlooks the interests of the 70 million Muslims." Here the speaker begged the whole question; as if the Indian National Congress, which has been very largely from the first a movement organised and carried on by the Hindus, or even the Hindu Mahasabha has ever advocated or fought for any public measure of that description! Will Sir Abdur name a single one?

Sir Abdur also delivered himself thus —

The fact, however, is that the *Hindus* and *Mussalmans* are not two religious sects, like the Protestants and Roman Catholics of England, but *form two distinct communities or peoples* and so they regard themselves. Their respective attitudes towards life, their distinctive culture, civilization and social habits, their traditions and history, no less than their religion, divide them so completely that the fact that they have lived in the same country for nearly a thousand years has contributed hardly anything to their fusion into a nation. A mighty spiritual spell separates the 230 millions of Hindus, not only from the 70 millions of Indian Muslims, but from the rest of humanity, while it divides the Hindus themselves internally into groups which know no social commerce with one another. Caste, with its cruel doctrine of untouchability, has survived many a social convulsion. It has baffled all the efforts

of Buddha and Asoka, of Akbar and Aurangzeb, and the English panacea of nationalism has brought not more unity but worse divisions

Before we proceed to examine the speaker's dicta, it is necessary to consider what an eminent and orthodox Moslem leader like Maulana Shaukat Ali thinks of the Moslem League and its session at Aligarh, where Sir Abdur Rahim delivered his precious speech. The Maulana in a recent speech of his declared that the "so-called Muslim League was neither a League nor Muslim." He said further.—

From Cawnpore, I reached Aligarh, the nerve-centre of reactionaries. They are the usual prowlers from nook and corner scattered round the camp-fire of the present Government. Mahomed Ali, myself and Dr Mohamed went to see the Tamasha which was to beguile the Muslims into the crawling lane of loyalty to the British. Sir Abdur Rahim was an old friend of mine and I expected great things from him, but five years of bad company had told on his moral backbone. Mr Innah in immaculate clothes and black "Astakhani" Angora cap was supporting him on the right and that mischievous reactionary, Dr Ziauddin Ahmed, was on his left. Between these two masterful personalities, the President was sinking deeper and deeper into the morass.

Let us now see what Musalman scholars themselves have to say on the absurd theory that the Hindus and Indian Muslims are two distinct peoples, etc. Professor S Khuda Bakhsh, who is a great Islamic scholar which Sir Abdur is not, and who hails from a place which is a few hundred miles nearer to Afghanistan, Turkistan, Persia and Arabia than Sir Abdur's home, flatly contradicted the Madnapore knight soon after he had unburdened himself of his ethnological, anthropological and sociological discoveries. Mr. Khuda Bakhsh rightly holds that the vast majority of Indian Muslims are Hindus who have accepted the religion of Islam.

Another distinguished Islamic scholar and historian, Professor Habib of Aligarh, who lives nearer still to Persia, Arabia, etc., than either Sir Abdur or Mr. Khuda Bakhsh, wrote recently in the course of an article in the *Venue Orient* on the racial origin of Indian Muslims:—

There are people who imagine that Islam has been always the same. This is, no doubt, true so far as the letter of the law is concerned. But everything depends upon the nature of the interpreting mind, and the Arab, Persian and Indian interpretations of Islam are as different as various moral structures raised on the same formal foundations can be. To the Arab the new faith was a message of hope, to the Persian a consolation in his philosophical pessimism, to the Indians a new frame-work for his metaphysical speculations,

which but slightly modified the immemorial customs of his country.

It is said that the Mussalmans have adopted from the Hindus many customs which are not found in their faith. Hindu customs are no doubt everywhere with us and accompany us from the cradle to the grave. But they have come to us not through adoption but inheritance.

I do not say that this survival of Hinduism or Indianisation of Islam, by whichever name we call it, was good or bad. That question will be decided by every man according to his temperament, but no careful observer can fail to see its all-pervading influence. The bird may escape from its cage, but it cannot fly out of the atmosphere that surrounds it and supports it in its flight. On the two fundamental institutions of our social life, the family and the caste, our outlook is the ancient outlook of Hinduism. Islam knows nothing of caste: its whole attitude is one of democratic equality: consequently Hindus who became Mussalmans could not refuse to dine with each other or to pray in the same mosque. But the spirit of the caste system lived on, none-the-less. Muslim converts persisted in marrying among converts from their own caste with the inevitable result that the caste system was transformed instead of being overthrown. Here and there a few concessions were made to the new spirit of social democracy, but the great pillar of the vicious system remained unshaken. Social opinion crushed the freedom Islam had allowed to the individual and made inter-caste marriages as impossible in the new creed as they were in the old.

Islam as a formal faith has always stood in sharp contrast with Hinduism, but Hinduism is essentially a social system and as such it is followed by the Mussalmans of India as well as the Hindus. This is the foundation of our national unity.

Muslim rites of birth, marriage and death are closely analogous to Hindu rites.

We regret there is neither time nor space to quote more from Professor Habib's article. Nor have we space here to dwell at length on what have been called "taints of Hinduism" in the Census Reports. Suffice it to say that in Bengal,

"Even now it is not peculiar to find Muhammadans in some parts of the province make offerings to some tree or even at a temple dedicated to the Hindu goddess Kali along with their Hindu neighbors." *Bengal Census Report, 1921, p. 159.*

In the *India Census Report, 1921, p. 115*, we read:—

"There are communities among the Muhammadan population, chiefly among converts from Hinduism, whose religious ritual and exercises have a very strong tinge of Hinduism and who retain caste and observe Hindu festivals and ceremonies along with those of their own religion."

Examples follow. There are also descriptions of certain "border-land sects" of the Bombay Presidency, which were classified as Hindu-Muhammadans in the Bombay Report and Tables of 1911.

We are neither apologists for nor defenders of caste; we are against it in both opinion and practice. But we may be allowed to say that caste exists *in fact*, though not in theory, among Muslims, Christians, etc., also. There is even untouchability among some Muslims. It is an absurd exaggeration to say that Hindus are separated from the rest of humanity by an impassable spiritual barrier. Hinduism has influenced both Islam and Christianity, the former through Sufism and in other ways, and the latter in various directions. Similarly, it is an exaggeration and a falsehood to say that the caste groups of Hindus know no social commerce with one another. Nor is it correct to say that caste has baffled all efforts to modify it or mitigate its rigours. Its rigidity has considerably relaxed, and, not to speak of the widely prevalent practice of interdining, even intercaste marriages have throughout history taken place in some part or other of the country and are even now gaining ground.

As regards the origin of the Indian Muslims we have the following in the Census Report of India, 1921, Vol. I, p. 116.—

"The distribution of the Muhammadan population has depended chiefly on historical considerations which were described in the 1911 report and need not be again discussed. It was there pointed out that, while the Muhammadans of the eastern tracts (i.e., Bengal, Assam, etc.) and of Madras were almost entirely descendants of converts from Hinduism, by no means a large proportion even of the Muhammadans of the Punjab are really of foreign blood, the estimate of the Punjab superintendent being about 15 per cent. The proportion advances of course as one proceeds further north-west."

The full significance of these observations will be understood when it is added that "The Muhammadans of Bengal form more than one-third, 37.78 per cent, of the whole number of Muhammadans in India," and "are nearly twice as those in the Punjab," etc.

Sir Abdur Rahim has made some allegations which can deserve to be examined and refuted only if he quotes chapter and verse. Some of these are, that

"A certain class of Hindu politicians" "appeal to the lower instincts of the community." "A section of them have specialised in vilifying all Muslim institutions, including Islam itself; some in distorting history to make out that no good has come to India from the advent of Islam, and practically all in proving that the Muslim community is incompetent and composed of no better material than the lowest classes of their untouchables."

"In fact some of the Hindu leaders have talked publicly of driving out the Muslims from India as the Spaniards expelled the Moors from Spain, that

is, unless they perform Suddhi and become Hindus or submit to their full political programme. Either of these alternatives would, according to their calculation, lead to the other. We shall, undoubtedly, be a big mouthful for our friends to swallow."

Let us first know who, if any, have said these things, and then it can be considered whether they are men of sufficient responsibility, worth, and standing in public life to be entitled to have their utterances seriously noticed. Personally, we are not aware of any responsible Hindu leader uttering nonsense like most of what Sir Abdur Rahim attributes to his opponents.

"To convert Musalmans in millions into Hinduism"—if that be the declared object of any Hindu leader or association—stands on a different footing from the foolish things attributed to "a certain class of Hindu politicians", etc. There are large numbers of Christian and Moslem enthusiasts who believe in converting and hope to convert all mankind, not to speak of millions, to their respective faiths. Why should it then be considered an offence for Hindus to think of converting Muslims? Nor is conversion of non-Hindus to Hinduism a new thing.

In ancient times many non-Aryan tribes were Hinduised. Scythians and others became Hindus. Even some Greeks who had settled in India accepted Hinduism and became Hindus. Later, animistic tribes like Santals, Bhils, Oraons, etc., are becoming Hinduised; so that in Census Reports one finds Hindu Santals and animist Santals, etc., separately mentioned and enumerated. For information on the question of the Brahmanising of the non-Aryan or casteless tribes, *vide* "Census of India", 1911, Vol. I, p. 121; Sir Alfred Lyall's *Essay on Missionary and non-Missionary Religions*, Risley's *Tribes and Castes of Bengal*, Vol. I, page XV; Assam Census Report for 1891, Vol. I, pp. 83, 84, and Bengal Census Report for 1901, page 152.

Instances of reconversion of whole groups from Christianity and Islam to Hinduism within recent historical times have been given in Census Reports. We read in the "Census of India, 1911, Vol. I, page 121:—

"Apart from these recent efforts, it appears that here and there small communities of Christian and Muhammadan converts have drifted back into Hinduism. The Urap and Varap Agris of the Thana district of Bombay are said to have reverted to Hinduism from Christianity less than a century ago. The Kirpal Bhandaris of the same district were forcibly converted to Christianity by the Portuguese.

But were afterwards accepted back into Hinduism. The Matia Kunbis and Sheikhdas of Bombay have been referred to in paragraph 156. Regarding those of Baroda, the local superintendent writes that they became Muhammedans about three centuries ago, but have gradually abandoned their Muhammedan practices, and many of them were recently admitted into the Vaishnava sects of Ramanand and Swami Narayan."

There is an old Sanskrit *smṛiti* called *Devala Smṛiti*, which prescribes the expiatory rites to be performed for reconverting Musalmans and other non-Hindus into Hinduism.

Sir Abdur Rahim is not accurate in stating that the Hindu movements he condemns "were trying to convert Mohammedans back to Hinduism to swell the ranks of untouchables". The Malkana Rajputs of Agra district, who have been reconverted to Hinduism in hundreds, are not untouchables. Nor have other converts to Hinduism become untouchables. Of course, they are not classed with Brahmins. But Moslem converts also are not classed with Saiyids.

"It might be said that these movements were organized in self-defence. What was the occasion for such defence, and against whom? Was it against Englishmen? It was not said so."

The reference to defence "against Englishmen" is a contemptible effort to gain their favour. But supposing Hindus want to defend themselves against the encroachments of Englishmen and get back their own, what is there wrong in it? The Hindu movements, which Sir Abdur reviles, may be quite justly meant to defend the Hindu community against the Christian and Muslim communities in the sense of preventing or decreasing conversion from Hinduism to Christianity and Islam. As it has been found that Muslim leaders generally have a communal outlook and demand more than their just share of political representation, the Hindu Mahasabha can rightly try to defend just Hindu rights against Muslim encroachment. Further, during riots, the comparatively greater solidarity of Muslims gives them an advantage over the Hindus. That may have led Hindus to think of acquiring greater solidarity by various means. It has also become necessary to take steps to protect Hindu widows and other Hindu women against the brutalities of some men who are a disgrace to the Muslim community and who have no idea of the true and higher teachings of Islam.

In Sir Abdur Rahim's opinion, Shuddhi and other Hindu movements are the causes of riots. Possibly that is so only in

some few instances, owing to the misunderstanding and misinterpretation of their objects. But why did riots occur every now and then long before the Sangathan and the Mahasabha movements came into being?

Sir Abdur claims to have *always* fought for the advance of the nation as a whole. We have no desire to deprive him of the consolation of thinking that he has. He indirectly accuses Hindus in many passages of having a narrow outlook, and boasts of the Muslim "international outlook". Let us take a few facts into consideration.

An international outlook does not exclude the welfare of one's own community. But whenever famines, floods, cyclones, earthquakes and epidemics ravage East and North Bengal, where Muslims form a majority of the population, the Muslims do very little for the relief of their own co-religionists. That is done by the narrow-minded Hindus. The Khadi Pratisthan, a predominantly Hindu movement, benefits at least as many Muslims as Hindus. In the second annual report of the Abhaya Ashram of Comilla, it is stated that 1175 persons received help from its outdoor dispensary, of whom 2396 were Muslims. In the school maintained by this Ashram, out of 120 pupils, 72 are Musalmans. The workers and conductors are *all* Hindus, who observe no caste distinction on principle and in practice. In the fifteenth annual Report of the Society for the Improvement of the Backward Classes of Bengal and Assam, we find that it maintains 406 schools in 20 districts of Bengal and Assam. "Of the total number of children, both boys and girls, receiving tuition in these schools, viz., 16389, the largest number, 5454, come from the Namasudra community, and the next largest number, 3023, from the Muhammadan community." But among its subscribers we find the names of only two Musalman gentlemen, not of Sir Abdur Rahim or of any of his fiery followers.

Will Sir Abdur Rahim kindly name any entirely or predominantly Muslim organisation which benefits Hindus to the extent that Hindu efforts benefit Muslims? We will then admit his claim to have a wider outlook than the Hindus.

As for Muslim "international outlook," it is not really international, but it is a communal outlook spread over countries which have a Muslim population and is interested only in the fortunes and fate of the Muslims there. Real internationalism is interested

in the welfare of all peoples of all countries, irrespective of their creed.

But even as regards the qualified credal internationalism of the Muslims, may we ask what Sir Abdur Rahim and his fellow-flatterers of Englishmen were doing when the Khilafat was in danger and the Turks were fighting for freedom? Were they not either in the enjoyment of power and pelf or seeking for the same, whilst the narrow-minded Hindus under the leadership of Mahatma Gandhi stood shoulder to shoulder with the Moslems and gave what moral and other support they could to the Turks?

Sir Abdur Rahim

emphasized the fact that the Mohammedans of India could not be ignored in any political advance that was in store for India without doing the greatest harm to the nation itself."

As if any responsible Hindu wanted to ignore or ever opposed just Muslim claims! So far as he is himself personally concerned, has he forgotten that Hindu organs and associations amongst others protested against the super-session of his claims to the officiating governorship of Bengal? And does he not know that it is mainly Hindus and other non-Muslims who sowed and men like him came afterwards to claim a share in the harvest?

Says the Midnapore knight:—

We Muslims must tell these politicians frankly and explicitly that their claim that *India belongs solely to the Hindus is preposterous and unfounded and is unjust to India itself.*

Sir Abdur may be safely challenged to name any sane Hindu politician who has put forward such a claim.

As a matter of fact, in the sense of material possession, India at present belongs neither to Hindus nor to Muslims nor to any other Indians, it belongs to the English. In any other sense it belongs to all natives of the soil.

Rabindranath Tagore has tried repeatedly to impress on our minds the truth that India cannot belong to anybody by his simply being born in the country and living in it; it must be made one's own by one's self-sacrificing labours for making it an ideal country to live in. Part of what the poet said in reply to the address presented to him at Abhaya Ashram, Comilla, has been thus roughly translated.—

The country is not one's own by mere accident of birth but becomes so by one's life's contribution. An animal has got its fur but man has got to spin and weave because what the animal has got it has got once for all and ready-made. It is for man to

rearrange and reshuffle for his purposes materials he finds placed before him. That we were so long kept from realising India in her true self is due to the fact that we have not by daily endeavour created her moment by moment making her healthful and fruitful. Let us not cherish the dream that Swaraj can be ours by some extraneous happening. It can be ours in so far as we succeed in permeating our consciousness throughout the country by service.

It cannot be contended that Muslims have rendered this kind of service to the country to a greater extent than the Hindus or even to an equal extent.

There is one proposition the truth of which even Sir Abdur Rahim cannot deny. It is that the Hindus belong to India and to India alone. Their pride of their past is concerned solely with India, their visions of the future are connected with India. Even of the Muslim period of India there are things in which Hindus take pride. A great Hindu like Ranade has described what India owes to the Muslims. In the living present Hindu idealists live for India and are prepared to die for it. It is different with Indian Muslims. They are not proud of ancient Indian culture. Their eyes are turned towards some foreign countries in Asia. They can think of an independent India only on conditions. They can bear to think of a fresh successful invasion of India by foreign Musalmans in certain circumstances, nay, they would even desire it in those circumstances.

In fact, Swaraj seems to the generality of Muslim politicians the Hindu's concern. Muslims would agree to it as an act of condescension on their part on certain exorbitant conditions to be accepted by the Hindus. So that, in reality, instead of the Hindus thinking that India belongs solely to them, it is the Muslims who by their conduct make it appear as if the country belonged only to the Hindus and its fate, therefore, concerned the Hindus exclusively or more than the Muslims. The latter would much rather think and dream of Turkey (*not now*), Arabia, Morocco, etc., and send their money there, instead of to famine- or flood-stricken East Bengal Moslems "ryots and labourers," of whose "interests" Sir Abdur glibly speaks but to whom no famous Muslim leader, from the Aga Khan downwards, ever gave a morsel of food during famine. The arrangement is that they are to be kept alive by the narrow-minded Hindus in such times in order that afterwards the vastness of their numbers may be exploited by Sir Abdur and men of his ilk!

When a man who has been all along fighting freedom's battle finds fault with the unwise and unpractical revolutionaries, some of whom are even criminals, it is easy to bear with him and even support him. But when a man of a different stamp sneers at the revolutionaries, one can only pity him for his incapacity to imagine the existence of that ardent love of freedom which sometimes unfortunately leads impatient youth to imprudent, unpractical, and even criminal courses. There should be certainly condemnation for such youth, but also pity;—never sneering remarks from men who never made any sacrifices for the country or suffered for it and are incapable of any noble idealism.

Says Sir Abdur Rahim:—

These politicians who would eliminate the English from India, allege that in such a contingency we Muslims would rather see a foreign Muslim power rule in this country. That is true in the sense that the Muslims would not like the Hindus, any more than the Hindus would like the Muslims, to rule in the place of the British.

The Muslims, though a silent community, are not blind to what is going on. I say emphatically however that it is not true that we Muslims would not like to see a self-governing India, provided the Government of the country is made as much responsible to the Muslims as to the Hindus.

Sir Abdur Rahim stands self-accused. No one who loves his motherland would like or want any foreign nation to conquer or rule it, whatever the religion of that nation. The Chinese Christian General, of whom we have heard so much, has never said or dreamt that unless Chinese Christians obtained some conditions from non-Christian Chinese, they would much rather see the country invaded and conquered by some foreign Christian power. Chinese Moslems also do not stipulate that unless they have a certain share in the government of the country, they would rather see China conquered by the Muslim Turks or Arabs or Afghans or Persians. Because to both Chinese Christians and Chinese Moslems other Chinese are nearer than any foreign Christians or foreign Muslims. But Indian Muslims like Sir Abdur Rahim consider foreign Muslims nearer to them than Indian Hindus.
